There is a difference of opinion about the policy of putting so much money into buildings. When I have tried to excite the envy of professors in other institutions by praising these new buildings they have sometimes retorted "They need men more than marble down in Pennsylvania." That is true. The reputation of the University of Pennsylvania would have been much higher than it is if the authorities had adopted the policy of the early Johns Hopkins and got the greatest men to be found in America or abroad even if they had to be housed in garrets and cellars. But the criticism is probably unjust for it is not likely that they had the choice. All college presidents find it easier to get new buildings than to get professors to use them or janitors to clean them. Many a town has found it easier to get a library building than books.

So I rejoice that Pennsylvania has its splendid buildings. The money has not been wasted. It has been well spent, even tho it could have been better spent. And I do not agree with those who think them too fine for their purpose. To be sure the laboratory of mechanical engineering is not much like the shops the students later will have to work in or manage. They are more like those glorified shops we read of in socialistic utopias. But who knows but that some of these young men, finding that filth and noise and ugliness are not essential to industry and that it is quite possible for a workman, when his day's work is done, to step into the street looking as neat and decent as a bank clerk, may bring their own shops into a more utopian condition.

There are now twenty-six dormitory houses, arranged so as to form three quadrangles, one of which is a triangle, the entrance to the whole being thru a gateway under Memorial Tower, erected in honor of the sons of the university who served in our war with Spain. The individual houses are also constructed on

the single entry system, each opening on a quad and none of them containing more than fifty students who form a self-governing community, composed of men of various classes and schools. The principle is different from that of Yale, where the College are separated from the Science men and then segregated by classes. The discipline of the dormitories is in charge of a Parietal Committee composed of the proctors resident in the dormitories, and a board composed of one representative elected by the students of each house. The arrangement of the dormitory group about the courtyards gives the effect of cloistration which is traditionally regarded as conducive to the thinking of high thoughts, a seclusion all the more desirable since the university is in the midst of a great city and the campus is traversed by the traffic of the streets. The Triangle is the scene of the festivities of Alumni day. Last year, however, the loyal alumni did not enjoy themselves so much as usual because they were deprived of their spirits by the hard-hearted Parietal Committee which refused to suspend their rule against the introduction of intoxicants into the dormitories. There was much grumbling at the regulation and the Board of Directors of the Alumni Association made a formal protest and appeal to the trustees but in vain. The rule had been made because of certain unedifying spectacles presented here in former years; but according to the alumni they were not to blame for this but it was the undergraduates living in the dormitory who rashly attempting, later in the night, to follow the examples of their elders, quite surpassed them in conviviality.

I have already alluded to the influence of the dormitories in promoting, by this mixing of schools and classes, a social unity in the university that tends to compensate for its administrative disintegration. Such a force is especially needed because Pennsylvania has an extremely diversified student body. I do not know of any more so. Princeton and Yale, with their somewhat rigid courses and fixt habits, get a selected set of young men. The State universities are, of course, open to all comers, but the Western States do not have such a varied population as Pennsylvania. An ethnic

study of the student body would make a very interesting thesis for it would be hard to find elsewhere a population of such diversity of origin brought together at the same age under the influence of the same environment where a detailed and continuous record is kept of their physical and mental characteristics. There are representatives in the university of all the Old World races which have been drawn upon to work in Pennsylvania's mines and factories. The son of the capitalist and the son of his humblest laborer may be found in the same class room. There are boys from the mountains and boys from underground. Some of them have a lineage of scholars well known for two hundred years. Some have parents who cannot read. The students from the city are as diverse as those from the country. Some are well set up and well groomed young men and before their luxurious fraternity houses there are automobiles waiting to carry them from lunch to their classrooms, a few blocks away. Then, again, we see the street cars bringing pale-faced, stoop-shouldered young men who snatch ravenously at a scrap of learning and hurry away with it to unknown parts of the city. Some are interested only in the discovery of new methods of electrolysis; some are interested only in the discovery of new methods of ballet-dancing. Some care for nothing but cuneiform inscriptions; some care for nothing but teeth. There was a great fascination for me in simply watching the students. The University of Pennsylvania is a more interesting place to visit than Princeton for the same reason that a botanical garden is more interesting than a grove.

The presence of so many diverse elements in the university is an educational force in itself, provided it is taken in the right spirit as in general I think it is. There is a noticeable atmosphere of informality and congeniality about the place. I would say democracy but there are so many kinds of democracy, and every university boasts the purest brand. I might distinguish by saying that Princeton has the democracy of the club and Pennsylvania has the democracy of the street car.

Not but what the Pennsylvanians have their prejudices. There is, of course,

some snobbishness, family or financial. Anti-Semitism occasionally shows itself, particularly in connection with fraternities. There is, as I have said, some prejudice against women as students. The boy who sat next to me in the chemistry class, in which there were half a dozen rather mature ladies, said with a sneer that he did not see why a woman should want to study chemistry. I asked him why he was studying chemistry and he said it was because he had failed in it the year before. There is some aversion to foreigners and considerable antipathy to negroes. "They generally get run out sooner or later" I was informed by one of the students, but my informant told, but not without a certain unwilling respect in his tone, of one negro who was too smart to be got rid of and had reached the Senior class of the medical school: "I wish they had oral exams.," he added, "then the profs. could soak him."

Pennsylvania is the most cosmopolitan of American universities. It has more students by half from foreign countries than it has from New England. In 1909 there were 225 foreigners enrolled, about 5 per cent. of the whole.⁴ Among them are 20 from Australia and 15 from New Zealand, more than are to be found in all the other American universities. They are mostly in the Department of Dentistry, a fourth of whose students are foreign, including many from France and Holland. There are 38 students from South America, of whom Brazil furnishes the most, 15. Professor Rowe, on his recent trip thru South America, was welcomed in San Paolo, Brazil, by a U. of P. Alumni Club of eighteen members. In the number of Asiatic students, 31, Pennsylvania is surpassed by Yale, 42; Illinois, 39; Harvard, 43; Cornell, 50; Columbia, 42; California, 46.

There are six national clubs, Chinese, British, French, Japanese, Latin-American and Russian, and a cosmopolitan club besides. The students from different localities in the United States are similarly organized. There are about twenty-five State and as many more Pennsylvania county clubs among the undergraduates, many of them working in co-operation with the local alumni or-

⁴See report of Professor Tombo. *Science*, October 1, 1909.

ganizations at home for the greater glory of their Alma Mater. I doubt if any other university has so complete a system.

Our universities in general and the University of Pennsylvania in particular, seem to be trending toward the organization of the medieval universities where the student gilds took an important part in the government. The fraternities and these national, State, county and city clubs have more than a fanciful analogy to the "Nations" or Consiliariæ altho their aims are somewhat different. In 1200, when Germany was farther away from Italy than China is now from America, the Germans of the University of Bologna formed their national club

sities one wonders why these picturesque ceremonies are not revived with the others. It would be a pleasant sight to see the members of the Texas State Club, in cowboy costume and bearing the Lone Star banner, escorting one of their "Doctorandi" to College Hall for his examination and waiting on the steps outside to congratulate or console him. Perhaps something of this kind is what President Lowell meant when in his inaugural he spoke of the need of more honors to scholarship. Another worthy endeavor for these modern "Nations" would be "the extirpation of rancour and quarrels," even the official feuds of the classes, the bowl and poster

THE DENTAL CLINIC.

for "the conduct of funerals, the extirpation of rancour and quarrels, the attendance and escort of our Doctorandi to and from the place of examination" and other purposes, specified and unspecified. Nowadays when medieval pageantry is so popular in our univer-

fights in which the students are stripped naked or sent to the hospital, and the Sophomore raid on the Freshman banquet in which hundreds of dollars worth of furniture and pictures are destroyed, and other rough and vulgar displays of animal spirits.

THE ENGINEERING BUILDING.

This is the largest of the seventy buildings on the campus, having a total floor space of 128,000 square feet. It has a frontage of 300 feet and a depth of 100 feet, besides a wing of 50 feet. It cost \$8,000,000 and was dedicated in 1906. It is heated by direct steam, lighted by electricity and ventilated by electrically driven fans.

The University of Pennsylvania must have all of the fraternities that any university has and some of its own besides. Twenty-six national fraternities are represented here. Considering their power and wealth it is surprising to learn that they do not run college politics as they do in the Western universities. Music in various forms is one of the most popular of the student activities. There is a school of music somewhere about the institution but I did not find it. The students I talked with, tho active in glee club and operatic work, did not seem to know anything about it, so I judge it has little to do with inspiring and shaping the musical life of the university. The Mask and Wig Club get up annual comic operas in professional style and with more than the professional certainty of success. Last year this club turned over to the university \$40,000 of its surplus for the construction of a dormitory to be called by its name. This is a mani-

festation of the true spirit of college loyalty and ought to be imitated by other student activities which get more money than they can legitimately use. The architectural students are finding an opportunity for the exercise of their artistic talents in the production of old English dramas and spectacles. In debating the Pennsylvanians have shown remarkable ability. In the triangular league with Cornell and Columbia they have won both annual debates, the positive and the negative sides, seven times in the last eight years. Athletics, altho the most prominent of student activities, I have not discussed in these articles because the general public hears more about this side of university life than it does about all the other sides.

Owing partly to the influence of Franklin the University of Pennsylvania has been free from sectarian control, altho even he would doubtless wish to have more stress laid on instruction in

religion and morals than now exists. Pennsylvania, however, like Yale and Princeton, keeps up the custom of compulsory chapel for college students. The absence of a theological seminary has had one practical disadvantage which accounts in part for the fact that the University of Pennsylvania took but little part in the intellectual development of the West and had until recently a rather local clientele. The ministers in small places were the recruiting agents for the colleges. The presidents of most institutions established in the West were ministers. They naturally gave preference to the college they knew most about in the sending of students and the getting of professors, and in that way Yale and Harvard attained a dominant position in the new empire. The most interesting features of the Y. M. C. A. work in Pennsylvania is maintenance of a university settlement and a summer camp. The settlement has two large and well equipped buildings and an athletic field on the bank of the Schuylkill.

Some idea of the trend of graduate work may be gained from the distribution of students. The catalog of 1908-9 gives the number of students taking major work in the leading departments as follows: History, 33; English, 33; pedagogy, 25; chemistry, 24; Germanics, 23; classics, 22; physics, 22; political economy, 20; philosophy, 19. This is of course apart from the medical department, where a great deal of research work is done. An anonymous gift of \$200,000 has just been received for this purpose. The engineering department devotes itself strictly to undergraduate training, believing that it is not good policy to attempt to combine with it either research or extension work. The Wistar Institute of Anatomy and Biology is a semi-independent foundation devoted exclusively to research. It occupies a large building containing laboratories and museums, and offers facilities for investigation free of charge to qualified persons from any institution, thus serving as a sort of clearing house for biological research. The institute has assumed the publication of all the important independent periodicals in its field, *The Journal of Morphology*, *The Journal of Comparative Neurology* and

Psychology, *The American Journal of Anatomy*, *The Anatomical Record* and *The Journal of Experimental Zoology*.

The University of Pennsylvania has led in Assyriological research. The expeditions sent out under its auspices, and conducted by Dr. John P. Peters, Dr. Hilprecht and Dr. Haynes, have unearthed the ancient city of Nippur in southern Babylonia, and discovered thousands of tablets and other antiquities ranging from a period which Dr. Hilprecht once put as far back as 7000 B. C. Many of these objects are now displayed in the museum, and boxes of them are still in the cellar. A succession of noble volumes of several series are still appearing written by the general editor, Dr. Hilprecht, Dr. Clay, Dr. Radau and others, while a personal difference, such as ambitious and sometimes jealous scholars too frequently fall into, has thru the papers given the Nippur expeditions more public fame than has all the learned research. Nor must I fail to mention Professor Jastrow's various studies, particularly that in Babylonian religion now appearing in two large volumes in Berlin and in German. The Free Museum of Science and Art also contains a large store of other ethnological specimens, Alaskan, Egyptian, Nubian and Etruscan. No other university in the country has an archeological museum which will compare with this in richness and variety, and in some respects its only rivals are the Louvre and the British Museum. The completed building will cover nearly twelve acres, and cost about two millions and a quarter. The part now erected cost, including furnishings and equipment, \$389,000, of which the State provided \$150,000.

I must mention here two interesting investigations which the University had the honor of starting, but dropped before their point of greatest value had been reached. One was the photography of moving animals by Eadweard Muybridge. The University has 700 of his plates. These experiments revolutionized two arts, painting and drama. The artists said at first that they would pay no attention to them, that their own pictures correctly represented running horses as seen by the eye, that science can never dictate to art. Nevertheless,

they had to change their minds and their methods, and already the old-fashioned rocking-horse gallop seems as absurd to us as Egyptian statuary. The Muybridge photographs were also the starting point of the moving picture business. If the University of Pennsylvania had developed this idea it would have gained scientific fame and popular appreciation. Incidentally it would be in receipt of an income of several millions

William Pepper, Joseph Leidy, Horace Howard Furness and S. Weir Mitchell. They spent three years in investigating every medium who would consent to appear before them and found nothing but fraud. But it is not enough to expose one generation of mediums, for they crop up later with the same old tricks and some new ones. The commission expressly stated that their report was only preliminary, and asked to be allow-

In the Mechanical Department of the Engineering Building.

a year. I understand, of course, that a university holds to the principle of Agassiz and has "no time to make money." Still it has to have money, and is not it as honorable to earn it as to beg it?

The second investigation I have in mind is the Seybert Commission of 1881. This was appointed by the trustees to investigate modern spiritualism, the funds being furnished by the bequest of Henry Seybert for that purpose. The commission consisted of ten men, among them

ed to continue the investigation.⁶ They stopped only because they had run out of mediums. If the Seybert fund has not been otherwise used, would it not be in order for the trustees to appoint a new commission? Many people would be interested to see if they would make as short work of Mrs. Piper and Eusapia Palladino as they did of Dr. Slade.

The University of Pennsylvania pre-

⁶ *Professor's Report of the Commission Appointed by the University of Pennsylvania to Investigate Modern Spiritualism.* Philadelphia: J. B. Lippincott Company. 1887.

sents the same puzzle to me as the earth did to the ancients. I cannot see what supports it. How does it manage to do so much with such a small revenue? According to the report of the Carnegie Foundation it was sixth among American institutions in the number of students and eleventh in total income. Obviously the students must pay in tuition fees a larger part of the expense of instruction than in other institutions. This was shown in the table published in connection with my first article. I have been told that the real financial foundation of the University is a little memorandum book which Provost Harrison carries in his vest pocket when he makes his calls, and that if this fails him he puts his hand into another of his pockets and supplies the deficit. But what would become of the University if something should happen to that memorandum book? One of the most useful of Mr. Harrison's donations is that he gave in memory of his father, the George Leib Harrison Foundation. This now amounts to a million dollars and provides fellowships and scholarships to men of exceptional ability, assists professors in research work and otherwise promotes the higher interests of the University. The success of Provost Harrison in raising money will be best appreciated by the college presidents who have failed to accomplish it. But he has done more than raise money or give it, he has made good use of it for the development of the University in the ways I have indicated. He does not get credit for all he does because he is so quiet and unostentatious about it. "There goes our little provost," said a student on the campus to me in a tone that had in it something of affection and was not lacking in the essentials of respect. He had been sitting with the seniors as they sang in the twilight; he was going to a literary society, just strolling about, unobtrusively, informally, seeing things for himself. This is different from some presidents I had seen. Still nearer to the students, however, is the vice-provost, Edgar F. Smith, Professor of Chemistry, on whom devolves much of the administrative work of the University. I wish it were possible to get up a triangular intercollegiate contest between

Prof. Edgar F. Smith of Pennsylvania, Prof. Albert W. Smith of Cornell, and Prof. Thomas A. Clark of Illinois, to see which could name the most students at sight. Every one of them could name his thousands.

During Mr. Harrison's administration the bonds connecting the University and the State have been drawn more closely. In fact, the institution is already doing the work of a State university, only it does not get the pay for it. That is why it is not free to students. It could be made so if the State would appropriate for it a million dollars a year, such as is given by Western States not nearly so rich as Pennsylvania. The constitution of 1776 provided for "one or more universities" and it is time to put it into effect. The difficulty lies in the word "more," for there are several claimants for public support. But a good beginning is being made. The last Legislature passed a bill appropriating \$750,000 for the University of Pennsylvania for the biennium, tho the Governor scaled it down to \$480,000, distributed as follows: \$130,000 for general maintenance, \$130,000 for the veterinary school, \$200,000 for the university hospital, and \$20,000 for the library. The University has also received much assistance in various ways from the city and people of Philadelphia from its foundation to the present. The old families of Philadelphia have always taken great pride in it and given it hearty support, even in some cases going so far as to send their sons to it. The Philadelphia newspapers pay little attention to the University except to exploit some scandal in connection with it. One may read them for weeks and not hear of anything except the athletic field. The Boston papers fully appreciate the importance of Harvard. The Chicago papers use the campus as a happy hunting ground for scare heads of marvelous discoveries in science and religion. Either way is better than silence. People know more about the University of Chicago than they do about the University of Pennsylvania, even if what they know is not so. But those who do not yet know about the University of Pennsylvania will have to learn before long, for it is becoming an educational power in the land. It was raised thru the efforts of

Provost William Pepper from a local institution, in which many of the professors taught for the fun of the thing, into the position of a great national and international university. What progress it has made recently I have tried to indicate in the preceding pages. It has

gained more students in the last five years than Harvard, Yale, Princeton, Stanford, Johns Hopkins, Chicago and California, all put together, and its advance in other respects, altho not commensurate with its growth in numbers, has been surprisingly great.

NEW YORK CITY.

GREAT AMERICAN UNIVERSITIES.—This is the eleventh of a series of articles on the present condition and future prospects of the larger universities of the United States by one of the editors of THE INDEPENDENT. The dates of publication of these articles are as follows:

1 Harvard University.....Jan. 7th, 1909	8 University of Minnesota....Aug. 5th, 1909
2 Yale University.....Feb. 4th, 1909	9 University of Illinois.....Sept. 2d, 1909
3 Princeton University.....March 4th, 1909	10 Cornell University.....Oct. 7th, 1909
4 Stanford University.....April 1st, 1909	11 University of Pennsylvania.Nov. 4th, 1909
5 University of California....May 6th, 1909	12 Johns Hopkins University...Dec. 2d, 1909

Indictments Without Loopholes

BY OLIVER E. PAGAN

[As indictment expert of the United States Government, Mr. Pagan, who is special assistant to the Attorney-General, has written the legal accusations in all the important Federal prosecutions of the last six years. He has indicted trusts, land grafters, Governors, Senators and ordinary Congressmen. Before his time the first defense of Federal malefactors was to smash the indictment. Now the accused magnates generally take it for granted that the indictment is unassailable, altho Judge Holt has just thrown out the indictment charging conspiracy in the American Sugar Refining case, and the Government will appeal. In this article Mr. Pagan tells something of how he produces "burglarproof" indictments, and his article is a lesson in general rhetoric as well as in law.—EDITOR.]

SINCE the law is based on common sense and grammar, I try to use both in drawing an indictment. Before starting to write I make sure that a crime has been committed and that there is sufficient legal evidence. The crime must fit a statute. I keep the statute beside me as a guide when I begin to write out an outline in pencil, aiming to be as clear and short as possible. The pencil draft is typewritten; then it is worked over to attain further clarity, brevity and precision. The sentences are rearranged, the modifiers shifted so that there is no confusion or useless language.

The classics of English literature, especially the writings of old English jurists, give us a standard of accurate and economical expression. The modern tendency to slipshod language has infected the legal fraternity as well as other classes. An average attorney gets

tangled up in his own parts of speech. He falls a prey to indefiniteness, grandiloquence and inconsequence. When writing anything like an indictment he becomes self-conscious or intoxicated with the extent of his verbal resources, and produces a labyrinth of words. He even forgets his object.

While the courts will not invalidate an indictment for mere "surplusage" or verbosity—which is a heritage of the days when lawyers were paid for length rather than strength—the use of superfluities is usually accompanied by the graver fault of indefiniteness. A few "alleges" thrown into an indictment are enough to spoil it. "To wit," another uncertain expression, has ruined many a pleading. To say that a man stole "about \$1,000" won't do at all. We must state positively that he stole \$1,000. If the amount proves to be only \$900, that won't hurt the case. The indictment

must be positive, tho it is not necessary to prove all the details charged. The correctness of a stated time is immaterial, as long as it is within the statute of limitations—unless it is a case of burglary at night or something like that. One word misplaced in a sentence may change the entire legal effect. Take these two sentences: "He bought goods intending not to pay for them." "He bought goods not intending to pay for them." In the first case there is a positive statement and a crime charged; in the second example the statement is negative and does not charge a crime. "Whereas" is a bad expression, like "allege" and "to wit," but "said" and "aforesaid" are economical and good expressions.

Many pleaders can't omit telling how they are going to prove the charge. They fill an indictment with a history of the case and most of the evidence. This is just as needless as a prolix form of introduction often followed. In beginning an indictment I follow the simple old English form, "The jurors of Our Lady the Queen upon their oaths present," etc. I try to write indictments about half as long as the average presented in the courts. My lengthiest pleading, under the elaborate anti-trust law, is about 2,000 words. Logic and simplicity ought not to be misappreciated, but it is a plain fact that some jurists and attorneys hate to lose the red tape, and object to a document which says all the things necessary and then quits. The majority, however, are willing to concede the advantage of conciseness when this legal novelty is brought to their attention. Good punctuation is a detail not to be overlooked.

The importance of selecting the right statute for an indictment was illustrated in the case of ex-Senator Burton of Kansas, who had been unlawfully acting as a paid attorney in the Post-Office Department. A check had been mailed to him in payment of his services. Two indictments were brought and dismissed, because they were based on a double error, that a check was money and that a crime had been committed either at St. Louis, where the check was mailed or at Washington, where the check was received. When I wrote an indictment that

held water, I did not charge him with "receiving compensation," which was doubtful of proof, but stated that he "agreed to receive compensation," which was easily established. We may not succeed in making the punishment fit the crime, but it helps some to fit the right statute to the right defendant.

New laws, such as the Sherman Anti-Trust law, the Interstate Commerce law, the Pure Food law and the Immigration law, call for independent thought on the part of the pleaders who have to make written charges against violators of those laws. There is nothing in the old law which grew up in England, called the common law, to furnish precedents for such cases. When thus called upon to think, the majority of pleaders either fail to satisfy the fundamental rule of pleading, which requires them to state the facts in sufficient detail to enable the defendant, court and jury to understand what the charge is, or else they state so many immaterial facts that they get lost in a maze and entirely forget to state the facts essential to the charge. One of the earliest cases under the Sherman law, the "Knight case," decided by the Supreme Court of the United States against the Government, was a good example of wool-gathering. The pleader told a long story about the buying up or leasing of a sugar refinery, but neglected to state facts which would show how this would affect interstate commerce; and the court calmly refused to infer such facts to exist. It is an old rule that pleadings must not be "argumentation"; that is, the pleader must not state facts surrounding the main fact, and then expect the court to infer that he is charging the main fact. He must charge it directly, altho at the trial proof may be given indirectly or by circumstantial evidence.

The pleader should not always put all his eggs in one basket. That is, he should make the charge in various ways, under different counts, in order to meet the possible variances in the evidence as it is produced afterward at the trial, and also in order to hit the one of several theories of the law involved which the trial judge may have in his mind. An indictment was once drawn by a district attorney in the West against a young

Napoleon of finance who was selling worthless mine stock thru the mails. The indictment was built on a certain theory of facts, and the district attorney was afraid to go to trial for fear the defense might prove the facts to be different. When I was called in I drew another indictment, stating the facts several ways in several counts. Thus we had the defendant "coming and going," for if he objected to one count he ran the risk of admitting the charge in some other count. He was tried and convicted.

An indictment in a recent national bank case in New York was held to be defective on what might seem to be rather a fine point. The defendant was charged with making false entries in his books, and the pleader thought that since there are two sides in bookkeeping, debit and credit, he must mention both sides in one count, but the court held that this violated the rule against "duplication," because only one of the double entries might be false. Each false entry should have figured in a separate count. It is against the law to make "a false entry."

An example of the danger of too much descriptive detail in an indictment was given when a pleader said a man stole a white horse. It chanced to be a horse of another color, as the saying is, and the man escaped. If the pleader had written "horse" without qualification, leaving the determination of color to the trial, the thief would have gone to jail. A rule provides that when stolen property and the like is described in close detail, it must be proved according to the given detail. However, the forbidding of a riotous and incorrect imagination on the part of a pleader does not also prohibit a constructive use of facts. In the lottery case at Mobile, Ala., the Honduras company was circulating its last list of drawings, thinking to evade the law, which says that no advertisement of a lottery shall be circulated by mail or express. I drew an indictment charging that the last list was actually an advertisement—for it was intended to lure new customers into the game—and the promoters of the lottery were glad to avoid trial by paying \$300,000 in fines to the Government and promising to quit.

WASHINGTON, D. C.

To the Murderers of Ferrer

BY HARRY H. KEMP

Fools! think ye still to slay the Age-to-Be?

Seek, rather, to enchain the flowing wind,

Whose limits are the sky's, or strive to bind

The turbulent, vast bosom of the sea,

Than thus to grapple progress foolishly

Or stay the onward marches of the Mind!

Oh, kings and princes! Now, too late, ye find

That what He served was mightier than He!

Why wrestle with God's adamant-fronted laws?

When will ye see the vanity of pyres

And running noose and rifle? The Great Cause

Ye *cannot* hang with rope or burn with fires!

And, do ye what ye will, whither Cæsar's crown!

God's earthquake-tread must shake your empires down!

LAWRENCE, KAN.

The Assassination of Prince Ito

BY HENRY GEORGE, JR.

[Mr. Henry George, Jr., has just returned from an extended tour of investigation in the Orient for a representative American publication. His travels and his personal knowledge of conditions and men make him well fitted to write on this subject.—EDITOR.]

THE last time I saw Prince Ito was in the midst of a brilliant company in the banquet hall of the Imperial Hotel, Tokyo. It was at the close of last May, and the occasion was the first public dinner of the International Press Association of the Japanese capital. Besides all the leading members of the Japanese press, a number of distinguished foreign correspondents were

Count Okuma, Mr. Chirol, the foreign editor of the *London Times*, then on a brief visit to Japan; Dr. Morrison, the Peking correspondent of the *London*

PRINCE ITO,

Who was assassinated at Harbin on October 26.

present, and also front-rank men at the bar, in the army and in the world of politics. At the head table sat seven guests of honor. Chief of these was Ito. The others were two Japanese, two Englishmen and two Americans, to wit: The Premier, General Marquis Katsura;

THE EMPEROR OF JAPAN.

His illustrious reign has been largely due to Prince Ito.

Times, traveling with Chirol; ex-Vice-President Fairbanks and myself.

Prince Ito was the first of the honored guests to speak. Captain Brinkley, a cultured Englishman, who has grown gray-haired in Japan, and who is editor of the *Japan Mail*, made a fervid address of introduction. He gave a brief sketch of the truly wonderful career of the statesman and indicated Japan's immeasurable debt to him.

When Ito arose emotion almost mastered him, strange as it appeared in a stoical Japanese. His voice was low

and tremulous. He said, speaking in his native tongue, altho he commanded fluent English, that he felt restored to the peace and blessings of home and that now at last he hoped he was done with the stress of official life.

He had just a few days before returned from Korea and had formally resigned from his office of Resident General in that weak and unfortunate kingdom—a kingdom robbed into poverty

The argument appealed to every Japanese, but at that time Japan was scarcely out of the swaddling clothes of her new birth. Ito and the other advisers to the Crown feared such a bold policy at such a time. But later a war came with China over Korea and later yet a war with Russia, the Manchurian slice of China itself being an added cause of the latter conflict. So that, as a result of these two conflicts, Japan did, in 1905,

ITO ENTERING SEOUL
As Resident General of Korea

and impotence by its aristocracy, and for generations lying a lure to Russia, until Japan, in self defense, entered and established a protectorate.

Such a protectorate was what the great Japanese War Minister Saigo urged Japan to establish there in the seventies. "If Japan does not make Korea strong to resist the foreigner," urged Saigo, "Russia or some other power will seize that territory, and then Japan will not only find herself cut off from the continent of Asia, but in imminent danger of invasion and partitioning at the pleasure of the foreigner."

what Saigo urged her to do in the seventies.

And just as Ito had been the directing genius of the revolution of 1868, and subsequently drafted the instrument for a constitutional monarchy, and was the chief organizer of the new form of government, successively holding most of the principal offices of state, he was the logical man for the tremendous task of reorganizing Korea under Japan's protectorate. Japan gave her best mind to the work.

Ito entered upon this new labor as he had entered upon all the others—with

modesty. And he soon found himself confronted with two unforeseen and very serious difficulties. One was an influx of adventurous and unscrupulous Japanese, who undertook to carve out personal fortunes, not stopping at murder to accomplish their ends. The authorities in the Philippines have had similar difficulties with a similar kind of Americans. Such adventurers are known in the Far East as "beachcombers." Ito, in a public speech, gave notice that if they did not clear out and keep out of Korea he would handle them without gloves; and where they were actually caught in crime they were summarily punished.

This action called upon the Resident General the condemnation of those who had regarded Korea as a country to loot.

But a still more serious situation arose when the drum-head methods of the military staff under Ito came into collision with the more gentle methods of his civil staff. The one party was for stern, repressive measures against all manifestations of rebellion of the younger generation of Koreans, who, with the cry of "Korea for the Koreans," hoped to rouse the dormant nation to a sense of its degradation and to throw off the domination of Japan. The civil staff, on the other hand, was for conciliation with schools, hospitals, the general introduction of sanitation and such manifestations of Japan's good will.

The struggle between these two elements was long and obstinate, giving outward appearances of a policy full of erratic turns and even violent contradictions. But Ito's temperate intentions won in the end. The civil staff prevailed over the military; and when Ito laid down the Resident Generalship, it was with the conviction that the formative stage had been passed, and that the rule of Japan, whether as a protectorate or that of an integral part of the Japanese Empire, would thereafter be along the lines of peaceful up-building and development.

But in accomplishing this, Ito did not kill the military discontent with "soft" rule in the Hermit Kingdom nor quell the Korean patriotism that could see no justice short of freedom from Japanese and every other domination. However, when he turned his back upon Seoul and came home to Tokyo, to hand back his creden-

tials and pronounce his task done, it was with a deep sigh of personal relief.

This was the reason of his emotion as he stood up in that brilliant company at the Tokyo banquet. He had had most to do with bringing his native land out of the darkness of feudalism into the light of modern civilization; and now at the sunset of his life—he was seventy-two as he stood there—he had shaped the course which should raise another country out of the dust of ages—a country as large as France, but with a small population—a population for the most part reduced to helplessness by the monstrous exactions of a crystallized privileged class. Now, it seemed to him, he could rest for the remainder of his days in comparative ease.

But the thing was not to be. A new difficulty confronted Japan—a difficulty so serious and requiring such delicacy in the handling that the nation's First Man must undertake its settlement.

As a result of the war with Russia, that part of the South Manchurian Railroad running from Changchun south to Dairen (Dalny) and Port Arthur was acknowledged by Russia, in the Portsmouth treaty, to be the property of Japan. It was part of the line built by the Russian Government as an artery of the great Trans-Siberian Railroad running between Moscow and Vladivostok. The juncture point was Harbin in North Manchuria. After the Japanese had come into possession of that part of this branch reaching from Changchun down to Port Arthur, there still remained—and it remains today—in the hands of the Russians the short piece running from Harbin to Changchun. This was commercially valueless to the Russian system, since all thru business that can be diverted is, by special inducements, drawn over the Vladivostok route to and from the ocean; so that the Changchun piece is really an encumbrance. Therefore, it was natural that the Russian Government should desire to sell it.

But to whom should it be sold?

That was a matter fraught with the utmost importance to Japan. Not so much on commercial or transportation as upon political grounds. For her position in Manchuria is beset with the utmost difficulties. Chinese patriotism regards

her military occupation with suspicion, even if that occupation be only the protection of the South Manchurian road, and to last only for the remainder of the term of the railroad lease, which is fourteen years more, and this only in place of the Russians, who originally obtained the concession and the lease.

But still more serious is the jealousy of competing merchants of other nations who feel—not with justification—that the Japanese Government is making conditions and will continue to make conditions more favorable for its own merchants and manufacturers there than for those of other peoples. And back of

to the concessions wrung from China by Russia. The question has been and is: How get into Manchuria?

The purchase of the bit of Russian railroad between Harbin and Changchun looked like a possible beginning. Thru the Far East it is commonly said that Mr. Harriman looked upon this bit of railroad as the nucleus of a Harriman Trans-Asiatic-trans-European system. At any rate, it appears certain that Russia was willing to sell it either to a banking syndicate of foreigners, in which the Japanese were not included, or else to the Chinese Government, with the tacit understanding that it was then immedi-

RAILROAD STATION AT HARBIN,
Where the transaction of Prince Ito took place.

these bona fide manufacturers and merchants who demand the "open door" for trade, are the banking combinations and the syndicates that reach out everywhere for railroad and franchise privileges—the men who, under the guise of furthering "trade," go in to exploit countries.

Both of these classes of outsiders—Europeans and Americans—have gazed with increasing jealousy upon Japan's occupation of Korea and her falling heir

ately to be transferred to the syndicate.

Such a syndicate owning this piece of railroad, carrying with such ownership the right of military protection, would raise up against Japan the very dangers that drove her into the war with Russia. Therefore, political necessity urged her to buy the road in question, and no less a man than Ito was adequate for the handling of the matter.

Therefore the Japanese Government

invited a conference with the Russian Government, and Ito and the Russian Minister of Finance, M. Kokovsoff, arranged to meet, not at Tokyo, nor at St Petersburg, but at the compromise point of Harbin—the point on the Trans-Siberian line, where the piece of Russian road in question branched off and ran down to the Japanese line at Changchun.

And there on the afternoon of October 26, with the sun shining, and a throng of Japanese officials and obscurer men about, and with the Russian Minister and his attendants a few steps away, the great Ito fell, the victim of a young Korean who shot from among the crowd three times. He fell with a smile and words of greeting to the Russian Minister on his lips; fell at the feet of his country's policy which, if compelled by Japan's feeling of self-defense, yet crossed the rights of the Koreans to be free, if only to lie and groan under the heartless and brutalizing despotism that had sucked the life-blood of that people for ages.

And now at his bier all Japan will mourn. For not only is he the First Man of the nation—he is the Spirit of the Nation incarnate. He is the Meiji era—the era of "enlightenment." He is the new Nippon—the Nippon that began with the fear of conquest and dismemberment by the foreign nations that were even then partitioning other parts of Asia. He represented the new Nippon that felt its first thrill as the young Mikado issued from the palace seclusion of his imperial ancestors at Kyoto, and at the urging of the young Ito and others of the new learning, gave forth the proclamation abolishing the Shogunate, or army leadership, and promised constitutional government, general education and all the conditions of the most enlightened peoples of the world.

Ito, born in 1838, the sole child of a petty clansman of Choshu, had got the seeds of this foreign learning into him very early, and had, while yet quite young, staked his life on it, and against the strict prohibition of the Shogun, determined to go abroad in quest of it. With the youthful Inouye and two others, all three of whom, like himself, afterward came to high distinction, he

cluded the Shogun's guards and got on board an English vessel, and sailed to England.

He and the others returned only when news came that the allied fleet proposed to bombard Shimonoseki, at the entrance of the Inland Sea. To them, it seemed as if the partitioning of Japan was about to commence. They hurried back to their country and threw themselves into the turbulent events that ensued.

Out of those events, in which they were most potent, Ito and Inouye emerged great figures, both holding successively the highest positions of State and being largely the molders of the new institutions. They, with Yamagata, Oyama, Matsukata and a few others, became the chief personal advisers to the really wise Emperor, and by common consent received the unofficial and honorary title of "Elder Statesmen," who have no constitutional place, but who are as real in the councils of the nation as the constitutional Ministers themselves.

Through all the turbulence of his stormy life—a life of home dissensions and foreign wars and rumors of wars; a life of struggling to lift and shape and inspire the nation in the highest ways—Ito cherished the sweetest affection for his boyhood friend, Inouye (now Marquis and full of age and honors). And having no son himself, he adopted as his male heir the son of the brother of this friend Inouye, so that the name of "Ito" might be carried on and a son be left to do homage to his ashes.

And while all the nation, from its august head down, will now do reverence to those ashes, the whole world may take notice of one shining fact. Ito, who had had every opportunity a man could have to become rich, died poor. The house he owned at Omori was given to him by the Emperor. His ways of living, like his personal bearing, were of the simplest. He was one of the great men of the earth, and like most great men, was too much engaged with the master matters to think of the pomp and pride of things. All who met him in his day will remember the gentle, modest bearing, and in the annals of Japan, down to the uttermost posterity, will shine the name of Ito the Great.

Errors of Peace Advocates

BY AMOS S. HERSHEY, Ph.D.

PROFESSOR OF POLITICAL SCIENCE AND INTERNATIONAL LAW IN THE INDIANA UNIVERSITY.

THE peace movement of our day has gathered such momentum that it seems urgent to call attention to some of the excesses committed in its name.

One of these is the demand that our text-books on history be emasculated in the interest of peace. It is probably true that many of these texts devote too much space to narratives of war and descriptions of battle at the expense of the arts of peace and the progress of civilization. But the fact remains that our children take more interest in these narratives than in what are often to them dry details regarding art, science and inventions. For instance, it is doubtful whether interesting descriptions of social life and customs of Colonial days are more stimulating or valuable as a means of developing character or imagination than the stories of heroism and sacrifice contained in the annals of our Revolutionary or Civil War. It is also doubtful whether the New Testament appeals as strongly to the imagination of the child as the Old Testament, or whether the stories told by Homer or Plutarch are less soul-stirring or ennobling than the account of Penn's treatment of the Indians or the narratives contained in the "Lives of the Saints."

Moreover, our leading authorities on child study tell us that the child repeats in his imaginative life the general experience of the race; and it seems to follow that some concession should be made to these tastes and inclinations. Furthermore, it is extremely doubtful, to say the least, whether the imaginative cravings of the healthy normal boy, who is both a hunter and a fighter by instinct and inheritance, should be left wholly unsatisfied in any sound pedagogical scheme. Likewise, the average girl shares in these memory experiences of the race as an interested onlooker, if not as an actual participant; and her rôle in history as the nurse and worshipper of the warrior cannot be wholly ignored.

But there is a weightier reason for refusing to allow our text-books to be expurgated by the extreme peace advocates or non-resistants. They do not seem to have an adequate appreciation of the importance of war as a factor in the history of civilization. They apparently fail to realize that from Marathon to Mukden nearly all questions of political or racial freedom and dominance have been decided on the battlefield.

It is true that the coming reign of perpetual peace, as predicted by seers like Micah, Isaiah and Jesus, and advocated by great thinkers like Penn and Kant, is one of the noblest ideals of the race. It is not as visionary and impossible of ultimate realization as many imagine, but it is a vision of the *future*, and history is a record of the *past* experiences of the race.

In looking backward into the past as far and clearly as he can, the student of history with trained vision sees progress and co-operation; but he also sees that life is a continuous and relentless struggle with its environment, and that *human* life is largely a struggle between more or less hostile groups resulting in the survival of the fittest—*i. e.*, those best fitted to survive under given conditions. Beginning with the family, whether in its matriarchal or patriarchal form, he sees it ever widening into the gens or clan, the clan into the phratry or curia and tribe, the tribe into the city and city-state. In the case of Rome, *c. g.*, he sees the city-state expanding into a great empire, and by the exercise of a marvelous statecraft and the use of a superior military formation and discipline gradually swallowing up all the rest.

He may then survey the gradual breaking up of this empire and the formation of new groups held loosely together by a system of land ownership based on a military tenure known as feudalism. He sees the feudal barons of the Middle Ages engaged in desperate

struggles with each other—struggles which result in the survival and dominance of the strongest and most unscrupulous, like the Normans in England, the Capets in France, the Hapsburgs in Austria, the Hohenzollerns in Brandenburg, and the Romanoffs in Russia.

There gradually emerges the states system of modern Europe based on the doctrine of absolute territorial sovereignty and legal equality of sovereign states. In a few instances, like Holland and Switzerland, the ideas of confederation or voluntary union and democracy prevailed over those of annexation and conquest, and in England a series of happy accidents led to the development of representative and cabinet government. These have since proved to be the leaven that has leavened the whole lump.

Since the seventeenth century the struggle between these large competing groups or states has continued, and is still going on, altho the groups themselves have been largely transformed by modern industrial and socialistic ideas.

In the economic field a similar process is actually going on under our very eyes. It has for some time been predicted by a few theorists like Marx and Engels that the practice of unregulated struggle or competition between modern business and industrial enterprises must inevitably result in the destruction of the weaker and the survival of the stronger, the better organized and the more unscrupulous.

This brings us to another criticism of a certain type or school of peace advocates. They refuse to face the world as it really is and has been, or they take refuge in a one-sided view of the evolutionary process. They will not see that we still live in the midst of constant peril and warfare; that we are confronted on all sides by possible external as well as internal foes; and that life is still a struggle in which those best adapted to their environment survive and flourish.

Of course there is a brighter side to the history of civilization than the one outlined above. Alongside of hostility and struggle there has been co-operation and voluntary association. There has been enormous and cumulative progress

in the arts and sciences, more especially during the past few centuries. But we can no more afford to ignore one side of the shield than the other.

The problem of peace is related directly to attitudes between national groups or states rather than to standards within any particular group. At the present stage of our still very imperfect civilization it is primarily a question of national interest or expediency rather than one to be determined by any particularistic point of view or system of personal or individualistic ethics.

Now if we look abroad upon the world as actually constituted into political or national groups, we find that it is virtually organized into a loose and inchoate confederacy of forty-five supposedly sovereign states representing various degrees of political, economic and social development. Eight of these are great Powers, of which several are world empires, with colonies and dependencies under varying degrees of dependence ranging from complete subjection to almost complete independence.

These forty-five sovereign states are in legal theory equal and independent, but some of them, like Cuba and Montenegro, are so in appearance only. Others are united by political alliances into larger but more or less uncertain and shifting groups. The most important of them are well equipped with the most destructive weapons devised by inventive genius, and modern Europe is virtually an armed camp. These sovereigns profess and practise an imperfect code of international ethics and certain rules of diplomatic etiquette, which are based partly on principles of justice and partly on considerations of policy or expediency and self-interest. One and all, they recognize war as a legitimate means of settling serious disputes among themselves. There is a growing sentiment and practice in favor of arbitration and even of making such arbitration compulsory in certain cases. The recent Hague Conference declared in favor of obligatory arbitration *in principle*, but was unable to agree upon its application in more than one class of cases, viz., claims arising from contractual debts. This is an important step in advance and somewhat lessens the danger of war, especial-

ly between Europe and the United States, but it only tends to diminish the many possible causes of war by one.

Another common error of peace advocates is the view that arbitration is the sole and sovereign preventive of war. Diplomacy has prevented, as it has caused, many a war. In the daily intercourse of nations, it is constantly at work healing wounds, adjusting claims, arranging compromise, and preventing friction. And recent experience during the Russo-Japanese War has shown that there are also great possibilities in mediation and commissions of inquiry.

Arbitration is no longer an experiment. During the past century there have been several hundred successful applications of this treatment, with practically no failures. The time has come when it is criminal as well as absurd for nations to appeal to arms to settle mere boundary disputes, to collect pecuniary claims, or even to secure reparation for breaches of treaty or violations of international law. Experience has shown that such questions are capable of judicial determination and should be settled by arbitration.

But there are, unfortunately, theoretical as well as practical limits to arbitration, for there are higher and more vital ideals than even those of peace. Such are the ideals of nationality, humanity and justice. Prince Bismarck and Count Cavour found in war a means for the realization of German and Italian unity, and the United States went to the rescue of Cuba in the interest of humanity. President Roosevelt has repeatedly called attention to the fact that there may be a conflict between the ideal of peace and that of justice.

Moreover, there are questions affecting the very life and growth of a nation, questions affecting its sense of dignity, honor and conscience or moral worth, questions affecting the welfare of the race and the future of civilization which it would be extremely difficult, if not impossible, to submit to arbitration, at least at the present stage of civilization and political development. The United States will never consent to arbitrate any question endangering the existence of the Monroe Doctrine; neither Russia

nor Japan could probably be induced to delegate to the Hague tribunal the settlement of their commercial and political rivalries in the Far East. It does not follow that such questions must needs be decided by the arbitrament of the God of Battles, but they are, under existing conditions, not proper subjects for judicial arbitration.

There seem, however, to be questions whose Gordian knot can never be cut except by the sword. How, for example, would it have been possible to drive General Weyler out of starving and dying Cuba except at the point of the bayonet? How could the independence of the Dutch or American republics or the unity of modern Germany or Italy have been accomplished except at the cost of war?

Another source of error on the part of many peace advocates is the confusion of symptoms and causes of war. Modern navies and standing armies are to be classed as a symptom which reveals diseased or abnormal conditions of international relations rather than as a *casus belli*. Indeed, under present conditions, it is a question whether they are not also to be considered in the light of a preventive; for it cannot be denied that with all the cruel and crushing weight with which they rest upon modern industry and civilization, modern armaments have actually preserved the peace in Europe for a generation. Whether this peace may not have been purchased at too dear a price is another question.

The causes for war are various and manifold.* They have their root in human nature, in the passions, appetites, aversions and ambitions of mankind; and in the economic, political and social conditions under which men seek for the means of existence and enjoyment. On the one hand, we have to reckon with certain human factors, such as hunger, greed, national jealousy, racial aversion, love of glory or national vanity, and a desire to gratify these passions; and, on the other hand man is often confronted with conditions in his physical, political and so-

*The writer has made an attempt at a classification of causes in an article in *The Reader for September, 1907*, pp. 340-341. Certain passages of that article have been reproduced in this article.

cial environment which make it difficult to gratify these desires without a resort to violence. At any rate, the temptation to use force, under certain conditions, seems at times to be well-nigh irresistible. Until human nature is radically changed or social and political conditions are vastly improved, we shall probably continue to hear of wars and rumors of war.

A more or less extended study of the causes of war has convinced the writer that the most potent and prolific cause, even of modern wars, is the old passion for aggression and conquest. In recent times this passion assumes the form of commercial imperialism or a desire for economic supremacy, and nations with this virus in their blood are constantly seeking new fields for colonial expansion and commercial exploitation. Hence follow national rivalries and jealousies which may lead to war. If religious and dynastic wars are a thing of the past, recent contact between Orientals and Occidentals seems to indicate that there is danger of a recrudescence of racial antipathies which, if they continue to grow, may furnish us with a new *casus belli* to which it will be extremely difficult to apply the principle of arbitration.

Here, then, is a promising field for the labors of the pacifists. Beyond urging the settlement of disputes by arbitration and a limitation or armaments, let them address themselves to the task of softening the racial antipathies and bringing about a better understanding between the nations; devise ways and means for checking the aggressive spirit of modern commercial imperialism; secure a limitation or abolition of the right of conquest—a right at present clearly recognized by international law; try to persuade the nations to refrain from violating each other's territorial entity and sovereignty and to content themselves with

the exploitation and development of their own resources; and substitute, if possible, other nobler and less vulgar ideals for the ideal in statesmanship of mere commercial success and material prosperity.

But the most promising field for our activities as peace advocates lies in the international organization of the world on a federal basis, thus eventually insuring the permanent reign of peace and the establishment of universal order. Such an organization would not wholly eliminate the possibility of insurrection and civil war, and an international police power composed of small navies and slight standing armies might still be necessary in order to maintain the peace, repress violence and suppress insurrection. This is the way pointed out by the system of periodical peace conferences, to the ever-increasing prestige and extended scope of which we may look forward with confidence. It is the way of federation or voluntary union—the path followed with such beneficent results by the United States, Holland, Switzerland, Canada and Australia. The alternative is a continuance of the present struggle between the nations, which must inevitably result in the survival of the strongest and most unscrupulous—in the ultimate establishment of a world empire with a *pax Romana*.

The federation of the world is often regarded as a mere vision of the poets and a dream of philosophers. But it may be observed that in the Hague Tribunal or Court of Arbitration, we actually have, albeit in rudimentary form, a World Judiciary; in the system of periodical Hague conferences we have at least the rude beginnings of a World Legislature; and in the Administrative Council and International Bureau at The Hague we may in time discover the germ of a World Executive.

BLOOMINGTON, IND.

The Increase of Divorce

BY SAMUEL W. DIKE, LL.D.

[Dr. Dike has devoted his attention for many years to the problems of marriage and divorce, and is president of the National League for the Protection of the Family.—EDITOR.]

WE are now able, as we never have been before, to study the movement of divorces in foreign countries. No attention was given by Americans to the divorce statistics of Europe until Woolsey made a beginning forty years ago. But even when he published a revised edition of his work in 1881 he was able to give data for only three or four European countries and a half-dozen of our own States. Bodio of Italy and Bertillon of France, in their little pamphlets two or three years later, added somewhat to our knowledge of the movement in European countries. But none of these students was able to give data sufficient to show any general movement. A House of Lords report in Great Britain later added a very little to these sources.

But in 1889 the great report of the Department of Labor at Washington, made by Carroll D. Wright, put an entirely new face on the subject. This report, in a volume of 1,074 pages, gave a summary of the marriage and divorce laws of all the United States and of seventeen European countries and the statistics for the twenty years 1867-1886 so far as possible. This report brought out pretty clearly—what had been suspected and predicted by now and then one—that there was a great movement in respect to divorce that was affecting not only all parts of the United States, but nearly if not quite all Europe.

The recent issue of Part I of the Report of the Census Office bringing the report of 1889 down to the end of 1900 and extending the investigation to other European countries as well as to Algeria in Africa, Japan and Formosa in Asia, and to Australia and New Zealand, and incorporating in its pages the material parts of the old report, enables us to take a still wider view of the movement as well as to see its outlines for forty years in many countries and in some for a far longer time. For these two reports of the United States have

carefully gathered up not only the official figures the Government has collected, but added whatever other sources can supply. With slight exceptions it is a complete record of all that is known statistically on the subject. The report of 1889 was said on good authority to have attracted more attention and to have brought more credit to the Department of Labor than any work it had then or even since done. The fuller material and the more complete analysis made of the material cannot fail to make the present work, in two volumes, of far more value than the earlier one has been.

The one fundamental fact established by this last report is that divorces are increasing everywhere thruout the world so far as we have figures, except in Japan, where for a special reason, as we shall see later, they are decreasing.

A few countries give figures for forty years or more. Taking first those for forty years only we have the following for Europe: Belgium in the forty years increased her divorces from 130 to 618 in a year, England and Wales from 130 to 670, Scotland from 32 to 202, Ireland from 1 to 6, France from 2,181 to 13,098, Baden in Germany from 19 to 270, Bavaria from 270 to 746, Hesse from 28 to 183, Saxony from 396 to 1,470, Württemberg from 94 to 259. The Netherlands increased from 133 to 995, and Sweden from 1867 to 1905 increased from 128 to 448. For shorter periods other figures are now given. Austria increased divorces and separations from 748 in 1882 to 2,309 in 1906. Hungary increased from 910 in 1876 to 3,638 in 1905—that is, in twenty years. In Bulgaria the increase from 1887 to 1900 was small, being from 204 to 292. In Denmark, which next to Switzerland, has the highest divorce rate in Europe, the increase was also relatively small, being from 479 in 1891 to 589 in 1906. In the German Empire as a whole there were 3,942 divorces in 1881 and 12,180 in 1906. Italy, which has no divorce,

granted 723 separations in 1867 and 867 in 1904. Rumania increased her divorces from 276 in 1871 to 1,800 in 1904. Finland in thirty years from 1875 to 1905 increased from 55 to 153 in 1905. Poland from 163 in 1867 to 345 in 1886. Russia outside of these two last granted 1,066 in 1867 and 1,385 in 1886. Russia has not furnished statistics for the last twenty years. Servia granted 297 in 1887 and 426 in 1904. Switzerland, having the highest divorce rate in Europe, about 1 divorce to 20 marriages in 1906, granted 1,102 in 1876 and 1,343 in 1906. Norway has made the greatest increase in proportion to numbers of any country in Europe, having gone from 33 in 1870 to 366, or eleven times as many, in 1906.

In foreign countries outside of Europe we now have statistics for a few. Canada granted 4 divorces in 1868 and 42 in 1906. The Commonwealth of Australia and New Zealand granted 74 in 1887 and 465 in 1905. From the Far East we have the statistics of Japan and Formosa. Japan had 110,859 divorces in 1887 and 60,179 in 1905. The ratio of divorces to marriages was 1 to 3 in 1887 and 1 to 5 in 1905. The remarkable decrease is explained largely, if not wholly, by the fact that divorce in Japan, which formerly was entirely within the control of the families concerned, except in case of disagreement, became the subject of the

regulation of public law in 1898, since which time the number has been a little over half what it had been. In Formosa, now under Japan, there were 860 divorces in 1898 and 4,939 in 1906. But the figures for the earlier date are probably wide of the mark, evidently being those reported from the imperfect returns of the first year of collection. In the later years there was 1 divorce to 6 marriages. From Africa we have data only from Algeria, since it has been under French rule, which leaves the Mussulmans and Jews to their own systems of marriage and divorce. There were among all classes 12,405 divorces in 1881 and 14,735 in 1905. Among the Jews in Algeria there was 1 divorce to 18 marriages, among Europeans 1 to 29, and among the Mussulmans 1 to 3. It is noticeable that the ratio for the years reported among the Jews of Poland was 1 to 4.

As a whole, divorces have nearly doubled in Europe in the last twenty years. In the United States, notwithstanding the high rate already attained they have increased well toward threefold or from 25,535 in 1886 to 72,062 in 1906. There were 9,937 in 1867 in the United States. It is clear that there is a world-wide social movement that for good or for evil is affecting the most fundamental of social institutions.

AUBURNDALE, MASS.

The Better Part

BY HORACE MERRIMAN HAYDN

'Twere sweet to win the plaudits of the crowd,
To do, or say, or write the thing unique.
Yet more, to hear within my soul—not loud,
But clear as silvery chime—Thee, Master,
speak:

"Thou hast wrought well thy work. 'Tis mine
To recompense thee. Dost repine?"

'Twere sweet to have possessions large in
store,

With unchecked hand to succor human need.
Yet if that joy Thou dost refuse to pour
Into my cup, I scan Thy life and read
That Thou didst give to man no gold,
No gold, but only love unfold.

'Twere sweet to turn the erring heart to Thee.
Yea, Master, sweeter than thou might be
side.

Wilt Thou not grant me some such then to
see,

Whom I have brought in Thy dear cross to
hide?

I bid me "Peace." Can I yet know
The harvest? Mine in faith to sow.

Fain would I cleave, Lord, to this better part.
Here would my restless spirit rest content.
Help me to still the tumult in my heart.

That in Thy calm each new day may be
spent,

Until, beyond all mist of tears,
I read the meaning of the years.

Literature

Around the Globe

WITH all the interesting spots of this earth discovered and explored, it would seem as if the literature of travel must gradually and ere long become but as an oft-told tale, were it not that rediscovery may prove more interesting than discovery itself, and that no two pairs of eyes ever yet saw alike, or went forth to look at the same things from the same viewpoint. He who goes to find the Italy

of the Renaissance will have a different tale to tell from his whose preoccupation is with Roman remains, and the lover of German medievalism will not speak of the new empire which alone another will see clearly, and comprehendingly describe. The aspect of the earth is changing every day, as it has been changing since history—and travel—began. One can still journey with the Bible, Herodotus or Mandeville, or—Mark Twain:

"RAM" IN THE LIME LIGHT
From Bayne's "A Fantasy of Mediterranean Travel" (Chicago)

one can follow the ejaculatory itinerary of the schoolma'am; one can pin his faith to Baedeker. The results depend, not

and keep the courts where Jamshyd gloried and drank deep.

New realms of travel are being made

MURIAHIE AND MEN DESCENDING A DESERT DEFILE
From Furlong's "Gateway to the Sahara" (Scribner's)

upon the tour, but upon the tourist. The familiar haunts of Nature will be centers of civilization tomorrow; London Bridge is awaiting its traveler from New Zealand to sketch from its broken arches the ruins of St. Paul's; the lion and the liz-

accessible to us; the world grows ever larger, because the perfection of our means of transportation is ever making it smaller. We shall "trip" to the ends of the earth—even unto the poles—in the footsteps of the discoverers and the

pioneers, then, these resources exhausted, we shall return to the places nearer home, grown new and strange and interesting again, worth rediscovering because long neglected. The automobile has carried us back to the days of the

*French Provinces*¹ demonstrates that even France still holds unknown delights as great as those praised a hundred times, and in places as accessible as they. We thought ourselves perfectly familiar with the beauties and picturesqueness of

the French chateau, did we not? Well, Mr. Peixotto has rediscovered others, famous once, forgotten now — Vaux-le-Vicomte, Courances, and Fleury-en-Bière—all three of them easily reached, in the neighborhood of Fontainebleau. Here is a suggestion capable of infinite expansion, but there are others in this book, which is one long imitation, extended with contagious enthusiasm, to go wandering by autoboot and autocar, around Paris and away from it; and, after the felicitous manner of modern travel writers, Mr. Peixotto does not forget, in his enthusiasm, to be practical in his rôle as guide. His drawings are a delight, of course.

The cradle of modern civilization, the seat of its prehistory, from the pillars of Hercules to Bible lands, is having its season of rediscovery. Whether the great Powers in Morocco, or Mr. Hichens in the Sahara, are responsible for our reawakened

LANDING AT CHAMPERICO.

From Walter's "Guatemala and Her People of Today." (Doubt & Co.)

stage-coach, plus certain modern advantages; what the aeroplane will do for us remains still to be seen.

A rediscoverer in familiar places is Mr. Ernest Peixotto. His *Through the*

French Provinces. By Ernest Peixotto. Illustrations by the Author. Charles Scribner's Sons. 8vo. \$2.50 net.

interest in Northern Africa, it were hard to decide. Suffice it to say that Mr. Charles Wellington Furlong is in the nick of time with his *Gateway of the Sahara*,² a book on Tripoli and

The Gateway of the Sahara. By Charles Wellington Furlong. Illustrated by the Author. Charles Scribner's Sons. 8vo. \$2.50 net.

Tripolitania, the most truly African part of Barbary, which, a work of travel today, will be but a mysterious, picturesque reminiscence tomorrow, when civilization shall have done its inevitable work. The book has local color, it is excellently written, the mixed population, its strange ways and methods of thought, as they reveal themselves to the

tomorrow the foreign legions of France? Yes, Mr. Furlong is just in time. Like Mr. Peixotto, he is his own illustrator, and, again like him, as handy with brush and pencil as with his pen.

What may well be described as a tour of discovery, so far as the means of locomotion is concerned, is Mrs. Frances Kinsley Hutchinson's *Motoring in the*

Copyright, 1900, by Fleming H. Revell Company.

them over after its own image, which is not, so far as the tourist is concerned, one of infinite variety. The book furnishes good reading, there is so cheerful a holiday atmosphere in its pages. It demonstrates, also, that this magnificent trip can be made without the dangers one has come to connect with travel in the Balkans. It all depends upon the traveler, his tact and attitude.

Mr. Norman Duncan, journeying far from Labrador, has taken the Bible as his guide in *Going Down from Jerusalem*,⁴ a book that has all the charm of a first visit paid by an observant, highly impressionable traveler to an unknown country. It is not only nature that has impressed him there, its warm beauty, the peace of its star-studded nights, the parching heats of its deserts, but the human nature of its denizens, their *Weltanschauung*, formulated entirely by their religion, the peace it gives, and also the baffling lack of concord in them between practice and precept.

Mr. S. G. Bayne evidently was determined to take a good mental rest when he started on the trip which has produced *A Fantasy of Mediterranean Travel*,⁵ and he has unmistakably carried out the determination. His text is of the most casual, superficial character, but his illustrations are excellent.

While *Court Life in China*⁶ is not strictly speaking a book of travel, it may well find a place here. Its author, Mr. Isaac Taylor Headland, husband of the physician of the late Dowager Empress's family, devotes nearly one-half of his pages to the life, character and reign of one of the great women rulers of history, a woman whom the West will probably never learn to judge with the impartiality that is her due, since it can never make the viewpoint of the Orient its own. The rise of this middle-class Manchu girl to absolute power in the oldest and numerically the greatest of empires must ever remain a romance of the East to us, far stranger than any invented by its tellers of stories. Mr. Headland testifies anew to the influence

she acquired over all who came in contact with her; he also talks pointedly of the injustice and double-dealing and violence that went to the formation of her conception of the Foreign Devils. The Emperor Kuang-Hsü is next discussed, so are the Chinese statesmen. In the writing of his studies of court life, and of the private and social life of the ladies of the upper classes the author has had the full benefit of his wife's exceptionally close knowledge and experience.

The good work of making us better acquainted with our fellow-Americans to the south of us goes on apace. The latest contribution to that knowledge, which still remains scant, is Mr. Nevin O. Winter's *Guatemala and Her People of Today*,⁷ with chapters on the neighboring republic of Honduras and British Honduras. As in his earlier book on Mexico, the author combines the practical with the historical and picturesque: our possible share in the making of the Guatemala of tomorrow is of as much interest to him as the country and the people, their civilization, manners and customs of today. It may not be amiss to register in this place a protest. Much was said and written during the recent Hudson-Fulton celebration regarding the scant display of the British flag in this city, but the total neglect of the national colors of our two American sister republics who sent representatives—Mexico and the Argentine—was passed over unnoticed. Again, much enthusiasm was bestowed upon the martial bearing of the British and German sailors and marines, but not one word of praise was given to one of the finest bodies of men in the foreign ranks of the military parade—the Argentinians.

An autumn season without a book or two by Miss Esther Singleton would seem incomplete, indeed. This time she gives us *Famous Cathedrals Described by Great Writers*,⁸ ranging from Moscow and St. Petersburg all the way across Europe to Dublin and Burgos. This is, we believe, her twenty-second "famous writers" book. They have their uses, and deserve their popularity.

Literary Notes

....We have received too late for review in our Educational Number the following books from Silver, Burdett & Co.: Howe's *Elements of Descriptive Astronomy*; Barry's *Hygiene of the Schoolroom*; Conn and Budington's *Advanced Physiology and Hygiene*; Sprague's *Macbeth*; Book II of the *New Century Geographical Series* and Book III of the *Progressive Road to Reading Series*.

....E. Byrne Hackett has resigned from the Baker & Taylor Company, publishers and booksellers, of this city, and will assume the management of the Yale University Press. Among the early publications of the Yale University Press will be the addresses delivered by the British Ambassador, James Bryce, in the Page Lecture Series and a controversial book entitled "The True Makers of Prophecy," by Canon Hensley Henson, who while in this country some months ago spoke before the graduating class at West Point.

....Mr. Dana Estes, M. A., is the editor of a new series of little volumes, *Noble Thought Books*, the writer chosen to open it being (it was almost unavoidable) Marcus Aurelius, while the second volume is entitled *The Noble Thoughts of John Ruskin*. The introductions furnished by the editor are, in the main, historical and biographical. There appears to be an inexhaustible market for publications of this kind, every season bringing the old favorites in some new and handsome form. The present edition is bound in green leather, and of a format easy to slip into a coat pocket. (Dana Estes, \$1.50.)

....A thoroly revised and enlarged edition of Mrs. Harriet Earhart Monroe's *Washington: Its Sights and Insights*, first published six years ago, makes available again an informing, well-written guide to the national capital. The author is briefly historical whenever necessary, which is, of course, quite often, but the chief interest of the book lies in its information on the current state of the various government departments, the number of their employees, the work done by them, etc., an occasional anecdote (not always laudatory of the things that be in our politics, even under civil service rules) leavening the record. The illustrations are all new. (Funk & Wagnalls, 1 net.)

....The veteran musical commentator, Mr. George P. Upton, whose "Standard Operas" and "Standard Concert Guide" have won a multitude of appreciative friends among music lovers, has now supplemented those worthy and useful handbooks by the publication of a volume devoted to concise and untechnical analyses of the lesser works in the modern concert repertory—overtures, suites, symphonic poems, rhapsodies, fantasias, etc.—which he entitles *Standard Concert Repertory* (McClurg, \$1.75). The book includes all the important compositions in those kinds currently performed, and marked by the author's thoroughness and painstaking care in compilation; is, in short, a useful and handy book of reference.

Pebbles

MR. LINGERLONG. I had a queer adventure this afternoon—

Miss de Muir (with a swift glance at the clock)—You mean yesterday afternoon, I presume.—*Chicago Tribune*.

COLLEGE STUDENT—Roses are red, violets are blue, Send me ten dollars and I'll think of you.

Loving Father—Some roses are red; others are pink, Enclosed find ten dollars, I don't think.

DR. C. H. PARKHURST, the eloquent New York clergyman, at a banquet of a religious club, said of charity:

"Too many of us, perhaps, misinterpret the meaning of charity as a certain deacon misinterpreted a Scriptural text.

"This deacon, a pillar of the Western church, entered in his journal:

"The Scripture asserts that 'if a man take away thy coat, let him have thy cloak also.' Today, having caught my hostler stealing my potatoes, I have given him the sack.'"

AN INSURANCE COURTSHIP.

They both lived in a fourth-class country town, without fire protection, but love laughs at such obstacles as this. He had made up his mind to ask the fatal question which he felt would either make or mar him, and to that purpose walked slowly up the steps of the two-story frame dwelling with no exposures within sixty feet. Only the day before he had gained the good will of her father by obtaining a 15 per cent. reduction in his rate on account of the new metal roof which had been placed on the paternal home.

As he touched the electric bell (installed according to the rules of the National Board of Fire Underwriters) his heart swelled to the bursting point.

"Let it burst," he murmured. "Have I not life insurance to the amount of \$5,000?"

The object of his affections was radiant in an Empire gown of pale pink, bought at Jones & Smith's fire sale at a reduced price. He could wait no longer.

"Beloved," he exclaimed, "for three weary years I have endured the life of a local agent, all for your sake. For three years I have cut rates, stole and perjured myself, and tonight I make application for your heart for a term which will never expire. Your love is all the commission I desire. I have furnished five rooms of a small brick flat, gravel roof, parapet walls, insured for three times as much as it is worth, and if you will be mine I shall be as happy—almost as happy—as the day I beat that non-union agent out of a \$10,000 risk. Nothing earth can give will ever equal that bliss. Have no fear. The moral hazard of the risk you take is perfectly good, the rate adequate, and—and—" But she was the daughter of an insurance commissioner and could not long withstand such technical wooing, so with a happy sigh she fell into his arms.

"You will always be fully protected," he whispered.

That night he received a telegram stating that he had been appointed special agent. Well! Well!—*Rough Notes*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Prince Ito's Unfinished Task

THE assassination of Prince Ito in the Russian railroad station at Harbin means more to Japan than the loss of one of the greatest of her Elder Statesmen. All of that unique group of men who raised a medieval kingdom to the rank of a world Power in a single generation must soon depart. But this is a calamity like the death of a general on the field of battle in the midst of a campaign. It is like the killing of Gustavus Adolphus at Lützen. For it is a mistake to suppose that the Peace of Portsmouth put an end to the Russo-Japanese War. It has been going on ever since and never more actively than now. No armies are marching and no navies are sinking, otherwise the tactics are much the same. As before, railroads are the chief weapons of offense and defense, and, as before, it is the financial interests that control the campaign. The prize is Manchuria, one of the richest regions of the temperate zone open for exploitation by modern commerce. The industrial pioneers of all nations, including our own, are looking with longing eyes toward this inviting field.

If the reader will refer to a map he

will see at a glance the general lines of the Japanese strategy. There is Korea, looking like a wedge driven into the Asiatic continent. Japan is the mallet doing the driving. But the point of the wedge is blunt. That, however, can be remedied. If the reader will lay his ruler on the northeastern point of Korea and draw a line to the west, then lay it on the northwestern point of Korea and draw a line to the north he will sharpen the wedge and drive it into the heart of Manchuria. This is what the Japanese are doing with the two railroads which China has with great reluctance agreed to let them build.

Of one of these railroads the world has heard much. It runs from Antung on the Yalu River, which forms the northwestern boundary of Korea, to Mukden, the capital of Manchuria. It was rushed thru during the war to convey troops into the interior. By the treaty of Peking, concluded in early September, Japan obtained the right to "reconstruct" this railroad, making it standard gage and in part following a new route.

But the same treaty provided for the construction of another railroad to the north of this, "as a joint enterprise" of Japan and China. This was something of a surprise, for the general public had no suspicion of this project, altho in fact two links of the proposed railroad had already been constructed. Very unobtrusively the Japanese had developed the port of Chyonjin, which is on the Tumen River in the northeastern corner of Korea, near the Russian frontier, and not far from Vladivostok. From here a temporary railroad had been constructed running into the interior as far as Hoiryong. This is on the boundary of China and just beyond it is the Province of Chien-Tao. Japan therefore laid claim to this province on the ground that it was part of ancient Korea, but finally consented to relinquish this shadowy title on condition of receiving the very substantial compensation of open trading points in the province and the right of way thru it to Kilin (Kirin), which is already connected with Chan-chun on the Mukden-Harbin Railroad. It was for a time something of a wonder why Japan should be so desperately anxious to get

Chien-tao, an insignificant mountainous district scarcely worth policing.

One more glance at the map to see what will be split off when this wedge is driven in. Obviously the splinter is Russia's Far East, including her only Pacific port, Vladivostok. In other words, the Japanese forces have stolen a march over the enemy and turned his flank. Hence this excitement and alarm. Already the St. Petersburg papers not only regard Vladivostok as threatened, but speak of the necessity of abandoning Khabarovsk, on the Amur River, as the seat of government of the eastern province, and removing the administration to Chita, a retreat of a thousand miles. But Manchuria will not be profitable to Russia if St. Petersburg is to be its only seaport. That is why Prince Ito was asked to meet the Russian Minister of Finance at Harbin, but before he could grasp his hand he was struck down by the bullets of the assassin.

What effect this disaster will have upon the situation remains to be seen. The Japanese in Manchuria have three foes to fight—the Russians, the Chinese and the Koreans, not counting the more or less active opposition of the commercial Powers. The publication of the Pekin treaty forbidding the Chinese to construct railroads paralleling the Japanese lines, and permitting the Japanese to construct railroads paralleling the Russian lines, aroused the latent patriotism of the Chinese, and a boycott of Japanese goods has been started similar to that of a year ago. In this movement, as before, the Autonomic Association of Canton and the Chinese students in Japan are among the chief agitators. Various Chinese chambers of commerce in Manchuria have declared their intention of neither hiring Japanese nor buying from them, and the campaign is being carried on by the electioneering methods familiar to us here, by circulars, post cards, dodgers and posters.

The Koreans employ more violent measures. The liberty which they did not raise a hand to defend, now it is lost seems a very precious thing, worthy the vain sacrifice of many lives. The murderer of Ito came from Vladivostok, and this has been used by Korean hands as the base for raids on the Japanese in

Northern Korea. Southern Korea has never been completely pacified, and of late the insurrection has been increasing. The country is overrun with bands like those which used to infest Macedonia, ostensibly inspired by patriotic motives, but raising funds by blackmailing and kidnaping. The Japanese troops are kept busy chasing them and with little avail, for when hard pressed they disappear among the peaceful population. A month ago the Japanese authorities announced that it would be necessary to increase the number of police stations in Korea from 339 to 480, and the assassination has again fanned the fires of insurrection. With the Russian papers threatening war, with the Chinese merchants boycotting things Japanese, with the Koreans shooting and burning, and with Europe and America clamoring for the open door in Manchuria, the Japanese lot is not a happy one.

The New York Customs Frauds

AT the recent trial, in New York, of Antonio Musica and his son, Philip, for defrauding the Government by conspiring with dishonest employees at the Custom House to avoid the payment of lawful duties, three of the Government's weighers testified that they had been engaged in this conspiracy. They freely and coolly admitted on the witness stand, apparently with no compunctions of conscience, that for years they had assisted importers to commit such frauds, sharing with them the profits of the criminal transactions. They also testified that the Collector of the Port, Mr. Loeb, had not only promised immunity to them, in return for these sworn confessions of guilt, but had also undertaken to retain them in the customs service of the United States. At the conclusion of the trial Judge Holt, before whom this testimony had been given, expressed his emphatic disapproval of that part of the agreement which provided for the retention of these men as employees in the Custom House. "It is not only discreditable to the Government," said he, "but it is also an injustice to the honest men of the same class in the service to compel them to continue to act in company with men who confess that they have committed crimes in the dis-

charge of public duty and are unfit to be trusted."

We are confident that Judge Holt's opinion is that of a vast majority of the American people. It is sometimes necessary, as he said, to promise immunity in order that the evidence of accomplices may be obtained, but this agreement went far beyond immunity from prosecution. These men, who by their own admission had been doing such foul work a long time (one of them for at least eight years), were to be retained, with their names on the payroll. It may be noted that Judge Holt afterward, while in no way modifying his just criticism of this part of the agreement with the confessing witnesses, commended the "sincere and resolute efforts" of the Collector to stamp out corruption in the service and bring violators of the law to punishment. It is true that Mr. Loeb has set out vigorously to purify the customs service at New York, which was sorely in need of purification. But in promising to keep these rascals at work he blundered.

We have read the statement in which he seeks to defend himself. "Without their testimony," he says, "a conviction could not have been obtained. They knew perfectly well that if they should be discharged and should then testify that they had taken bribes, it would be practically impossible for them to procure employment elsewhere and their families might starve." This is not a sufficient excuse. It seems to us that it must have been possible to obtain their testimony by a promise of immunity alone. If good detective work had brought them to the point where they were inclined to confess in order that they might avoid imprisonment, it was unnecessary to add the extraordinary reward of continued employment. It has been asserted repeatedly, without contradiction, that this agreement was approved by Secretary MacVeagh long before it was disclosed in court. We are not ready to believe this. As a merchant, Mr. MacVeagh has employed a large number of men. We do not think he could be induced to show such extraordinary favor to three rascals who had been robbing him for years. As for the difficulties which the corrupt weighers would

encounter in seeking employment elsewhere, such annoyance and hardship would be light punishment in comparison with the years in prison which they deserve.

There are many indications, in the sworn testimony and in other evidence, of persistent and wholesale corruption in the customs service at New York. There is reason to believe that some importers have solicited corrupt action for their own benefit, that others have been blackmailed, that employees in some instances have extorted bribes, and in others have been invited to take them. This corruption on the part of employees is partly a legacy from the days when appointments were rewards for political work. Many of those placed in the service under the old conditions had been unfitted for honest work by their connection with "practical politics."

We notice that, in all the excuses given for the favorable treatment of the guilty weighers, there is an assertion or an assumption that it was almost impossible for the Government to bring to light the corruption, the existence of which for years past is admitted, and to secure the punishment of the guilty. Now, we do not believe that the unearthing of this corruption would have successfully defied the efforts of skillful detectives, and we suspect that few if any detectives of ability have been used. It is known that the frauds have caused a loss of millions in revenue. One company has paid back more than \$2,000,000 that was stolen. One employee is said to have enabled importers to take \$1,000,000 by fraud. With one-tenth of the money that has been lost the Government could have paid for detective service that, in our opinion, would have upset the schemes of the conspirators and placed a considerable number of them in the penitentiary.

Whenever a crime highly profitable to corrupt importers is brought to light, the full penalty provided by law should be exacted. When the Sugar Trust paid between \$2,000,000 and \$3,000,000 to the Treasury on account of frauds in weighing, a much larger sum was justly due under the law, and should have been recovered.

Suffragists and Suffragets

We have learned to make a sharp distinction between the two, suffragists and suffragets. The one employ, to carry conviction, the arguments of persuasion and peace, the other those of violence and war. The suffragists use the methods of modern civilization; the suffragets those of discarded barbarism. The suffragists have won their fight, in their own legitimate way, over large portions of the Christian world; the suffragets have not yet, in their short career, won a single victory, nor have they gained anything beyond hostility, disgust and lawful arrest. The suffragists keep within the limits of the law in whose making they have no part except by silent consent; while the suffragets resist and flout all law, because they were not consulted in the making of it, no matter how necessary and beneficial.

We do not believe that the sanity of American women will be overcome by the example of the violence of their English sisters. Mrs. Pankhurst is here talking to our women, but she finds them suffragists, not suffragets. She does not urge or devise the methods of violence by which the English suffragets attempt to compel the attention of the masculine voters. Mrs. Catt and Mrs. O. H. P. Belmont do not assault the Mayor or Governor; they do not scream from the gallery of the legislative hall, or smash windows of hostile officials; they hire a hall, they send to their own big meeting delegates from every assembly district in the city, make vigorous speeches in their own meetings, and pass sensible resolutions. This gets columns of attention, even in the midst of a hot municipal campaign, and no little respect. It is a way that helps their cause in this land of feminine sanity; and we notice that Mrs. Pankhurst herself, in her campaign here for her cause, invited here from England to help female suffrage, does not venture to approve the methods which at the Bermondsey by-election sent women to smash a masculine ballot box and destroy the ballots. Really, the British way of courting imprisonment and then starving themselves to death, after the example of Russian patriots, may influence and convince British members of Parliament, but it is not to be safely ventured on in this

country. It will not work. It is too ludicrous. Our women have some sense of the incongruous.

In England, Ireland, Scotland and Wales women can now vote in all elections except for members of Parliament. This right has been achieved without violence. The same limited right of suffrage is granted in Denmark, Sweden and Iceland, while all rights of suffrage are given to women in Norway, Finland, Australia and New Zealand, and in four of the United States. All these rights have been peacefully secured; men have been converted to the sense of justice and have yielded them to argument, not to force. To attempt violence is simply ridiculous, almost amusing. Violence is not a woman's weapon. Men could sweep women into the sea, but they don't want to. What Australia and Colorado have given, the rest of our States will give, with a fair degree of patience; and the resolutions passed at the crowded meeting of women in Carnegie Hall were as sensible and just as they were peaceable.

Robert Browning and William Watson

BROWNING's poem which everybody knows, "Just for a handful of silver he left us," is said to have been directed against Wordsworth after he had received the honor of Poet Laureate, and had forgotten the high hopes of liberty which had inspired his sonnets at the time of the French Revolution. That was a magnificent poem, full of disappointment and regret more than of indignation, sternly condemnatory, but without a trace of vindictiveness, filled with a high passion for liberty, and closing with ultimate forgiveness. It is a model for righteous rebuke, severe but poetic.

Such is not the shorter poem by William Watson, included in his last volume and protected from republication by copyright. It is directed definitely against an unnamed woman, a woman still living, and is nothing more than versified abuse, whether justified or not we do not know. We are told that she is a woman of the highest position below royalty, and that everybody in England knows who she is, altho they do not print her name. We in this country are not supposed to know.

She might be the Premier's wife for all we are told or know. Indeed, one wonders whether there is no political venom in the poem quite as bitter as anything that exudes from the woman's tongue. The poem is entitled "The Woman with the Serpent's Tongue," and she is described as having a "hungering eye" and "venomed fangs" "malignant lipped," one who "sneers at the just," "blackens goodness in the grave" and whose position gives her the opportunity to do all sorts of vicious mischief.

This is not legitimate poetry; it is bilingsgate, simply rimed abuse. Let any one compare it with Browning's "Lost Leader," and he will see that Browning's is the expression of lofty sorrow that has not lost sympathy, but which must speak for justice and liberty, while this flings against a woman the bitterness of personal or political animosity. Like Browning, William Watson did not get the poetical recognition from his Sovereign or his Sovereign's Minister which he may have thought he deserved, but in Browning's lines there is no sense of disappointed vengeance. It is the purpose of Watson's poem to damn the woman described in all her social and public relations. That is not manly. • If she has influence such that her hands

"Can touch the springs
That move who knows what men or things,"
or kings, then let the responsible men in office be condemned, and not the woman behind them, no matter what venom is in her tongue.

And it is not poetic; it is baldly prosaic, with no touch of imagination, no ray of beauty. It has force enough, but a tetrametric succession of sledge-hammer blows does not constitute poetry. Violence is prosaic and requires special illuminative radiance to make it at all poetic. The publishers thought the poem ought not to have been included in the volume, and so think we.

Anemia and Physical Reform

THE announcement that Mr. John D. Rockefeller has given \$1,000,000 for the crusade against the hookworm and the anemia caused by it in this country means almost beyond doubt that in the next decade this parasite will cease to be a serious factor in mortality or morbid-

ity in the United States itself or in any of its territories. In spite of its ravages the worm is quite easy to eradicate, and prophylaxis of the disease is a comparatively simple matter. It was ignorance of its presence and lack of information with regard to the symptoms caused by it and its mode of ingress into the human system that has encouraged its spread. As it is, it seems probable that the successful crusade against this parasite will represent the second great benefit that has been conferred on us in the sphere of medicine by the Spanish-American War and the problems which it created. The American occupation of Cuba forced American enterprise and science to seek out and demonstrate just how yellow fever was carried and so bring about its eradication. The American occupation of Porto Rico led to the discovery that so-called tropical anemia, supposed so often to be due to a combination of the unwholesomeness of the climate and the effect of past malaria, was really due to the presence of minute parasites. These were the so-called hookworms, familiar enough in certain parts of Europe and in Egypt, but supposed to be non-existent in this country. The knowledge of the disease gained from Porto Rico soon enabled American experts to recognize the presence of the same parasite in our Southern States, and to the utter surprise of Southern physicians it was found that their worst anemias were due to this cause.

Some idea of the ravages that can be worked by apparently so trivial an agent the hookworm is only from one-fourth to about one-half an inch in length—may be gathered from the fact that in Porto Rico in 1903, in a total of 23,500 deaths, over 5,700 were from anemia and practically all of these the consequence of the presence of the hookworm in the intestines of the patients. The farther the investigations have been made in the South the greater has been found to be the extent of territory over which the worm exists and also the greater number of patients affected by it. The worm does not occur above the Potomac to any extent, for it finds the Southern climate much more suitable to it, so that it flourishes best only in tropical and subtropical regions. There is no danger of its ever becoming a national

affection, and yet it has done much to injure vitality at the South, and has been not only the cause of many deaths, but has been productive of an apathy and a lack of ambition in a great many people. It is no wonder that this should be so, for when thousands of little worms are fastened to the intestinal walls, sucking the very life blood of the patient, and occasionally migrating from one portion of the intestines to another, but always leaving a little bleeding spot from which, for a time, at least, blood oozes, it is scarcely to be expected that the victim will have much energy for anything in life.

The affection itself is extremely interesting, for it is one of the oldest diseases that we now seem to be able to trace definitely in the history of the race. It exists very commonly in Egypt and, indeed, for a long time the peculiar anemia which it causes was spoken of as Egyptian chlorosis. Dr. Sandwith, the English physician who has made a special study of Egyptian diseases during his long residence there, states that the descriptions of old Egyptian writers make it very clear that this parasite must have been present in Egypt 4,000 years ago. It was there that the existence of the parasite was first demonstrated about the middle of the nineteenth century, and it was supposed to be strictly limited in its habitat to this part of the world. One of the medical surprises of the time was to find that it existed among the workers in the St. Gothard Tunnel. Then came the further discovery that this so-called tropical or Egyptian anemia was very common in miners, brick-workers, tunnel workers, and, indeed, in many of the trades in which workmen were engaged in the handling of soil. We have had the same experience in this country since the discovery of the existence of the parasite in the Southern States. For instance, in the mines of Pennsylvania the disease has been found to exist, tho fortunately not to any serious extent. There is no guarantee, however, against its spread, for in recent years it has increased very much among the miners of Germany and Austria-Hungary. Haldane and Boycott showed that it was quite common in the mines of Cornwall in England.

In spite of the definite tendency of the

worm to become diffused, as is demonstrated by the history we have given, it is a comparatively easy parasite to deal with. We have a different form of it in this country to that which is described in the Old World, ours being at least once and a half as long and probably, therefore, more serious in its effect, but experience has shown that the parasite can be eradicated rather easily. It used to be thought that it found its way into the human intestines thru the digestive tract alone. The habits of workers in tunnels and mines make it rather easy for the eggs of the parasites in their intestines to be transferred to their co-workers thru food and water. Not long ago it was shown, however, by Loos, that the parasites might be hatched from the egg outside the body and that the embryo worms then attach themselves to the skin, gradually bore thru it, find their way into the veins, are carried to the lungs thru the right side of the heart, from here escape from the pulmonary vessels into the air spaces, pass up the bronchi and trachea to the pharynx and then are swallowed with the food and find a lodgment in the upper part of the small intestines. This is such a remarkable migration that only that it is confirmed by the observations of another distinguished expert, Chaudinn, it would be almost incredible.

There is no doubt now that many hitherto inexplicable skin diseases of tropical regions and of miners and tunnel workers must be explained by the presence of this parasite on its way thru the skin. Allen Smith has suggested that the so-called "ground-itch" of the tropics and Haldane thinks that the curious skin eruption called "the bunches" in Cornish miners are produced by the worm in the skin. Once the worm finds its way to the intestines it maintains itself there for years. The liability to reinfection is very great. If the worms are once removed, however, the patient proceeds to get better, provided, of course, the blood degeneration consequent upon daily losses for years and the patient's general condition permit of reintegration. A simple antiseptic thymol kills the worms most effectually and then they are swept out of the digestive tract by the use of some such purgative as salts. This treat-

ment may have to be repeated several times so as to effectually eradicate all of the worms, but in the milder cases it practically works a miracle. In a very short time the patients are new men and women, and, above all, the children lose their pallor and lack-luster look and become energetic individuals.

What is needed, then, is a spread of the knowledge of how the parasite gains entrance, first thru the digestive tract of those who are careless with regard to cleanliness in eating and drinking, and secondly thru the skin of those who go barefooted and fail to wash their feet and hands regularly. None of these precautions are difficult to secure, even in populations that are quite uneducated, and all that is needed is a definite crusade of information and encouragement, and we shall soon be rid of one of the serious paralyzing factors in the life of the Southern people. It will probably mean as much or more for "the poor whites" of the South than would the foundation of several universities. It is a great bit of philanthropy properly directed and well applied.

The Second Battle of Salamis

THE first Battle of Salamis, in 480 B. C., demonstrated the greatness of Greece. The second Battle of Salamis proves its decadence. In those days the valor of the Greeks made King Xerxes start from his throne. Now, when Greek meets Greek all the world laughs. They cannot even hit each other; only the hospital. A military dictatorship is no new thing in Greece. Many times in its history has some strong man made himself a tyrant, sometimes to the benefit of the people he ruled. The disgrace of the present situation lies not, therefore, in the practical suspension of free government, but in the fact that these tyrants of today are not strong men but weak, inefficient, quarrelsome, cowardly braggarts. We all saw what they were a few years ago in their war with Turkey, where they showed a rare combination of bluster and incompetence. Now they are trying to force another war, loading the country with taxes to create a new army and navy. Of course, they know that the Young Turks would like nothing better than to march to Athens, but they know,

too, that the Powers would again intervene to stop it because of the reverence of the world for the former inhabitants of the country.

There is one group of men even more despicable than the Greek officers and that is the group of Greek politicians they have under their thumbs. This new Battle of Salamis was a mutiny against mutineers. That is why it failed. If it had been a mutiny against the Government it would have succeeded. It did before. The Government not only pardoned the leaders in the military mutiny of a few months ago, but at their dictation it dismissed from the army the two officers who remained loyal to it. They require universal military training but with this exception, that the princes, one or more of whom in the natural order may be expected to command the army and navy, are to be deprived of the opportunity of military training.

The legislative procedure in Athens now is as follows: The bills are drawn up by the Military League, all sorts of bills revolutionizing the judiciary, imposing an income tax, making appropriations, etc. Then Colonel Zorgas takes them over to the Prime Minister's and orders them passed without amendment within twenty-four hours by the Chamber of Deputies. And they are passed. One day the Chamber passed twenty-three of these bills in an hour's session. But this did not suit the gentlemen of the Military League. They sent word to the Prime Minister that the passage of bills so swiftly and silently did not look well. It implied disrespect to the League, a sort of *lèse majesté*. Hereafter, they directed, the bills were to be discussed, not rejected or amended, but just discussed according to parliamentary custom. The Deputies complied, and the later bills from the headquarters of the Military League were duly discussed, altho it is reported that the debate was "in a minor key."

The truth of it is, Greece is a spoiled child. She has been coddled by the Powers and saved from the consequences of her own folly until she has lost the power of standing alone. From the time of Marco Bozzaris and Bryon she has been sympathized with, admired and petted without giving any sufficient reason for such favor. And now she is preparing

or war against one of the most warlike nations of Europe, when she is too poor to support her own Government. Russia, France and Great Britain have to drop into the hat \$20,000 apiece every year to keep up the salary of the King.

General Howard The death of Major-General Howard, in his seventy-ninth year, ends the roster of those who commanded an army during the Civil War; General Sickles, who still survives, commanded a corps. At West Point General Howard was fourth in his class, and his military career was distinguished and successful, except in the Battle of Chancellorsville, where, thru no fault of his, he failed to hold his position; but this was richly redeemed at Gettysburg. It was at Fair Oaks that he received the wound that cost him his right arm, but in two months he was again in the field. For a while he commanded the Army of the Tennessee, and dealt General Hood a crushing blow; and in General Sherman's march to the sea he commanded the right wing. After the war he had charge of the Freedmen's Bureau, was president of Howard University, named after him, and later of Lincoln University. What distinguished General Howard from other military officers was his positive religious activity. It appeared in his military career, for he found no conflict between the profession of the soldier and the religious life. He had no idea of settling down, when relieved of military duty, to a life of honored ease, but was always busy in some service for the people, particularly religious or educational. Possibly the pain from his amputated arm, from which he was never free, and of which few knew, accounted in part for his almost restless activity, altho it did not interfere with his persistent cheerfulness. His devotion to the interests of the negro race was constant, and his last years were given to the establishment of an institution for the education of the mountain whites. Doubtless his frank religiousness was the occasion of much chaffing while he was in active service, but Generals Grant and Sherman put the fullest confidence in him. He died suddenly of heart disease

the week after speaking at the American Missionary Association at Burlington, Vt., and the day after he had lectured on "Abraham Lincoln" in Canada. His is the record not only of a distinguished military career, but, what is better, of a useful life.

Anti Clericalism in Italy

Advices by mail emphasize the popular indignation at the recent execution of Prof. Francesco Ferrer by the Spanish military authorities. It evoked a remarkable exhibition of popular anti-clerical feeling in Italy and France. Enormous indignation meetings were held in Milan, Florence and Rome. In Milan, a correspondent writes us, the number of participating remonstrants is reported to have numbered more than fifty thousand. Work was entirely suspended in many cities for one or two days, even the shops and restaurants being closed. Everywhere in Florence the barred shutters bore a placard with the significant declaration, "Closed on account of international mourning" (*Chiuso per lutto internazionale*). Whether rightly or wrongly, the Italian press, in editorials glowing with indignation, attributes the travesty of justice, to which Ferrer fell a victim, to the machinations of the Jesuits and the hatred of the Roman Catholic authorities in Spain. For Professor Ferrer, as founder and director of his famous "Modern School," was an outspoken opponent of Spanish ecclesiasticism. By a legal procedure which nearly all the leading journals of Europe characterize as a blot upon civilization, the guilt of having abetted anarchistic plots was fixt on Ferrer. But Europe persists in regarding this as a mere pretext, under cover of which medievalism has struck a blow at modernism. This conviction has given to the pro-Ferrer meetings in Italy a surprisingly strong anti-clerical character. Naturally the socialistic press and organizations, representing primarily the working people, have taken the lead in these demonstrations. Anarchistic agitators also are trying to make capital out of the situation. But when entire cities participate in such them as of purely factional origin. It is undeniable that the laboring classes in Italy consider the Roman Catholic hier-

archy hostile to their plans for industrial and social betterment. Hence in many places priests were beaten and churches set on fire, while Ferrer was proclaimed another Giordano Bruno. In Florence the authorities yielded to the popular demand that Archbishopric street be rebaptized with the name of Francesco Ferrer. Unless a change of popular feeling ensues Italy must speedily become the scene of a new anti-clerical movement.

When we regret and condemn the execution of Professor Ferrer in Spain, we do not thereby approve his schools or his teachings, and we presume he took part in the Barcelona insurrection. The principles he taught in his schools were simply anarchistic, hostile to government and to the Christian religion, and wholly to be condemned. Here are some of the principles inculcated in Ferrer's schools, and which were engraved on tablets for the scholars to learn:

"The cause of all the injustices suffered by men, whether privileged or disinterested, is found in the belief in a supernatural Being, and in the relations between men established by religion.

"The flag is a rag of various colors attached to a staff, the symbol of tyranny and misery.

"Property has been acquired by spoliation and theft, under the designations of industry and commerce.

"All evils, all sufferings, all injustices are due to that stupid and brutal thing called Fatherland."

We are not surprised, and we are pleased, that the Southern Presbyterians are so much bothered by criticisms from other bodies about the "elect infant" clause in the Westminster Confession, that the presbyteries are now voting on the proposal to amend it. As it now reads it says: "Elect infants dying in infancy are regenerated and saved by Christ thru the Spirit"; which pretty plainly intimates that there are non-elect infants who are not saved, which was a common belief two hundred years ago. The amendment proposed by the Southern Presbyterians turns the words about and reads, "All infants dying in infancy are elect, and regenerated and saved by Christ thru the Spirit." That straightens it out, but it would be better to throw overboard the entire obsolete Confession.

Three deaths by football on Saturday, and others seriously wounded, are an argument against football as it is played, but not against football. Any strenuous business or amusement has its dangers, whether football, or baseball, or canoeing, or motoring, or hunting, or aeronautics, but they are not to be given up; simply to be made as safe as possible in a world full of dangers and where people will take risks. Certainly football involves more physical exposure than bridge or poker, but we would rather see our college boys devoted to football than to bridge or poker. Doubtless the game ought to be opened up or soccer take its place, but football is a good, manly game and will continue.

We have not many such noble men left as John S. Kennedy. Few are those who begrudge millions to men like him. He was a modest man, who made no noise over what he gave away, over a million to the Presbyterian Hospital in this city and many tens or hundreds of thousands for various universities, colleges and city museums. His wealth came to him legitimately and was used in accordance with the altruistic principles which his religion inculcated. He began life a poor boy and ended it at eighty one of the richest and most honored citizens of this city. Even Constantinople and Robert College, of whose board of trustees he was president, will mourn his death.

Thomas M. Mulry, president of the St. Vincent de Paul Society, says he has been for over thirty years conversant with conditions in every section of the city, and that Mr. Turner's story in *McClure's* is "most outrageously false," and that this is "one of the cleanest cities in the world." It is a strict rule of the St. Vincent de Paul conferences to help only reputable people. Possibly the Good Shepherd Sisters of East Ninetieth street could tell quite a different story.

It is authoritatively announced that Herbert Gladstone will accept the peerage which his father repeatedly refused. Both are right. The Grand Old Man did not need a title to make him distinguished.

INSURANCE

The Limitation of Life Insurance

THERE has been a growing conviction on the part of well-informed underwriters that the limitations placed upon life insurance were not only burdensome but unjust. Darwin P. Kingsley has thus placed himself on record and he has recently secured the co-operation of L. G. Fouse, president of the Fidelity Mutual Life Insurance Company, who holds that while a check on extravagance is always desirable, nevertheless limitation may be and has been carried too far. It was desirable that New York and other States should limit the expense account of life insurance companies. But when the laws of New York and other States go a step further and limit the surplus and other conditions closely allied with solvency, Mr. Fouse cannot but strongly condemn these. Many billions of dollars are underwritten for the benefit of dependents of producers. Taxation of insurance companies is so easy that it has grown and is constantly growing. And yet life insurance is an institution that does much to ameliorate the condition of the human family. It is likewise a greater distribution of wealth than has ever before been devised. Insurance also does much for the improvement of economic and social conditions. The modern trend toward extravagance, not only on the part of the individual but also on the part of the State, should be curbed and then the unjust burdens laid upon life insurance could easily be modified or repealed. Competition could be relied upon to regulate the accumulation of surplus funds if the laws require, as they should, a full and complete accounting for the information of policyholders and the public and do not permit the making of contracts that are in the interest of gambling rather than in the interest of protection. The proper province of legislation lies with principles rather than with details. Another limitation that has been severely criticised is that limiting the new business which may be written in any one year by any one company to \$150,000,000.

Life insurance contracts are not for a year; many of them are for more than a generation, and some of them extend to

two generations. If eagerness to excel in volume of business should at any time be at the expense of permanency and properly serving the patrons of the companies, then there should be some regulative restriction or forms of legal limitation, so that the insured may for all time be properly protected. Life insurance payments, by reason of the payment of renewal premiums, are cumulative, and keep on increasing from year to year, with a corresponding increase in the burden and responsibility of investing the funds. Such increase should be so regulated as to prevent men from attempting to control or monopolize, not only the business of life insurance, but, thru the large accumulations, other businesses and even governments. This is a matter serious enough to call for reflection on the part of the thoughtful.

The legal limitation as to volume should never prevent a company from making good the decrement, or in fact from making a slight increase of business, even tho it should have a billion or more insurance in force, and there is much doubt whether there should be any limitation or restriction on any company until it has approximately a billion of insurance in force.

If a company has such a volume of business on its books, the attention of its managers should be directed in the main to serving its policyholders efficiently and economically, rather than to increasing the volume of insurance in force.

THE Association of Life Insurance Presidents is considering a proposition presented by President Dryden, of the Prudential, looking toward the appointment of a commission of experts having national reputation. The purpose will be to study exhaustively the matter of the taxation of life insurance companies and to report upon the findings of the commission. At a meeting held in this city on October 8 the subject was referred to a committee composed as follows, viz: Paul Morton, president of the Equitable; Sylvester C. Dunham, of the Travelers; Vice-President Ward, of the Prudential, and Manager Cox.

Financial

Steel Corporation's Quarter

At the meeting of the Steel Corporation's directors, on the 26th ult., it was shown that the quarter's net earnings had been \$38,246,907, an increase of nearly \$9,000,000 over those of the June quarter. The recent advance is indicated below:

End of Quarter.	Net Earnings.	Unfilled Orders, Tons.
Sept. 30, 1909.....	\$38,246,907	4,790,833
June, 30	29,320,491	4,057,939
March 31	22,921,268	3,542,595
Dec. 31, 1908.....	26,225,485	3,603,527
Sept. 30	27,100,274	3,421,977
June 30	20,265,756	3,313,876
March 31	18,220,005	3,765,343

Following the panic, the earnings fell to \$18,000,000 in the first quarter of 1908, from \$32,500,000, \$43,800,000 and \$45,500,000 in the three quarters immediately preceding. Some expected, last week, a larger increase of the tonnage of unfilled orders. In explanation it is pointed out the company, with an enlarged plant, can dispose of orders more promptly now than it could in past years. It is noticeable that appropriations from earnings for additions to property, construction, etc., were resumed, the sum thus deducted, \$10,000,000, being the first appropriation of the kind since \$6,000,000 was set aside in the last quarter of 1907.

The dividend on the common stock was placed upon a 4 per cent. basis. This appears to have been expected by some who have promoted the extraordinary speculative movement in the shares. At the close on Saturday, the price on the Stock Exchange was 90½, showing a net gain of 3½ for the week. Trading in these shares still leads the market. Last week it was 29 per cent. of the total, and for the last four weeks it has been 32½ per cent., or 6,300,000 shares.

Trade and Production

TRADE reports continue to be highly favorable. The demand generally is strong and broad. Manufacturers' order books are filled. The pig iron output in October even exceeded September's unprecedented quantity. Steel mills are

breaking records. October's railway gross earnings show an increase of more than 10 per cent. Railroad companies are making heavy purchases. The New York Central placed orders last week for \$25,000,000 worth of locomotives and cars, and is about to buy \$4,600,000 worth of rails. It intends to spend \$60,000,000 next year in reducing grades, straightening curves and laying additional tracks. President Brown says:

"The expansion of traffic of all sorts within the past few months has been marvelous. The improvements we are going to make are absolutely necessary to meet the demands of business. My latest reports show that every car and engine in the system is in active use."

The price of cotton has been raised to about 15 cents, the highest figures in thirty years except for a time during the Sully movement in 1904. Mills all over the world are reducing output by shortening time. In this country, about 50 per cent. of the mills in New England will be doing this by the middle of November, but in Fall River and New Bedford the manufacturers, whose recent annual reports show good profits, are not inclined to take part in the movement. In Georgia 150 mills have decided to reduce time by 25 per cent. for two months, and a majority of the South Carolina mills will cut their time to five days a week.

....In 1904, when the deposits of the Girard National Bank, of Philadelphia, passed the \$25,000,000 mark, a dinner was given to celebrate the event, and it was proposed that there should be a similar dinner for each successive addition of \$5,000,000. Circumstances prevented such a celebration when \$30,000,000 and \$35,000,000 were reached, but the passing of the \$40,000,000 mark was duly recognized last week at an elaborate dinner given by Morris L. Clothier at the Union League to the bank's officers and directors.

....From Savannah, last week, 3,000 tons of steel rails were exported by the Alabama branch of the Steel Corporation to buyers in Argentina, where they had been sold in competition with the rails of European mills.

The Independent

DL. LXVII NEW YORK, THURSDAY, NOVEMBER 11, 1909 No. 3180

Survey of the World

President Taft Leaving New Orleans early on the morning of the 1st, the President stopped for several hours in Jackson, Miss. In an address there he spoke of the importance of agriculture. Farming should become a scientific profession:

If I were advising a young man in this country as to his future profession I should tell him that there was probably greater opportunity for real reward in assiduity, industry, attention to business and scientific investigation in the profession of agriculture than in any other profession this country affords.

Your State has the tradition that most of our great men were both lawyers and farmers. I am not altogether certain that that combination makes for good agriculture. I am sure that some of the distinguished members of your bar find, or did find that before you set up everything of that sort, that a glass of milk was about as expensive as a glass of champagne.

But the tendency toward the country and country life is a tendency that we ought to encourage. It tends toward sane, philosophical and quiet consideration of the problems of life. It takes out that nervous exhaustion of energy; it takes out the gambling spirit; it takes out of the life of the citizen that hurry and restlessness that carries men quickly to their graves, and it makes for the happiness of individuals and families far more than any trade or profession that brings you into the great maelstrom of city life."

There was much to be done in the way of educating laborers. The negroes, he said, "may grow to be good citizens and useful to the community by acquiring education, as they have acquired it in the past." At a banquet that evening, he warmly praised Secretary Dickinson, whom he had chosen for the Cabinet because he desired to show by an example the truth of his declaration that he was anxious to bring the South closer to the Government at Washington. He ended:

"One of your great heroes of Mississippi is Jefferson Davis, and I am glad that the Administration at Washington has wiped out the evidence of that extreme partisan bitterness at Cabin John Bridge, and that his name is restored there as Secretary of War. I am glad because I know and can testify from my experience in the South that the same joy that they experience at that act on the part of the Administration is the joy of a common country and loyalty to a common flag."

At Columbus, Miss., speaking to the girls of the Industrial Institute and College, he advised them not to be in a hurry to marry. He wished that every woman in the world was so situated that she need not think it necessary to marry if she did not want to. The best legacy that could be left to a young man was a good education and a good character, developed by training in a family to good moral standards. The same was true of young women:

"I am glad that I shall not have any property to leave to my boys, of whom I have two, but only a good character and a pride in themselves and a good education, but for my daughter I am going to scrape together as much as I can give her and as good an education as I can, so that she may follow the lesson that I have sought to teach her, that she may marry only whom she chooses to marry and not because of circumstances. I think the most important education that we have is the education which I am glad to say, is now being accepted, the industrial education that puts young men and young women in a position whereby they can by their own efforts work themselves into independence. I congratulate these young women on the opportunity which this great institution affords them to carve out their future and their own happiness."

"We have not given the women a fair show. We have not opened all the avenues to livelihood that they are quite as well able to fill as we, and in certain respects better able than we. I am not a rabid suffragist. The truth is I am not in favor of suffrage for women until I can be convinced that all the women desire it. When they desire it, I am in favor of giving

it to them, and when they desire it, they will get it, too."

Columbus is the birthplace of Secretary Dickinson. There the President held a reception at the old home of the Confederate General, Stephen D. Lee. Speaking in the public square, he expressed regret that he could not have met General Lee, because the latter's kindly and gentle influence represented the spirit which he would invoke on the part of every Southerner:

"My friends, one cannot come before a Southern audience, being a Northern man, without having a memory of that which is past, and he cannot come in the capacity in which I have come, as your President, without thanking God that the past is over, not that we are attacking what the past is, but that we have passed through that awful trial on both sides that certified to the world the fiber of our natures and the strength of our American people, in order to show to the world that we were equal to any of them as a world Power.

"Now you Southern people are an emotional people. We have some emotions in the North, too, but if there is any difference, your hearts expand more easily and you are more sensitive, possibly than we are. In order to understand the Southern people (especially with respect to issues of the war and what grew out of it), in order to understand their present position, one must know that your hearts and emotions are broad enough to entertain entire loyalty to the issues of the past which you fought so nobly to sustain, and entire loyalty to our present Government, for which you would be willing to lay down your lives if occasion required it. Now, that is what I know the Southern nature to be, and that is why I come and appeal to you, if appeal is necessary (and I don't believe it is), to uphold the hands of an Administration that is not seeking your votes, but is asking your support and sympathy during an Administration already begun."

In other addresses he expressed his desire to bring the Southern States "closer to all the other States." It was not that he wanted to make the Southern people Republicans, he repeatedly said, but that he desired they should feel that they were "as near the heart of the central Government as any other people in the Union." In one of his speeches at Jackson he told how the late Justice Lamar had befriended and encouraged him when, as Solicitor-General, he felt chilled by the attitude of the Supreme Court. Justice Lamar (a Mississippian) had taken pains to compliment him and had expressed a desire to walk home with him from the court chamber because, the Justice said, "When I look at you I cannot help thinking of my dearest friend,

Grover Cleveland." The President remained for twenty hours in Birmingham, Ala., where he reviewed the largest parade ever seen in the city. He repeated there the substance of some of his earlier addresses and spoke earnestly of his attitude toward the South:

"I would not have the South give up a single one of her noble traditions. I would not have her abate a single bit of the deep pride she feels in all her great heroes that represented her in that awful struggle between the North and South; but I would have the whole country know, as I believe the South is growing herself to know, that it is possible to preserve all those traditions intact and have a warm and deeply loyal love of the old flag to which she has come back, and to know that the North respects her for those traditions she preserves, and does not ask her to discard one; but only wishes to unite with her in the benefits of a common cause, and of a sympathy and association between the people of the two sections that will certainly lead us on to a greater and greater future."

"God bless you!" cried an old man in the audience; "We all love you!" As he left a luncheon party, there were a line of Confederate veterans on one side and a line of Union veterans on the other. He shook hands with them, alternately. Said one of the Confederates: "You have captured the Secessionists, the Ku-Klux, and the cranky Democrats, all of them." At Macon, Ga., there was a general holiday. The President passed under an arch made of \$50,000 worth of cotton bales. In an address he reminded the people that while he should recommend many measures, Congress would be responsible if they should be rejected. Sometimes, he said, a man's head swelled a bit with his momentary authority, and he began to think that a good deal of the constitutional limitation of the President's power might well have been omitted. But our forefathers had built well, and he was not in favor of changing the Constitution whenever he ran against the sharp edge of some restriction. The best way to get rid of a legal limitation that really interfered with progress or reform was to arouse the people to the need of change, and then to change the law, and not rely upon the Executive himself to ignore the statutes and follow a law unto himself because it was supposed to be the law of higher morality. In Savannah there was a grand reception. During his

speech at a banquet there were cries of "second term" and "four years more." Rear Admiral Sperry had spoken of the navy. The President said he agreed with him that there had been "no act of the wonderfully useful and inspiring Administration of Theodore Roosevelt to which we are more indebted than the sending of the sixteen battleships around the world." At the banquet in Charleston, Senator Tillman sat near him, this being the first Presidential entertainment for many years at which he had been present. The Senator also traveled several hours the following day with Mr. Taft, as his invited guest. But he declined to attend the banquet at Columbia, holding that the city should not have required him to pay \$10 for a seat. The President arrived on the evening of the 6th at Augusta, which was his temporary home for two months after his election. All reports agree in saying that he has been received in the South with marked expressions of respect and esteem.

The Elections The most interesting results of the State elections on the 2d inst. may be summarized as follows: In Maryland, the Constitutional amendment designed to disfranchise negroes was rejected. Rhode Island re-elected Governor Pothier by an increased plurality and adopted amendments improving the apportionment of legislators and giving the Governor the veto power. In Massachusetts, Governor Draper was re-elected, but the Republican majority was reduced from 60,000 to 8,000, owing to the new tariff and to the Governor's veto of an eight-hour bill. To disapproval of the new tariff is also ascribed the reduction of the Republican majority in Nebraska from 24,000 to about 1,000. In Kentucky the Democrats made large gains and will have two-thirds of the Legislature. In New York, several Republican legislators who opposed Governor Hughes's plan for direct primary action were unseated and the majorities of others were reduced. There were important municipal elections. In San Francisco, Charles M. Fickert was elected District-Attorney over Francis J. Heney, the famous prosecutor, by 10,200, and P. H. McCarthy,

candidate of the Union Labor party, was chosen Mayor by a plurality of 9,834. The successful movement is hostile to further prosecution in the bribery cases. In Philadelphia the reformers failed to elect D. C. Gibboney District-Attorney. Samuel P. Rotan was re-elected by 43,000. Boston voted to accept a new form of government, providing for a Mayor and nine Councilmen, to be nominated on petition and at large, and subject to recall after two years' service. Mt. Vernon, N. Y., voted for the commission form, with provision for recall. In Cleveland, Mayor Johnson, now in his fourth term, was defeated by Herman C. Baehr, whose plurality was about 4,000. A settlement of the traction controversy will be made, in accordance with Judge Taylor's plan, before the expiration of Mayor Johnson's term. In Salt Lake, the American, or Anti-Mormon, party was again successful. New York elected William J. Gaynor Mayor, but nearly all the other Tammany candidates were defeated by nominees of the Fusionists, who will control the powerful Board of Estimate and Apportionment. A majority of these are Anti-Tammany Democrats identified with reform. The vote for Mayor was as follows: Gaynor (Tammany Democrat), 250,678; Bannard (Republican and Fusion), 177,662; Hearst (Independent Democrat), 153,843. Supporters of Bannard and Hearst united in voting for the Fusion nominees below the head of the ticket. The results of the elections, and the issues involved, are considered in our editorial pages.

A Banker's Great Bequests The estate of the late John Stewart Kennedy, banker, who died in New York on October 31, in his eightieth year, is valued at about \$60,000,000. When his will was filed last week it became known that he had left nearly \$30,000,000 to religious, charitable and educational institutions. "Having been greatly prospered," he said, "in the business which I carried on for more than thirty years in this, my adopted country," he desired to leave some expression of his sympathy with these institutions. A majority of the public bequests are named below:

Board of Foreign Missions of the Presby-

terian Church, \$2,250,000; Presbyterian Board of Home Missions, \$2,250,000; Presbyterian Church Erection Fund, \$2,250,000; Presbyterian Hospital in New York, \$2,250,000; New York Public Library, \$2,250,000; Metropolitan Museum of Art, \$2,250,000; Columbia University, \$2,250,000; Church Extension Committee of the New York Presbytery, \$1,500,000; Robert College, Constantinople, \$1,500,000; University of the City of New York, \$750,000; American Bible Society, \$750,000; Presbyterian Board of Aid for Colleges, \$750,000; Charity Organization Society, of New York, for its School of Philanthropy, in addition to an endowment of \$250,000 already given, \$750,000; United Charities corporation, \$1,500,000; University of Glasgow, \$100,000; Tuskegee Institute, \$100,000; Yale University, \$100,000; Amherst College, \$100,000; Williams College, \$100,000; Dartmouth College, \$100,000; Bowdoin College, \$100,000; Hamilton College, \$100,000; Hampton Institute, \$100,000; Lafayette College, Oberlin College, Wellesley College, Barnard College, Teachers' College, Elnira College for Women, Northfield Seminary, Mount Hermon Boys' School, Berea College, and Anatolia College, Turkey, each \$50,000; Lake Forest University, Center College, and the Syrian Protestant College at Beirut, each \$25,000; American School at Smyrna, Cooper Union, National Academy of Design, New York City Mission and Tract Society, and St. Andrews' Society, each \$20,000; Presbyterian Board of Relief, \$40,000; New York Infirmary for Women and Children, \$25,000; Presbyterian Home for Aged Women, Presbyterian Missions for Freedmen, Bible House at Constantinople, New York Bible Society, Young Men's Christian Association, Young Women's Christian Association, Manhattan Eye and Ear Hospital, New York Orthopaedic Dispensary, Fordham Home for Incurables, New York Society for Relief of Ruptured and Crippled, Charity Organization Society, Association for Improving the Condition of the Poor, Children's Aid Society, State Charities Aid Association, Presbyterian Hospital Alumnae Association, each \$10,000.

Mr. Kennedy made many large gifts during his life. Among these were \$1,000,000 to the Presbyterian Hospital, \$400,000 to make a home for that hospital's nurses, and \$500,000 to Columbia University.

The Philippines and Hawaii At the general election in the Philippines on the 2d, the Nationalists were again successful. They have sixty members of the new Assembly, the Progressists fifteen, and the Independents five. The number of Nationalist Governors of provinces was increased by four. In Manila, Dominador Gomez was again elected to the Assembly. He was excluded two years ago, the courts

having decided that he was not a citizen. The Nationalist party has advocated immediate independence. There was little interest in the election, and a light vote was cast.—James F. Smith, Governor-General, now on leave of absence, has resigned, and W. Cameron Forbes, of Massachusetts, recently acting-Governor-General, has been appointed in his place. The resignation was accepted with regret. General Smith went to the islands in 1898, as a soldier. He has been Collector of Customs, Governor of Negros, Judge of the Supreme Court, member of the Commission, and (since 1906) Governor-General.—Cholera has appeared in Cebu, and it is feared that the disease will spread thru that island.—Several hundred thousand cigars recently imported from Manila and received at New York have been sent back to the Philippines. The Government decided that the old high tariff duty must be paid because the transportation of these cigars had not been direct. They had been carried to Canton and there transferred from one steamship to another. If they had come directly from the islands, they would have been admitted free of duty.—The assertions of several medical experts that many persons held at the Hawaiian leper settlement of Molokai were not lepers are shown to have been true by the results of careful examinations recently made by a special commission of physicians and bacteriologists, in accordance with an act of the Legislature. Of the first one hundred so examined, fifty were found to be free of leprous taint. There are 875 in the settlement, and all will be examined. Many residents of Honolulu who have relatives at Molokai now hope that these will be released.

Cuba and Porto Rico At the opening of the session of Cuba's Congress last week, President Gomez congratulated the people upon the unprecedented crop of sugar, recommended that a tariff with maximum and minimum rates be enacted, pointed to a decrease of the death rate, urged that construction of railways be encouraged by subsidies, and asked that immigration be promoted by legislation. He has issued

a decree requiring all corporations to register at the office of the Department of Commerce, giving such information as the Department may call for. Their books will be subject to official inspection.—The resignations of Justo Garcia Velez, Secretary of State, and Dr. Duque, Secretary of Sanitation, have been accepted. Dr. Duque challenged Secretary Velez to fight a duel. A court of honor decided that a duel was required and it took place. Each of the two Cabinet officers fired four shots and neither of them was hurt.—When letters from this country ordering tickets of the Cuban lottery, or asking for information about the drawings, are received in Havana, they are forwarded to the Post Office Department at Washington. If they contain money, this is returned to the senders, with a statement that the transmission of lottery tickets or circulars in the mails is forbidden by United States law. On the other hand, when our Government learns of the reception here of lottery circulars from persons in Havana, it gives the information to the Cuban officers who have charge of the lottery.—The new Governor of Porto Rico, Col. George R. Colton, was inaugurated on the 6th. Complete self-government under the flag of the United States, he said in his address, would eventually be gained by the people of the island. Every permanent resident who desired to become an American citizen should be entitled to do so. He asserted that under an act of Congress three years old any Porto Rican could acquire American citizenship.

The Budget Passed

The finance bill, which has been hotly discussed in the House of Commons and in

the country at large ever since its introduction by the Government on April 20, was passed on its third reading in the House on November 4 by a vote of 370 to 149. The Nationalists abstained from voting, but only two Liberals joined them in this. In the House of Lords the debate will begin on November 22, when the bill comes up for its second reading. It is thought likely that the Lords, encouraged by the Unionist victory in the recent Bermondsey election, will refuse to consider the bill and so force an election. The

budget bill has been much modified and extended in the course of its discussion in the House of Commons. It originally filled with its schedules sixty-two folio pages of print; now it takes up more than a hundred. The most important section is that relating to the taxation of land values, which originally consisted of twenty-eight clauses but has been extended to forty-two. It provides four kinds of new taxes: (1) Duty on increment value; (2) reversion duty; (3) duty on undeveloped land; (4) duty on minerals. The duty on increment value is a tax of 20 per cent. levied on any increase in the "site value" of land accruing after last April. It is to be paid whenever the land is sold or let on lease (for more than fourteen years), and whenever it changes hands by death. In the case of corporations, which do not die, the duty is to be paid periodically every fifteen years, beginning with 1914, instead of on transfer thru death of the owner. If there is no increase or a decrease nothing is due. After the first payment duty is only charged on the increment since the previous payment. "Site value" equals "total value" minus any buildings, machinery, or other structures, growing timber, fruit trees, fruit bushes, and other things growing. And "total value" equals "gross value" minus depreciation due to any fixt charges, public rights of way, rights of common, or any agreement restricting the use of land. The following are exempt from the increment tax: 1. Agricultural land, so long as it has no higher value than its value for agricultural purposes. Land for sporting and allied purposes is classed as agricultural land, except where its value for such purposes exceeds the agricultural value. 2. Small houses occupied by their owners for twelve months previous to the collection of the duty and not exceeding £40 a year in London, £20 in any other town of 50,000 inhabitants, £16 elsewhere. 3. Agricultural holdings of not more than 50 acres and £75 annual value, occupied and cultivated by their owners for twelve months. 4. Land held by any corporate or incorporate body for the purpose of games or recreation without view to profit. 5. Crown lands. 6. Buildings used for separate tenements or flats.

The Cook-Peary Controversy

The Committee of Research appointed by the National Geographical Society of Washington, after an examination of the evidence presented by Commander Robert E. Peary, unanimously decided that he had reached the North Pole April 6, 1909. The Committee had before it his original journal of records and observations together with all his instruments and apparatus. His notebook showed the latitude and longitude for each day of the journey and the details of the observations. The record was supported by the corroborative evidence of the leaders of the four who accompanied him on the greater part of his dash to the pole, the last being Captain Bartlett, who was sent back from latitude 87 degrees, 40 minutes. The Board of Managers recognizing this as the greatest geographical achievement that the society could have an opportunity to honor, voted that a special medal be awarded to Commander Peary. Capt. C. A. Bartlett was also voted a medal in view of "the able seamanship, pertinacious effort and able management displayed during the Peary Arctic expeditions." The following action was taken by the board in regard to the claims of Dr. Cook:

"Resolved, That the question of whether or not any one reached the North Pole prior to 1909 be referred to the committee on research, with instructions to recommend to the board of managers a sub-committee of experts who shall have authority to send for papers or make such journeys as may be necessary to inspect original records, and that this action of the society be communicated at once to those who may have evidence of importance."

The membership of the Board of the National Geographical Society is the following: President, Willis L. Moore; vice-president, Henry Gannett; secretary, O. P. Austin; treasurer, John Joy Edson; editor, Gilbert H. Grosvenor, Prof. Alexander Graham Bell, Admiral C. H. Chester, C. J. Bell, Rudolph Kauffmann, Brig.-Gen. John M. Wilson, retired; Dr. T. L. MacDonald, Prof. J. Howard Gore, H. F. Blount, David Fairchild and F. V. Coville. The president of the society telegraphed to the University of Copenhagen stating that the committee which had access to the original records of Commander Peary is about to visit Copenhagen and requested the university to

grant them the courtesy of being present at the official examination of Dr. Cook's papers. This request was resented and the Consistory of the University unanimously voted to decline the offered assistance, taking it for granted that the data and records after their examination would be placed at the disposal of other scientific institutions. They thought it improper to give preference to the American over any other geographical society and unfair to admit to their councils those who had already taken the side of Commander Peary and express their skepticism of Dr. Cook in the strongest terms. Rear-Admiral Colby M. Chester, who is a member of the sub-committee which examined the records of Commander Peary and was appointed to assist the University of Copenhagen in passing upon the claims of Dr. Cook, denounced Dr. Cook as a fakir in a speech before the University Club of Washington. He is reported to have said that Dr. Cook admitted to him two years ago that the picture of the summit of Mount McKinley was a trick photograph made by draping some canvas over a table. He expressed the opinion that Dr. Cook never got closer than 564 miles to the North Pole. According to his published report he saw the midnight sun for the first time, whereas he should have seen it as early as April 1, if his latitude had been what he claimed. Dr. Cook attempted to explain this by stating that the sun had for many days been obscured by clouds, but this is contradicted by his own narrative, in which he states that the weather was clear enough to make frequent nautical observations between April 3 and April 7. Accepting Dr. Cook's observations, they indicate, according to Admiral Chester, that he was going southward instead of northward.

The School Question in France

Now that the French ecclesiasties are freed from their connection with the State, they are entering upon an open and active political movement for the defense of the parochial schools and repeal of legislation antagonistic to the interests of the Church. At the congress of Catholics held in Toulouse under the presidency of Archbishop Marcy, resolutions were

adopted declaring the right of the Church to hold property, including monasteries and convents, and demanding the restitution of the property forfeited under the separation law. The aim of the new movement was most clearly expressed by Archbishop Cabrieres, of Montpellier, when he said: "We must become political as well as religious leaders, like the bishops in other countries." In the campaign of 1910 efforts will be made all over France to secure the election of candidates obliged to support the interests of the Church and to prevent any further aggressions on the part of the Government. The execution of Ferrer, whose name is associated with an extreme type of secular schools, has stimulated the movement against the clerical control of education in both France and Italy. The radicals of strong anti-clerical tendencies, under the leadership of ex-Premier Combes, are rejecting the enactment of laws abolishing all private and religious schools, and compelling all the children in the country to attend the national schools. Between these opposing parties the Premier, M. Briand, is endeavoring to keep the Government in a moderate and fair position. In an address at the opening of the new building of the League of Education, he said:

"The public schools are the hope of the future security of France, and if their enemies succeed in undermining the schools it is the Republic itself which will be weakened. The Government will strive to obtain adequate laws, but the support and defense of the people will be most efficacious."

France, he declared, will never obey orders from the outside, and Catholic France does not view religion as an instrument of political propaganda, and will never permit the overthrow of public institutions by force. The Government is expected to intervene for the protection of the schoolmasters who are being prosecuted by the Committees of Catholic Parents which are being formed throughout France. A bill is being prepared which will make the Government instead of the individual teacher the defendant in all such cases. *The Temps*, which is a semi-official organ, strongly opposes the aim of the Combistes, holding that France is a free country and every creed has the right to provide for its adherents

the kind of religious education it deems proper, and that such prohibitive legislation would be the institution of a policy as oppressive as the Revocation of the Edict of Nantes. The financial difficulty also will prevent the State monopolizing education. There are at present 1,122,375 children attending the private schools and to provide for them would cost some \$80,000,000 and the annual expenditure of \$15,000,000 for salaries and maintenance.—President Fallières in his address on the dedication of the Education Building, expressed his personal conviction of a strong desire to see equality established between the sexes. The laws should be the same for both, and women ought to be on an equality with men in social life.—Premier Briand has come out in opposition to a change in the electoral law introducing proportional representation as in Belgium. It would, he thought, result in the enactment of laws which would be ineffective because they did not command the sympathy and support of the public as a whole. Since the Socialists under M. Jaures have made a strong point of electoral reform of this kind, the opposition taken by M. Briand will still further alienate his supporters on the Left.

Lieutenant Tibaldos, who **Foreign Notes** led the recent mutiny in the Greek navy, and escaped after the surrender of the revolting flotilla at Salamis, was arrested at midnight on the Kephisia road. He and his companion, Lieutenant Demoulis, were disguised in citizens' clothes. It was the desire of the Government that Tibaldos be charged only with a political crime, but the senior naval officers join with the Military League in demanding capital punishment for the mutineers. Some of the minor officers engaged in the mutiny have been reinstated, but their men treat them with contempt and refuse to obey them.—King Manuel of Portugal is a guest of King Alfonso of Spain for the week. Later he will go to England. The train bearing the King of Portugal was, for his greater safety, switched to a local station near the palace and all the people, including newspaper reporters, were excluded from the platform.

A Bond Issue for Reclamation

BY WILLIAM E. BORAH

UNITED STATES SENATOR FROM IOWA

THE arid lands are, when water is artificially applied, the richest and most productive lands in the whole region of the West. They produce almost everything grown in the temperate zone, they produce abundantly and as yet show no sign of speedy impoverishment. It is estimated by those who have studied the subject and are qualified to speak that when the Reclamation Service shall have completed its work, twenty-five million acres of these arid lands will have been reduced to cultivation; divided into forty-acre units we have 625,000 new homes. Estimating five members to each family we have 3,125,000 people prospering where the desert shortly reigned supreme. We should add to this also the thousands who constitute the inhabitants of the new towns springing up in connection with and depending upon the success of these reclamation projects. When you take into consideration the richness of the soil, the healthfulness of the climate, the boundless empire of wealth thus created and realize all this is in the end to be accomplished without one dollar of cost to the Government, you begin to grasp the incalculable worth of the work which the Government is now doing thru the Reclamation Service. It is the wisest, most beneficent and most permanent work in which statecraft can engage. It would seem to require some temerity to stand in the way of its speedy completion.

The reclamation law provided for the reclamation of arid lands by making use for that purpose of the funds realized from the sale of the public lands in the arid States. The cost of such reclaiming was to be charged to the lands reclaimed, and those settling upon the arid lands must pay in full such charges before acquiring title to their lands. The public land fund, in other words, became a revolving fund, depleted with the expenditures as made, augmented as the title passed to the settlers.

A great many projects have been be-

gun and are now in course of construction. Settlers have gone upon the lands and are awaiting the application of water to their lands to begin raising crops and repaying the Government charges. Under the homestead law they cannot leave their lands without forfeiting their entry, and under the laws of nature they cannot stay very long where they are without water, without forfeiting their existence. The income from the sale of public lands available for this work is only about \$9,000,000 per annum, a sum wholly insufficient to complete this work within any reasonable time. Unless it is completed within a reasonable time many settlers must forfeit their entry, their time and money already expended, and lose their opportunity of securing a home. The Government remains out of the money expended that much longer. The simple question presented is, Shall the Government, without expense to itself, proceed to complete these works with all reasonable dispatch?

The President, after passing thru the great arid region and understanding well the situation, declared in favor of a bond issue with which to raise funds for the completion of the work now in the course of construction. This seems wise and just. The bonds are to be paid out of the public land fund, which in the end must be met wholly by the settlers. The lands bear the burden. The settlers are willing and anxious to have this done, the Government is out nothing, but, on the other hand, must be greatly benefited by speedy action. It is merely loaning the credit of the Government for the speedy completion of this work without any expense whatever, when the matter shall have been closed up, to the Government.

The question of sending more men to farm, of attaching more citizens to the soil, of finding room for more homes, is not only a question of immediate import touching the welfare of those homesteaders who have gone upon these lands

good faith, but it is a question nationwide and entering profoundly into the economic situation now confronting us. The hegira of the last thirty years from the farm to the city is beginning to have effect upon the whole economic life of this nation. Things will only be better when the face of the American citizen turns from the crowded and congested conditions of the city to a more extensive home life on the farm.

There is another side to this question also. More American farmers are crossing the border this fall into Canada than ever before. One of our great newspapers estimates that seventy thousand farmers will go to Canada to live this

fall and will take with them seventy million dollars in cash and effects. We can ill afford to lose these people, among the very best of our citizenship, and the wealth which they take with them both in dollars and in muscle and brain. It is the duty of this Government to meet this great principle of conservation not in a theoretical way, but in a practical way, and this is an instance where the wisdom of Congress may well be tested upon this subject. If inducement can be held out to help persuade the farmer to remain here and develop our great natural resources and utilize our agricultural lands we should do so.

BOISE, IDAHO.

The Unattractiveness of American Men

BY AMANDA SAEPE QUAESITA

[Of many letters called out by the article in our issue of October 28, by "An Unwilling Celibate," we select the following for publication by a woman of high character and position, for whom we vouch.—EDITOR.]

HAVE read the article on "Why Educated Women Do Not Marry," in the October 28 issue of THE INDEPENDENT, with the interest which every one must share who belongs to the class of unmarried and educated spinners therein discussed. I sympathize wholly with the irritation felt by that writer, at the criticism of our manner of life, and agree with her that the fault is not ours. My experience has, however, been different from hers, for from accidents of propinquity or whatever reason, I have been asked in marriage a normal number of times, in most cases by men whom I liked and who were eligible enough. And yet they were in every sense absolutely out of the question when considered as possible husbands. I, like the writer of the article, am a college graduate, with a doctor's degree from a large university. I have known many men, and have been genuinely fond of them as comrades in work and recreation. I think I have been more intimate with men in some respects than with women, for in my branch of work I have often found them more companion-

able intellectually than women. But one does not marry for the sake of intellectual discussion. One can have that without marriage, and as a *suitor* the American of my acquaintance is a distinct failure! He does the main thing; he proposes (at least in my case he has done so), but with no marked courage, romance or charm; and unless a woman is very anxious to marry in the abstract, there is little temptation to fall in with his wishes.

To illustrate my point more clearly, let me describe my courtship experiences frankly. I recall five occasions when the question has been put to me by men whom, in a certain fashion, I liked. The only one who *made love* to me in any strict sense was an interesting but impossible foreigner, who tried to persuade me that when he had become a diplomat we could rule in a foreign salon together! I heard of him later as a bank clerk, and have since lost track of him entirely.

Two others were college professors, interesting after a fashion, but with no social experience, absolutely without

accomplishments in any but their own subjects, and both prone to monologs in conversation which sent me into a doze. It may be asked why I liked them at all, and why they should, without encouragement, have asked me to marry them. I do not know, for certainly I am no coquet, but I venture as an explanation that in the first place they wished to marry some one; in the second place, they found me an eligible person in looks, family, behavior and domestic economies; and thirdly, they mistook my genuine interest in their professional activities for a sentimental leaning toward them as possible husbands.

Even then, if they had stuck to their point and shown a certain recklessness in overcoming resistance, I am sure they would have gained my respect, even tho not my affection. As it was, the lady-like submissiveness with which they took their dismissal, and the briskness with which they began to court the next girl on the list excited nothing but amusement.

The other two were professional men, college-bred, and one had a further record of scholarship behind him. But each in his separate fashion was quite out of the game from the start. I will pass over details of plainness of face and meanness of stature, for, after all, those are secondary matters. The main difficulty was, that in every possible respect I was their superior, conceited as that may sound. They said this themselves, and they were quite right. I was more accomplished, more traveled, more socially experienced, more versatile; and their enjoyment of my company consisted largely in sitting back to listen to my words, with a fascination not unmixt with terror! I advanced the conversational topics; I invented the games; I sang the songs; I read the books and reported their contents; and while I protested that I did not also propose and tried to prevent them from so doing, I decided the question of matrimony as I had decided every other, and they made no further appeal, knowing that it would be useless. I liked these men, too, and like them still. They were nice brothers, who could be easily managed. But at the editorial in *The Independent* remarked, "Men marry, after all, for

love." I add, So do women. And the timorous affection of even a lovable man who dances to her piping is not warranted to win a woman of spirit. Uneducated women will admire these men, because to them they seem remarkable. They do not seem remarkable to a woman who is as much or more enlightened than they, and such a woman will not marry a man unless he is at least her equal, and seems to her *more* than her equal.

All this may seem like the egotistic affectation of a vain woman, if I do not hasten to modify what has gone before. The criticisms here made against men are distinctly aimed at *American* men. As Mrs. Anna Rogers pointed out in her essay in the *Atlantic Monthly* on "Some Faults of American Men," and as Professor Münsterberg had said before her, in his chapter on Women in "American Traits," the American men are not culturally on a level with the women. They do not play, sing, paint, keep abreast of literature, or have an intelligent interest in social matters. They leave it all to their sisters; and while I do think they try conscientiously to get married, they spend little attention on the problem of making themselves attractive to a cultured, active and independent woman.

She is ahead of them. She knows it and they know it, and when she asks them candidly to name one good reason why she *should* marry them, they curl up like a sheet of paper in a blaze!

Not so the European. Every woman who has lived in Europe feels the striking difference between the two types of masculinity. The American men may seem more moral and perhaps more wholesome, but undeniably more dull. The Frenchman, the Italian, the Austrian, are so much more entertaining, and while their proposals are conspicuously infrequent without a knowledge of the bank book, as entertainers they could make an American man open his eyes. They do not lie back and smoke, and expect the woman to amuse them. But they find her a comfortable chair and play Chopin to her, they invite her to take tea in charming corners, they plan moonlight walks and sunset rides, etc., etc. They feel the obligation to be

teresting, and I must say that they succeed in a fashion that makes the average American man seem like a dull, awkward boy in comparison. Part of this foreign notion of a man's place in society may be based on artificiality of manners, or deceptive advances, or what you like. But part of it is the honest conviction that women are to be courted with care and attention, that the woman is worth the candle, and that rejection or indifference on her part means for them not collapse, but battle. They have too much respect for themselves to be as indifferent as the average American man to matters of art, society, or in fact anything but the one profession or pursuit by which they earn their living.

If the good-hearted, companionable, honest American man would wake up, use his wits, straighten his necktie, improve his manners, become informed on things in general, try seriously not to marry, but to make himself marriageable, and above all, get over his terrified admiration of the nimbler sex, cultivate his capacity to contradict her, and even bully her now and then—he would get what he wanted in wives as he has done in every other department of life.

Meanwhile, the woman who has taken her education more seriously will like him, will play with him and will work with him, but she has too much romance left in her to marry where she cannot wholly respect, or to substitute for love a liking not unmingled with contempt.

To My Mother

BY SARAH NOBLE IVES

THE autumn airs stir gently over France,
 Dropping with scarce a rustle the brown leaves
 On the warm bosom of their mother Earth,
 And laughing softly o'er the heads of those
 Who toil and sing among her laden vines.
 There Summer finds the world too sweet to leave,
 And, hesitating, lingers to caress
 Her ruddy sister, as she rests amid
 Her harvests, rich with latent rain and sun.
 Wooed by these still, bright days, the chestnut trees
 Feel in their aged limbs the sap of youth
 Stirring again, and in the flush of joy
 Crown their bare heads with garlands of the spring.

So would I wish the autumn of thy days,
 When thou art sitting near the close of life,
 Waiting the last long silence; when thy sheaves,
 And the rich fruits of all thy patient love,
 Freighted with seeds for future ripening
 Are heaped around thee—mayst thou feel the spring
 Of youth within thee, and with holy joy,
 Crown the fair circle of thy years with flowers.

NEW YORK CITY.

An Interview with Prince Ito

BY WILLIAM T. ELLIS

LOOKING back upon nearly a year of strenuous journalistic labor in the Far East I see that the hardest and at the same time most interesting work I had centered in the capital of ancient Chosun, where more than three thousand years of national existence seemed to be coming to an end for poor old Korea. To "see both sides and get all the facts" meant persisting, patient, discriminating investigation, some conclusions of which were published in *THE INDEPENDENT* of April 25, 1907. The Japanese side of the case was easy to get, from official quarters; the Korean version was put forth, sometimes with more feeling than exactness, by practically all the foreigners in Seoul with whom I talked. But official Koreans, especially those willing to be quoted, were hard to reach.

The King himself, I was told on every side, would be glad to talk with an American newspaper representative, but he was a prisoner in his own palace, and access to him could only be had thru the American adviser to the Japanese (and, ostensibly, to the Korean King), Durham White Stevens, or thru Marquis Ito himself. From what I had learned of the King I had become convinced that he was a weak, crafty and cowardly plotter, whose word was worth no more than that of the meanest palace eunuch. So the point to be established, as of more importance than aught this wobbly scion of an ancient royal line might say, was whether or not he was actually a prisoner in the hands of the Japanese, or whether he was a free agent.

Thus it came about that I was brought into personal relationship with the powerful Prince Ito and the brilliant D. W. Stevens, both of whom have since been laid low, remote from the scene of our

conference in Korea's capital, by defenders of that same ruler whose power they thought they had effectually broken. Misguided Korean "patriotism" slew Stevens in San Francisco and Ito in Manchuria, and set the flames of revolt to burning with temporary brightness in Korea; and perhaps—time will tell—thwarted Japan's patient purposes in Manchuria.

Repeatedly I had gone to the ever-gracious and charming and brilliant Stevens for the Japanese side of the story that I was uncovering day by day. He had, with admirable skill and tact, refused my request to see the King, whom he mockingly called "my imperial master"; and he hinted that the King was really not in a state mentally to be seen. But Stevens agreed to arrange an interview with Prince Ito, the Japanese Resident-General, to talk over the general Korean situation. On the afternoon of November 16, 1906, about half-past four o'clock, he called for me at the "Astor House Hotel," and suggested that we walk to the Residency-General. Jinrikishas are unsocial vehicles, and Stevens evidently wanted to talk; so our rickshaws followed us as we threaded our way thru the native streets up the hill toward Prince Ito's home and office. My companion, apparently to prepare me for the interview, dwelt on the difficulty of the Japanese task in taking over the suzerainty of Korea. He admitted that there had been serious friction between the army and the civil power, the former standing always for the most vigorous measures, and for a contemptuous disregard of Korean rights. This was one of the most serious of the Resident-General's difficulties. He said that there had been many outrages perpetrated upon Koreans by the inimi-

grants, who were of the lowest class of Japanese; but that Prince Ito was sincerely doing his best to remedy these difficulties. He digressed to pay his compliments to the foreigners who espoused Korea's cause, declaring that the foremost of these was "afflicted with congenital inaccuracy." The *Seoul News*, he asserted, was maintained by the Household Department of the Korean Government, and other "agitators" were paid out of the same purse.

Especially striking to me was Stevens's almost plaintive plea for consideration for Ito, who, he said, was growing old and showing it, and who was seriously troubled by ill health. By this time we had arrived at the Residency, without being challenged by the Japanese guards at the gate. Three Japanese functionaries, in a combination of European evening dress and brass buttons, ushered us into the large parlor; the house had formerly been the Japanese legation.

Prince Ito came down promptly. He was smaller and less pompous than I had expected to find him, and not so venerable. Although sixty-nine years of age, his goatee and mustache were not very gray. His general plumpness and comparative youthfulness seemed at variance with his reported frailty. He wore a simple black uniform, with less gold lace on it than that of the sergeant at the gate. On his breast were two decorations, sunbursts, each the size of an after-dinner saucer. One had what seemed to be a ruby the size of a quarter of a dollar in the center, the rays being white enamel, with gold edges, the whole being green at the circumference. The other decoration was similar, except that it had the conventional Korean symbol in the center. Stevens told me that one was the first-class Order of Chrysanthemum and the other the first-class Order of the Cherry Blossom. With the familiar quick, jerky bows of the Japanese, Prince Ito greeted us, shaking hands cordially. While the common places of greeting were being exchanged, he offered cigars and cigarets from a silver box in the center of the table. European tea was soon served, and, later, as darkness drew on, a servant brought in two large silver candleabra—after which the electric lights

were turned out. While Prince Ito adopted European usages in his official life, and wore European clothes, I was informed by Stevens that he did most of his work in a Japanese house, and wearing the more comfortable Japanese garb. All the while he talked, Prince Ito smoked vigorously. He addressed his remarks to me; and I had the feeling that Stevens felt a trifle left out of the interview, especially as he manifestly wanted to steer the Resident General on to thicker ice, at one or two points. I had to give close heed to Prince Ito, for his English was broken. He confessed to weariness, in response to my inquiries concerning his health, for he had spent five hours with the Korean cabinet that day, "giving them a moral lecture."

When, early in the conversation, I asked, "What of Korea?" he settled back in his chair and began to talk. Thenceforth the interview became a discourse. For nearly an hour Prince Ito held forth, without a single interrogation from me. He pointed out the magnitude of the question. Then he took up the cry for annexation, which he said was being raised in Japan. To this he was opposed. Annexation would be both costly and difficult. Korea was not a barbarous nation; she had had a history of three thousand years. One thousand years of this had been a period of corruption, without any reform. In this time she had been unable to administer herself. Thus came about China's suzerainty.

By this time I saw that my distinguished host was talking less to me than to himself; the statesman had laid aside his official cares, as he was wont to doff his European clothes, and was simply an old man indulging in pleasurable reminiscences. He recalled the war with China over Korea, and cited many incidents of those stirring days. Then there followed naturally the involved story, uninteresting to a Westerner unless expanded, of Russian intrigue in Korea, subsequent to that war. There crept a note of bitterness against Russia into his voice, as he told how this Power had repeatedly thwarted Japan which had to wait until her day should come. "Japan would have settled the Boxer troubles alone, as representative of the Powers,

but Russia objected. "We had the force all ready and at hand." So there ensued the tedious delays in the relief of Peking.

"Japan wants merely to help Korea to govern herself. If Korea proves faithful to Japan, Japan will respect her sovereignty. If not"—and here the strong head was defiantly tossed—"Japan will conquer her." Then followed an elaborate discussion of the treaty then supposedly in negotiation between Japan and Korea: he spoke of it as an already accomplished fact. "Russia objects, but"—and again that spirited toss of the head—"we do not care what Russia thinks. We shall go ahead."

When given an opening I asked, "Will Japan colonize Korea?" This question he dodged, pointing out that the Japanese do not like to go to a very hot or a very cold climate. He spoke of his own well-known aversion to cold weather, and his practice of spending his winters in Japan. Little did he dream that a cold-weather journey into Manchuria,

when he would rather be in the more salubrious climate of Japan, would be the tragic end of his career.

Night had fully come, and the great statesman's interest in his own monolog having subsided, I arose to go, dropping casually the question—which was the real object of my visit, to place responsibility for the Emperor's seclusion upon the highest Japanese authority—"May I have an interview with the Emperor?" At once the little black eyes snapped, and I seemed to see the *raconteur* of entertaining stories transformed before my vision into the alert, careful statesman. He parried my question by another, as to why I wanted to see the Korean ruler; thought he couldn't allow it; hemmed and hawed, and was helped out by Stevens. At length, seeing that he had accepted too much responsibility for the Korean Emperor's actions, he finally said he would ask his Majesty and let me know later. I have not yet heard the answer!

SWARTHMORE, PA.

The Great Musical Uplift

BY HENRY T. FINCK

FREDERICK STOCK, the eminent Chicago conductor and successor of Theodore Thomas, recently called attention to the great wave—"a real tidal wave"—of music which is sweeping over the United States. Tidal wave is hardly too strong a word for this movement. From New York to San Francisco, from Atlanta to Los Angeles, from Boston to Seattle, from New Orleans to Minneapolis—you may follow any degree of latitude or longitude and come across cities and towns of all sizes in which music flourishes as never before.

Among the cities which have orchestras of their own and orchestras are expensive luxuries—are, besides Boston and New York, which have had them for generations, Philadelphia, Pittsburgh, Chicago, Cincinnati, St. Louis, Washington, St. Paul, Milwaukee, Los Angeles, San Francisco, Seattle. Some of these are heard in a number of cities on

monthly or annual tours, so that hardly any sizable town fails to get its share of orchestral music.

These numerous concerts provide abundant employment for soloists who are coming to us across the ocean in ever-increasing numbers, and who also give recitals of their own, as a matter of course. Were it not that concert-giving involves a great deal of fatiguing travel and the eating of many voice-injuring meals in poor hotels, it is likely that most of the leading operatic stars would forsake their calling and take to the concert hall entirely; for the demand for them at present is extraordinary, and even the highest-priced singers can make more on tours of their own than at the Metropolitan and the Manhattan Opera Houses, which pay salaries that all the world marvels at. Madame Schumann-Heink has already practically given up the opera for concerts; so has Madame Sembrich; and one could hardly blame

Miss Geraldine Farrar if she followed their example, for she has sung on her recent tour with Madame Samaroff to record audiences. In Chicago her Auditorium concert drew a sixteen thousand dollar audience, of which \$10,000 was given to the German Hospital. Such a thing is unheard of since the days of Jenny Lind and her first concert in New York.

It might be said that curiosity has as much to do with such extraordinary successes as a love of music; and there is some truth in this. But on this point there is a widely current misconception. The public flocks to hear the famous singers and players, and stays away when minor artists come to play good music. Pessimists thereat exclaim: "See! It is not the music they want to hear, but the famous prima donna, pianist and violinist." These censors forget one thing. They forget that it takes a great artist to interpret the best music adequately. The minor singers and players may be well-trained musicians, honestly devoted to their profession, but they cannot enter into the inner spirit of the music they render, they lack magnetism, they miss fire. That's what makes them minor artists.

The new musical activity thruout the country comes to a focus in the oldest centers, particularly Boston and New York. Boston used to be the hub, musically as otherwise, and a strenuous effort is being made this year to recover the lost supremacy. The wonderful symphony orchestra will no longer enjoy a monopoly. There is to be another orchestra of one hundred men whose specialty will be modern French music, and a third orchestra of eighty-six players has been engaged for the new opera house. This million-dollar institution marks the advent of a new spirit to the New England metropolis. Instead of depending on New York for a few weeks of opera once a year, Boston has now a company of its own which will be active several months. It is affiliated with our own Metropolitan, and there will be some interchange of singers. The operas will be sung in Italian and French, but in the spring a few weeks of German opera will be supplied by the Metropolitan Company. Mr. Hammer-

stein, also, will try to duplicate his success of last spring.

Much as will be offered in Boston—and similar stories might be told of several other cities—it dwindles into insignificance when compared with New York's coming tidal wave of music. Hammerstein opens this week with five operatic performances at the Manhattan. Next week he will have seven, including two of French opéra comique—"La Fille de Madame Angot" and "La Mascotte." Next week, also, the other company will open its doors for six performances in the Metropolitan and two in the New Theater. Thenceforth, for five months, there will be at least sixteen operatic performances in New York every week.

These performances will be given with the aid of the greatest singers in the world, as usual, and more of them than ever before. The galaxy of stars is dazzling. The fixed stars at the Metropolitan will be Farrar, Fremstad, Gadski, Destinn, Homer, to whom Nordica will again be added, and Caruso, Burrian, Jörn, Anthes, Goritz, Reiss, Soomer, Amato. Then there are new-comers—Delna, Slezak, Clément, Mettschik, Lipkowska, Jadjlower, of some of whom great things are expected. Hammerstein's constellation includes Tetrzini, Garden, Trentini, Gerville-Reache, Cavalieri, Dalmores, Zenatello, Constantino, Dufranne, Sammarco, and, greatest of all, Maurice Renaud.

Besides the standard operas that we have always with us there will be, if promises are kept, no fewer than twenty-one never before heard in New York. A few years ago everybody would have laughed at such a prospectus; but since Hammerstein proved that operatic novelties can be made to pay, a new stimulus has been given to such enterprise, and the composers are rejoicing. Not content with existing works the owner of the Manhattan has commissioned two American composers, Victor Herbert and Reginald de Koven, to write English operas for him. That of Victor Herbert is expected to be ready by February. He informed me the other day that two acts of it are completed. Herbert is best known as a writer of operettas, but he has composed some excellent serious orchestral works also, and

there is no reason why he should not succeed in grand opera. He is our Johann Strauss, and I believe he could be the American Richard Strauss, too, for he has the gift of melody, as well as great command of orchestral resources.

Richard Strauss's "Elektra" is to be the principle novelty at the Manhattan, where it is not likely, however, to create as much of a sensation as the same composer's "Salome" did last year. At the Metropolitan, the most promising novelty will be Humperdinck's "Children of the King," a work of different caliber. Strauss seeks to astonish his hearers, Humperdinck to move his; both succeed.

Until a few years ago the opera nights were Monday, Wednesday, Friday and Saturday, with a Saturday matinée. That left two weekdays, at any rate, free for the concert-givers. Now the Tuesdays and Thursdays are also pre-empted by the operas. It is owing to this that concerts began this year several weeks sooner than usual, and that the Sunday-concert habit is growing fast.

Notwithstanding the increase in the number of operatic evenings, our leading orchestral concern, the Philharmonic, is to give nearly double its usual number of concerts in Carnegie Hall, besides five in the Brooklyn Academy; thirty-nine in all. Whether so many will pay, is not the main question in the minds of those responsible for the change of policy in this venerable institution. The object is to make it an aggregation of players second to none in the world, and it is practically a new orchestra, the old wood having been eliminated and the vacancies filled with the best players obtainable here or abroad. The fact that Gustav Mahler is the conductor ensures interesting readings at all events. Even at the Metropolitan Opera House, where he was hampered by insufficient opportunity to rehearse and impress his individual conceptions on the players and singers, he achieved results that astonished and delighted his audiences. With a first-class orchestra at his command for as many rehearsals as he chooses, he will be able to do wonders. One detail is that the players not only respect but also like him, which is a very important thing. He lets them go when they are tired, and thus has taught them to

concentrate their attention and do as much work in two hours as they might otherwise accomplish in four.

Inasmuch as Saturday evening has always been, for reasons unknown, a poor night for attracting audiences either to the opera (even at popular prices) or to concerts, the Saturday evening Philharmonic performances have been given up and transferred to Thursday evening, so that the Friday afternoon concerts will now follow the evening performance. Sunday afternoons are to be utilized by historic and Beethoven cycles.

The increased activity of the Philharmonic will not prevent the New York Symphony Society from giving about as many concerts (including a Berlioz cycle) as usual; nor will the Boston Symphony, the Russian Symphony, the People's Symphony and the Volpe Orchestras subside in the least. While there is nothing particularly uplifting in the mere quantity of entertainments, the quality of most of the offerings, including chamber concerts, is so high as to distinctly argue progress.

Of the prominent soloists to be heard this season several, including Johanna Gadski, Fritz Kreisler and Dr. Wüllner, have already been heard, repeating their former triumphs. Louise Homer has joined her colleagues in becoming a lied-singer in addition to being an operatic star, making her début in a recital of songs composed by her husband, Sidney Homer. Another contralto, Tilly Koenen, of Holland, has sung successfully at Carnegie Hall, proving again, as Schumann-Heink did long ago, that all the honors are not for the sopranos. We shall also hear Yolanda Mërö, Pepito Arriola, Busoni, Elman, Maud Powell, Sembrich and many other singers and players. One of the most eminent of Russian composers, Sergei Rachmaninoff, comes to play his own works, among them, no doubt, the prelude which made him famous, and lovers of "In a Persian Garden" and other song cycles will have an opportunity to welcome their composer, Liza Lehmann, whose presence will once more raise the question: "Can women compose?" They are trying hard enough, beyond all doubt; indeed, the publishers say there are now more women who compose than men.

To Sidney Lanier

BY CLIFFORD LANIER

THOU magic breather of the silver flute!
Arion skillful of our later time!
Enchanting men by thine enchanted lute,
And driving to thy yoke of lusty rhyme.
Wild sea-shapes strange, and deepest mysteries
In that all boundless ocean of thine art:
Who, coming to thy called consistories,
Straight do thy bidding and espouse thy part,
So that thou buoyest high upon the wave
To heavens sweet, in Fame's proud glories drest!
Behold! Already thy tamed coursers lave
Their shining figures in Fame's port of rest,
And thou wave-beaten bard, in kingly form,
Art promontoried high above all storm.

MONTGOMERY, ALA.

Academic Ceremonial

BY RAYMOND MACDONALD ALDEN

[The writer holds a professorship of English Literature and Rhetoric in the Leland Stanford, Jr., University.—EDITOR.]

A RECENT editorial note in THE INDEPENDENT, to the effect that a straw hat was in every way more becoming to President Taft than the academic toggery with which he was invested at the Yale commencement, has been recalled by the elaborate ceremonial connected with the inauguration of President Lowell at Cambridge; and both occasions have served to emphasize the fact that of late years there has been a kind of renaissance of ceremonial—some would call it ritual—in the American universities. It may be worth while to ask why this has occurred, and whether there is any justification for it.

American democracy has always tended, on the whole, to be indifferent to ceremonial observances and ceremonial costume, outside of military display and the ritual of certain secret societies; and our colleges formerly reflected this attitude. In a few of the oldest, to be sure, from early times certain traditions were maintained, such as, at Harvard commencements, the imposing presence of the Governor of the Commonwealth and his military staff, and the requirement that all speakers should wear full "evening" dress—broad daylight tho it were.

But for the most part such academic occasions were graced only by the observances and the clothes that marked any other "dressed up" affair, and the flowers, ribbons and white dresses of the graduates of young ladies' seminaries rather eclipsed in grandeur the college commencements of their more soberly garbed brothers.

But not so today. The sterner sex, in this one connection at least, has asserted its right to beautiful and significant clothing; and no body of women outside the Orient is likely to furnish a more brilliant display than the gathering of officials, faculties and students at university functions almost anywhere in America. Silken robes, gold-tasseled caps, hoods lined with crimson, orange or blue, and bordered with purple and yellow velvet—these verily make the air rainbow-hued. In one of the large universities it was also the custom, a few years ago, for professors to appear thus nobly clad at the "faculty teas" held at intervals in the university library building, whither all the best society of the city was bidden. At such occasions it was a striking sensation, to a masculine novice, not only to find his "silks and fine

array" the object of curious and flattering comment on the part of the other sex, but to feel, as he walked among them, that his natural angularities were concealed, that his skirts rustled like theirs, and that his movements took on graces hitherto quite unknown. These graces, however, soon vanished when it became a question of getting up and down stairs. If this costume were really maintained for other than brief occasions, who knows but important spiritual results might flow therefrom? For a well-known divine has confessed that, when he once occupied the pulpit of a brother preacher in a church where the clergyman was always gowned, he himself found the unfamiliar costume quite altering the tone of his sermon, softening its intellectual angularities as his flowing sleeves softened those of his elbows, and gently forcing both gesture and style into more urbane and conciliatory forms.

The academic costume of the American college is an inheritance from the English universities, but an inheritance which was allowed to lapse for a long time, and is now being reclaimed—with modifications. In some respects we are doing it more quietly than they do in the mother country; certainly we have nothing comparable to the gowns of the Cambridge doctors of divinity, of scarlet body with trimmings of pink—a combination rarely seen elsewhere outside of particularly riotous geranium beds. On the other hand, with our desire for a rational and complete system, we have developed a many-colored variety of significant details of academic costume which is quite unknown across the sea. This present system dates only from 1894, when there met at New York an "Intercollegiate Commission," consisting of representatives of Columbia, Princeton, Yale and New York universities, to discuss the matter of academic ceremonial. In the following year the commission presented its report, embodying a scheme of costume which had been drawn up in consultation with Mr. Gardner C. Leonard, the leading American expert on the subject, and this was adopted by formal statute of Columbia University (President Seth Low having been a member of the commission), followed by other institutions very soon.

At present the same plan is in use in some two hundred colleges, and a permanent bureau has been organized, chartered by the Regents of the University of the State of New York, for keeping the necessary records, distinguishing official colors, and deciding new questions of what may be called academic heraldry.

The intercollegiate scheme of costume was based, so far as seemed practicable, on historic usage, its chief point being the ancient division of scholars into bachelors, masters and doctors, with a corresponding series of gowns, distinguished chiefly by the shape of the sleeves. At Oxford and Cambridge one may still see these three types, with local modifications; on the Continent they have largely died out, with the abandonment of university convocations and commencements. The hoods are lined with the colors of the university conferring the degree, and are bordered with a color symbolic of the faculty in which the degree is taken; white for arts and letters, blue for philosophy, yellow for science, purple for law, scarlet for theology and green for medicine. Of these colors the white and the scarlet are perhaps the only ones having traditional warrant (the white is a modification of the fur border on the bachelors' hoods of Oxford and Cambridge); the others are in part arbitrary, tho suggested very generally by associations either historic or imaginative, which may or may not seem happily significant to the investigator. The extraordinary range and complexity of modern university courses are brought out by the fact that it has been found necessary to extend the color scheme devised for the various schools or faculties, until there are now fifteen of them officially recognized by the Intercollegiate Bureau. One may imagine the horror of the old-time scholar at finding graduates in dentistry, commerce and forestry donning academic symbols theoretically on the same level as those of the "artes humaniores." (Surely the forestry graduates should wear "Lincoln green"—but this had already been usurped by the medical men; they are therefore decked in russet brown.)

So much for the historical explanation of this development. But what of the real inner reasons for it? Has it any

justification other than as an innocent attempt to add something of color and form to the prevailingly sober life of the scholar?

It is to be explained in part as an element in the growing sense of solidarity among our colleges. Founded under various auspices, often in the days and by the agency of sectarian conflict, these were formerly isolated in spirit and often exhibited jealous rivalries with one another. No one was quite sure, moreover, whether their degrees meant the same thing; and students beginning their career in one institution commonly continued it there, in marked contrast to such academic migration as was familiar in Germany. But the last generation has seen a marked change in all these respects. Academic rivalry and suspicion have happily decayed; various important efforts have been made to set definite standards of university work, the most notable being the formation of the Association of American Universities and the activities of the Trustees of the Carnegie Fund for the Advancement of Teaching; and migration from one institution to another is not only tolerated, but encouraged by all wide-awake faculties. Coupled with this solidarity of our own colleges has come a closer connection between them and their fellows of the Old World; the work and the degrees of the former are now fairly well recognized by the latter, and at any celebration commemorating such an event as the birth of a university—like recent ones at Aberdeen and Leipzig—on the one side, or Yale and Princeton on the other—representatives of the sister institutions of both continents are present. On such occasions Latin is still the common language of international scholarship, and the congratulatory letters are in that language, whether they be from the University of Copenhagen, of Padua, or of Texas. In like manner, one may say, academic costume is another international and interacademic language. When Ambassador Bryce made the Charter Day Address last year at the University of California, his gown and hood were familiar to the local community because of their kinship with those worn by the California faculty on all similar occasions, and the sense that he was a son of

Oxford was blended with the sense that he and they alike were members of the world-wide society of scholars. And every graduate who dons a white-bordered master's hood, and puts his hands into the slitted medieval sleeves of a master's gown, has the same thing brought home to him by the same academic language. It is quite true that both these international languages are now of sentimental rather than practical utility, for there are few delegates who do not find French or English a more ready medium of exchange than Latin, and the derby hat is doubtless in wider circulation between England and America than the mortar-board. But all languages are used for other purposes than merely to make one's self understood.

This brings me to the second explanation to be suggested—the revival of symbolism which in our time is showing itself in many directions. The Middle Ages were filled with symbolism, in the form of allegory, and the usages of church, college and state, as developed at that time, were saturated with it as truly as were poetry and art. Then it died away, as men increasingly discriminated between the concrete and the spiritual, between the idea and its shadow. We shall probably never regain the taste for a view of the world which deliberately blurs the lines between the sign and the thing signified, nor the desire to spend much time and labor in realizing objectively the symbolic life—as they still did, for example, when Sir Philip Sidney and three other young noblemen spent two whole days in storming an allegorical "Fortress of Perfect Beauty," in honor of the Virgin Queen. Nevertheless, symbolism has been returning, with a difference. Now, when we use it, we know what we are doing; we admit the distinction between substance and shadow, yet want them both, for the same reason that Bacon said we want poetry, "To give satisfaction to the mind in those points wherein the nature of things doth deny it." Now, youth is naturally full of the love of these unuseful, significant things, but in our time is a little ashamed of admitting it; and I take it that some very deep wisdom has been wrought into the present movement for making the academic life both

beautiful and symbolic, as it was in the past, at the same time that its increasing utility is encouraged.

Some of the universities of the Middle and Western States, founded at a time when educational tradition was weakened and utilitarianism was very strong, began with this symbolic element left out of account. Their atmosphere and their public occasions were very much those of a business college, which is a place where one goes for a definite kind of instruction, and leaves when he has got it, as he would go to and leave a department store. They conferred degrees, to be sure, but that was because these appendages, in themselves absurd, have an actual commercial value. Already these institutions have changed their tone and methods. In part their own students have forced it upon them. These young people have hungered for an *alma mater*—which a business college is not. They have made songs, and set them to tunes sung by colleges centuries old, despite the fact that they might have had better ones made to order. They have insisted on developing "traditions." Nothing is at once more humorous and more serious than the solemnity with which the students of a young Western institution will make themselves believe that some observance of theirs—it may be nothing more than a night-shirt parade—is a tradition, and has the sanctity of untold generations behind it. And in some cases they have actually adopted resolutions asking the faculty to join them in wearing academic costume on commencement day. In the particular case I have in mind, the engineering students refused to join with the rest, for to them the university is still more a business college than to the others, and they are not greatly concerned with the links that bind it to the past. So the differences between these newer institutions and the older, between Eastern and Western, have begun to fade, and as the older have become more progressively useful, the younger have grown more cognizant of the value of a past. The University of Chicago, tho' founded very late, did not have to undergo this experience, for its first president realized from the outset the importance of an atmosphere, and it has been universally remarked

with what extraordinary success he developed one, despite very unfavorable conditions, the use of academic ceremonial being one of the conspicuous means to that end.

Those who object to this tendency do so either on the ground that it is irrational or that it is undemocratic. As to the first objection, my own position will already have appeared. It is wholly irrational, and all the better for being so. The point may be made clearer by an incident. At a recent discussion of an educational subject before a club of university men, one of the members based his remarks on an imaginary sketch of a natural system of education such as would be devised by a wise man who had been miraculously deprived of all memories and prejudices born of history or inheritance, and, of course, he had no difficulty in proving that the system would be very different from that actually existing. But a later speaker commented thus:

"The imaginary wise man, constructing his educational system without the aid of either prejudice or history, would certainly not be likely to take into account such a fact as this—that in the first year of my college life the academic influences that affected me most strongly were, as I now recall them, the dark Gothic stalls in the university chapel and some stained-glass windows bearing inscriptions commemorative of early graduates."

Nothing could be more irrational; but so are most actual experiences, and if we cut out the Gothic stalls or the gowns and hoods we should also cut out such things as degrees, awarding only certificates of proficiency in the several subjects studied—and do a hundred other things which I leave to the rationalist to work out. Of course, there are two types of mind to reckon with here, and each will strive to be consistent after its kind. If I were to venture, without disrespect, to make a personal application, I might say, since THE INDEPENDENT has expressed the wish to see straw hats and light summer suits worn on academic occasions in the month of June (and equally comfortable overcoats, no doubt, when the weather is cold), that nothing else could be expected of a periodical which will use the spelling "thru" in a poem. But I hasten to avoid the implication, and to point out that an enthusiastic spelling reformer need not

be an anti-ceremonialist. For the old spelling, it is believed, is not only irrational, but actually wasteful of time and money, while not much positive harm can be alleged against caps and gowns. True, they also are said to be expensive, but this is a mistake. For graduating students the uniform costume is by far the most economical, and, while the silk gowns of the faculty are somewhat costly, one of them will last a lifetime under ordinary conditions, and will cover a multitude of sins in an impecunious professor's old frock coat.

As to the objection that the fashion under discussion is undemocratic, I pass over the point that here again the same thing applies to degrees, and admit that the master's and doctor's gowns go back to days when to be a master or a doctor was to have rights and privileges (still harmlessly conferred in diplomas) which other men did not have. On the first commencement at which masters of arts of the Leland Stanford Junior University received the traditional insignia of the degree, President Jordan pointed out this historical circumstance, and observed that at present no one would think them any better or more privileged than their neighbors. This is the matter of importance—no one does now suppose that the academic degree or the academic costume places any barrier between its owner and the mass of humanity, except in whatever way education itself places such a barrier. As has already been pointed out, we enjoy the symbolism without mistaking it for reality. In this respect there is a close analogy between educational and ecclesiastical ceremonial. There is a ritualism which derives its very existence from belief in certain doctrines which the great body of Protestant Christendom has rejected, and such ritualism may with consistency be regarded by zealous Protestants as dangerous. But quite apart from this is a noticeable growth in the dignity and elaborateness of church services, which one may call ritualistic if he likes, but which has no other cause than the love of beauty or of symbolism. The Presbyterian Church, for example, has shown this tendency of late years, and has even published a new prayer-book

"for voluntary use," thereby leading a few alarmists to suspect that it is on the high road to popery; but no intelligent person believes that any matter of doctrine is involved. One can no longer tell a Congregationalist by his neglecting to bow his head during public prayer, but I do not suppose that this is because Congregationalists have come to believe that the Lord has respect to physical posture. And in the same way the same tendencies in academic life, while as a matter of esthetics they may be frankly termed a reversion to medievalism, do not indicate any reversion to medieval views as to aristocracy or its opposite.

The fact is, just as our youth are a trifle ashamed of being thought poetic or enthusiastic, so we are all tempted by the devil of intellectualism to the affectation of an indifference to form. "What a frightful bore!" whispered one of my colleagues, as we waited on commencement day for the winding procession of black-robed graduates to make its way into the hall. And I begged to remind him, perhaps not without rudeness, of the retort made by one of the characters in "Romola" to a cynical anti-formalist of Florence:

"There has been no great people without processions, and the man who thinks himself too wise to be moved by them to anything but contempt, is like the puddle that was proud of standing alone while the river rushed by."

Of course, it is a bore to wear a hot gown and stand under a hot June sky while the old, old things are done in the old, old way, when one might better be in his study grinding out a new page of his next monograph. But I dread the time when this thought shall cease to be overtopped by the memory of the day when for my class the old things were new things, every bit of color and music and pomp setting our blood tingling with common loyalty and hope. And I pity the man who can watch, without a lift of the heart, the annual procession of the Harvard Phi Beta Kappa under the Cambridge elms, with the latest initiates and the gray-headed graduates marching together behind a band of music, for no better reason than that this is what has been done before and will be done hereafter.

PALO ALTO, CAL.

The Young American in the Philippines

BY MAURICE DUNLAP

[Mr. Dunlap is Collaborator in the Bureau of Forestry, Manila, and what he writes may be presumed to have the approval of the Governor-General.—EDITOR.]

ROUGHLY speaking, there are four classes of work that bring the young American to the Philippines offering him a temporary means of livelihood or the opportunity of a life career. These are the United States army and navy, the civil service, business occupations, and the development of the natural resources of the country.

The officers and enlisted men of the United States army and navy are, at best, transients. They come under orders and with the expectation of staying only two or three years when their places will be taken by new arrivals. They are stationed principally in the vicinity of Manila, or at a few large posts in the Moro province, which is under a semimilitary government. The armed force of Americans in the islands at present numbers about 12,000.

Outside the army and navy there are about 12,000 Americans in the islands, 2,000 of whom are women. Nearly half this number are engaged in some form of employment in Manila. Many of these have bought property, built houses and settled down to spend the rest of their lives in the islands. This is more true of the business people and the pioneers than of the civil employees.

The majority of the Americans in Manila, over 2,500, are engaged in the different branches of the civil service that offer opportunity to a considerable number of trained employees. Civil engineers, surveyors, foresters, architects, printers, stenographers and teachers find ready employment if capable of passing the particular examinations required in each line of work. As a rule, salaries paid these employees are nearly twice that which would be paid for similar services in the United States. This is due, to some extent, to the false impressions prevailing at home concerning climate and health in the islands. These often make it difficult to obtain sufficient employees in special lines from the United States. Besides this, living in

Manila is higher than at home, many things being necessary to comfort here which would be deemed luxuries in the United States. Also, many interrupt careers at home to enter the service, and on their return have difficulty in resuming their work at the point where they left it.

In connection with the army and navy, there are employed clerks who, while being civil-service men, are working for the United States Government. The majority of civilians, however, are employed and paid by the Government of the Philippines. Civilians in the latter service have special leave privileges not granted to those in the former, but are not considered employees of the United States civil service on their return to the States unless they have been three years in the Philippines service.

The civilian who has passed his examination and received his appointment in the homeland has his transportation paid to Manila and draws his salary from the moment of his arrival. He agrees to stay in the islands for a period of at least two years. Each of these years he may be granted a month's vacation with full pay, and at the end of the two years he receives two months' additional salary; in other words, he receives twenty-six months' wages for practically twenty-two months' work. During his stay in the islands when ill he can avail himself of free medical service at the Civil Hospital. The Government also extends other courtesies, such as free transportation on Government boats to island ports, Japan and the United States, and a liberal allowance of holidays and half-holidays during department meets, carnival season and for many of the native holidays. During the warmer months the regular hours of service are reduced. These various privileges are extended as an offset to other things; separation from home and friends, the want of a pension fund for faithful employees disabled in

the service, and the interruption of career at home. President Taft advocates the establishment of a pension system which, in all probability, will become a fact in time and will lead to greater opportunities for a career for the young American in the Philippines. Other world-powers have found the pension system for colonial employees to be mutually profitable to themselves and the employees.

Appointments and promotions in the civil service are conducted strictly on the merit system, except that when qualifications are equal, natives of the islands are given first preference, soldiers with honorable discharges second, and American citizens third. This is true, with the exception of one bureau, where the new men are appointed by the director of the bureau. This is the Bureau of Constabulary, and as it offers peculiar opportunities for a career to the young American it deserves special mention.

The constabulary is the armed police force of the Government of the Philippine Islands. Established and administered under the general supervision of the Governor-General, it is devoted to the maintenance of order, the prevention of crime, and the enforcement of the laws. It is a semimilitary organization, but its methods are distinctly those of peace. The colonial dependencies of other Powers where similar conditions prevail have similar organizations. In India the system has been a particularly successful one. The constabulary is organized on military lines, and its officers wear uniform and shoulder straps. New appointees from the States enter with the grade of "third lieutenant and inspector." The constabulary of the Philippines is the only branch of the civil service where a substantial pension and retirement fund has been provided. In addition to leave privileges, quarters are given, and periodical increases in salary for length of service are more frequent than in other branches. Thus special inducements are offered to the right men in the constabulary, and yet these men have been particularly hard to find. The constabulary force is composed of some 5,000 Filipinos, and officered by about 300 men, a few of whom are natives. The

necessity of dealing with native employees as well as with native local officers in the various provinces into which the constabulary is sent, requires a great amount of tact as well as the ability to maintain discipline.

The majority of the young men who enter as third lieutenants are graduates of the colleges and universities of the Middle West. Men must be not under twenty-one and not over thirty-three years of age, and in good physical condition to enter this service. Applicants not graduates of colleges must pass examinations in grammar, arithmetic, geography, history and constitutional law. The new Appropriation Act for the year 1909 calls for ninety-five third lieutenants. The salary of a third lieutenant is \$1,100. Additional compensation of \$50 a year is given every officer not a Filipino who proves his ability to speak and read one native dialect. The usual salary for the regularly appointed employee on his entrance into the civil service is \$1,200, but considering the special advantages offered in the constabulary, the difference of \$100 is more than compensated for.

Two peculiar opportunities offer themselves to the young American who is a civil employee in the Philippines; one is the opportunity to learn Spanish, and the other the chance of seeing the world. To any who contemplate future business dealings with South American countries the first is invaluable, and the broadening influence of the world tour, which many make in coming and going from these islands, cannot be underestimated.

A great number of men who originally came out as volunteers or regulars in the United States army have remained to engage in various businesses and to develop the natural resources of the islands. The need of a lower rate of tariff to allow the entrance of Philippine products into the United States is the crying need of both business man and planter. The great resources of the islands need American capital to develop them and a market in the United States for the products. It seems rather odd in an American colony to see large and prosperous firms of Englishmen, Germans and Spaniards receiving the lion's

share of the profits of certain paying industries. American capital has introduced electric lighting and ice plants in the larger towns. It is constructing railways in the principal islands which continually require the services of numbers of skilled Americans. It has brought in mining machinery, built saw mills, docks, and constructed a large factory for the manufacture of cocoanut oil. All the comforts and conveniences of American civilization are furnished the sojourner in these islands by American capital.

The planters who have found most success in developing the great agricultural possibilities of a rich soil combined with a fine climate have had some capital to begin on. The Gulf of Davao, on the Island of Mindanao, offers the most favorable field for the American investor in hemp, rubber or cocoanuts. The climate is ideal, there are no typhoons to destroy crops, and the natives in those parts (pagans) are peaceable and willing to labor. There are at present forty-eight American and twelve Spanish plantations in Davao. Tobacco, sugar cane, rice, rubber trees, and most of all, the great Philippine product, hemp, flourish wonderfully in this region. Experiments in raising spices are being made; pineapples and lemons flourish, and pearl shell, tortoise shell and beeswax are all important exports. This rich country is under the government of the Moro Province, and seems to be likely to remain in the dominion of the United States for an indefinite period, according to the statement of the Governor of that Province in a recent annual report. He says:

"No one dreams of now giving the Moro and Pagan the powers and of imposing on them the responsibilities of self-government. The most advanced of them has no conception of the meaning of the word."

The pioneers who have gone to Davao have gone with the purpose of establishing homes and ending their days in the country. Many Americans in other lines of work have also invested extensively. Thousands of rubber and cocoanut trees are set out every year, and everything points to this developing into a wealthy and prosperous community. Operations on all plantations have to be carried out on a large scale and the American must

be able to manage rather than labor. A white man cannot engage in manual labor in the tropics to the extent he can at home, and he must therefore have the capital to hire labor and the tact and patience to win the confidence of the Oriental. Two difficulties that encounter the prospective planter are the necessity of learning the local dialect and the new methods of cultivation, which must be learned, as rules that obtain in the United States will not hold in the Philippines.

The natural resources of the islands are almost unlimited. The immense areas of valuable forests, the findings of gold and copper, and the marvelous fertility of the soil, that produces so many products for which there is always a market, all offer alluring prospects to the young American with some capital. There is an almost unlimited amount of magnificent fertile land available for homestead entry in the Philippines, but everywhere the same conditions must be considered that hamper the Davao planters, besides the facts that labor is not everywhere available and that it is practically impossible to settle among the Moros, who occupy much good agricultural and forest land and who are jealous and suspicious of intruders.

As to the health of all classes of Americans who come to these islands, the death rate is no greater than in the cities of the Southern States and is much less than the Filipino death rate. Notwithstanding exaggerated reports concerning cholera epidemics, figures show that only 124 Americans have succumbed to the disease since the American occupation among all classes—soldiers, civilians, business men and pioneers. Malaria and dysentery are rather to be dreaded because of their insidious effects on the system. The climate is fine in most parts of the islands where the larger cities are located and in many places it is ideal. There is always opportunity for out-of-door sports the year round. If the young American avails himself of them and exercises ordinary care in his daily habits, he will be quite proof against Oriental diseases. Many diseases common in temperate zones are practically unknown to the Philippines, as, for instance, diphtheria, scarletina and hay fever.

Manila, altho far from other centers of civilization, is a modern city offering all the comforts and luxuries to be had at home. The young American who makes his home there will find athletic, literary and social clubs of every description, the secret societies and lodges with which he is familiar at home, large church organizations, a flourishing Y. M. C. A. with elaborate quarters and gymnasium, a fine street car system, electric lights, telephones and automobiles.

The Philippine Government and the Manila Merchants' Association as well gladly furnish information to any one interested in the possibilities of a colonial career, or the investment of capital in the Philippines. The Director of Civil Service, or the Chief of Constabulary, at Manila, may be addressed. The Governor of the District of Davao, Davao, Philippines, may also be addressed concerning the association of planters in that district.

MANILA, P. I.

Dr. Cook's Pemmican

BY E. FOUNTAIN HUSSEY

[We have rarely received so many indignant letters from our readers as we have in regard to our editorial of October 21, "Is It a Lie?" We print the one which contains the most meat.—EDITOR.]

WHAT is the matter with THE INDEPENDENT? Of course, one who speaks for fair play in the polar controversy stands, by the cast of circumstances, apologist for Cook. But does speaking for suspended judgment so commit us that we are going to be mortified to gall and bitterness, like the editor of THE INDEPENDENT, if he does not make good? That is very American, to be sure. We find it hard to stand for the impartial issue and not get our feelings involved. We have had several notable fits when our personal pride was touched. We had one when Dewey was given a house, and off went a good man into oblivion. We have got the habit of looking to THE INDEPENDENT to hold us level. Please don't let go!

The wits have done their best to save the polar situation, but I am afraid that we are in for it. Here comes Mr. George Kennan, a name to conjure with. He is in deadly earnest. With what seriousness, too, we sit down and read his articles. He can feed dead dogs pemmican and we believe him like a fairy tale. He can do more wonderful things with arithmetic, and dogs, than were ever seen before. He can take the savage husky,

fresh from gorging bear and musk-ox, start him over the polar ice on a pound a day of pemmican, and drop him dead of starvation in groups of eight and six at a time at needful intervals. If Dr. Cook could write like Mr. Kennan he would be a garlanded hero at this hour!

Let us excerpt briefly from Mr. Kennan's balance sheet of debit and credit, by which he proves to his own satisfaction that, "as a simple matter of arithmetic" Cook never could reach the Pole and get back again with the food supply he had. We quote the three first items as illustrative:

	Cr.
March 21—Amount of pemmican at start	800 lbs.
	Dr.
March 31—Pemmican eaten by 10 men and 20 dogs in first ten days at 1 lb. each per day 200 lbs. (8 dogs died.)	
April 10—Pemmican eaten by 1 man and 18 dogs in next ten days at 1 lb. each per day 116 lbs. (6 more dogs died.)	

The effect of figures upon the reading eye is a remarkable psychological phenomenon. They convince of anything if they only "come out even." Had it not been for those impish dogs trying out

from their parentheses, "Why are we all in a heap?" my docile mind, for one, might have run over the neat presentment nor have noted how all too perfect it was. Arctic explorers have never stated that Eskimo dogs characteristically "up and die" in groups. Careful scrutiny of Mr. Kennan's statement, however, demonstrates beyond a doubt they did in this case; eight dogs on the 31st of March, for every dog of the twenty-six is duly charged in the bill with his pound of pemmican to that day. Alternative to this, the only interpretation is that whatever dog died before this date continued to eat his daily ration after he was dead. Further surprise awaits the reader, who is told that these dogs, obliged, dead or alive, to eat a pound of pemmican a day, perished of starvation, and that so soon! What is his interest to have it proved by scientific quotations that they dwindled from 60 pounds to 24 in eight days, what his astonishment that they sank into that parenthesis mere skeletons, skin and viscera, "wholly deprived of fat, and saturated with fatigue toxins!"

The second ten days, it will be seen, are consistent with the first ten days. The dogs show again that unexpected group method of demise, by starvation, on a full daily ration, duly charged in the bill. And when Mr. Kennan, down a column, gathers up "sixteen starved dogs," weighs them, reduces them to equivalent terms of pemmican, and proves that the surviving train could not run six days, tho they have forty-two more to go, it looks as if it were all up with Dr. Cook!

Let us get serious ourselves and start out afresh, arithmetic is so interesting! Cook set forth on the final dash with two Eskimos and with twenty-six dogs picked as the best from a pack of over a hundred, in prime condition, fresh from the hunting fields. Thirteen to a sled is not an economical team, six to nine being the efficient numbers. The extra dogs were taken for team food, to be sacrificed early in the journey, the first shirkers being the first eaten. The writer knows nothing from experience of Arctic travel nor the economics of the sledge train, but Nansen mentions ("In Nacht und

Eis," ii, p. 122), counting a dog as twenty-five rations, even tho travel worn and "*ziemlich ausgehungert*."

Just as "a simple matter of arithmetic," let us see how it would affect Mr. Kennan's balance sheet if Dr. Cook, who is not yet commonly charged with being a fool, should dispose of the food dogs one at a time instead of in bunches, somewhat as follows:

FIRST TEN DAYS.

	Men	Dogs	Pemmican pounds
First day	3	26	20
Second	3	26	29
Third	3	25 (first kill)	3
Fourth	3	24 (second kill)	3
Fifth	3	23 (third kill)	3
Sixth	3	22 (fourth kill)	3
Seventh	3	21 (fifth kill)	3
Eighth	3	20 (sixth kill)	3
Ninth	3	19 (seventh kill)	3
Tenth	3	18 (eighth kill)	3
			Total pemmican...82
			(Kennan, 290)

Starting the second ten days with diminished numbers, which are further to decrease from eighteen to twelve, the six more dogs which Mr. Kennan allows, if properly disposed, suffice nicely for team provender during this period, since the total of dog days is 135 (17+16+15+14+13+12+12+12+12+12), while the total of rations is 150 (6×25), not counting scraps left over from the first ten days. So we shall need only 30 pounds of pemmican required for three men, where Mr. Kennan debits 210. For the twenty days, therefore, we total 112 pounds of pemmican for the expedition instead of Mr. Kennan's 500 pounds, or a saving of 388. If we held a brief for Dr. Cook we should go back and wipe out that 52 pounds that we allowed the first two days out for the team, for the Eskimo dog when he is fat can travel, like the camel, long without food. But we are not trying to make a case for anybody, with Mr. Kennan's too awful example before us of what zeal can do with figures; zeal that would give a man no chance for his life in the Arctics, zeal that would kill his chance for honor at home.

Nansen, in 1895, made his dash from the "Fram" with one companion and twenty-eight dogs, a party of thirty to feed as comparable with Cook's twenty-nine. He carried 1,198 pounds of food,

which he expected to suffice for fifty days outward and at least as many back. Kennan credits Dr. Cook with 1,018 pounds of condensed food at the start and an interval of eighty-four days before he secured game. Nansen records eighty-six days before he and Johansen had game, and says that he had practically a month's supply still on his sleds. ("In Nacht und Eis," ii, p. 124, 126.) Mr. Kennan, with all his Arctic experience and his vast knowledge of Arctic literature, makes no mention of Nansen and the very detailed account in his "Farthest North" of this parallel feat in travel and food economy.

The writer has had the experience of lunching with Dr. Cook and a small party of scientists, and of being an inter-

ested listener for two hours to question and answer between the returned Odysseus and the mathematicians, astronomers, physicians and physicists present. Whether or not this wanderer is a man of guile, his tale appears as the most dramatic incident of modern times. Nor does he seem "of many wiles." He is a man without personal magnetism; it is afterward that the simplicity of his manner, his pleasant directness, the probability of what he says, come back to the mind and make it harder to believe that he lies than that he tells the truth. If you call that being convinced that he has stood at the North Pole, I do not know any one who has actually met the man who does not lean at least so far to his side.

ANN ARBOR, MICH.

The Calm Between Storms at Westminster

BY JUSTIN McCARTHY

THE political, or to be more accurate, I should say the Parliamentary, situation here is just at present very peculiar. The Liberal administration has decided on giving to the House of Commons a week's holiday from its very exciting and even more exhaustive work. I was going to say that a holiday at this time of year is a very unusual Parliamentary event, but then I have to recall to mind the fact that it is a very unusual Parliamentary event to have the House of Commons sitting after the first week in October has passed. The Government, however, took it for granted, no doubt, that the debates on the Budget could not possibly be crushed into a very limited space of time even now, and that the best course would therefore be to give the wearied members a few days' holiday and then bring them back to settle down with revived energy to the continuance and conclusion of their task. It is not prob-

able that the Budget measures can be disposed of in the representative chamber until well on in November, and then must come the eventful decision of the House of Lords. The truth is that people in general are now thinking much less earnestly over the clauses contained in the Budget measure than over the course which the peers may make up their minds to adopt with regard to the whole measure when complete. If I happened to be one of those who are devoted to the preservation of the hereditary chamber I know well what course I should advise the peers to adopt under the imminent conditions. I should recommend them, by all means, to let the financial clauses of the Budget pass untouched as they came from the House of Commons and take to themselves the airs of men too wise and, above all, too exalted to make any effort at the improvement and instruction of a representative assembly. If, however, the peers

should make up their minds to meddle with the financial clauses of the measure, and to send them back thus altered to the House of Commons, or to strike out some of them altogether, then the inevitable result must be to bring about an appeal to the country thru the means of a general election, and to invite the abolition of the House of Lords in its present form as a governing political assembly. I think that every genuine and thoro Radical, and I include myself among those to whom that description must apply, will be sincerely glad if the peers should take that course, and thus bring on themselves the decision of the country. There are many voters belonging to the Liberal party among the English constituencies just now who are far from being satisfied with some of the clauses in the Budget. Such voters might, under ordinary conditions, have kept back from supporting them by vote if the question should thus and then have arisen, but will most assuredly

vote dead against the peers, and therefore for the present Government, if the peers should give them an opportunity of thus protesting against the existence of any hereditary chamber.

In the meantime, the Commons are allowed to have a holiday from their labors—to have a week of quiet after the tempestuous debates of recent nights and recent days as well. I have heard it remarked more than once when this holiday was announced that after storm there comes a calm. But I must say that I can hardly imagine anything less like a calm than the interval which is now coming between the adjournment

and the reassembling of the representative chamber. Certainly the newspapers, whether metropolitan or provincial, do not convey to our minds any idea of a calm settling down upon town or country during this present interval. We read accounts of furious meetings held everywhere at which the supporters and the opponents of the Government express their opinions in the most furious denunciations of their political adversaries. The Opposition newspapers con-

tinued day after day to denounce Mr. Lloyd-George as if he were a British Marat or, rather, much worse than several Marats condensed into one, while the journals on the side of the Government write of this or that man on the other side as if he were engaged in a proclaimed conspiracy to make his country the perpetual bond slave of the Tory dukes. Certainly I find it hard to remember any crisis in our recent history which provoked so much passionate denunciation of party by party as this financial

scheme of Mr. Lloyd-George has done and is doing during what is supposed to be this present interval of calm. My fellow countrymen in the House of Commons have not thus far taken much part in the controversy, and have not pledged themselves to the support of the one side or the other. But I think I may infer from some recent utterances of Mr. John Redmond, the leader of the Irish party in the House of Commons, that if the Government desire to have any support whatever from those who follow his lead, Mr. Asquith and his colleagues must give to them some distinct promise and pledge that the cause of Home Rule is to be

H. G. WELLS

frankly and fully adopted and proclaimed by the present administration. For some time back, as we all know, the present Government has made no manifestation whatever in favor of the Irish National cause. Now, I feel perfectly convinced that this holding back from any avowal of sympathy with Ireland's demand has not the approval of at least some influential members of Mr. Asquith's administration. I know that there are members, even of the Cabinet, who are as true to the principle of Home Rule for Ireland as was Mr. Gladstone himself, when that great statesman encountered all the forces of Conservatism and aristocracy in these islands in his noble effort to give to Ireland a legislature of her own. I feel good hope, therefore, that Mr. Redmond's recent declaration may supply to those members of the present Ministry who are growing slack in their support of Home Rule some good reason for a reconsideration of their position at the present political crisis, and for bearing in mind the fact that the Irish vote in the House of Commons has more than once already decided the fate of an imperiled Government.

In the meantime, I think that there is even already a sort of reaction setting in against that current of public opinion which lately seemed to be in the direction of Toryism and tariff reform. I observe that the number of *Punch* just issued has as its principal cartoon a caricature of Lord Rosebery, who is described as "the new Bombastes." Now, I think it is not the habit of *Punch* to associate itself in any manner with a losing cause, and I have noticed that during this present crisis the comic journal seems very anxious to proclaim itself as on the side of the present administration. We shall, however, have Westminster Palace occupied again in a very few days by the members of both Houses of the Legislature, and the time cannot then be far off when we shall see whether the peers have the courage to provoke and make inevitable the appeal to the country at a general election.

Meanwhile, amid all the political excitement we have not been left without some literary work which can command a good share of public attention. For

instance, we have the latest novel by Mr. H. G. Wells, given to us in fine form by the publishing house of Unwin (Harper). The novel is named "Ann Veronica," and is described on its title page as "A Modern Love Story." It is not my intention to offer to my American readers anything like an outline in miniature of this most interesting novel. I may say, however, that it is admirably characteristic of its author's style, that style which has impressed itself as effectively on American as well as English readers. Mr. Wells's novels are novels of character rather than of incident, and the author can hold us completely enthralled by our interest in the daily lives of persons who live amid the most commonplace surroundings of life as if they were passing thru the most extraordinary and blood-curdling adventures. Ann Veronica, the heroine of this story, is born and brought up in a commonplace London suburb, and even her adventures, when she comes to have adventures of any kind, are only such as might be happening to numbers of young women in any neighboring street or in the next parish. But she is none the less set forth before us as a typical impersonation of a new development of womanhood which is especially characteristic of the present day in what may be described as the civilized countries. From the moment when she begins to think for herself, she finds herself inspired with a passion to give her own intellect its full scope, and to discard the traditions of the past. Now, I have said that I do not propose to tell the story of Ann Veronica, but shall leave that story to be told as none but Mr. Wells himself could tell it. The novel is certain to create much eager and animated controversy among its readers, but I venture to think there is one epithet which no reader whatever is likely to apply to it, and that is the epithet "commonplace." I can, indeed, imagine many a discussion arising on the question whether the story of Ann Veronica does or does not point a moral. But I cannot believe that the most captious reader will doubt for a moment that never before has Mr. Wells, with all his successes, given better proof that he knows how to adorn a tale. The heroine is

far from being a faultless young woman, and I can easily imagine many readers will set her down as devoted to her own ways and even crochets, but she is undoubtedly full of charm, and is especially typical of the new girl of the period, a hopeful figure, a beacon light of progress, according to some; a warning and alarm, according to others; but, most assuredly, one of the most attractive and impressive studies Mr. Wells has yet given to us in his ideal and yet thoroly realistic fiction.

My fellow-countrymen in the United States and, indeed, a large proportion of all other inhabitants, native or foreign, in those States, will be glad to read of the events associated with the recent celebrations in Ireland of Father Mathew's birthday. The great Apostle of Temperance was born in Tipperary on October 10, 1790, and he died at Queens-town, near Cork, in 1856. He became a priest of the Capuchin order, and he devoted himself during the greater part of his life to the promotion of the cause of temperance, a cause which then, indeed, stood much in need of promotion in Ireland as well as in many or most other countries. Father Mathew's fame is thoroly well known thruout all the civilized world, and since he passed away from this life the anniversary of his birth has been made a day of national celebration thruout his own land, and, indeed, in every land where Irishmen find a home. This latest anniversary has, however, been made the occasion for the founding of a great national beneficent association. This association is to hold forth a helpful hand, a beneficent hand, not merely to the promotion of temperance, but to the assistance of every Irishman who is endeavoring to raise himself, and those who depend upon him, from the distress caused by want of employment and of healthful occupation. I feel, myself, much per-

sonal, as well as national, interest in this most appropriate form of celebration to be given to the anniversary now and hereafter of this most memorable birthday. During my early boyhood, Father Mathew was living and working in Cork, and I was still only a mere boy when I received from him his temperance pledge, and he was the friend of my family and of me until his death in 1856. I am firmly convinced that the influence of his noble efforts in the cause of temperance has never since been lost on Ireland, and that the Irish people have never since his time gone back into anything like that addiction to frequent intemperance which was only too common among many classes before he began his great work, habits which were indeed even more common thruout most classes in England and in Scotland and in many other countries as well. I may say that Father Mathew, altho the most earnest of men in his own work, was at the same time a man endowed with a bright, keen sense of humor. He was ever a worker in the cause of education, and he founded a great temperance institute in Cork which was furnished with a large library for the use of boys as well as of grown men at the most moderate rates, and indeed with no charge whatever for any well-behaved men or boys among the poorer clases who were recommended on trustworthy authority to Father Mathew's protection. I can distinctly remember that the first time I ever read or even saw the early numbers of one of Dickens's novels, then published in monthly parts, was when these came under my notice on the central table of the reading-room in this institution. It is only natural, therefore, that I should feel a deep and peculiar interest in this most recent Irish celebration of the illustrious Temperance Apostle's birthday.

LONDON, ENGLAND.

The People and the New Tariff Law

BY HARRISON S. SMALLEY

[The author is assistant professor of Political Economy in the University of Michigan.—EDITOR.]

SINCE the enactment of the Payne-Aldrich tariff law it has been evident that relatively few people are really satisfied with it, while very many, especially in the West, are thoroly dissatisfied. Yet it cannot be said that the law has suffered for want of able support. In his public utterances, and especially in his Winona speech, President Taft has defended the measure on many grounds. He has assured the people that it is the best protective tariff law ever enacted, that it amounts to a substantial revision downward, and that its passage is a compliance with the promises of the Republican platform. But with all that he has said Mr. Taft has accomplished little beyond convincing the people—if, indeed, they needed to be convinced—of his own sincerity in the matter. The law remains almost as unpopular as ever.

There are doubtless various reasons which account for this fact. Some people have found, or think they have found flaws in the President's defense of the law, which prevent them from accepting his conclusions. Others have been antagonized by what they consider his ungrateful conduct toward the insurgents, without whose devoted courage not even the President could have prevented the special session of Congress from being an utter failure. Still others are rendered apprehensive by his emphasis upon the importance of party solidarity, and fear that in this instance his regard for the general welfare may have been subordinated to his consideration for party interests. Moreover the great body of ultimate consumers are disappointed because they do not see in the new law any prospect of a diminished cost of living. But in addition there is another reason which, tho not so obvious, is nevertheless the most important of all.

It is a fact to which attention is often called, that most of the public problems of the present day are economic in character. This is true of the problems of labor and capital, corporations, trusts,

railroads, immigration, the tariff, the conservation of natural resources, and the like. It has also come to be clear that these problems are not independent, but that they are closely inter-related, and that this relationship arises, among other things, from the fact that they are all incidents of a great struggle which is being waged for the control of industry. In this struggle is involved a conflict between two antagonistic principles, the principle of democracy in business being pitted against that of autocracy, which for the moment is dominant. An issue is being drawn between property and privilege on the one hand and the people on the other; between vested interests and the public welfare; between finance and business; between Wall Street, in a broad sense, and the country; between the many and the few; between plutocracy and popular government in industry and politics. This is an issue to which this journal has frequently directed attention. Beyond a doubt it is constantly becoming more and more clean-cut, and is being more and more clearly perceived by the people. True, it is not an issue between parties, but, on the contrary, is being fought out within the parties. Among Republicans, so far as Congress is concerned, the struggle is being waged by the so-called insurgents against the regulars, who are headed by the Cannon-Aldrich coterie. Needless to say, the latter represent the "interests," privilege, finance, industrial autocracy, while the former stand for the people, the public welfare, legitimate business, industrial democracy.

Now the simplest and most obvious fact about the new tariff law is that it was primarily the work of representatives of the "interests," and was bitterly opposed by those Senators and Congressmen who are closest to the people. This is a fact which will not down. President Taft and others may extol the merits of the law, but when all has been said an insistent thought creeps back into the

minds of the people. This ugly fact remains before their eyes; the tariff law was fathered and furthered by the agents of special privilege, but was fought to the end by a goodly number of those who are believed to have the public interests at heart.

It is possible that if the very bill which finally passed had been introduced by the insurgents and advocated by them, its passage would have been hailed with satisfaction, at least by the great body of Republicans. But the people cannot welcome a measure which is approved by many men whom they distrust, and is condemned by many others in whom they have the highest confidence. Even President Taft's powerful influence is not enough to turn the scales in favor of the law.

Moreover, in an important sense the people were defeated in the enactment of this law, and they are still smarting under the sting of the defeat. It does not relieve the pain to be told that the law is a good one. It may be good or bad—that is a matter of *relatively* little moment. The important thing is that in the passage of the bill it was demonstrated that the Republican party in Congress is in the control of the Cannon-Aldrich coterie—men whom the people have come, rightly or wrongly, to regard as their enemies, as the enemies of industrial and political democracy. The existence of the law, therefore, means to the

people a defeat, not so much because of defects in its schedules as because of the circumstances of its enactment. The law now stands as an outward and visible sign and as a constant reminder of the domination of the few over the many. Is it strange that the people do not like the law?

In the popular mind, then, there is a recognition of a great industrial and political issue of such magnitude that it wholly overshadows such a question as that of the tariff. A defeat on that issue is too great a price to pay even for the best of tariff laws. And therefore it is probable that even if the new law turns out to be a brilliant success as a tariff measure, the hearts of the people will long nourish a bitter feeling about it. Whether this popular attitude is right or not, it is not the purpose of this article to discuss. In any case the fact remains that correct understanding of the opposition of the people to the tariff law can not be gained unless one looks beyond the merits and defects of the measure itself to the manner of its formation and enactment. And if this can be taken as an indication that henceforth all measures will be judged by the people with reference to their bearing on the ever-deepening conflict for industrial supremacy, it is a circumstance of serious import to those financiers who have aspired to autocratic control of American business.

Oliver Otis Howard

Sola Virtus Invicta

BY JOHN PEARSON

"All the blood of all the Howards,"
Noble tho it be,
Never boasted truer, braver,
Tenderer knight than he.

Beside his life their proudest blazon,
Dimly splendid, pales;
Kin or no, he lived their legend:
Virtue alone prevails.

CLEVELAND, OHIO.

The Student's Ten Commandments

By John M. Thomas, D. D.

[These Ten Commandments were pronounced by President Thomas of Middlebury College, at a recent meeting of the University Convocation of the State of New York.—EDITOR.]

1. Thou shalt set the service of God and man before thine heart as the end of all thy work.
2. Thou shalt inquire of each study what it has for thee as a worker for a better world, not relinquishing thy pursuit of it until thou hast gained its profit unto this end.
3. Thou shalt love the truth and only the truth, and welcome all truth gladly, whether it bring thee or the world joy or suffering, pleasure or hardship, ease or toil.
4. Thou shalt meet each task at the moment assigned for it with a willing heart.
5. Thou shalt work each day to the limit of thy strength, consistently with the yet harder work which shall be thy duty on the morrow.
6. Thou shalt respect the rights and pleasures of others, claiming no privilege for thyself but the privilege of service, and allowing thyself no joy which does not increase the joy of thy fellow-men.
7. Thou shalt love thy friends more than thyself, thy college more than thy friends, thy country more than thy college, and God more than all else.
8. Thou shalt rejoice in the excellences of others, and despise all rewards saving the gratitude of thy fellows and the approval of God.
9. Thou shalt live by thy best, holding thyself relentlessly to those ideals thou dost most admire in other men.
10. Thou shalt make for thyself commandments harder than any other can make for thee, and each new day commandments more rigorous than thine own laws of the day before.

A Southern's View of "The Southerner"

*The Southerner** first appeared in *The Atlantic Monthly*, where it excited much interest among Northern readers, for whom it seems especially designed. While the author claims that it is a novel, it is really an indictment of a whole people. Nicholas Worth, the hero, is a Southern youth, who gets a Harvard education immediately after the Civil War. Unfortunately, this education results in making him a man who feels better and different from his own kind, who secretly despises them for their faults, and who is only willing to impart to them the mind and virtues and standards of another people whom he admires more. There can be no doubt that the criticisms are written from an intimate inside knowledge of Southern character, and that the book contains a truthful list of not only the faults and frailties of this people, but of their fallacious standards of value, one of them being to brag upon Nicholas Worth as a distinguished citizen of their section. The South is almost pusillanimous sometimes in its appreciation and praise of a merely intellectual and scholarly man. But that does not mean that the South accepts his doctrines and dogmas. It simply wears him like a brass button on the outside of his coat, where he will show for what it wants him to be worth. This conduct was offensive to Nicholas, and he calls it by ugly names in his book. He conducts a political campaign in opposition to the regular Republican and Democratic machine politics, and in the interest of education and industry—two particulars where the Southern character is very frail, and this part of the book is used to display, in a cold, sneering manner, the thriftlessness of his people, their Chauvinism, their absurdities. He calls it the "land of the formulas," where every one lives in the present as if it were the past. He nearly reaches dramatic expression in his contempt, but a Harvard frost of tempera-

ment prevents their egregious animation. Jonathan in the story proclaims the history of the South in epigrammatic clauses.

"Strong men came here. They worked; then they bought slaves and stopped working; then they wrangled; then they fought; then they were oppressed; and they were on the defensive from the time slavery came. They are sidetracked now, and are just about to find out that the track they are on leads to nowhere."

The author thinks that is "good history." And it is good outside history. But the spiritual history of the South has never been written, and the author of this book, whoever he may be, is either too stupefied by his educational intoxication to recall it, or he is one of those poor creatures who never had the sense of it.

Nicholas Worth is defeated in his political campaign, and resents as dishonorable the fact that the section still exploits him and claims him as one of the scholarly feathers in its cap. That is not dishonorable in Southern; they do not think in the terms of the age in which they live, and above all, that they need a renaissance of life—a peculiar people, wonderful, crystalized in the heroics of memory and of temperament. But who shall bring them a message? Not a man like Nicholas Worth. Moses was a leader, a hero, not a pedagog who had lost his need of religion by squeezing his soul thru an intellectual sausage grinder at Harvard. No people, especially a choleric people like those of the South, endure being kicked by a highly educated little fellow, and Nicholas is a little fellow. This is one fault of the book. The reformer in it is too small a personality, too decimated by the kind of education he is trying to thrust upon others, too contemptuous, too unfriendly in spite of his protestations of devotion. One may deceive primitive peoples, pagans and intellectual fools, but no man can deceive people whose life is of the heart rather than of the head. They have intimations and inspirations that guard them against the subtle verity of men like Nicholas Worth.

The other fault of the book is this: By education and industry, the hero

meant the kind of education and the kind of commercialism that has secularized and fattened the North and East. The South is very backward in accepting it because of the heroic integrity of that heart-life already referred to. It does not appeal to its ambition and moral and intellectual taste. What the South wants is a peculiar education, a training that appeals to something besides the commercial and intellectual cupidity which is the shame of the North and East, into which Nicholas Worth has really moved and of which he has his being. This is the fault of all the educational missionaries from that section who come South. They have nothing good enough or big enough to teach the people they come to reform. Therefore they remain to win their lands and moneys by the rejected system.

There is a certain terrifying power in the South that makes a Southerner, such as the author of this book must be or have been, willing to sacrifice the credit for his good deed by failing to sign his name to an enlightening criticism of his section like this. This is not because he fears the sword, but the heart of his people. They do not merely turn their back upon the perpetrators of such a wrong as this author has committed; they have a power of contempt that is not intellectual or reasonable, but sincere, definite, personal, and with a kind of invincible blood-righteousness in it. And the victims of it declare that it is the most lasting, embarrassing and painful experience a man can have in this life. This accounts for a good many excommunicated Southerners who no longer make their home in this section. They have told the truth about their own people in a manner which gives a false impression as well as a true one.

MRS. L. H. HARRIS.

Dr. Diet

SINCE Fletcher threw his mastication and low diet glove into the arena we have had a lively tournament of discussion as to how much or how little should be eaten. Sir James Crichton-Browne,¹ who is a distinguished English medical au-

thority, has answered the contention that men have always eaten too much and that only now are we getting diet wisdom by insisting that the only test for diet sufficiency is human efficiency. He shows that men at all times have eaten what was acknowledged to be the standard diet until Fletcher followed by Chittenden disturbed men's notions in this regard. In the fifth century before Christ, at Athens, when the greatest men who ever lived were born in large numbers and we had several of the most efficient human generations that ever came into existence, the proteid diet was high. The same thing has been true at all times. Whenever the diet of soldiers, sailors, prisoners, is reduced much below the average that men usually eat, tho this is nearly double what Fletcher and Chittenden deem necessary, weakness and illness supervene. Men cannot do good work and eat less than what instinct has taught mankind to eat in the past.

Dr. C. Stanford Read² reviews the dietetic situation and seems a little inclined to get on both sides of the fence. Perhaps men have eaten too much, but it does seem as tho instinct must be the only guide after all. In his chapter on "Vegetarianism" he has a very interesting review of observations made on inebriates in whom the vegetarian diet did away with all craving for alcohol. The Salvation Army has tried this plan on some apparently hopeless cases and declares that the benefits are incalculable. Women who were habitual drunkards for ten, fifteen and even twenty-five years have been able to overcome their craving for alcohol on a vegetable diet and yet gain in health and strength while living thus.

Professor Snyder, of the University of Minnesota, has made a very valuable textbook³ of all our present information with regard to foods out of the lectures that he has been giving at the Minnesota College of Agriculture on "Human Foods and the Nutritive Value." He takes no sides and his discussion of food materials is excellent.

¹FADS AND FEEDING. By C. Stanford Read. New York: F. P. Dutton & Co. \$1.50.

²HUMAN FOODS AND THEIR NUTRITIVE VALUE. By Harry Snyder. New York: The Macmillan Co. \$1.45 net.

³PARSIMONY IN NUTRITION. By Sir James Crichton-Browne. New York: Funk & Wagnalls Co. 75 cents net.

Upton Sinclair⁴ has told the story of how he regained health by learning how to eat from Fletcher, and learning the additional lesson of eating very little and that of food out of which the life has not been cooked. He and his friend, Mr. Michael Williams, consider that they have come upon a new virtue—the virtue of good eating—fully as important as any of which moralists and prophets have ever preached. They want to pass on their lesson in feeding to others and hence this book. The authors are perfectly sure that what is good for them must be good for all the race. It is true that all the race for centuries has lived quite differently and that the old people in our almshouses fairly stuff themselves and have done so all their lives, yet live to be eighty, ninety and even a hundred in the enjoyment of good health. The latter-day evangelists seem to forget entirely how much the individual counts in anything like this and that we must all learn to live for ourselves. Their special dread is germs. Altogether there are something less than two score of germs that we know to be harmful to mankind. We know thousands of other kinds that are not harmful and many of them are beneficial. Germs are little plants. We deliberately eat them in cheese and many other things, and that we should be eating them unaware in meat and other food is not surprising. It looks awful to be told that there are 560,000,000 of aerobic microbes, we should say germs, in sausage, and 420,000,000 of anaerobes; that may only mean, however, that our meat diet is more largely vegetable than we thought it. Whether we eat microscopic vegetables or the larger varieties may be a matter of utter indifference. Who knows? Apparently it has been so for the most part in the past, for the human race has survived in spite of the gauntlet of germs it ran all unaware in the pre-bacteriologic days. Let us not get scared. Instinct is still in the world and if not all nearly all is well as yet.

The Speakers of the House. By H. B. Fuller. Boston: Little, Brown & Co. \$2.

Mr. Hubert Bruce Fuller's book on the Speakers of the House of Represent-

atives is a running commentary on the presiding officers of that body from Muhlenberg to Cannon, written with some verve and not much system. The best part of the volume is devoted to Reed and Cannon, about whom the author writes with a firmness of hand that shows more than chance acquaintance-ship with these two great leaders. Pains-taking historical research does not seem to be a strong point with Mr. Fuller, so that the first portion of his book seems more or less perfunctory, not to say jejune. Reed's "revolution" in the rules and his personality are described in a light and pleasing manner which is on the whole convincing, altho one cannot agree with the author's view that Reed seemed to "combine happily the wit and sarcasm of Disraeli, the scholarship of Rosebery, and the sturdiness and stubbornness of Gladstone." This is, of course, fine writing for effect—perhaps a faint echo of something remembered from Macaulay's style. There are a few good stories which add to the value of the book. Congressman Sulzer once applied to Reed for recognition on a pension bill, and met with the response, "This man is not entitled to a pension under the law. I am worried nearly to death with these pension bills." Thereupon Sulzer replied: "I know it, Mr. Speaker, but just think of it, if I do not pass this bill it will be the death of this poor, old soldier. Recognize me and I will get it thru in a few minutes and I will save two lives, yours and his." Reed recognized Mr. Sulzer when he had scarcely left the Speaker's desk, and on the passage of the bill remarked: "The bill is passed and two lives are saved—the old soldier's and that of the gentleman from New York." There is also a pen picture of Mr. Cannon that must have been drawn from a point of vantage very close to the Speaker's desk, and is alone worth the price of the book. Cannon is a conservative of unquestioned integrity; he is studiously unconventional; he mounted to his place by sheer hard work and mastery of legislative mysteries; his eloquence is his earnestness and his home-spun philosophy; while somewhat narrow-minded he fights in the open; he has carefully nursed his district with a handsome Federal building, a soldiers' home, a wise distribution of

⁴Upton Sinclair and How We Won It. With an Account of the New England Tea Party. Sinclair and Michael Williams. New York: Frederick A. Stokes Co. \$1.25.

local patronage, and a long list of pensioners; and he has a general grip on things which is hard to shake off. Surely this is about right. Mr. Fuller incidentally, in describing the working of the Speaker's office today, makes a brief but effective analysis of the party system in the House—the Committee on Rules and the tenaciously cohering leaders. His conclusions, too, are sound; he does not join in the indiscriminating abuse of the despotism of the Speaker; he does not weep over the precious rights of the minority to delay the country's business; he believes that the trouble with the party system, including the Speaker's office, is not in the system but in the character of the men who work it. The book will undoubtedly find a place in the unacademic and readable literature of American politics; it will only tarry awhile, however, with our Bagehot and Bryce, and will reach its long home before sunset.

The A-B-C of Taxation. By C. B. Fillebrown. New York: Doubleday, Page & Co. \$1.20.

This book, by a veteran defender of Henry George's Single Tax doctrine, consists of a lucid exposition of George's teaching about land values. It is cogent in parts as a geometric proposition, tho detailed with some unnecessary repetition. Enthusiasm and cock-sureness, qualities which distinguish the genus Single Taxer, appear all thru. The story goes that when an awkward interval occurred at a funeral one mourner solemnly rose and proposed to redeem the time by saying a few words on the Single Tax. However, when the land taxers leave agricultural land values aside and illustrate their case by exposing city rents, they become, indeed, impressive. Boston, the author's city, pays a gross ground rent to its site owners of over fifty million dollars a year—three-fourths of it to dead-hands. Ten millions of this is resumed by the city as taxes. Taxes upon improvements and upon personal property and polls amount to eleven millions. The Single Taxers propose to make the land pay the whole twenty-one millions and to leave improvements and personalty tax free. Like most reformers they prom-

ise the millennium as a reward for adopting their scheme. While suspicious concerning the arrival of the millennium on schedule time, many city dwellers would dearly love to set the tax collector, like a watch dog, on to the land owners who are carrying off annually the fabulous values for which they "toil not, neither do they spin." German municipalities have shown the way. Many of them put a special extra tax, amounting sometimes to 20 per cent., upon increments of values as shown by successive sales of city plots. The English Cabinet has scared the House of Lords until its teeth are chattering in its senile jaws, by proposing to take back in future one-quarter of all increments in urban land values for the public which creates them. In America, also, municipal services—schools, health inspection, hospitals, parks, baths and the like—are becoming so costly that this overflowing reservoir may shortly be tapped.

The White Prophet. By Hall Caine. New York: D. Appleton & Co. \$1.50.

This book is an ambitious attempt to present a new religion, tho new only in the sense that by its teachings it shows how far short Christianity falls of the standard set by Jesus Christ. The scene is laid in English-governed Egypt, in this case significant because it is the home of two great religions—the Mohammedan and the Christian. This country, so prolific in prophets, produces yet another—Ishmael Ameer—who goes about preaching and teaching in much the same constructive way his master did before him. The natives become excited and interested, and the British Consul-General, believing himself face to face with a Mahdi rebellion, determines to suppress the Prophet. He turns to his son to aid him in the enterprise. The father is a typical representative of militarism, and above all a British soldier who obeys his superior first and last, whereas his son has a back-handed conscience that pulls him in a dozen different directions. The author half attributes this temperamental trouble to his American mother. The young man has heard the Prophet and believes that the preacher speaks the

truth when he says that Christianity, as well as Mohammedanism, has failed to redeem the world from its lusts. The son refuses to take part in the suppression, and the future tragedies of the story are based upon this refusal. In the White Prophet the reader is supposed to see a new Oriental Christ, but the author has failed in his spiritual conception of the man. He preaches no sermons of hope, but condemns sweepingly. It's Mr. Caine's old trick of juggling with right and wrong till he makes the failures of our one great religion seem the whole of it. Whatever may be the first impression of the Prophet, eventually he shows the cloven hoof that always marks the tracks of Mr. Caine's idols, and thereafter we know that this book has no message from the spirit, but is just another subject the author has selected over which to have hysterics. The story has no compensations. The characters are made strong only that we may see them suffer longer. The whole is wordy and monotonous with padding.

Literary Notes

...The *Deutsche Geschichte*, by Oskar Jäger, the veteran German historian, of which the first volume of 668 pages and reaching down to 1648 has just been published, will be completed in a second volume going to our day and date. Here we have for the thoughtful reader a history of Germany on a higher scale and written by a master. The book is being fully illustrated, the first volume containing 114 cuts, mostly portraits. (Munich: Beck.)

...*Das Neue Testament in religiösen Betrachtungen für das moderne Bedürfnis*, edited by Lic. Dr. Gottlob Mayer in conjunction with seven other prominent representatives of progressive orthodoxy, is an earnest attempt to adapt the contents of the Bible to the thinking man of today, yet without sacrificing any of the substantials of the Scriptures. It is appearing in fifty parts, making a total of perhaps six volumes. Published by C. Bertelsmann, of Gütersloh.

...An editor often wishes that he could write the whole magazine himself and so have it to suit him, but he rarely attempts it and still more rarely keeps it up. *The Forerunner*, however, is, as its title says, literally "by Charlotte Perkins Gilman." Mrs. Gilman writes the poetry, editorials, serial, short story, articles, answers to correspondents, and even the advertisements. This last is an original feature which we hope will not become the universal custom. Mrs. Gilman in this first issue testifies from personal experience to have worn the hosiery, eaten the chocolate, used the toilet

preparations and employed the fountain pen that she advertises, but when the advertising reaches a hundred pages a month we fear it will prove too much of a strain upon her constitution. To INDEPENDENT readers it is not necessary to say that the new magazine is devoted to the gynocentric theory of the universe and is full of novel ideas wittily exprest. (Charton Co., 61 Wall street, New York. \$1 a year.)

Pebbles

A SURE THING.

"I could kiss her," said Bronson, "inside of twenty-four hours."

They were sitting on the beach—four of them. Bronson had just come from the city. The others had been there for a couple of weeks.

The girl in question was sitting some distance away, under an umbrella, quietly and demurely reading.

The other fellows looked at Bronson, each with an incredulous smile.

"That's all right," said Tilter. "So I thought; but it isn't so easy. We have all tried it on," he said, "and up to the present moment we have failed. For myself, I cannot make out whether she really objects or not."

Bronson gave another look in the direction of the young woman in question.

"Perhaps you were in too much of a hurry," he said, reflectively.

"If you think," said Quibb, with a satirical grin, "that you can give us any points on that proposition, you are laboring under a totally unjustifiable delusion. I haven't been spending my summers at seaside resorts for the past eight years for nothing."

"Nevertheless," replied Bronson, "I bet I can kiss that girl within twenty-four hours. There's a spot on the back piazza," he continued, "and you can see it from one of the top windows of that bathhouse yonder. Now, you boys can see me do the trick. How would half past five this afternoon do?"

"I'll bet you a hundred you can't do it!" broke in Hubton. "Will you fellows take a third each?" he asked, turning to his companions.

"Sure!" replied Quibb.

"I'm in!" replied Tilter.

"It's a go!" said Bronson.

They all met again at six, behind a friendly rock. The trio that had bet with Bronson were all pretty well crestfallen.

"You did it," said Tilter, disconsolately. "You're a wizard, all right. Boys, pony up."

"That's easy money," said Quibb, as he counted out his share.

"I don't know of any better way of making a hundred," said Hubton, as he handed it over.

Bronson smiled.

"You mean fifty," he replied.

"Fifty!" exclaimed the three of them in chorus. "You made a hundred, didn't you?"

Bronson smiled again.

"Fifty of it," he explained, "goes to the girl."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Elections

IN several of last week's State elections there were issues or popular movements which excited more than local interest. Maryland voted a second time upon a constitutional amendment designed to disfranchise the negroes of that State, and it was rejected by a majority of 16,000. As the negroes are only about one-fifth of Maryland's population, the excuses given in States further south for such disfranchisement are clearly insincere when offered there. The white people of Maryland do not fear "negro domination." Disfranchisement has been sought there in the interest of Democratic machine rule. The rejection of the amendment was due mainly to Democrats who do not like their party's machine and are also ashamed of the pretense that the negro vote menaces white supremacy. In Rhode Island, reform in legislative representation has been promoted by the adoption of an amendment increasing the number of legislators elected in cities. It is believed that this just change will tend to prevent control of legislation by a boss. Hereafter, also, the Governor will exercise the veto power.

In Massachusetts the Republican majority was reduced (in the vote for Governor) from 60,000 to 8,000. This was due chiefly to popular disapproval of the new tariff, altho Governor Draper's veto of an eight-hour bill affecting certain classes of public employees had excited the opposition of organized labor. During the campaign much was said about the tariff, which was the leading subject of the speeches made by the Democratic candidate for Lieutenant-Governor, who had been a Republican devoted to tariff reform. Disapproval of the new tariff was also effective in Nebraska, where a Republican majority of 24,000 was cut down to almost nothing. In Kentucky, the Democrats were favored by a reaction which gave them two-thirds of the Legislature and control of the municipal government in Louisville.

In the State of New York there were many indications of the growing strength of the movement for the direct primary law proposed and earnestly advocated by Governor Hughes. Several Republican legislators will be replaced by Democrats elected by Republican voters, who could not support the candidates of their own party because these were clearly in opposition to the Governor with respect to this issue. For the same reason there were some notable reductions of Republican majorities.

The most important municipal elections were those in New York, San Francisco, Philadelphia, Cleveland and Boston. A majority of the people of San Francisco have voted virtually to discontinue the prosecution of the men who were responsible for corruption in their municipal government. This is the meaning of the defeat, by a majority of 10,000, of Francis J. Heney, the brave prosecutor, who was a candidate for District Attorney, and of the election as Mayor of P. H. McCarthy, candidate of the Union Labor party, whose foremost representative heretofore has been Mayor Schmitz, the corrupt and convicted partner of Boss Ruef. Those who desired to see the rich bribers prosecuted to conviction fought hard in the campaign, but were overcome by the votes of citizens who had been complaining that the prosecutions affected business unfavorably and gave the city a disa-

greeable notoriety. It is quite well known that the prosecutors had ample support until they began to reach after "the men higher up," the wealthy and "respectable" officers of corporations whom Heney had determined to bring to justice. This election probably marks the end of the movement against these rascals. San Francisco has blundered. If her people, holding up the hands of a courageous and competent prosecutor, had sent to prison all these thieves and bribers, this would have been an achievement of which they and their children after them might have been proud. Moreover, it would have been highly beneficial to the business interests of the city. These interests must suffer by reason of last week's shameful surrender, the defeat of Heney, and the election of a Mayor who promises to make San Francisco "the Paris of America."

The election in Philadelphia offers no encouragement to those who hoped for a reaction there in favor of reform. D. Clarence Gibboney, for many years an earnest worker for decency and honesty, was the candidate of the reformers for District Attorney. But the local Republican "organization," controlled now, as it was at the time of the uprising a few years ago, by a combination of contractors, prevented his election. The majority against him was 43,000. Rarely can a majority of the people of Philadelphia be aroused from that curious indifference which accepts the domination of a ring.

Boston voted for something closely resembling the commission form of government, and is the first of our great cities to seek in this way an improvement of municipal conditions. There is to be a mayor, elected for four years, but subject to recall at the end of two years by a majority of the voters. Nominations for this office are to be made on petition by not less than 5,000 voters, and the ballots are to bear no party designations. The Council is to be composed of only nine members, all elected at large for three years, and three of them going out each year. These Councilmen are also to be nominated by petition. Nominations made by the Mayor for heads of departments must be approved by the State's Civil Service Commission. The experi-

ment will be closely watched elsewhere. Topeka also voted for a commission plan, and Mount Vernon, a suburb of New York, gave a small majority in favor of a similar form of government. It will ask for legislative approval of a charter providing for a commission of five persons (the Mayor being one), and for the recall of any one of them.

In Cleveland, Mayor Johnson, who has held the office four terms and become widely known as the vigorous advocate of three-cent fares on the street railways, was a candidate for re-election. His Republican opponent was successful. Mayor Johnson also lost his majority in the Council. The explanation appears to be that the people were weary of the long contest for a reduction of fares. It will be recalled that recent referendums have been unfavorable to the Mayor. One cause of the prevailing weariness has been unsatisfactory railway service. A settlement of the controversy is said to be at hand, and it will probably be made upon the basis of an allowance of net earnings permitting 6 per cent. dividends. It cannot be foreseen how this will affect the fares, but they will be much lower than they were when Mayor Johnson began his fight, eight years ago. Altho out of office, his purpose will have been accomplished in part.

Many feared that the result of the election in New York City would be extremely unfortunate, but it was quite encouraging. While it is true that Tammany's candidate for Mayor, William J. Gaynor (recently a Judge of the Supreme Court), was elected, it is also true that Tammany lost nearly all of the other offices, both in the city and in New York County. Thus it has been deprived of control of the highly important Board of Estimate and Apportionment, in which it will have only the three votes of the Mayor, while the officers elected on the Fusion ticket will have twelve. The powers of this board with respect to the city's purse are large, and it is expected that the city's expenditures during the coming term of four years will exceed \$1,000,000,000. The election of the Fusion nominees for a long list of offices below that of Mayor was due to the candidacy of William R. Hearst in opposition to Judge Gaynor. He became

a candidate upon condition that his supporters should vote for these Fusion nominees.

A majority of them are Democrats, but not Democrats of the Tammany kind. The new Comptroller is a Republican, but the President of the Board of Aldermen and the presidents of the three leading boroughs are independent Democrats. The quality of these associates of the Tammany Mayor in the Board of Estimate may be indicated by the records of two of them. Mr. McAneny, formerly a prominent advocate of civil service reform, was recently, as the head of the City Club, a leader in the work of preparing and filing the charges against two of Tammany's borough presidents, who were afterward found guilty and removed from office. Mr. Mitchel, President of the Board of Aldermen, as Commissioner of Accounts conducted the official investigations which disclosed their unworthiness.

Judge Gaynor has an inviting opportunity to work in harmony with these men and others elected on the Fusion ticket, and thus to give the city good government. If he declines to do so, the city will still be served by their honesty and proved ability. As for Tammany, excluded from the springs of patronage in nearly all the offices of the city and of the county, which includes a large part of the city, its plight causes good citizens to rejoice. The discomfiture of this organization encourages the friends of good government thruout the country and all over the world.

John S. Kennedy's Bequests

AN example to the country and the world, and particularly to rich men in this country, is to be seen in the bequests made in the will of Mr. Kennedy, who died in this city last week. He was one of those canny and shrewd and yet generous and public-spirited Scotchmen who have been educated in the spirit of John Knox and the love of learning, and equal love of acquisition, for which Scotland is famous. He was one of the most honored citizens in this his adopted city, and his will is as admirable as any that has ever been written by a rich man.

His estate is estimated at \$60,000,000, and nearly a half of it is given back to the public. It is not the amount given so much as the good judgment shown in the selection of the objects for his bequests that calls for our admiration.

And, first, he appreciates the value of religious institutions for the benefit of the world. It is a fine lesson to others that he first gives two and a quarter millions each to the Presbyterian Board of Foreign Missions, the same denomination's Board of Home Missions, and its Church Erection Fund. The Church Extension Committee of the New York Presbytery will receive a million and a half, while the Bible Society receives three-quarters of a million. We presume that very little of this is in the way of permanent endowment, of which only the interest can be used. Similarly, the American Board has once or twice received by bequest a million or more, and wisely used it to extend its work, exhausting the gift in a few years. Its profit to the world is much greater thus put to immediate use and enlarging its influence than when it is held as an endowment to reduce the charities of a succeeding generation. There is no better work than the Christian missionary service, which gives character to the people of our own country and carries civilization—that, too, a Christian civilization—to foreign lands.

Then Mr. Kennedy gave largely to education. Of these gifts the most notable, and the one which most pleases us, is that of a million and a half dollars to Robert College, Constantinople. One can go the world over and hardly find an institution which has better served its generation. Its story is told in President George Washburn's "Fifty Years in Constantinople," just published. Founded by Dr. Cyrus Hamlin, and then presided over by the scholar and statesman, Dr. Washburn, it has been the creator of free Bulgaria, and its influence has been commanding in the regeneration of Turkey itself. Now the Turks are seeking its instruction for their choicest youth, as previously did the Bulgarians, and now do the Greeks and Armenians, but for lack of accommodations it has been unable to accept those who have

applied. This gift will enlarge its capacity for influence. Now let some one else do as much for the Syrian Protestant College in Beirut, an institution of similar influence for the Arabic-speaking world, and also supply proper endowments for a dozen other American colleges in Turkey, India, China and Japan. Some of these Mr. Kennedy also wisely remembered—\$25,000 to the Syrian Protestant College and \$50,000 to the Anatolian College in Marsovan, Turkey.

Very wisely Mr. Kennedy gives large bequests to the city of New York. To the Metropolitan Museum of Art, the New York Public Library, Columbia University and the Presbyterian Hospital he gives two and a half millions each. These gifts could hardly be better bestowed. The Metropolitan Museum ought to be magnificently endowed, a chief honor to what will yet be the greatest city in the world. A million and a half goes to the United Charities, and three-quarters of a million to the School of Philanthropy of the Charities Organization, and smaller amounts to other institutions.

When we come to other educational institutions we observe a similar wise selection. The University of the City of New York receives three-quarters of a million; and Yale, Amherst, Williams, Dartmouth, Bowdoin and Hamilton colleges receive each \$100,000, and a similar amount goes to Hampton and Tuskegee institutes, while a considerable number of other colleges and schools will receive smaller amounts.

We say it is a model will. It indicates the testator's personal knowledge of the institutions designated and an unusually wise appreciation of their value. Of course the larger half of the estate goes to relatives and personal friends, as is right; but his obligations to the public are handsomely recognized. And there is a wise understanding of what are the forces which benefit the world, religion and education; and the education under religious influences. Would that other rich men, whose wealth always comes from the public, might as fully and wisely recognize their obligation to the public which has so enriched and honored them.

After all, it was the character of Mr. Kennedy which made him able to do what will continue him a blessing to the world at home and abroad after his death, as well as during his lifetime.

The Independence of Church Courts

THE question how far the decisions of ecclesiastical bodies under their own constitutions can be reviewed and reversed by civil courts is an important one to all denominations, and nowhere more so than when two denominations attempt to unite, as in the case of the union of the Cumberland Presbyterians with the Northern Presbyterian Church. Both Churches agreed by their highest national bodies to unite; but as is always the case there were some of the Cumberland Church who objected and followed the example of the "Wee Frees" in Scotland, went to the courts, declared that they were the real genuine Cumberlanders, and demanded all the property.

The legal question involved is as to whether the General Assembly of the Cumberland Presbyterian Church and the lower synods had the right and authority to agree to unite. The ordinary American way is to hold that the actions of the ecclesiastical authorities are not to be reviewed, that these matters are *ultra vires* of the civil courts. But the English view is the Erastian one, and has been somewhat followed in a few of our State courts. Under it the Free Church of Scotland recalcitrants were given all the property of the Free Church when it joined the United Presbyterian Church, and Parliament had to correct the evident wrong. The English law courts hold that all questions connected with Church property, doctrine and discipline included, are subject to review by the civil courts. The American view is otherwise, and has found expression in the decisions of a majority of the Supreme Courts of the States, and also in decisions of the United States Supreme Court. In a number of cases the Missouri and Tennessee courts have supported the English view, and it is not surprising that they have given the property of the Cumber-

land Presbyterian Church in their borders over to the minority which reject the union, on the ground that the creed of the Presbyterian Church, that is, the old Confession of Faith, denies liberty of will and damns infants. The Missouri decision devotes seventeen pages to show that the Confessions of the two Churches do not agree.

While Indiana, Tennessee and Missouri courts have favored the lingering minority, in most States the decisions have allowed the union, refusing to override the decisions of the Church courts. In Missouri the Supreme Court has denied a rehearing to the Union party. The Appellate Court of Indiana has rendered an opinion favorable to the Anti-Unionists, and an appeal has been made. In Kentucky, Texas and Georgia the Supreme Courts have given decisions favoring the union, and litigation is now pending in Indiana, Illinois, Alabama, Mississippi, Oklahoma, Arkansas, Colorado and California. In Illinois the Supreme Court has decided one case in favor of the Unionists, but as there is another for it to pass upon involving somewhat different questions we cannot claim that court as yet for the Union party. An Indiana case is now before a United States Court, and an Erastian view is not likely to prevail there.

The Anti-Unionists have been, as might be expected of the defeated party, blazing hot over the matter, and their language in their paper quite goes beyond the usual courtesies. The Moderator of the General Assembly of the Cumberland Church at Dallas, Tex., the Hon. Warner E. Settle, now Chief Justice of Kentucky, but who did not sit when the case was tried in his court, has been charged with having misled eight men by an erroneous decision at Dallas, and it is asserted that fraud was therein perpetrated on them, but they have not been produced either in person or by affidavit. It was decided in the Chancellor's Court of Tennessee that this asserted fraud was not pertinent to the case.

The Union of Churches is so very desirable a result that the opposition of a few ought not to be regarded. There always will be those who want to dissent, who have outlived their age. They have to be ignored and overridden, or

there will be no progress. This union is working happily except for these legal contentions, which will be settled before very long. They simply should make those planning other unions very careful about the preliminary steps. Litigious people will make trouble, and some few courts may be as little worthy of consideration as the Supreme Court of Missouri which has decided that the Westminster Confession of Faith is a fatalistic document. Even if it were such the new Confession relieves the fatalism.

The Uncultured Sex

THE question, which we raised in our issue of October 28, of why so many fine women remain unappropriated, has aroused among our readers the interest that its importance deserves. We have acquired a collection of human documents invaluable to the student of feminine psychology. All conceivable views are set forth in them, except, of course, that which we editorially express. The letter we have chosen for publication presents a case quite different from that of our former contributor, but equally significant of present day tendencies. Miss Saepe Quaesita, as we have ventured to name her, throws a new light on the old question of why American girls marry foreigners. It is not so much because they long for titles and castles as it is because the Frenchman, the Italian and the Austrian (why this marked omission of the Englishman?) show more *verve* and *esprit* in their suit. The lady apparently would not mind a little contradiction and even bullying if there were interludes of music and moonlight. Young men in search of wives should make note of this point. It seems that the old rule, "faint heart never won fair lady," still holds with the new woman. We had sometimes suspected that educated women rather enjoyed the abject terror into which the display of their superior accomplishments threw the ordinary man, but we are glad to find that we were wrong, at least in so far as this lady is a representative of her class.

She is obviously a little unfair in comparing American men who earn their own living and expect also to support their wives with Europeans who have

had nothing to do but to play Chopin and make love and who are hunting for American wives with bank accounts sufficient to keep them for the rest of their lives in the secure enjoyment of the same pursuits. To be successful in the cultivation of culture a country must have a leisure class. We Americans recognize this fact, but we are going about the getting of this leisure class in a new way. In Europe the aristocracy is largely relieved from drudgery in order that they may cultivate the graces of life. In America the attempt is being made to relieve the women of all classes from drudgery, and we are glad to see that some of them at least are making good use of the leisure thus afforded them. It is a project involving unprecedented daring and self-sacrifice on the part of American men, this making an aristocracy of half the race. That it is possible yet remains to be proved. Whether it is desirable depends upon whether this new feminine aristocracy avoids the faults of the aristocracy of the Old World, such as its frivolousness and snobbishness.

But our contributor belongs to the self-supporting class as much as the American men with whom she associates, and she has a right to expect them to be her equals in taste and accomplishments. Altho in our opinion she attaches too much importance to the conventional stigmata of culture, we must acknowledge the justice of her indictment. In the educated classes the American man is undeniably inferior to the American woman in range of interests, in refinement of taste, in manners and in conversational ability, and his deficiencies cannot be altogether accounted for by his absorption in business. They are due rather to mental laziness and lack of ambition. That the American man prefers to "hold his religion in his wife's name" is an old joke. He is also content to turn over to his better half his literature, his art and his music, and she is likely in the future to have a monopoly of his science and political economy. Women are in the majority, not only in the churches, but also at the lectures, concerts, operas, theaters, art galleries, libraries and study clubs; that is, in all forms of the collective pursuit of religious, intellectual and artistic culture. This is partly due to the

greater gregariousness of women, but the number of men who privately cultivate the fine arts is insignificant. The qualitative disparity is greater than the quantitative. The better the music or the pictures or the play the fewer the men. The lowest and worst concerts and operas are attended only by men. At those of mediocre quality the audience is about half and half. And the music that requires the closest attention and the highest intelligence for its appreciation has chiefly women for its auditors.

The present trend in education increases this difference between the sexes. There are more women being educated than men and they are receiving a wider culture. They are in overwhelming majority in the graduating classes of the high schools, and wherever they are allowed to they predominate in the department of liberal arts of the universities. That is, the men are being more narrowly trained for their vocations and the women are gaining a broader outlook and a cultivated esthetic taste.

One reason for the present rage for athletics is that the boys have been driven from the classroom to the football field by force of feminine competition. It is the only place where masculine supremacy is incontestable. There has been much complaint that college girls admired the athletes more than the scholars among their colleagues. But as our contributor shows, it is the nature of woman to want to look up to a man. Now, our girls are growing so tall since they have got out of the house into the open air that it is hard for them to find men to look up to. That they adore the football hero does not necessarily mean that they admire brute strength more than intellectual ability, but that brute strength is the only kind of superiority which they can find to admire in the opposite sex.

Our Mature Country

WE the people of the United States have thought of ourselves and of our national domain for nearly a century and a quarter as collectively and in combination a "new" country. Land to occupy and to "skin," for the mere trouble of taking possession of it and working it

by wasteful methods, has been thought of as boundless in extent. Food and raw materials have been looked upon as "cheap," as "surplus," and as an unlimited stuff for export. Manufactures have been regarded as products of old countries, which we could produce here only by artificially raising their prices. Equality and democracy we have assumed to be forever secure on this side of the Atlantic, because any man, if he chose, could live independently on the land, asking no favors, and holding his head as high as the tallest.

Doubtless we shall be an "old country," and possibly an effete civilization before we cease to think of ourselves in these terms of youthful optimism. And perhaps there is no more harm in it than there is when proud old gentlemen refuse assistance in getting into their overcoats, and dear old ladies wear the gayest of brightly beribboned hats. Nevertheless, for some purposes, we might wisely begin to survey ourselves with a somewhat severer accuracy, and for practical purposes admit that, if not yet old we have become at least a mature country.

A small thermometer may give readings as exact as a big one. Every time that the price of milk is advanced a cent a quart the fact is quite as good an indication that our country has gotten beyond childhood, if not, indeed, beyond adolescence, as would be a system of established social classes, such as one sees in England. All prices have advanced in the western world; but one has only to look over miscellaneous price schedules running back for fifty years to discover at a glance that continuously the prices of food and of raw materials have been advancing and are still advancing by greater steps of increase than the prices of manufactured commodities. Whether because agriculture no longer offers so good an opportunity to gain a livelihood as it once did, or because the temper of the people no longer suits itself to the rural life, our population is ceasing to be a food-producing people to the same predominating and characteristic extent that it was half a century ago.

This fact, even if it stood alone, would settle the question of our national youth

or maturity. The distribution of our people has become the distribution observed in old countries. Our habits are becoming the habits of the older nations. Our public opinion is becoming like the public opinion of Europe, notwithstanding our republican form of political organization. We have the luxurious if not the leisure class. We have the "class struggle," and we are beginning to have landlordism.

This conclusion is backed up by the observation of our shrewdest men of affairs and our expert investigators. When Mr. Hill, speaking from the standpoint of the railroad man engaged in transporting grain and other food stuffs to the seaboard, tells us that we are likely before many years to import food instead of exporting it, we receive his prediction with mingled feelings of shock and incredulity. Perhaps Mr. Hill is wrong in the literalness of his prophesy. Perhaps we shall continue to export food supplies, but if we do, it will be because we wake up in time to realize that we can no longer "farm it" by the old American methods. We must farm it by scientific and intensive methods of cultivation, which must combine American ingenuity with the European habit of applying intelligence, patience and persistent hard work, together with abundant capital, to the undertaking. And this means that we have become a mature country, and must live as mature countries have learned how to live.

If we ask what the essential fact or circumstance characterizes the habit of life in mature countries the answer is found in the sober word "economy." Apparently we are the most wantonly wasteful people in the world. The conditions of life that prevail in the mature country will compel us to take stock of our resources and our energies and will make us cease to squander them. That we shall be a less happy people when we cease to be so happy-go-lucky is not likely. On the contrary, we shall "cut out" of life an enormous amount of useless striving after things foolish and unsatisfying, a striving that now renders us irritable, and too often brings breakdown and bitterness. It is the common observation of travelers in European countries that people in all social ranks there

seem to possess a happier spirit than we know, and to have more leisure than we find for the substantial enjoyments and amenities of life. Yet they have to work harder than we, and they get less for their toil. The necessity for economy has compelled them to choose the things that are worth while. Perhaps nothing in the whole range of human habits, next to the elemental moralities, contributes so much in the long run to substantial happiness as a well disciplined habit of "cutting out" the things that are really not worth striving for, or coveting. In becoming a mature country we shall face some serious problems that hitherto we have vainly imagined we might escape. But for recompense we shall be saner and wiser. We shall be more economical in a large and good sense of the word; we shall acquire a truer taste; we shall work less nervously and more effectively; we shall have more leisure, altho we may work as many hours a week; we shall be healthier, and, more than all, we shall be happier.

The Apple Crop

A RURAL reader of THE INDEPENDENT writes: "Cannot your country editor tell us what is the matter with the old-fashioned apple? In fact, what has become of the Spitzenburg and greening and pippin of our boyhood days?" The writer of this note complains that the old democratic apple, the everybody's fruit, has become so high priced that oranges are cheaper. He is right, and what we are going to do about it must be considered. For the past three years the apples have gone up to five dollars per barrel, and over that, for the choicest fruit in the New York market. There was one let-down just at the close of the 1907 sales, when the market went to smash, owing to the immense amount of cold storage hastily tumbled on the retailers by the speculators. But this fall apples are more scarce than ever, and the really prime fruit can be secured only at a fabulous price. It has become a people's question, for the apple enters so largely into everyday food that we cannot fill its place either with any other fruit or food.

The old-time apple tree was grafted high up, on seedling stock. The Spitzen-

burgs constituted simply the top of the tree, while the trunk was a hardy seedling; but now our apple trees come to us from nurseries, and are grafted in the roots. It so happens that the wood of three or four of the best old sorts are more or less tender, and being thawed and frozen during the winter, they soon give way, and begin to die. With weakened stock the fruit itself is less perfect, altho likely to be more in quantity. Then again, the old-fashioned apple tree was planted in virgin soil; it was never fed after that, but allowed to exhaust all the apple and apple tree food that the soil contained. In this way most of the farm lots where apples are likely to be planted are unsupplied with those elements which go to make up good apple trees and apples. Here are two of the difficulties in the way of apple growing.

What are we going to do about it? Evidently we have got to go back to grafting our tender sorts high up, on hardy seedling wood. Then again we have got to learn how to feed our trees. The fact is there is not one of all our fruit trees that needs more care than the apple; but there is not one of them all so completely neglected. The apple orchard is planted, and then the trees are expected to shift mainly for themselves. This not only in the way of plant food, but in the way of trimming and spraying. You cannot find one fairly trimmed and honestly fed orchard to a township. Most of our apple growers do not know what the apple and apple tree needs. Perhaps the simplest solution of this problem for them would be to make their orchards sheep pastures, for the sheep litter is evenly spread and the food supplied uniformly. The skillful grower will, however, learn that his trees need just about that sort of compost which comes about from a gathered pile of barn manure, muck, autumn leaves and other waste. This pile will sometimes need a little lime, to hasten the fermentation.

We do not get by all our troubles yet, for the apple enemies have greatly multiplied within the last fifty years, and there is far more for the tree itself to contend with. Some of our trees must be washed at least every month with kerosene emulsion, or its equivalent, to

keep down the scales and the fungoid diseases. Bordeaux mixture is getting to be a phrase pretty well known among our farmers, and they are learning its power to protect foliage and bark alike from fungus diseases. They must, however, learn that these remedies have to be applied with considerable continuity and determination. Possibly we are getting to be a little too familiar with the use of arsenical mixtures on our crops. These things have worked wonders in the way of helping us in our battle with moths, bugs and beetles in the larva stage, but they are not needed in such reckless profusion as is sometimes recommended. In fact, the remedy has proven sometimes worse than the evil.

In 1909 whole States were devastated with what we sometimes call the apple louse—an aphid that does not confine its work always to the apple tree. When this pest does occur, however, and assails the apple, it comes in such sweeping myriads that the foliage of the trees is burned up. The very defective leaves are no longer able to perform their functions, in the way of distributing food to the fruit. The forming apples hang in clumps like crab apples, and the whole crop remains worthless except for cider. This is the story of this fall's crop. Half a dozen States or more report about 20 per cent. of their apples fit for barreling; the rest almost worthless. Those who thinned their apples closely, thus assisting Nature, were able to produce as good a crop as on ordinary years. Very few, however, have done this, and now the market price for good apples is away up above the poor man's pocketbook.

Perhaps the worst difficulty that the apple grower has to meet with is a fly, an insect that works all summer, stinging thru the skin of the apple, and laying an egg that sometimes does not hatch out until the fruit is barreled and in the cellar. Millions of barrels of the best apples are annually destroyed by this pest. So far we are unable to defy it, just as we are still unable to meet the attack of the aphid described above. To some extent the country editor is able, in this way, to account for the high prices and the short crops. But on the other hand he is able to report that a list of

apples is gradually being secured, new sorts in the main, that are not only hardy, but immune to a great extent to the attacks of the foes we have named. Among these are the Wealthy, the McIntosh, the Shiawassie, the Astrachan, the Hubbardston, while others approach these in their power of resistance. Precisely why these varieties and some others are neglected by beetles, bugs and flies it is hard to say; it will be enough to know that they are let alone.

So, then, it comes about to this, that we can have apples enough for the people, and at about \$2 a barrel—and good apples at that—when we have learned that the apple tree must be our most carefully cultivated tree, and that our orchards must get as much brain attention as our hops, potatoes and wheat. If this cannot be brought about the grand old apple is hereafter to be for the wealthier classes alone. New features of the fight will doubtless develop, with new insect and fungoid foes, but, for the present, first, feed well, and, second, trim well—that is, give your trees sunshine and air, and do not exhaust their strength on useless suckering. Brains are needed here if anywhere in horticulture. And why not? The apple is worthy of all the care and thought we can bestow upon it. Nature knew what she was giving us when she made it; and did not mean it for louts and loafers. You can have my prince of fruits, she seems to say, only with special care and energy.

King of the Rosaceæ family, the apple may be set down as at the head of the vegetable world. Come out into the orchard and study the McIntosh, the beauty and the glory of early winter; or the Northern Spy, the pride of mid-winter. Almost any one can grow a tree of either variety in his dooryard, arching over his well, or displacing a far less valuable bush. They should displace a vast number of ordinary yard, lawn and shade trees. They should line our streets. There is no reason for stinginess with the apple. Let the pedestrian have a pocket-full; let the schoolboys freely lunch. It is our national tree. Nothing will more contribute to national health than enough apples for all the

people. Less meat, more fruit; less hard work for the digestive organs, more healthfulness.

Citizenship for Porto Ricans If Colonel Colton's inaugural address as the new Governor of Porto Rico is met with fairness by the people, there ought to be more political peace in the island than has been the case of late. He said:

"That complete self government under the Stars and Stripes will eventually come to the people of Porto Rico is as certain as our institutions are secure. It will come to them when a sustained public opinion arises among the whole people that cannot be easily swayed by the specious arguments of the few who may seek to advantage themselves at the cost of their country. . . .

"I believe that every permanent resident of Porto Rico who desires to become an American citizen should be entitled to do so, and that the jurisdiction of the courts for the accomplishment of that purpose should be so arranged as to make the procedure convenient. . . . That Congress never intended to debar them from becoming American citizens is conclusively shown by its act of June 29, 1906, which, in my judgment, points out a clear channel thru which any Porto Rican may become an American citizen by voluntary act without leaving this island."

Any Porto Rican who asks for citizenship can get it, but only as foreigners get it, which does not quite satisfy the pride of nationality. Yet the objection is that the declaration that all Porto Ricans are American citizens would forfeit the special privileges which Porto Rico has of holding for the local exchequer what is received from customs. We trust that very soon it will be found safe and wise to constitute Porto Rico a Territory, will full Territorial privileges and obligations.

Parnell and Gaynor The Irish Catholic voters, who in Ireland threw over Mr. Parnell when they found him guilty of social sin, pardoned Judge Gaynor and voted for him as Mayor of New York, quite undisturbed by the charge that he had forsaken the Catholic faith after his first wife had secured divorce for adultery, and that he had married another against the rules of his Church. Western Catholic papers repeated these charges and anticipated that he would be turned down by the

voters. One priest in church denounced Judge Gaynor and warned his hearers not to vote for him, and just as the campaign was closing circulars were sent to the voters repeating what Western Catholic papers had said, but the unperturbed voters obeyed Tammany rather than the Church. They remembered an old Irish rule to follow Rome in religion, but not in politics; and they seem to have regarded the candidate as no longer a Catholic, amenable to Catholic morality, and felt they could vote for him as they might for any trustworthy Protestant or atheist. It is just as well that the circulars, purposely held back till too late to reply to them, had no effect. It is proper to raise questions of a candidate's present morals, but hardly of the offenses of his youth when he has, by a long life of decency, left them behind him; but it is not well to raise the question of religion. To raise it at the last moment savors too much of a political trickery.

A Teapot Tempest While the Church of Christ, Scientist, is having a mighty quarrel, one party composed of the men who control and manage the decrepit Mrs. Eddy, in Boston, and the other the men and women who attach themselves to the by no means decrepit Mrs. Stetson, in New York, the world looks on and laughs, and in a not over-Christian way enjoys the fun too much to say, "A plague o' both your houses!" And why? Simply because the language familiar to both is gibberish to all the rest of us. They actually think they understand the non-understandable Eddy Bible—both parties—and read it with veneration. Both talk of "malicious animal magnetism," "unscientific control thru hypnotism," "absent treatment" and various imaginary conditions and meaningless philosophical jargons which delight the initiate, and confuse and amuse the outsider. It takes an enormous capacity for faith to accept the revelations of the aged prophetess, but we would be content to stand aside and merely look if it were not for the extraordinary tyranny exercised by a little coterie of men who surround the Boston prophetess and who undertake to give their orders to just as credulous people

here in New York. The New York First Church of Christ, Scientist, seems likely to split; mostly a quarrel of personal ambition, and we do not believe that the attractive and ambitious Mrs. Stetson, with all her hypnotism and animal magnetism, deserves to be deprived of her rights to teach and heal any more than those who run things in Boston. We are content to have the break come simply because the whole doctrine is unscientific and unintelligible; and when ordinarily cultivated people shall learn logic and the meaning of words and the sense of evidence, the whole aggregation will disappear.

A Defense of the Irrational

We print this week a defense of academic ceremonial, gowns, hoods, mortarboards—all the polychrome of fifteen assorted colors of silk or velvet by which a graduated scholar indicates what is his sort of degree, from divinity to dentistry. The author's apology is of a somewhat reversible logic, like "*lucus a non lucendo*." It must be "a very deep wisdom" that has been wrought into the present movement, for he tells us that "it is wholly irrational, and all the better for being so"; that "nothing could be more irrational," and we agree with him. We admire the acuteness if not the validity of the process by which it is proved that what is irrational is therefore wise. The objection that the assumption of gorgeous clothes to separate the scholar from the unlearned man is undemocratic is more serious than the charge of irrationality. The author admits that the gowned and hooded baccalaureate actually has gained no rights and privileges not allowed to anybody else, for the old ones have all passed away; but he adds that they deceive nobody, for neither the wearer nor the spectator imagines he has any special privilege. The show is, he says, "a reversion to medievalism, but not to medieval views." Why we should revert to medievalism when we have got away from the medieval views is not clear. Our own contention is that all this putting on of outworn millinery is more than mere amusement, like a play or a historic pageant, but that it is the attempt to impress the beholder with the claim of belonging to a superior class.

Abraham Lincoln could not wear a scholar's gown to cover his angularity, or a yellow, or crimson, or mauve, or magenta hood to adorn his shoulders, or a quatre-cornered cap to top his inches; and what such a plain, ungraduated and ungarnished gentleman could wear is good enough for the youth who will leave the universities in 1910.

Turkey Protests

We are glad that A. Rustem Bey, Chargé d'Affaires of the Turkish Legation at Washington, made a public protest against the illiberality of the United States, as represented in the action of a Federal court, which has refused naturalization to an Armenian on the ground that as an Asiatic he was not "a free white person" who might under our laws be naturalized; and we do not care if this protest was contrary to diplomatic etiquette. It was right, just the same, and needed to wake our people up to the absurdity of the interpretation of the law and of the law itself. Think of it! It lets in black negroes from Africa, but shuts out Chinese and Japanese and Hindus, and has been used to shut out the Syrians, Turks and Armenians, who are white Caucasians, the Turks from Circassia itself, the land of beautiful women. Here is Turkey, backward, half civilized, whose courts we refuse to trust, protesting against the illiberality of American courts, and justly protesting, to our shame. We are told that Attorney-General Wickersham will make an investigation to determine whether, under our laws, Turks are or are not "free white persons." The statement is laughable; the question does not require investigation in law or in justice. It is agreeable to report that this past week another judge has admitted a Turkish subject to naturalization. It had been rumored that the Turkish Government, which now allows Christians to enter the army, was willing that Armenians should be regarded as ineligible to American citizenship, as that would prevent young Armenians from flocking to this country to avoid military service, intending to return as American citizens; but this protest shows that the Turkish Government is more concerned for the honor of its subjects than for loss to its army.

We are not convinced that the Bermondsey bye-election proves that the Tories will win at the next general election in Great Britain. To be sure, a Unionist got the victory, but it was by a plurality, and not a majority. The Socialists put up a candidate, thus dividing the Liberal vote, one the Rev. Mr. Salter, an ethical culture preacher, son of an American clergyman once known as a member of the "Iowa Band." Bermondsey is about the most disreputable quarter of London, and its voters were much besieged by an elaborate and costly campaign. The population is fearfully crowded, composed of dock hands and laborers in unskilled employments at the lowest wages. - We put no great confidence in the reports of the Associated Press, whose reports always favor the Conservatives, who have the money.

The most notable and concrete memorial of Gen. O. O. Howard is Howard University in Washington, dedicated to the education of the negro race. General Howard was for a while its president, and he then resided in a spacious old mansion which adjoins the university's property. The first department he planned for the university was the School of Theology, taken up by the Congregationalists, but quite interdenominational and evangelical in its character. Its present quarters are too small for its hundred students, and the president, Dr. Thirkield, asks that General Howard's admirers give it to the university. It is a wise suggestion, and the house could be purchased and fitted up for less than a quarter of its original cost.

Even Southern papers laugh at Bishop Candler's protest against the gift of a million dollars by Mr. Rockefeller for an investigation as to the means for curing the disease caused by the hookworm. The bishop took it to be an insult to the South, and a part of the policy of representing the South as backward and unable to attend to its own problems of education and health; and so he resented the gift. We observe one Nashville paper which supports Bishop Candler with the assertion that those

supposed to be affected are not really diseased, but only no-account lazy. But that is an even harder disease to cure and would need more millions.

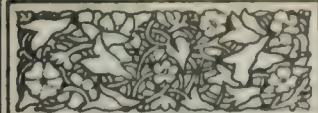

Eleven women are mentioned by *Van Norden's Magazine* who have given each one or more million dollars to charity. They are Mrs. Leland Stanford, \$33,000,000; Mrs. Russell Sage, \$25,000,000; Miss Helen Gould, \$10,000,000; Mrs. Thomas F. Ryan, \$5,000,000; Miss Mary J. Winthrop and Miss Eliza O. Ropes, \$2,000,000 each; Mrs. A. A. Anderson, \$1,750,000; and Mrs. W. K. Vanderbilt, Mrs. F. S. Penfield, Miss Anna T. Jeanes and Miss Grace H. Dodge, who have each given \$1,000,000. These are big sums, and, so far as we can judge, given with as much true generosity as was the widow's mite.

At last the House of Commons has passed the Budget bill, and by the expected majority, and it is up to the House of Lords to accept it or to reject it if it dares. That way stands peril. It would mean that there will begin the campaign which will not end until the House of Lords is reduced in numbers and reformed in spirit.

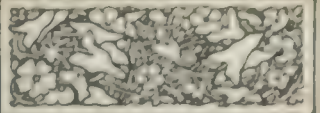

Perhaps it was not malaria, after all, that caused the decline of Greece and Rome. It might have been the hookworm. Let the classicists go thru the literature again with this in mind, and see if they cannot find evidence confirmatory of this theory as they have of the other fifty-seven varieties.

Before going out of office Mayor McClellan has done a good thing in appointing three women on the Board of Education, of this City, with one more promised for Brooklyn. It is a step in the right direction which leads to full suffrage.

The Japanese Minister of Education has issued instructions to the prefectural governors to prevent the students in the Japanese schools from drinking *saké*, the national drink, made from fermented rice.

Insurance

The Probable Future of the Interest Rate

At the meeting of the Actuarial Society, held at Springfield, Mass., last month, an interesting paper bearing the above title was read by Walter G. Nichols, editor of the *Insurance Monitor*. Speaking to actuaries, Mr. Nichols pointed out the great importance of a thoro knowledge regarding the interest rate, saying in part as follows:

"The importance of such knowledge is obvious when it is considered that a difference of 1 per cent. in the prevailing rate of interest may add from 10 to 15 per cent., or even more, to the cost of an insurance policy, while statutes limiting the surplus which a company may carry for its protection have been growing in popular favor. The subject is one which has heretofore received scant attention in the discussions of this or any other actuarial body. In fact, it is one which is but little understood even by political economists, who have made it a special study, or by financiers themselves.

"What is interest? According to all standard definitions it is the payment of money by the borrower for the use of money loaned or a moneyed debt forborne. Whether the basis of that payment is the forbearance of the lender to use his own or the service which the borrower enjoys, whether the payment is made up of such returns for its use in the shape of legitimate interest with a premium added for the insurance of the risk assumed by the lender of its loss matters little for the purpose of this discussion. The essential fact is that it is in form, at least, a moneyed payment for a money loan. It represents in theory what that money is considered worth by the borrower and what the granting of the loan is considered worth by the lender. But what is that money which is the basis of the whole transaction? The erroneous conceptions on this subject have led up to many of the mistaken views on the interest question. Money in the sense in which it is here employed is simply the medium of exchange for the transfer of capital. Its form is unimportant. It may be gold or silver, bank notes, or bank credits. It may be the leather and wood of the Romans, or the cowry shells of the Indian, or even the macoute of the African, which was but a sign of value having no substantial existence. Its one essential feature is that it shall be a generally recognized standard of value thru which commodities may be exchanged and obligations canceled. The intrinsic value of the material employed serves no other purpose than that of aiding to fix the standard, and only so far as money falls short

of completely performing this function of exchange does its condition and character enter into the interest problem. A common standard for the measure of exchange values is the prime essential of all business intercourse in civilized communities. The thing actually loaned and repaid in every moneyed transaction is an interest in such commodities, including labor itself, as may be purchasable, and the measure of that interest is the value of the commodity in terms of money.

"We seem to be on the eve of stupendous changes analogous to those which were witnessed during the nineteenth century. Industrial Europe is crowded and seeking exits for its surplus people and capital. The Far East, too, with its adoption of Western civilization, is feeling the pressure of population and the need of capital to develop its resources. The United States is fast changing from a new to a well-settled country, with a prospective population of from two to three hundred millions in the near future. Canada, too, is opening up her great agricultural territory in the Northwest, and in Russia the fertile plains of Siberia are bidding for population. Asia Minor, so long the abandoned home of ancient civilizations, is being penetrated by railroads and the valley of Mesopotamia may again be the granary of the East. Africa, impenetrable for ages, the land of mystery, has been explored and partitioned, and that vast continent is rapidly being peopled by Europeans. Australia is yet only fringed with settlers. South America has been but imperfectly explored and the great valley of the Amazon is unknown territory. Our own Alaska is only beginning to reveal the mineral wealth which she possesses, while from our Rocky Mountain region westward stretches a wide belt of territory whose virgin soil has never been leached by the rainfalls and whose desert character is just beginning to be reclaimed by irrigation.

"In the light of these facts and of those attending the alternate rise and fall of the interest rate for more than a thousand years, is there not strong ground for the argument that, since human nature does not change, and the incentives to save and to borrow and to spend remain the same, capital will continue, for many years at least, to command the market price which attaches to an era of expansion?"

By the recent placing of \$500,000 additional insurance on her life Mrs. Charles Netcher, owner of the Boston Store, in Chicago, becomes a risk for an even million of dollars and she is believed to be the most heavily insured woman now living in the country.

Financial

The Monetary Commission

SENATOR ALDRICH, chairman of the Monetary Commission, began on the 5th a tour of two weeks in the Middle West, and his first address was made in Chicago on the following day. This is the tour of which the President spoke in Boston, on September 14, when he said that Mr. Aldrich had "been regarded with deep suspicion by many people, especially in the West." It will be recalled that at the same time he remarked that conversation with the Senator showed that the "trend of the minds of the Commission was toward a central bank of issue." In his address at Chicago, Mr. Aldrich said that the question of a definite plan of reform had "not yet been taken up or considered by the Commission," whose report will not be submitted until a year from next December, but those who read carefully the report of the address will see that it seeks to clear the way for the advocacy of a central bank. There is no open argument for the establishment of such an institution. The Senator is asking for the counsel and cooperation of business men, and is promising that the investigation shall be the most complete and thoro one of its kind. But there are certain passages which are designed to have much weight. We quote a few of them:

"The conclusion has been reached [in other countries] with unanimity that bank note issues should always be made under governmental control, or at least subject to strict governmental restrictions and limitations, and that this can be done successfully only thru one central and exclusive bank of issue.

"The work of study and examination of the experience of other countries is simplified by the fact that there is practical uniformity of method and principle thruout the civilized world, with reference to both note issue and credit organization. . . . We cannot afford to ignore foreign experience.

"If it should be found desirable to adopt some of the more important features of systems which have been successful in other countries, I have too much confidence in the good judgment and intelligence of our countrymen to believe that the ghost of Andrew Jackson could be summoned to prevent a consummation advantageous to all.

"It is of the first importance to all that the world's financial center should be located in the United States, where by virtue of our preponderating resources and capital it should logically be established. I realize fully that this cannot be achieved without the use of the agencies and methods which the world's experience has shown to be indispensable in a competition of this kind."

These passages probably indicate the decision which the chairman and a majority of the members of the Commission will eventually make known. He excludes a system of branch banking, and says it would be impossible to establish any credit organization that would interfere with or control existing banks, or whose resources or credit could be used for speculative purposes, or that could be dominated by the financial men and institutions of one section. His addresses will stimulate discussion that may prevent ignorant or prejudiced opposition to the Commission's plan, which may turn out to be the best that can be devised. We expect that it will be a good one. It is unfortunate that the Commission's chairman and spokesman is regarded by many with suspicion and distrust.

....Plans have been completed and approved for a consolidation of the Mechanics National Bank and the National Copper Bank under the name of the Mechanics and Metals National Bank. The first is one of the oldest banks in New York, having been founded in 1810, and the second is one of the youngest, having been opened for business in 1907. Gates W. McGarrah, now president of the Mechanics National, will be president of the new institution, and Charles H. Sabin, president of the National Copper, will be first vice-president. They are personal friends, and it is understood that the powers and duties of the office of president will be apportioned equally to them. The new bank will have a capital of \$6,000,000 and a surplus of not less than \$6,000,000. Its assets will be about \$100,000,000.

The Independent

VOL. LXVII NEW YORK, THURSDAY, NOVEMBER 18, 1909 No. 3181

Survey of the World

Last Days of the President's Tour

President Taft arrived in Washington on the 10th, at the end of his long tour. He had traveled about 13,000 miles, made 266 speeches, and attended 579 formal breakfasts, luncheons and dinners. He had passed thru thirty-three States and two Territories, and been in Mexico. Beginning on September 15, the tour had consumed fifty-six days. He returned in fine health.—In Augusta, Ga., on the 8th, he made an address at the fair grounds, speaking of ship subsidies and a conservation of resources. He also said he would recommend a consolidation of several bureaus at Washington that are concerned with health and sanitation. In the course of an address at Florence, S. C., he said:

"My friends, we are apt to get enthusiastic over 15 cent cotton, and the growth of cities and States and all other industrial progress, but I hope that in doing so you will not forget the responsibilities of our national growth. We have been prosperous before, we were exceedingly prosperous in 1907, we were very prosperous for six or eight years before that, but there came a time when Theodore Roosevelt and men like him, who saw the tendency which came from that prosperity to an accumulation of wealth in individual hands by means that were not legal and could not be morally supported, called for a halt and called for an investigation into our prosperity and called for the enactment of legislation that should restrict our growth in order that it might be along the lines of legality and along the lines of business integrity and morality.

"Now, what I wish to call your attention to is that we are beginning again another great era of prosperity. No man can measure the growth that will now follow for the next eight years, but in that growth we ought to be careful not to be carried off our feet and made indifferent to our responsibilities as citizens, and it ought to be determined that we shall maintain a high standard as citizens and shall frown down and stamp upon by legal methods the corrupt methods introduced for the purpose of

perpetuating a monopoly. We ought to make up our minds that it is a business which we must attend to always. The price of liberty is eternal vigilance. So I say to you the price of exalted moral standards is eternal vigilance. It is easy for the people to forget everything but material progress. I hope we have had a lesson in the last six or eight years that will prevent our forgetting it.

"There is nothing inconsistent with proper material growth in the elevation of our moral standard of living. I am no pessimist. I believe we have gone on steadily getting better and better, and I think we showed by responding to the call when Theodore Roosevelt uttered it that we were sound to the core, and that we were not to be bribed into quietness and sleepiness by the comfort and wealth of our prosperity."

He was in Wilmington, N. C., several hours. On a revenue cutter he traveled twenty-five miles down the Cape Fear River. The people want to have the channel deepened. At a reception in Wilmington he spoke with pleasure of the welcome given to him by the Confederate veterans. He had been looking, he said, at Fort Fisher, and recalling the battle fought there:

"All that history you cherish and we cherish, but it does not make the slightest difference in our brotherly feeling, in our fraternal desire always to exhibit and manifest that love of each other which comes of standing elbow to elbow in the march of progress to make this nation, great as it is, even greater to afford under our country's flag an equal opportunity to all to work out their fortunes and to elevate the moral standards of the nation, so that above all in the type of American we can point to character as the thing to remember."

In Richmond, where he was most cordially received, he was entertained at the Governor's mansion. The last speech of his tour was made in that city. In it he outlined some of the recommendations to be set forth in his first annual message. He also referred to promises he had made relating to appointments in the

South. He had said that he was anxious to convince the Southern people that in the eye of the Administration they were surely a part of the Union and entitled to such consideration as was given to other parts of the country:

"I said it was not possible for the Executive to show this except in speech and in the appointment to Federal offices of men who would commend themselves to the communities in which they lived; that those appointees might be regarded not as agents of an alien Government but as representing their own Government. Now in so far as I have been able I have attempted to carry out that policy. A year has not yet elapsed and you must give me three more years to demonstrate my sincerity in that regard."

We had reached a time, he said, when the North could admire the Civil War heroes of the South, and the South those of the North. Therefore he ventured to express a hope that the project, suggested by President Roosevelt, for a memorial in honor of General Robert E. Lee, was "coming to fruition." This is the establishment of a great school of engineering at Washington and Lee University. The President added that he desired to aid the movement in all possible and proper ways.

His Outline of Recommendations

In his outline of recommendations to be laid before Congress, Mr. Taft mentioned first "the conservation of our resources and the reclamation of arid lands." Money for the reclamation fund was not available promptly enough to meet the requirements of settlers who needed water. This fund is derived from the sale of public lands. He was strongly in favor of anticipating it by issuing bonds, the payment of which should be charged to the same source of revenue. To supply our growing population we must enlarge our production acreage by reclaiming arid land and draining swamps. The Government owned much valuable coal land, many water-power sites, and millions of acres of phosphate, to be used in the fertilization of soil. It should reserve control over all these, so that they might not be monopolized. There was to be considered the Anti-Trust law and also a new arrangement of executive bureaus, designed to make it "more ef-

fective if possible." The Interstate Commerce law needed amendment. In his opinion, a special Interstate Commerce Court should be created. He was strongly in favor of postal savings banks:

"I know that in that proposition I come up against a great many conservative bankers, and also a great many who view with doubt the wisdom of extending paternalism in the Government. Where it happens that the Government is so situated that it can do a thing better and more economically than individuals can do it, and can supply a want for a means of thrift, I am in favor of its doing it."

He hoped that the Monetary Commission would point out the steps to be taken to reform "what is certainly today nothing but a patchwork." There was another subject very near his heart, one that, because he had been a judge, he knew something about:

"We must improve our legal procedure so as to make it both in criminal and civil cases more simple, more rapid, and less expensive, and I mean to recommend to Congress the appointment of a commission to take up that subject with respect to the Federal procedure, and then if with the Federal procedure we achieve a result that commends itself it will form a model for the States."

Missions and College Presidents

The President remained in Washington only a few hours.

On the 11th he was the principal speaker at the convention there of the Laymen's Missionary Movement, being introduced by Chief Forester Pinchot, the chairman. In the course of his address he said:

"The Philippine Islands are an example of what efficient foreign missions could do. The Filipinos are the only people, the only race, in the Orient, that are Christians, and they were made so 300 years ago by the earnest effort of Augustinian and Franciscan friars. They led them on, taught them the agricultural arts and induced them to lead a peaceful and religious life. They did not believe in too much education and they did not believe in bringing them into close union with the European nations. They thought there was a good deal that they might learn there that would hurt them and they preferred to keep them—I do not mean all of them, but all but a selected few—in a state of tutelage.

"But that which they wrought has been to our great advantage in working out the problem that we meet there—the problem of teaching them self-government. They are a Christian people and they look to Europe and America for their ideals and they recognize those ideals. And that makes it possible to in-

still in them the principles of civil liberty and the freedom of our institutions."

On the 12th he was in Middletown, Conn., attending the installation of Dr. William Arnold Shanklin as president of Wesleyan University. Among those accompanying him were Vice-President Sherman and Senator Root. During the exercises he used a chair in which George Washington sat when he visited the city. In his address he spoke of the powers and opportunities of a college president:

"It has fallen to me at times to have a share in selecting a college president, and there has always been at such times the suggestion that what we needed was a business man, a man who knew the value of a dollar and how to get it—a man who would put the institution on a business basis. I am glad to say that I always dissented from such an idea. I am not attacking business men, but I believe that such men have their limitations and that these limitations are such as to exclude them as college presidents. The college president first of all is a teacher. That is his profession and the university is a teaching institution. If he is to do his duty by the institution he must understand how teaching should be done. He must be a pedagogue. The college president must be a man of executive ability. He must have the power of selecting men for the work they are to do. And I submit that unless he is a teacher and understands all the teaching that is to be done, he is not fit to make such selections or to build up a faculty to do the teaching. I congratulate Wesleyan upon having chosen as president a man who in every way fills the measure that I have applied."

The Water-Power Site Controversy

What is known as the Pinchot-Ballinger controversy concerning the conservation of water-power sites on the public lands was revived last week by the publication of a long article, in which Louis R. Glavis, recently dismissed from his post as chief of the field division of the General Land Office, repeats and amplifies the charges against Secretary Ballinger which originally he laid before the President. This article relates exclusively to the Cunningham group of coal land claims in Alaska, which cover a large part of the entire coal area there. Glavis asserts that the Land Office ordered these claims to patent without due investigation when Mr. Ballinger (then Commissioner) knew they were under suspicion; that while in office, Commissioner Ballinger urged Congress to pass a law which would validate fraudulent Alaska

claims; that shortly after resigning from office he became attorney for the Cunningham group and other Alaska claims; that soon after he became Secretary of the Interior his office rendered a decision which would have validated all fraudulent Alaska claims, and that this decision was overruled by Attorney-General Wickersham, to whom Glavis appealed. He also holds that Mr. Ballinger violated the law in acting as attorney for the Cunningham claimants, when he was forbidden to do so within the two years following his retirement from office. Secretary Ballinger declares that the article is a tissue of falsehoods and unwarranted insinuations, saying that he was vindicated by the decision of President Taft, who had the record before him. He has explained again his cancellation of Secretary Garfield's order withdrawing 1,500,000 acres for the conservation of water-power sites, saying that it was in the interest of conservation, because much of this land did not contain power sites, and he was able to substitute a withdrawal of 300,000 acres which contained 50 per cent. more sites than were in the 1,500,000 acres. He is confident, he says, that Mr. Garfield would have taken the same course. On the 11th inst. he issued an order withdrawing 8,000 acres containing water-power sites in Montana, Idaho, Colorado, Washington, Wyoming and New Mexico. It is said at Washington that the Secretary believes that the attacks of Glavis and others are inspired by Chief Forester Pinchot. It is reported that he will demand the removal of Mr. Pinchot. The President, it is said, still desires to retain both officers in the service, is convinced that both desire to promote conservation in the public interest, and hopes they can be induced to work in harmony.

The Sugar Trust Frauds

Owing to the exposure of customs frauds at New York in the interest of the Sugar Trust, several of the Trust's employees have resigned or have been removed, and additional indictments have been found. One of the men indicted is James F. Bendernagel, who has been general superintendent of the Trust's largest refinery. It is evident

that more prominent persons, in the Government service as well as in the Trust, have been reached by the investigation which is in progress. Interesting statements have been given to the public by Richard Parr, who as special agent of the Treasury was engaged for three years in obtaining the proof of fraud in weighing sugar. He asserts that he encountered opposition in the Treasury Department. Attempts were made to draw him away from his work by sending him to San Francisco and other distant places. While in New York he was shadowed by private detectives. Evidence was stolen from his desk. To induce him to go to Europe, \$100,000 was offered to him. His story points to James B. Reynolds, who was then Assistant Secretary of the Treasury and was recently made a member of the Tariff Board, as the Treasury officer responsible for repeated interference with his work. Mr. Parr was assisted in entering the service by Mr. Loeb, then Secretary to the President and now Collector at New York. He makes it clear that he was encouraged by President Roosevelt to pursue his work of detecting the Sugar Trust's frauds.

Naval Base at Pearl Harbor

The President approved, last week, the recommendation of the Joint Army and Navy Board that a great naval station for the Pacific fleet be made at Pearl Harbor, in Hawaii, a few miles from Honolulu. At Olongapo (Subig Bay), in the Philippines, there is to be only a repair station, and no naval station will be made in Manila Bay. The protection and defense of the Philippines will be left to the army. This decision ends a long controversy. So far as the Philippines were concerned, the navy preferred Olongapo, but the army held that a naval base there could be defended against land attack only by a very large permanent military force. The army suggested Manila Bay, but there were similar objections to any site there. There will be large expenditures for the development of the base at Pearl Harbor. The harbor is one of the finest in the world, comprising eight square miles of land-locked water, approached by a narrow channel which can easily be defended. Several millions will be ex-

pendent in the establishment of artillery posts and in fortifications. A dry dock larger than any now in use will be constructed. Our Government's right to make a coaling and repair station there was originally acquired from Hawaii in 1884.—The new Governor-General of the Philippines will make an investigation of charges that there was corruption at the polls in the recent election. One of the complainants is Governor Cailles, a Filipino, who for several years has been the executive head of Laguna Province, but was defeated two weeks ago by a Nationalist candidate. He asserts that the election officers were bribed to record fraudulent votes against him.—A typhoon swept across Northern Leyte last week, destroying several small towns and greatly injuring the crops.

Nicaragua's Revolution

From Nicaragua come conflicting reports concerning recent engagements between Zelaya's troops and the revolutionists. Invariably each side claims victory. It appears to be proved, however, that Zelaya's men were beaten at Paso las Lajas, on the 4th, owing to the work of American sharpshooters on the other side. This place is about sixty miles west of Bluefields. Government troops, under General Toledo, crossed the San Juan River into Costa Rica, intending to attack the revolutionists from that country. Estrada at once sent protest to Costa Rica's president and to Washington. The intruders were expelled. Crossing into Nicaragua, they attacked the revolutionists at Colorado, on the 10th and 11th, and it is said they were defeated. But Zelaya's forces have recovered and occupied Greytown, where the revolutionists, before they fled, destroyed two small Government steamboats with dynamite and set fire to the public buildings. Zelaya's cable report says that he captured three steamships. It is asserted that he has promoted a revolution in Salvador by arming 2,000 disaffected residents of that country. He has also issued manifestoes declaring that the revolutionist leader's aim is to procure the annexation of Eastern Nicaragua by the United States and that the rebellion is to serve as an excuse for interference from Washington. Our Government, he adds, intends to establish a protectorate over all

the Central American countries. It is said that 300 Americans will go south from Mobile in his interest and attempt to capture Bluefields.—It is now reported that the revolutionists in the north-western part of Santo Domingo, near the Haytian boundary, are led by Ex-President Morales. Thus far they have made little progress.—Chile has agreed with the United States to submit to the Hague Tribunal the Alsop claim, now many years old, which is for about \$1,500,000.—General Bernardo Reyes, recently Governor of the Mexican State of Nuevo Leon, who was regarded as an opponent and rival of President Diaz, came to New York last week, on his way to Europe. He has been commissioned by President Diaz to spend a year or two in studying the military methods of European countries.

Cuba and Porto Rico Dispatches from Madrid say that an agreement has been reached as to the terms of a new commercial treaty between Spain and Cuba. Spain, it is asserted, grants to Cuba a tariff preference of 40 per cent., and the island makes concessions in return. A report that these concessions exceed those granted to the United States has caused our Government to make inquiry. If the value of our commercial treaty should be affected by an agreement with Spain, there would be complaint at Washington, and our agreement might be terminated.—In the budget laid before Congress by President Gomez, he increases the previous estimate (\$2,000,000) of the annual receipts from the new lottery to \$3,000,000.—Addressing the students of the University at Havana on the anniversary of the death of President Palma, Signor Ferrara, Speaker of the House, said that Palma should have been shot for causing American intervention. He also reproved the students for honoring Palma in their exercises. Whereupon they went on strike, refusing to attend his lectures until he should apologize. The desired apology has been made.—The coffee growers of Porto Rico are organizing an association which will ask Congress at Washington for tariff discrimination that will promote the sale of their coffee in the States.

The British Budget

The discussion on the finance bill has been one of the longest and most serious that the House of Commons has ever seen. It was recognized on both sides that England had come to the parting of the ways and a revolutionary change in the traditional financial policy was inevitable, that the Government must either draw upon the great landed estates for part of its revenue or establish a tariff. The debate in the House of Commons was closed by speeches by the three leaders in the present conflict, Lloyd-George, Balfour and Asquith reiterating their former arguments. Of these speeches that of the Chancellor of the Exchequer was, as usual, most brilliant and practical. Instead of talking in generalities, Mr. Lloyd-George brought forward specific cases to justify the position of the Government in regard to the taxation of increased land values. He showed that within twelve miles of the parish church of Sheffield there are 63,000 acres of land formerly common, regarded as valueless, but now enclosed and held by landlords, who had profited by the growth of the town.

"What I ask is this, when the State is in need of money for armaments, for social needs, is it unfair to ask the owners of this property to contribute a share, and a substantial share, of all further increment that accrues to them, not from their own efforts, not from their own exertions, not from any investments which they have made, but purely from the growth of the community of Sheffield? I say it is a perfectly just and fair tax. I say more than that. I cannot conceive a more just tax; I cannot conceive a more shabby opposition to it."

He then took up the point which the Opposition has repeatedly raised in this debate, that the tradesmen and others have also profited by the increase in population, but that the bill does not tax them, but only the landlords.

"Now here let me point out three important distinctions between the case of the landlord and that of the tradesman. In the first place, the tradesman does not hold a monopoly, nor his trade; if he could there would be something to say for it. There is another distinction; the tradesman contributes by his enterprise, his industry, his assiduity to the prosperity that enriches the community as a whole. Another point of distinction is this—the trader may have another trader established next door to him and who may take away the whole of his business; the more competition the trader has the worse it is for him, but the more competition there is the better it is for the land-

lord. If the trader has a number of rivals setting up in business in the same street, he has to cut down his prices; if the landlord finds a number of people competing for his land he doubles his prices—a very essential difference in the position from that of a pure monopoly. I give another instance of the distinction in the positions. There were works in South Wales and the manufacturers wanted ground for depositing rubbish, and so they took a lease of some slob land on the estuary of a river, purely worthless land covered by the tide, and they paid for permission to tip their rubbish there. Gradually the marsh became hard, solid ground, and now the landlord is letting it on building leases and gets 30s. or £2 a house for it. Now there is in such a case not only no development of the land by the owner, but he actually charges other people for the development; not only does he not make it, but he charges other people for the making of land from which he gets 30s. a house; £20 or £30 an acre for land that for nothing he did was worthless, not really land at all, but created by the energy and at the cost of others."

Mr. Balfour, leader of the Opposition, denounced the bill as worse than Socialism, because it was less logical and consistent. He declared that it was undermining private property when a Minister took it upon himself to decide what a man had rightfully earned, when he considered not the amount of the property, but whence it came. "Since Robin Hood there has been nothing like it." He described the method of operation of the Chancellor of the Exchequer as follows:

"He goes to Mr. A. or Mr. B.—perhaps I am wrong in saying Mr. A. or Mr. B., perhaps I should say his Grace the Duke of A. or B.—and says to him, 'You have done nothing for your property; it has grown in value without your efforts, you have not shown any intelligence, enterprise, or foresight. Therefore it does not belong to you.' He goes further and says, 'Therefore it belongs to me.' Now, that, I frankly admit, I cannot understand. I really cannot understand why the Chancellor of the Exchequer, after he has proved to his own satisfaction that somebody has not a right to what the law calls his property, says that that right naturally lapses to the Exchequer."

Lloyd-George on the Budget

What the pending finance bill really means to England may be best explained by quoting the words of its author, Mr. Lloyd-George, Chancellor of the Exchequer, from an article in the *London Nation*:

"There are ominous signs that we may be approaching one of the greatest constitutional struggles waged in this country for over 250

years. If the struggle comes, it is a subject for gratification that it should arise over a measure which probably raises, in a clearer and more decisive fashion than any other legislative proposal within living memory, some of the most important issues that divide Liberalism from Toryism. The frantic efforts made by the tariff reformers to defeat the Budget prove that they, at any rate, are fully alive to the fact that when it has become law it will make it much more difficult for any succeeding Government to carry thru the great operation which protectionists have in contemplation for passing on the burden of taxation from the banking accounts of the rich to the bread and meat of the multitude.

"That is not the only fiscal issue raised by the Budget. There are others of equal importance. Should taxation be borne by those who can best afford to bear it, or by those who can least afford to pay? Should it fall on the necessities or on the superfluities of life? Most momentous question of all, has the time not arrived for the State to call to a reckoning those who have secured valuable monopolies at the expense of the community, and too often abused those monopolies to its detriment? And when you come to the purposes to which the State ought to devote its revenues, should not the national resources be charged with the avoidance and prevention of unmerited poverty and distress? Lastly, has the State no responsibilities for the organized development of the neglected wealth of the land? All these fertile and suggestive questions are raised by this year's Budget. As a constitutional conflict between Lords and Commons is, having regard to the events of the last few years, inevitable in the immediate future. I think it is well it should be finally and definitely challenged over a proposal, or rather a series of proposals, which embodies so much of the Liberal plan for dealing with the social problems which confront statesmanship thru-out the world.

"It may be said that these projects are not a part of the Budget upon which the Lords will be called upon to pronounce. But personally I look on the Budget as a part of a comprehensive scheme of fiscal and social reform—the setting up of a great insurance scheme for the unemployed, and for the sick and infirm, the creation, thru the Development Bill, of machinery for the regeneration of rural life. All these constitute as essential and vital parts of the Budget as the taxation of ground value and the imposition of a super-tax."

The Tactics of the Suffragettes

While Mrs. Pankhurst in this country is making friends thru the charm of her personality, even of those who are most opposed to her opinions, the suffragettes in England are adopting more violent methods which are reported to have alienated some of their former supporters, among them Winston Churchill, president of the Board of Trade. Where-

ever members of the Cabinet appear in public, they are hooted or attacked by the suffragettes. Mr. Churchill was standing with his wife on the railroad platform at Bristol on November 13, when he was approached by a well-dressed woman who slashed him on the face with a dog whip. Mr. Churchill, after a hard struggle, succeeded in wresting the whip from the suffragette, who was taken off to prison. The appearance of Mr. Lloyd-George, Chancellor of the Exchequer, at the comic opera "The Mountaineers," gave rise to another suffragette demonstration, which has interrupted the performance for some time. Miss Cristabel Pankhurst sent a note to the manager of the Savoy Theater expressing regret for the occurrence but urging that "duty had to come first and a member of the Cabinet was present." The most stately function of the year, the Lord Mayor's banquet to the Cabinet at Guildhall, had its solemnity disturbed by two suffragettes who had gained access to the roof and smashing a stained glass window shouted "votes for women" into the banquet hall. They had come to the Guildhall early in the morning disguised as charwomen and remained there all day waiting their chance. Other suffragettes at the door, attired in evening dress, seized Winston Churchill as he entered the hall. Miss Kitty Marion, who barricaded her prison door and set fire to her mattress, has been released from prison and is telling her story from the lecture platform. Premier Asquith and other members of the Cabinet, wherever they appear, are chased by women armed with stomach pumps and bottles of milk, determined to feed them in the same way that the imprisoned suffragettes have been fed. A new organization has been formed, opposed to the militant methods of the suffragettes. It is called the "Younger Suffragist Society," and admits no members over thirty. It is chiefly composed of college girls from Newnham and Girton. One of the secretaries is Margaret Tennant, a niece to Mrs. Asquith. Mrs. Asquith, formerly Dorothy Tennant, better known to the world as by the appellation of "the Woman with the Serpent Tongue," applied to her by William Watson, is strongly opposed to the extension of suffrage to women.

The Steinheil Trial

The trial of Mme. Steinheil rivals the Dreyfus affair in its sensational aspects and may have political effects as important. The general public is always interested in a romantic mystery, and in this instance the interest was intensified by the prominence of the names connected with the scandal. In the long list of Mme. Steinheil's lovers were the names of well-known artists, journalists, magistrates and a President of the French Republic. President Felix Faure died in her presence and the rumors of foul play were raised at the time. The presiding judge, in spite of his fierce denunciation and accusations directed at the prisoner, seemed to fear that she would go too far in her revelations, and it is commonly suspected that the prosecution was not anxious to win the case. In fact, the trial was brought about by the efforts of Mme. Steinheil herself, possibly thru her love of notoriety or need of money. When the bodies of her artist husband, Adolph Steinheil, and her mother, Mme. Japy, were discovered in their home in the Impasse Ronsin, on the morning of May 31, 1908, Mme. Steinheil was found gagged and bound. Her story that two men dressed in long cloaks had entered the house and committed the crime was generally believed and public interest in the case had dropped when she revived it by a letter to the papers and threw suspicion upon her servant, Remy Couillard, by putting a pearl in his pocket. Since then a series of confessions, retractions, denials and accusations have followed in rapid succession. The trial was conducted in a manner altogether foreign to our ideas of justice. The spectators in the court room took an active part. One young man, moved by compassion for the beautiful prisoner, came forward and confessed that he had committed the crime, a confession which was easily disproved. Others whose names were involved in the scandal denounced the judge and demanded that they be declared innocent. Two of the jury were kept away on account of illness, one of them stating that his disability was brought on by his feeling of responsibility and perplexity caused by listening to the arguments of the opposing witnesses. The French court has two supplementary jurymen in

attendance, and these were called in. The prosecution failed to bring forward anything but circumstantial evidence and proof of the disreputable character of the accused woman. In the voting of the various questions submitted to the jury there were nine or ten ballots in her favor to two or three against. Mme. Steinheil was therefore acquitted of both crimes and released, amid the applause of the spectators, which included a large number of celebrities, especially actresses and playwrights. The affair may lead to a change in the French judicial system and be for some time a political issue.

Foreign Notes Another attempt was made to assassinate the Viceroy of India at Ahmedabad on November 13. As Lord Minto and Lady Minto were driving thru the streets, two bombs containing picric acid were thrown at his carriage. A sergeant of dragoons who was riding beside the carriage ward off one of the bombs with his saber and the other struck a native lieutenant who was holding an umbrella over Lady Minto and dropped to the ground without exploding. In another street a third bomb exploded, blowing off the hand of an innocent bystander who had picked it up from the ground out of curiosity.—Ever since July a joint committee of the House of Lords and the House of Commons has been taking evidence on the question of the abolition of the censorship of the drama. Most of the playwrights who appeared before the committee, especially those whose plays have been interdicted, criticised the censor for being arbitrary in his rulings and exercising an unfortunate influence on British drama, but the theater managers in general upheld the present system as it relieved them from responsibility. It was brought out in the sittings that the music halls which are not under the supervision of the censor have been more and more given to introducing brief plays and have been more notorious offenders against decency than the theaters. The committee reported in favor of continuing the censorship and extending it to the music halls.—The mail steamer "La Seyne," of the Messageries Maritimes Line, was sunk in Rhé

Straits near Singapore, on November 14, in consequence of a collision with the British East India steamer "Onda." Ninety-three passengers were lost and fell victims to the sharks that infest these waters. Twelve of the European crew and seventeen European passengers, twenty-eight of the native crew and fourteen native passengers were rescued from the wreckage, some of them badly bitten by the sharks.—An anti-Austrian speech made by General Asinari, commander of the Milan Army Corps, has created some unpleasant feeling. General Asinari, in presenting the Italian colors to a new cavalry regiment at Brescia, expressed the hope that they would soon be waving over the cities beyond the border which are looking to Italy for their liberation from Austria. Since General Asinari was present at the recent meeting between Emperor Nicholas and King Victor Emanuel at Racconigi, which was supposed to have an anti-Austrian tendency, unusual significance is attached to his remarks. The Italian Government has retired him on half pay as a punishment for his indiscretion.—It seems likely that themorganatic wife of Archduke Francis of Austria may ultimately sit upon the Austrian throne with her husband. The Countess Sophie Chotek was a lady-in-waiting at the Austrian Court when she was married to the heir to the Austro-Hungarian throne. She has recently been made Duchess of Hohenberg and on their visit to Berlin the Emperor of Germany sat her next to himself at a state dinner. It is evidently the intention of the Kaiser to facilitate the accession of Francis Ferdinand on the death of the Emperor of Germany, Francis Joseph.—The Hungarian Independence party is split over the question of the establishment of a separate Hungarian national bank on the expiration of the charter of the present Austro-Hungarian bank in 1910. This project was favored by Francis Kossuth, who, however, was only able to secure the support of seventy-four members in a recent test vote in the Diet, while the President of the Diet, Julius Justh, brought against it 120 votes. Kossuth has resigned his position as leader of the Independent party and President Justh has given up his official position to take his place as party leader.

Books and Boys

BY BRANDER MATTHEWS

NOT long ago President Butler, of Columbia University, wrote a characteristically suggestive paper on "The American College Under Fire," in which he admitted that the American college was no nearer perfection than any other human institution, and that it could only profit by criticism so long as this criticism was sustained by knowledge. Not a little of the criticism which the American college has recently had to undergo is not sustained by knowledge, either of the college itself or of the college undergraduate. Indeed, to any one possessed only of common sense, some of these criticisms must seem strangely beside the mark. One critic recently deprecated the large size of college classes and insisted that the colleges need more money to pay more instructors. This is a suggestion as sensible as it is obvious; but another critic of this critic was guilty of the sapient comment that "small classes will not do everything"—which nobody can deny—and that "they will not at once take freshmen and turn them into lovers of Pater and Horace." And this critic then further adventured himself into a denser futility when he seemed to suggest that "our sophomores must be half-baked" if they have not as freshmen acquired an abiding interest in Pater and Horace. This may be taken as a fair specimen of the criticism which is founded neither on knowledge nor on common sense.

Well may we ask the reason for this strange linking of Pater and Horace. What have they in common? Pater is the superfine expression of sophisticated culture, whose thought is strained and tenuous and whose style is tortured out of all manliness. Horace is a man of the world, who wrote poetry for men of the world, and who was the Augustan equivalent of Thackeray in his detachment and playful cynicism supported by manly sentiment. Now, what have freshmen or sophomores—ordinary undergraduates, half-baked it may be, but healthy and manly and ardent young fel-

lows of seventeen or eighteen—what have they to do with Pater and even with Horace? The freshman or even the sophomore who really liked Pater would probably be a prig, and the junior who really appreciated Horace would be wise beyond his years—and not only wise, but more or less unhappily disenchanted. The freshmen and the sophomores, if any there are, who are being nourished on Pater, are being fed on culturine (as Mr. James L. Ford has happily called it). They are getting near-culture, not the real thing. Their literary digestion is not working on the right food. It is true that perhaps a few juniors and seniors who may have taken to literature kindly and who have had the good fortune to discover Austin Dobson for themselves may be led to relish Horace and to find in the Roman lyrist a forerunner of the English masters of familiar verse—Dobson and Locker, Holmes and Bunner.

But setting aside Pater and Horace, as a pair linked together only by an inspired infelicity, why should the average undergraduate, a more or less green youth of twenty or thereabouts, be expected to take kindly to literature and to develop a distinct literary taste before he has grown his first beard? To expect this is absolutely unreasonable. Most men—indeed, most educated men—lack catholicity in their literary likings, and few of them ever gain any very keen sensitiveness to the subtler delicacies of literary art. As a matter of fact, there are many men shrewd in their callings who rarely read books; they absorb information from contact with their fellow man, and they prefer to get life at first hand from life itself and not at second hand from literature. Of course, they lose much that they might gain; and, of course, also, every undergraduate ought to be made to read a fair proportion of the masterpieces of literature. He ought to be exposed to the contagion of literature, with the hope that he may catch it. But nothing is more certain than that too much must not be expected of him.

Even with the best teaching, not one undergraduate in ten can be lured into reading the "Iliad" or "Paradise Lost" for the fun of it. The "Odyssey," on the other hand, is a rattling good yarn, and a normal youth can be tempted to read it in Lang's translation just as he would read "Huckleberry Finn," without suspecting that he was making acquaintance with a masterpiece. "Henry V" and "Julius Cæsar" are rich and stirring pictures of life that a young fellow ought to be able to enjoy. But "King Lear" is not for the immature; indeed, it is only for a very few of the mature; emphatically it is not spoon-meat for schoolboys. A healthy and wholesome young fellow ought to like "Treasure Island," and he can be made to see that it is a better book than "King Solomon's Mines"—altho that tale of battle, murder and sudden death is also in its way a rattling good yarn. He ought to enjoy Scott's ballads and Macaulay's, Longfellow's and Kipling's; but it does not reveal any deficiency in him, or in the teaching of the college itself, that the "Faerie Queen" fails to hold him with the same fascination. Let us clear our minds of cant, and if we want to train young men to enjoy books, we must take care to give them the kind of books they can enjoy at their immature stage of development—the books fitted to their years, to their inexperience of life, to their primitive tastes, to their ardent liking for action, and to their healthy shrinking from morbid introspection. We have no business to expect the average young man, in college or out, to enjoy the books which the average full grown man does not read for his own pleasure, and especially the books which can be fully appreciated only by readers who have a background of knowledge of life and of literature that few men possess and that no boys ought to possess. That way danger lies, and if we insist on feeding energetic youth on the selected books that only a few older men really relish, energetic youth is likely to acquire a distaste for all literature, and to come to the natural conclusion that all good books must be dull and tiresome.

Of course, it is hard for the young instructors in our colleges and in our fitting schools who have trained themselves

by severe study into a real liking for the austerer masterpieces of literature not to want to impart their own acquired taste to the young fellows committed to their charge. But if they yield to this natural temptation they can do so only because this very training of theirs has made them forgetful of their own likes and dislikes when they themselves were very young. They have won their own way slowly and laboriously into the kingdom of poesy, and then they set themselves the impossible task of taking their pupils in by a side door. They are at last able to appreciate the delicacies and subtleties of literary art, and these lesser matters of the law they endeavor to impart to their pupils. But the genuine boy or the genuine young man of undergraduate age is not ripe for these things. And there is no use trying to make him see the prettinesses of style which do not interest him. As Bismarck once put it pithily, "You cannot ripen fruit by putting a candle under the tree."

A few months ago the headmaster of one of those endowed schools which have been created abundantly of late for the sons of the very rich was reported to have said that he had found it very difficult indeed to get the boys in his school to appreciate the "Idyls of the King." For this let us be thankful, even if the schoolmaster groaned over it as the saddest thing of tongue or pen. Tennyson's jeweled words ought not to be forced down the throats of healthy youngsters, and we may rejoice that American youths are recalcitrant to this artificial dict. The cloying, effeminate, superabundantly polished verse of Tennyson disguises the tale that Malory told with manly directness, sophisticates it, and makes it a meal only for delicate palates. We need not go so far as the frank exponent of the strenuous life who dismissed Tennyson's enameled figures as "blameless curates clad in tin mail." But we can easily understand that this is the way they might strike a young fellow of manly likings. There is wisdom in the tale that is told of the little boy whose mother was about to read the Bible to him and who was asked what special passage she should choose. "Read the fightingest parts," was the prompt answer.

When that boy grows up and goes to school and to college he will not naturally take to the "Idyls of the King," any more than he will naturally take to "King Lear" or to "Paradise Lost" or to the "Divine Comedy." And why should he be expected to like what is not for his young years—and what is perhaps not for him even when he is twice as old? To expect that this marvel should happen is to court disappointment. To try to bring it about is to endanger the destruction of that very genuine appreciation of life in literature which is latent

in all of us and which needs to be sought out and encouraged. It is with great satisfaction that those who hold the views exprest in these few paragraphs have noted the recent enlargement of the list of books which are now required to be read in preparation for the college entrance examinations. This list is now not only far larger than it was ten years ago; it is also far more catholic and far more intelligently selected. And it ought to help to open the eyes of some misguided instructors who still persist in attempting the unattainable.

COLUMBIA UNIVERSITY, NEW YORK CITY.

Gifford Pinchot

Chief Forester of the United States and Head of the
Forest Service

BY WILLARD FRENCH

WRITING of Gifford Pinchot is a difficult task to one who knows him—it is difficult to avoid apparent exaggeration—for Mr. Pinchot possesses in unusual degree all of the best qualities which make a man. Coupled with them he has a unique and ardent ambition to serve humanity; to exercise to the limit his remarkable abilities, his knowledge, which is unrivaled in the field to which he has devoted his life, and his resourceful personality, outside the pale of politics, wholly for the good of his country.

His name has been frequently and freely handled by press and public during the present controversy between the departments of Agriculture and the Interior, over the disposition of public lands, but tho he is the responsible and active agency, in the center of the fight, it is noteworthy that not a derogatory word has been said of Gifford Pinchot. To question his integrity would be absurd. To doubt his patriotism, impossible. To criticise his ability and record needs but the reply, "By their fruits ye shall know them." To condemn his policy is to repudiate the vital principle more than anything else making for the

safety and prosperity of the country for all time to come. There is no one who is more valuable to the United States today than Gifford Pinchot.

He was born to this work—born in Simsbury, Conn., not quite forty-five years ago, and created the department over which he presides and the office he holds. He is literally responsible for it all—and it is a monument worth having. Incidentally, Mr. Pinchot was born to a large fortune which obliterated all necessity for further energy, but even while he was in college the passion had such possession of him that, while he found time to captain the football team and carried off several of the most coveted of the college prizes, he also won for himself the reputation of being "mad on trees."

Immediately after graduating from Yale he went abroad, and with ardent energy and thoroness which are vitally a part of him, he made a complete study of forestry, in countries and localities where the mother of invention had brought the art to highest development. Thoroughly equipped, he returned to America, where, of all places, he was needed, but where there was no place for him

until he made it. The public was peacefully sleeping upon convictions of the unlimited and inexhaustible resources of the country, while the lumber interests, coal interests, water-power interests, etc., were absorbing everything, denuding everything and arranging for a sad awakening of the public to general devastation in the near future. His first determined effort to accomplish something was in 1892, when he opened an office in New York, for consultation and advice to owners of timber lands. Sixteen years later, in addressing the great Conference on the Conservation of National Resources, held at the White House, where the Governors and delegates of forty-six States met with the Cabinet, the Supreme Court and the Inland Waterways Commission, President Roosevelt said:

"I want to say, here, that if it had not been for Gifford Pinchot this conference never would or never could have been held."

In a speech in Jamestown, Va., the year before, the President said:

"So much for what we are trying to do in utilizing our public lands for the public in securing the use of the water, the forest, the coal, and the timber for the whole public. In all these movements my chief advisor, and the man first to suggest to me the courses which have actually proved so beneficial, was Mr. Gifford Pinchot."

The story of the sixteen years between the private consulting office and these declarations sounds like a fairy tale. One fancies he must have held a magic wand to have accomplished the apparent impossibilities; but it is only the result of herculean industry and in-

domitable energy applied, without personal ambition, to one specific end. It was not more than ten years ago when he succeeded in forcing upon public attention the first glimmering consciousness of the ruin which the madness of private greed was working, and the salvation which method must eventually mean if honestly applied to national forestry and conservation of resources.

The United States Forest Service is Mr. Pinchot's own creation, from the inception up. First a Division of Forestry

was created, and he was made its head. Then its scope was widened a little and called the Bureau of Forestry. Then the entire forest interests of the United States, which were divided between the Department of Agriculture and the Department of the Interior, were consolidated in the Forest Service, under the Department of Agriculture, and Pinchot was made Chief. Ten years ago he had eleven assistants. Now he has nearly two thousand. The territory under his control is more than five times the size of New Eng-

GIFFORD PINCHOT.

land, and the vast machinery of the Forest Service is the best example of economical, energetic, effective and scientific work in the entire executive department of the Government. The House committee which investigated the expenditures, methods and results, a year ago, reported that the standard of the Forest Service was fully on a par with the methods of the outside business world and superior to any other part of the public service. There is not another

department like it in the world. Go there when you will, every floor of the Forestry Building is alive. Everything is rushing at full speed, but every one is working as tho it was the highest joy of life. It is the atmosphere which surrounds Pinchot himself and every one under him. It is refreshing. You come away with a sense that you have been in the woods.

Without his eternal optimism Gifford Pinchot would never have succeeded, in spite of his energy and ability, for a better abused man, thru the early stages of his efforts, and one better ridiculed, would be hard to find. By far the hardest part of his labor during the past ten years has been fighting, persuading, urging, educating and trying to adjust matters between the hostile private interests which were being curbed, the indifferent public, and a frequently antagonistic Congress, looking more to the present political interests than to the future public good. He is not an idealist. His policy has been to make all public lands available to the public, so far as they can be used without detriment to the future, by a simple administration which is prompt and effective—anything but bureaucratic. In the results he has seen enemies turn friends and friends become enthusiasts.

To rouse a nation, especially against its great money combinations, and accomplish the results already to his credit, in this short space of time, is almost beyond credulity. To understand it one must know the personality of the man and the spirit behind it. He is tall, but slender; nervously active and athletically self-reliant. Endurance and energy are stamped all over him. He has a hand-

some face, a high forehead capped with thick brown hair going gray. His eyes are quick and clear, full of fun and courage. He is a natural hunter, and next to any recreation which will take him into the forest he has a passion for deep-sea fishing. He is a leader of men because men like him, and when he convinces them that he is right they are glad to follow him. He has the finest regard for the feelings of others and is generous to a fault, but fortunately does not couple with it the usual quality of supersensitiveness which would have made his life an intolerable burden thru several past years. He smiled as we were speaking of some recent attacks, a few years ago, and remarked:

"It really does not trouble me, all this criticism. It only indicates that at last people are thinking, and they cannot think long upon the subject without becoming converts."

Altogether he has one of the most attractive personalities, one of the most inspiring atmospheres and one of the best laughs extant. It is worth going up to the seventh floor of the Forestry Building just to shake hands with him.

He is the right man at the helm for the most momentous question before the nation today, involving as it does not only the exhaustion of our sources of prosperity, but the unjust absorption and unequal distribution without compensation. He is devoting his life to the conservation and replenishment of our natural resources and the equitable distribution of them, so that the people, the rightful owners of the public lands, shall not be ruinously deprived of them, or forever dependent for their homes, their minerals, their water-power and necessities of life upon a few monopolies.

WASHINGTON, D. C.

Plays that Are Worth While

BY G 12

"THAT play is as good as a sermon," said G 10 to me as we left the theater. And he was a minister. I make this explanation because in the mouth of another the same words might have conveyed the opposite impression. They might have meant that

the play was as bad as a sermon. For it is a common superstition among those who never go to church that sermons nowadays are two hours long, and are exclusively devoted to the exposition of the mystery of the Trinity and the denunciation of the sins of the Hittites.

But my companion, being a maker of sermons and exceptionally good ones, too, knew what they were and what they were for, so his observation is worth quoting. Now the play was more than two hours long, was absolutely destitute of theology and confined itself to the sins that most easily beset the auditors. I may add also that they paid more to hear it than for any sermon; perhaps that was one reason why they paid better attention.

Nevertheless this play, realistic and up-to-date as it was, had about it more of the old ecclesiastical flavor than the modern sermon. It was a reversion to a

put into our hands we saw that the characters were personified vices as in the old moralities. This was the list: "A Cheat, a Sloven, a Painted Lady, a Shrew, a Snob, a Bully, A Hussy, a Satyr, a Coward, a Rogue and a Cad." We had no difficulty in recognizing them as they came on even tho they did not come to the front and introduce themselves in rime according to the old custom. It was such a collection of derelicts and failures as one finds in a cheap London boarding house—and elsewhere; people of diversified antecedents and antagonistic dispositions forced into undesired contiguity; wrangling, scheming, backbiting, boast-

"THE PASSING OF THE THIRD FLOOR BACK."

The entrance of the family into the magnificent, illuminated, boarding house in the last act. A novel effect is the painting of the fireplace in front against the missing wall of the stage room.

primitive type. It was cast in the form of the medieval morality play of the days when the stage was set up in the cloister of the monastery, before the Church had abandoned this method of teaching ethics. When the theater program was

ing: in atmosphere of pettiness, enmity and selfishness stifling to the spirit.

Then into this comes just one other boarder, mysteriously listed on the program as "The Passer by," and all is transformed. They feel his softening

influence in a moment, and at the end of the month there is a model boarding-house, such as any of us would like to live in and take advantage of. It is a miracle play as well as a morality, for sudden conversions like these, however the supernatural element is concealed, are nothing less than miraculous.

Yet the means of it were simple enough. The Passer-by appealed to the better elements in these soured boarders, called their attention to the idealistic and benevolent aspects of their respective vocations, and developed the talent for kindness hidden in each hardened nature. So at the end they were totally transformed, yet somehow retained the same personality, living together

"In simpleness and gentleness and honor and clean mirth."

The play, as perhaps I should have mentioned before, is "The Passing of the Third Floor Back," so awkward a title that one cannot forget it. Some may have read it in narrative form. It is to be found in one of Jerome K. Jerome's volumes of short stories. But Mr. Jerome has improved it in the dramatizing. In the story the Passer-by was an angel in disguise, his wings crumpled up in a hump under the back of his coat. In the play this grotesque symbolism is abandoned. There is left merely a suggestion of the supernatural in the ray of sunlight that enters the room just before the Passer-by knocks at the door and lingers on the carpet after he leaves. Mr. Forbes-Robertson, who takes the part, does not affect to look like Christ; he simply is like him, and shows us how we could also be like him. In this respect, as in some others, "The Passing of the Third Floor Back" is superior to "The Servant in the House." In the latter the introduction of the Oriental Christ figure was an incongruity somewhat disturbing to the artistic, if not the religious sense. Then, too, the auditor, however impressed, was not inspired to action. There was nothing definite set for him to do, unless to reform the Church and Society, which is too vague and mountainous a task. But Mr. Jerome's play points out the little things which every one of us can do every hour of the day, and which, being done collectively, would reform the Church and Society. It may have been

WILLIAM FAVERSHAM AS HEROD.
In Stephen Phillips's poetical drama.

imagination on my part, but it seemed to me that the crowd coming out of Maxine Elliott's Theater that night did not jostle and push one another as they commonly do in the rush for cabs and cars.

This idea of the uplifting power of optimistic suggestion is in the air. A score of books have been written about it during the year and some have sold immensely. It is the theme of another play of the month, otherwise very different, "The Harvest Moon." Mr. Au-

gustus Thomas utilized a psychical motive in "The Witching Hour," but that was mental magic, a sort of telepathy and willing-at-a-distance. In his new play he keeps to firmer ground, the effect of color on the mood, and the depressing or encouraging influence of suggestion. The heroine, Dora, is so much like Lucienne in Brieux's popular play, "l'Evasion," that it seems as if Mr. Thomas must have caught the idea from this source. She has been told from childhood that she has the faults as well as the face of her mother, who deserted her husband for the stage, and the poor girl comes to believe that she is irremediably weak-willed and unprincipled, and she acts accordingly. But she is saved by a shrewd old Frenchman, pupil of Charcot's, who convinces her that she has a strong and upright character. This is the psychic age, and the old stage duels are fought with new weapons. The villain nowadays uses malicious animal magnetism, and the hero foils him with negative suggestion.

We have been told repeatedly in late years that the poetic drama is coming back, but those who have prophesied it give no evidence except their wish to have it so. Stephen Phillips, who has labored longest and most successfully in this field, is rewarded by being brought into the London bankruptcy court. At the same time one of the best of his plays, "Herod," is being produced in New York with great magnificence and exceptionally good taste. The scene is crowded, overcrowded in fact, with priests, courtiers, soldiers, musicians, pharisees and slaves, who are admirably marshaled and costumed. The acting is good, better than the recitation of the verse. Mr. William Faversham sets the keynote of the whole somber sequence the instant he enters and casts a jealous eye on the popular high priest, Aristobulus, and listens to the poisoned whispers of his sister Salome. And the rest of the acts of Herod, and all that he did, behold they are written in the book of Josephus. But for the benefit of those of our readers who have departed from the ways of their forefathers and no longer keep Josephus on the center table, it may be necessary to explain that this is not the Salome of Wilde and Strauss.

She may have been as bad, but in a different way. She had no need to dance off seven veils to secure the death of Aristobulus and of Queen Mariamne.

It is not necessary to say anything about the drama because it is the best known of Mr. Phillips's works. Good poetry it all is; some of it very beautiful, and Mr. Faversham's company have done their best to make of it also a good play.

The poor multimillionaire has a hard time of it nowadays. He cannot pick up a magazine or enter a theater without the danger of seeing himself in the pillory. The villain of the modern play is not so apt to be a low-browed, black-mustached young man as a dignified gentleman with iron-gray hair. The telephone takes the place of the dagger of the old melodrama and instead of murder we have a stock exchange transaction. Such a play is "The Ringmaster," by Olive Porter, which is built on the lines of the popular novels of financial intrigue. Similarly "Such a Little Queen" belongs to the Zenda group of romances which have been in favor for the last fifteen years. But the author, Mr. Channing Pollock, gets a new effect by setting the scene not in the Balkans, but in New York. The exiled Queen of Herzegovina does her own work in a Harlem flat, using the scepter as a potato masher, keeping the crown in a handbox in the fireplace and wearing her coronation robe in the kitchen to save her only street dress.

All these five plays of the month are good of their kind. They are all clean plays, well staged and competently acted. The first is the successful accomplishment of what we are often told is an impossibility, the production of a play that shall be at the same time attractive, true to life and full of moral inspiration. The second introduces a bit of psychology quite out of the ordinary but not at all out of place. The third is a sumptuous and artistic presentation of a poetical tragedy. The fourth deals with modern life in one of its most characteristic forms. The fifth is a graceful and amusing bit of sentimentality. There is no reason for patronizing bad plays or poor plays when such as these are to be seen.

NEW YORK CITY.

Reference Libraries for Busy Men

BY PAUL P. FOSTER

[The writer of this article is in charge of the Editorial Reference Library of *The Youth's Companion*.—EDITOR.]

ON the morning of March 9, five days after the new President took his oath of office, and some weeks after every one of any political importance in Washington knew who was going to be the new Attorney-General, an Associated Press dispatch from Washington announced that the staff of the Library of Congress, after a thorough search of the archives of the Library, had been unable to discover any biographical information regarding Mr. Wickersham. It could not find, anywhere in the nation's library, enough information about the new Attorney-General even to enable the Associated Press to satisfy its unexact and non-critical readers!

On the other hand, the writer of this article, when asked on the 1st of March for matter about Mr. Wickersham—eight days before the Library of Congress had to confess its failure—was able instantly to furnish authentic biographical matter from four different sources, already collated and properly filed.

The difference very well illustrates the conditions in such of our great libraries as have not established any reference-filing system—and unfortunately that is true of most of them—and the resources of a very modest private library which does maintain such a system.

It is so universally admitted that the modern American library leads the world in adequate realization of its great function, the education of the public, that it may seem ungracious to affirm that there is one field of usefulness which it has left almost or quite untouched. There are card catalogs, annotations, bibliographies, class-lists, open-shelves, trained and sympathetic attendants. Students of the public schools are encouraged and instructed in the use of the library; members of women's clubs, students and workingmen alike, testify to the model facilities of the public library; new patrons are being reached, and the extension of the library's field of usefulness is apparent. The one important feature

which has been neglected is this: There has been no attempt to classify the contents of magazines and periodicals so that all the important articles on any subject may be instantly available.

The value of magazines and periodicals for reference purposes is universally recognized. To those who wish to be abreast of the times they furnish almost the only convenient means of keeping informed regarding late facts and developments. Books are, of course, indispensable, but necessarily they cannot long be relied upon for the latest information, nor do they offer the opportunities which magazines afford for presenting all sides of a subject in condensed, carefully edited articles by the leading authorities; while encyclopedias are frequently years behind the times before they reach the library shelf.

Therefore the progressive professional man of today depends for his information much more than is generally supposed upon periodicals, pamphlets, reports, press dispatches and newspaper "specials." An editorial in the *INDEPENDENT* of October 1, 1908, recently went so far as to say:

"It would not be altogether unfair to estimate a man's intellectual activity by the ratio of unbound to bound volumes in his working library. . . . Nowadays most ideas of importance appear first in periodicals. It has become their function to make crude information palatable, to convert abstract science into applied science, to throw a search-light into dark corners of the earth and dark spots of our civilization, to start new movements and to guide old ones; in short, to inspire, to interest and to instruct."

At a public library the inquirer for the latest facts concerning a particular subject is obliged to consult one card catalog after another, a dozen or more indexes to periodicals, to visit this and that department, only to discover at last that all the latest and best discussions of his subject are to be found in bulky volumes of periodicals—many of these absent in the bindery—and often the most useful material, newspaper "specials" and reports, wholly unavailable. That

this picture is not exaggerated, any person familiar with the routine at the average library will readily admit.

Now, it is perfectly possible for the libraries to furnish the business and professional man, the reader and taxpayer, with such a modern system of handling the vast stores of information now locked away in bulky, dust-collecting volumes, as will make those stores readily available to all; one that will enable libraries to meet the wants of those who have ceased to depend upon the library for the latest facts, because of frequent disappointments.

This simple and scientific method of saving selected articles and material is one which was adopted a dozen years ago by one of the largest publishing houses in the country, and has become indispensable to editors, artists, managers and to the office force.

Let us suppose that a patron of this library desires to know something about Alfred Nobel and his legacy to genius. Instead of being referred to an overwhelming collection of indexes, he is presented at once with a large manila envelope containing all the articles which have appeared in any one of seventy periodicals during the last twelve years. He will also find the official reports, many excellent newspaper "specials," press reports, and numerous pictures. There may be here matter gleaned from a thousand sources, yet all of it is instantly available, is in most convenient form, and can be carried away in one's hand, if desired.

Such a result has been obtained by treating each article as a unit and classifying it accordingly, instead of allowing it to be bound up, in the usual illogical fashion, with hundreds of wholly foreign articles, and buried volumes deep.

The ninety and more periodicals which reach the librarian's desk each month are stripped of covers, binding-staples and advertisements, and the librarian, with a blue pencil, quickly marks the articles and portraits which are to be preserved. An assistant removes each article, stamps it with the date and the library mark, binds the loose sheets with an automatic stapling machine, or merely fastens them together with a wire clip, and eventually deposits the article in an oblong vertical filing-envelope, ten by

eleven inches in size, which contains practically all the material on the subject, or its subdivision, possessed by the library, up to date.

The envelopes are self-indexing, and are filed in sectional filing-cabinets, occupying surprisingly little space. Assay the articles worth saving from the average issue of a magazine and they take up but little room. With the additional aid of a complete collection of reference books, encyclopedias, annuals, reports and unbound files of all important magazines and newspapers, the contents of which are indexed, this unique reference library is enabled to give the fullest and latest information on almost any subject.

Here is a great, constantly expanding, "loose-leaf," up-to-the-minute, encyclopedic reference system, which classifies anything and everything of potential value. It is the only plan by which it is possible to obtain general or special information regarding live subjects, instantly, compactly and conveniently. The busy patron of this library obtains from the envelope he requests all the articles regarding the desired subject which have appeared in "Poole," or any other index. He can be sure of having placed before him, almost as soon as he asks for it, the completest possible collection of data, in convenient form. No other method approaches it in simplicity, comprehensiveness and accessibility.

Take, for example, a subject now constantly discussed: the growth of prohibition. The "Temperance" envelope contains seventy-five articles on the subject, many of them newspaper "specials," and half of them from sources not indexed and therefore unavailable in any form at a library. Here is the full text of President Eliot's famous Faneuil Hall speech, in which he advocated no-license; the excellent and authoritative articles on the liquor problem which appeared in *Collier's Weekly*; the bibliography issued by the University of Wisconsin; careful articles from the *Boston Transcript*, the *New York Times and Tribune*, the *Literary Digest* and *London Sphere*; with all the other articles which libraries lock up in bound volumes for the patron to discover as best he can.

Now, only half of these articles could be found at a public library, probably

half of those again would be in process of binding, and nearly all would be in heavy volumes, bound with hundreds of other articles upon topics of no interest to the investigator. Our envelope, on the other hand, contains twice the information, all easily carried in one's hand, and instantly available. The difference is the same as that between handling a ton of crude ore and the little bag of concentrates to which it has been reduced, and which contains all the mineral wealth.

No one complains of the lack of material in these days; the trouble is that we are overwhelmed with it; library shelves groan with undigested books, pamphlets and bound volumes of periodicals. Multitudes of important facts confront us momentarily every day, but are lost in a hopeless mass when we try later to recall or investigate a single subject, or they are so inextricably confused with other material that the average busy man or woman cannot afford the time to ferret out the information. Libraries should organize this vast fund on modern lines, classify and concentrate it, and their experts should do our work for us, when they can do it better than we can and more quickly.

Let us consider a few of the demands which this "loose-leaf library" supplies in a large publishing house. The art department may want pictures of cowboys, for example. Here are three or four envelopes which contain more pictures, photographs and drawings of cowboys than could be found elsewhere in a week's search, if at all. If reproductions of the work of Remington, or Frost, or Parrish, or St. Gaudens, or Sargent, or any illustrator, painter, sculptor, or any other artist are wanted, they are forthcoming at once, in most convenient form. Is a prairie schooner of '49 wanted? Here it is. The stoke-hole of a modern liner? Here. The interior of a fur-trading post at Hudson Bay? We have it. Artistic covers of all the magazines for ten years past; effective advertisements, catalogs, announcements; all are at hand. And so just one department of a great publishing house is served.

An editor asks to verify the chevron of an orderly-sergeant; another for information regarding the new Attorney-General, the sons of the Presidents, loim

sharks, pure food, the clean milk campaign, hunting in Africa, what Mr. Roosevelt may or may not shoot there, out-of-door schools for tuberculous children—all the latest information is supplied at a minute's notice. Thousands of portraits of famous people are to be had, beautiful illustrations from the *London Sphere*, the *Illustrated London News*, the *Graphic*, *English Country Life*, the *English*, *German*, *French* and *Spanish* periodicals; none of the material to be had in a week's time at the largest libraries in the country; in short, here is an unrivaled assemblage of graphic information, complete, convenient and compact.

The plan is so simple and flexible that it may be adapted to almost any use. In every home there are quantities of magazines stored uselessly away in the attic. It would be an easy matter to dismember these collections of good literature and to save such articles as are desired for future reference. The stories may be saved, too, and sent to friends or to hospitals. The parts of a serial may be brought together and crudely bound, and one has the latest novel, for which a dollar or more is being charged in the book stores. The matinee-girl may classify the stage pictures—housewifely hints may be collated—vacation suggestions saved—a thousand and one items of useful information preserved; and all with the aid of a box or drawer, and some foot-square folds or envelopes. In fact, when people begin to discover how convenient it is to read a ten-page story or article, freed from the weight of all irrelevant matter, it may become popular to remove the binding staples soon after the magazine is received, "tabloid" the contents and thus ensure its permanent usefulness. In the publishing house referred to, this is done at the end of each month, and the advertisements from all the leading magazines are carefully saved and bound, for the convenience of the advertising department.

This is a way, too, by which all of us may assist in the "conservation of resources," about which we hear so much and which, like so many great movements, seems so remote to the individual. Assuredly information should be included in the list of resources to be conserved. Just try putting that pile of old

magazines, which has been gathering dust in the attic so long, thru this assaying process, and you will be surprised to find how vital and valuable your classified collection will become. Gradually you will add to your "loose-leaf library": pamphlets, the Government bulletins, catalogs, clippings and all the hitherto scattered information which you have been accumulating, and could never find before when you wanted it.

Various adaptations of such a reference system are being established in many different offices and institutions. A firm of street railway engineers in Boston maintains an elaborate engineering and technical reference bureau; the Public Service Commission of New York City has established a library on the lines described, complete in information regarding public utilities; and there are now a number of bureaus of municipal research: notably that in New York City.

The success of the Legislative Reference Bureaus has been largely due to this flexible plan. New York, Wisconsin, California, Indiana, Oregon, Nebraska, North and South Dakota, Alabama and Rhode Island are among the States where there is a modern, rapid system of supplying facts of value to legislators.

In the great States of Illinois, Massachusetts and Pennsylvania, at this writing, the progressive members of the Legislatures are endeavoring to establish such bureaus.

In all of the offices and institutions where such a system exists, its greatest benefit has been in the immense saving of time, a commodity worth money even to patrons of the public libraries. Material is always ready, concentrated and complete, and the use of the reference library has been multiplied by quick service, which can only be provided by this system, the manifold advantages of which are here set forth. As these advantages become more widely known, the plan is sure to be adopted in every institution where large numbers of people require complete information on live topics at a moment's notice, and wherever there is a demand for specialized information in any branch of science or technology, politics or business, for supplying which periodical articles are indispensable mediums. In the institutions and business houses where it has been thoroly tested, the enthusiasm of the patrons of this modern reference library is sufficient evidence of its value.

BOSTON, MASS.

To a Sonnet on the Sonnet

BY THOMAS WALSH

NAY—wouldst thou write a sonnet on the sonnet
 Full of confectionery charms like those
 The dimpled poets pin upon the rose,
 Twining thy fancies as if for a bonnet
 And forcing the poor frowning Muse to don it!—
 Wouldst thou prove faithless to try frail *rondcaus*?
 Thou sayst the sonnet like a lily grows—
 Then, critic, scorn not—nor lay trinkets on it.

No jewels asks she for her perfect throat,—
 But some pure court wherein she may expand
 And sun the cheek that gods have dreamt upon;
 So gird thee—if wouldst serve her cause remote—
 As one who in an alien, thankless land
 Tears down the huts that crowd a Parthenon.

BROOKLYN, N. Y.

The Aviator of the Nation

BY LUKE J. MINAHAN

[Mr. Minahan is president of the Pittsfield Aero Club, one of the most active in the country. Its Aero Park has been pronounced the best by the Aero Club of America, and is used by that and other clubs for ascensions.—Editor.]

THE world laughed when Jean Paul Friedrich Richter said: "Providence has given to the French the empire of the land; to the English that of the sea; to the German that of the air." At the time it was a biting sarcasm, a taunt to Germany's limited strength and size. But times have changed, and the "empire of the air" seems to be causing no end of anxiety to the other empires. And so we hear charges and counter charges, threats and counter threats, and each power in a mad contest strives for the conquest of the air, aye, mastery at all cost!

If those empires across the sea strive in bitter contest to gain the empire of the air, not so America. We, or better, those who are supposed to express our opinion, have gravely decided that airships will never be of any use to further the commercial interests of this country, therefore America, the nation, does not participate in the contest for the conquest of the air, and those Americans who, like the Wright brothers, Curtiss and others, would help to solve the problems of aerial flight find the Government and the people entirely indifferent to their needs, and must go abroad to get means to conduct their experiments. The fact that we do not contribute our quota toward solving an economical problem does not seem to concern us, and we find justification in that the airship and other instruments of like nature tend to add to the horrors of war, and to revolutionize the present state of things, therefore we will not encourage them financially.

However, it is a psychological mystery that no sooner and no matter how strong Assurance builds a castle, Doubt's minions will find some loose stones to move and undermine the castle's foundation. So some of us who had felt assured by what seemed to be wisdom are beginning to doubt whether America's

attitude in regard to solving the aerial flight problem is at all commendable. We doubt whether our Government's indifference is at all justifiable, and don't think it is to our credit as patriots that for the sake of a rather insignificant sum of money we let foreign countries have first rights over the works of American inventors. We failed—or did we refuse?—to recognize our geniuses, and the Wright brothers might have gone back to build bicycles for lack of funds to complete their aeroplane if France had not helped them out of their difficulties. Yet we wonder at their lack of appreciation for the niche we want to give them in the American Hall of Fame. We seem to forget that in their most trying hour, when, having been refused audience at home, they sought foreign markets and proved beyond doubt the value of their inventions, even then we failed to recognize their genius, but reluctantly admitted that they "might be more than dreamers!" We forget that after they had attained success in Europe and proved beyond doubt the value of the fruit of their labor, even when Germany had set an example by giving Count Zeppelin full support; we forget that even then our Government still stipulated that they should fulfil certain conditions which the best authorities regarded as too severe and impossible to fulfil, if they would have the Government buy an aeroplane from them; and when Orville Wright, in his attempt to meet those conditions, met with the accident that killed the passenger, hurt the inventor and wrecked the machine, he met with no such good demonstration of patriotism as Count Zeppelin met in Germany when his airship was destroyed: Germany gave Count Zeppelin \$1,000,000 with which to rebuild the destroyed airship, and to found an institute for the promotion of aeronautic science. America did not even give Or-

ville Wright its full sympathy, and the brothers were left to work out their own salvation. That they finally met those severe conditions is to their credit; of the officer who died in the accident that followed the first attempt we can truly say, "he died for his country."

Not a paper or periodical thruout the country failed to mention Curtiss's remarkable feat at Rheims, and most of those periodicals spoke of him with pride; but one looked in vain for comments that would denote that this nation appreciates the commercial value of the successes gained by her aviators in the last year. Where is the so much wanted American business insight that we don't seem to see the economic value of an efficient airship? Are we really so jingoed that we must consider every invention for its worth as an implement of warfare instead of as a means to further the development of our industry and a solver of economic problems? Why must we continually read that each of Zeppelin's airships will carry eight tons of warfare implements when, as a fact, the Zeppelin Aerial Navigation Company is planning to carry eight thousand tons of passengers and merchandise for the furtherment of Germany's industries? Mr. W. T. Stead says that the aeroplane "may be called the avant-courier of the international world-state or the herald of the ruin of civilization." He might have added that it is up to ourselves to make it either, and that there are more reasons for making it the first than the last alternative. We should believe with Count Zeppelin that "the effect of airships will rather be to create a bond of union between nations than to set them all against one another." True, this country was the only first-class power who, at the Hague Second Peace Conference signed the agreement: "to prohibit for a period extending to the close of the Third Peace Conference the discharge of projectiles and explosives from balloons or by other new methods of a similar nature," while twenty-three other Powers, including Germany, England, Russia, France, Austria, Italy and Spain, did not sign. But should the fact that America contemplates a program of peace prevent her from financially en-

couraging the development of science? The amount of work yet to be done to bring the aeroplane to a practical degree of efficiency is extensive. Giving no consideration to the large number of aviators of which we have heard as having wonderful flying capacities—claims yet unproved considering only those few that have actually flown, like Bleriot's monoplane, which crossed the English Channel on July 25, twenty-five miles in thirty-seven minutes; Wright's biplane, that met the Government conditions at Fort Meyer on July 30, flying one hour, twelve minutes and forty seconds at a speed of forty-two and one half miles per hour; Curtiss's aeroplane, that won the *Scientific American* cup on July 4, 1908, by a flight lasting thirty-two minutes, thirty seconds, and the Gordon-Bennett cup at Rheims, for the fastest flight of twenty kilometers, flying 12.42 miles in eleven minutes, fifty and two-thirds seconds; considering only these, and a few more whose feats have shown possibilities, we find that the limitations involved are so great that those feats are just about equal to the feat of the early steam car when it beat a horse-drawn car in a speed contest at Baltimore a century ago. The steam car then beat the horse-drawn car by a small margin, so Bleriot's monoplane beat the French torpedo boat in the journey across the Channel by a small margin.

We speak of stealing into foreign countries, when, as a fact, we are but like fledglings fluttering from branch to branch only in propitious weather; and we tremble at the thought of what would happen if adverse winds should catch us unexpectedly, for we remember how the winds dealt with a large number of uncautious aeronauts and aviators in the past.

Of course, it does not require much prescience to foresee the ultimate success of the aeroplane; but to attain that degree of efficiency will require extensive experiments, and to conduct these requires means, which the nations should provide. If we do that, we shall, in the near future, be the proud possessors of an aeroplane that will not only fly, but be utile, for we have the geniuses to build it.

Baron Takasaki: The Japanese Poet Laureate

BY YONE NOGUCHI

Baron Takasaki.

*I a gray poet of the sunset land
Gent you who sing by Nippon's shining strand.
Out of the shadows of a day that's done,
I hail you, Poet of the Rising Sun!*

John Hay

THUS the late John Hay sent his words of shadow-soft salutation to our Baron Takasaki, who received them when his beauty-loving soul with the world was lamenting over their author's death. This bit of petal of Mr. Hay's was the last to fall, as it was written only a week or two before his sleep; I can well imagine his gracious shape passing into the shadows singing a note of greeting, yes, singing even in sight of grim-faced death. The Baron's poetical reply in a customary *uta* followed after him over the "ten thousand billion miles of the shadowy road." What a joy it was for his old heart—the Baron is now enjoying the golden blessing of his three-score and ten—to be saluted over the seas by Mr. Hay as a poet, rather than as a statesman. Mr. Hay's words were true; there's no other poet like the Baron who lives and sings by Nippon's shining strand. His villa at the Hill of Leaves, "Hayama" in Japanese, stands on the cliff like a falcon's nest, gathering more sunlight, and many more stars at night; the blue waves of the Sagami Bay kiss its feet with the soft lips of love. The Crown Prince gave it the name "Onpakwaku,"* meaning the building washed by

merciful waves; indeed, here at Onpakwaku you feel every breath of Heaven's mercy, and make yourself reborn in a golden clime as a poet, and pray to sing as a soaring bird. A few years ago Lord Tennyson, the noble laureate's son, the Governor of the Australian Commonwealth, sent Baron Takasaki, the Japanese Poet Laureate, or the Chief of the Court Poets, his father's autograph poem called "The Poet," beginning thus as it is known well:

"The poet in a golden clime was born
With golden stars above."

It is one of his life's regrets that he cannot understand words of English, but it is his joy and pride to be born and bred as a poet, in whose golden world mortal language weighs little, since every poet from East and West speaks the same language of love and friendship. He was perfectly delighted to hear my talk upon the poets of England and America, old and new; "Truth is the same like a star," he sighed.

To see a poet in a right place and light is a blessing; I saw him and talked with him at his delightful Onpakwaku in the right month of March when your spring thoughts will begin to take their happy wings and the world for you may turn to a swaying reed of song at your command. I was told by the Baron that Her Majesty the Empress dropped in here a month ago to chat on poetry, and that she left a few *uta* written on seeing the *ume* (plum) blossoms in his garden. The beloved heart of the Empress with that of the old Baron was hugely glad to hear this year the songs of the *uguisu* (the nightingale) of its content in peace. This eight-matted chamber with a poetical whisper like that in a fairy story, embracing the large view of seas and skies, where I sat with him hour after hour, with a China vessel full of Japanese cake and many tiny cups filled with a fragrant tea from a strange corner of Japan before us, was honored, I am told by the Baron, by the blissful presence of

*The Baron wrote on his own Onpakwaku:
"The gladdening waves of royal mercy wash
This building, and their pleasing power affects
Even the spirits in Heaven with hidden joy."
(Translated by A. Lloyd)

the Crown Prince; I was perfectly charmed to be assured that the place where I sat was the very place where he was pleased to sit. I saw upon the *tokonoma* many a souvenir given to him by the royal family on various occasions; I especially took notice of a *susuri bako* (writing-box) lacquered, with the moon and trees in gold on the cover, which was presented by the Empress with her sweet wishes. Will he write *uta* forever from that writing-box?

BARON TAKASAKI,
The Japanese poet laureate.

Why, *uta* is his life; his belief in it is sure as death.

Beyond the glassed *shoji* the mighty wonder in the whitest apparition of Fuji Mountain expects you across the bay; it is the most beautiful sight in Japan, and doubtless one of the most beautiful in the world, by whose magic shape we Japanese can in a certain measure bind our sun-born souls with something like the ideal. It was born out of the truest heart of Japan; from it the Japanese poetry springs out; it is the embodiment of Japanese truth and love. It has been

sung from time immemorial, and still it is the very source of poetical inspiration. The hearts of our fathers used to leap higher seeing its divine cone; and our hearts leap, too. One of our oldest poets sang on Fuji with the following words:

"Of Yamato, the Land of Sunrise,
It is the peace giver, it is the good, it is the treasure.

On the peak of Fuji, in the land of Suruga,
I never weary of gazing."

The people born in the part of the country whence the high top of the mountain can be observed are deemed as born under a lucky star; the poet who can admire it and ennoble his own soul by its sacred touch may be said to be one with the divine lot. I find that very poet in the Baron Takasaki. And suppose you will stretch your arm from the Baron's balcony, I am sure you will feel as if you can touch a beautiful green mass, an island foliage-covered, rising out of the water about a mile from the mainland, in the direction of the famous Kamakura-Enoshima, the Holy Island, sacred to the goddess of the sea, the goddess of beauty. You will hear the old song born out of the old earth sung by a thousand fishermen upon the stainless blue sea, under the cloudless white sky. I have even a hope that we can espy one or two beautiful red *Torii* dedicated to the Dragon-goddess who homes in that unique city of the sea. It is certainly a rare piece of luck to talk on poetry and art with Baron Takasaki at his Hayama villa even where the long blessed shadow of the Great Idol of the Lord Buddha at Kamakura may reach, under whose breath we will chant the song of beauty and faith. However, his dear old heart must be sad as he lost his son in the late war with Russia, altho I believe that tears and sorrow only will heighten the nobility of a poet's heart, whose highest reach is nothing but tragedy.

He wrote when his son, Motohiko, a naval officer, about to start for the war, received a brace of wild geese from the Court:

"You've had a royal gift: Now, in return,
Shoot that proud bird that haunts the Eagle's nest

And bring him as an offering to your Lord!"
(Translated by A. Lloyd.)

The Eagle's Nest is one of the forts at Port Arthur. And soon after, hearing

the news of his death before Port Arthur, he was obliged to write under his son's picture:

I.

"Well hast thou kept the teaching of thy sire
That ever bade thee in the perilous hour
Yield up thy life for thy dear country's sake.

II.

"Now rest in peace; the son thou leav'st behind,
Thy only son, I take and nurture up,
A living monument of all thy worth."

(Translated by A. Lloyd.)

Her Majesty the Empress sent him the following *utas*:

I.

"We mourn for him, the son, who lost his life
For his dear country on the battle field;
Yet 'tis the father's heart that grieves us most.

II.

"Take thou his son—he's full of life and hope—
And use him as thy trusty bamboo-staff,
For serviceable aid in all thy work."

(Translated by A. Lloyd.)

To which the Baron replied with his profound bows:

I.

"I wept not for my son, yet now my sleeves
Are wet with tears, with gracious tears that fall
Like raindrops from our country's mother tree.

II.

"Yes, I will take my late son's only son,
And rear him gently. He will be to me
A staff, to thee a strong, protecting shield."

(Translated by A. Lloyd.)

"What I was going to say is this," he renewed his talk. He is a distinguished talker, always spontaneous, and often overwhelming. He has one advantage in not being a listener, as he is terribly deaf. And I was perfectly pleased to listen to his talk; his voice, sonorous and firm, sounded, at least to my ears, like an off-hand clatter of some Japanese sword which was a guardian god for a *samurai*. I never met, I confess, any person before like this Baron who imprest me with such a calm but strong thrill of truthfulness; the incarnation of patriotism, that is to say, the real *samurai* old and rare, I have seen with my living eyes right before me. "I do not say that I am a poet! Never! I am, as you know, a boorish sort of thing hailing from far-away Satsuma, where boorishness is re-

garded quite often as even a virtue; and I am still unfamiliar with art and letters. However, I dare say that I have never been a betrayer of truth in my heart and *uta*. I have not one line which does not sound true in my innermost heart where I burn incense before the altar of poetry. I pray only to be true, but not to become famous as a poet. In fact, I may not be a poet at all." Then he told me how he tried not to accept such an elevated title as the Chief of the Poetry Office or the *uta* teacher for the Emperor in reality, when it was offered to him personally by the Emperor some twenty years ago; and that he had no other way but to accept when he was told by the Mikado that it would be enough to do what he was able to do, and he, the Mikado, would be perfectly satisfied with it. And here he is holding that illustrious office with such honor strong and positive. It is said that he presented the Mikado three items for his ratification before he stepped one step toward his acceptance of the chief office in the poetry department in the palace. What were they?

The first thing was that the Emperor should not neglect his state work thru a greater indulgence in *uta* writing. The Baron observed that the nation—indeed, she was a small thing twenty years ago—must grow larger in order to take a hand, at least, in settling the Asiatic affairs, and then the Mikado's function would be a busy one to manage matters within and without. The Mikado was to call the Cabinet members before him every day, and a special audience should be given to the foreign ministers; if his daily course of work should be disturbed. Baron Takasaki said, it meant that the classical *uta*-poetry which ought to beautify and exalt the nation's mind was doing a great harm. The Baron declared that such was not the real *uta* at all. And it was his second item that the Mikado must think himself to be an *uta* student before him. And the Mikado was asked to overlook his hard language and criticism, where he was sure His Majesty would meet, since he was going to trust himself in his hand. The Baron said that there was nothing harder for him than to flatter, and he begged the

Emperor to remember that he was only a country *samurai* whose honesty was his life. It is said the Baron told the Emperor that he had to bend a bamboo stick more than he ought to when he wanted to make an arrow out of it (it is said he held an iron stick from the fire box before the Mikado to illustrate his words), and that it might happen sometimes he would be too severe toward His Majesty's *utas*, too, than he ought to perhaps. Thirdly, the Baron said that everybody had his own choice and opin-

It goes without saying that the Baron's attitude toward the Emperor's poems is grave; and it is beautiful to see that the Emperor is gently yielding under his guidance. The poems will be handed to him once a month or once in two months; they are quite often in the Mikado's handwriting, tho more often copied by some court lady. (Here the Baron showed me a package of the Emperor's *utas* which were sent in a few days ago for his reading; they are said to amount to seven hundred and fifty pieces, and to

THE POET LAUREATE'S HOME AT HIYAMA

ion, and his correction and judgment were not final by any means; he begged the Emperor to show his work, after his examination, to the other court poets. And he entreated the Mikado to regard him as one of them, and not as the head man of the office. Those three items were gladly approved by the Emperor, who is still today keeping rigidly the promise which he gave the Baron at the start.

represent two months' poetical work. I am sure he is a poetical wonder.) The Baron will go, I am told, under the rite of "purification and bathing in water" to begin with, and change his *kimono* to a dress of ceremony, and then begin to read them with such a feeling as if he were facing to a god's altar. He used to scratch quite freely and add his correction till some years ago as the Emperor's work left much to be desired; but it ad-

vanced almost marvelously lately, so that he has only to read and admire. I am told by the Baron that he has five marks of merit to put on the Emperor's *utas*; the very best being two circles, the second best one circle and two dots, the third one circle and one dot, the fourth just one circle, and the poorest only one dot. And how hard the Mikado strives to get the first mark!

It happened some years ago that the Emperor had been discouraged for some long time on receiving only a poor mark for his poems, and all the court ladies in waiting worried to see his unhappy face. The late Madam Saisho Atsuko, an eminent poetess herself, said to Baron Takasaki in her palace chamber that she wished he would slightly modify his rigidity upon the Mikado's poems; she had been worrying, she declared. And about the future of *uta*, which had begun to flourish from the reason of the Mikado's great interest, if he might suddenly cease to enjoy it. And she even said it would not be a particularly good mode of patriotism to make the Emperor unnecessarily sad. "I hear the most unexpected thing," the Baron exclaimed. He said he would gladly resign his post if the Emperor were dissatisfied with him; he was sure, however, he said, that her worrying would prove to be groundless as he had many reasons to believe in the Emperor, and a born poet as he was could never so easily desert his Muse. "And suppose," he said, "he stops writing or his *utas* grow less in number. It would never impair his Emperorship, I dare say. Let him be sad, if he will!" It was two or three months after this occurrence that Madam Saisho passed by the Emperor in the corridor, who stopped her to read a package of his *utas* which had returned from the Baron; among them were three poems which bore the best mark. "You have to write *uta* like those, you see," the Mikado exclaimed to the lady with laughter. She sent a messenger to the Baron as soon as she retired from the Mikado's presence, and begged him to forgive her words of stupidity of the other day. Indeed, the Baron's rigidity is something wonderful, while the Emperor's faith in

him is the rarest thing in the world. The Imperial house has been the center of literature and life from the ancient days; "Manyoshu," or "Collection of Ten Thousand Leaves," the first monumental *uta* anthology of the Japanese literature, and "Nihongi," or "Record of Japan," were published under the patronage of the Nara Court of the eighth century. And when the capital moved to Kyoto from Nara, the Imperial House was regarded as a light of art and culture. Ki no Tsurayuki, of the Heian period, when poetry had greatly degenerated into the pleasure-loving and effeminate, attempted to place it on a proper healthy level. I believe I would not be far wrong in saying that the Baron aims to be a second Tsurayuki; and his success is clearly seen already when the literature of the present Imperial House raises its head in hope and light. He will be remembered as one of the eminent poets of the modern age, altho he protests earnestly against being called a great poet. However, he was sure, he declared, as the road of the sun of his being a true Japanese whose eyes will ever turn upward to the country's glory and light. He is a patriot, perhaps, before he is a poet. He fought many battles for the sake of the Imperial House at the time of the Restoration; he was one of the truest guardians of the palace. He is a brave soldier and the rarest type of old *samurai* whom we see not so often today. He knows how to fight and conquer, but not only with his sword and fire; he is a strong believer in life and the world. He wrote:

"Lark! that thy matin lay dost bring
To Heaven's gate with soaring wing,
Then falling like a dropping stone,
Seek'st thy poor nest with grass o'ergrown,
To rise again. Vicissitude
Is all man's praised beatitude.
Rising or falling, may we sing
Like thee, brave lark, on happy wing."

(Translated by A. Lloyd.)

When I left his villa at Hayama the stars shone steadfastly like his own soul of poetry and truth. The waves of the sea must have been asleep as I heard no stir or noise. There was an hour or two yet before the rising of the moon.

TOKYO, JAPAN.

Notable Books of the Season

THIS is the time of year when the publishers deluge us with new books, and there is neither space nor time sufficient for thoro criticism. Yet the publishers are right in thinking that the American people do most of their book buying just before Christmas, and that now is the time when they want to know something about the books from which they must make their choice. Accordingly, we have adopted the custom of giving in this issue brief notices and preliminary appraisements of as many as possible of the books now appearing. Later in the year the most important of them will receive more extended and critical consideration. Juvenile literature and finely illustrated editions and gift books will be reviewed in our Holiday Book Number of December 16. The two departments of literature where new books are most numerous and most widely sold, fiction and religion, are also reserved for other issues.

Belles-Lettres

The young publishing season may still hold in store for us pleasant surprises, the unexpected lighting of new lamps for our feet; it certainly has already given us, in the field of *belles-lettres*, an important addition to our small but distinguished company of books of criticism that count and will endure in Mr. W. C. Brownell's companion volume to his "Victorian Prose Masters," which he calls *American Prose Masters*.¹ Apart from the distinction of a style that ever rises to the level of its subject, a style that is a model and a delight of clarity, suppleness and obedience to every nuance of opinion, these six essays have the saving sense—saving, be it hoped, for many ponderous critics—of humor. Mr. Brownell does not take our literary achievements too seriously because they are ours; he knows too well their relative importance and significance in the larger world of letters; and, speaking

with authority, he speaks fearlessly, occasionally with most considerate amusement. His wine needs no bush, wherefore briefness will suffice. This book contains the essay on Hawthorne that caused so many storms in as many teapots, with serious results to their fragile sides. Serious yet beneficial, for, after the storm had subsided, it was found that their capacity had been wondrously increased without cracking.

The *Essays on Literature*,² by the late Master of Balliol, Dr. Edward Caird, are concerned exclusively with the content of the work of the masters he discusses, and only with its form *passim* in the case of Wordsworth. The chief merit of these studies of "Dante in His Relation to the Theology and Ethics of the Middle Ages," "Goethe and Philosophy," "The Genius of Carlyle," "Rousseau" and "Wordsworth," lies in their sanity, their fundamental simplicity, their firm tracing of the large connecting outlines from landmark to landmark, to the exclusion of ingenious hairsplitting and subjective interpretation. So much has been read into Dante, so much has been read out of him (and this holds true of Goethe as well), that this guide, so sure of his footing, knowing so well the itinerary he has mapped out, in which no point of real importance appears to be overlooked, is refreshingly welcome. Thru "Inferno," "Purgatorio" and "Paradiso" he takes us, cutting away the underbrush of comment that obscures and confuses, never allowing it to obtrude itself; and for Goethe it suffices for him to point to Spinoza, the poet's lifelong companion rather than his teacher, and to the gradually weakening influences of Hellenism. As for Carlyle, Dr. Caird was of those whose youth was passed under his influence. Another generation has since grown up that, knowing, heeds him not, but mostly ignores him altogether. An essay on "The Problem of Philosophy at the Present Time" is included in the book, which will well repay its readers.

² *Essays on Literature*. By Edward Caird. Macmillan Co. 8vo. \$1.75.

Shakespeare study, which settled down confidently after the discussion of the significance of the Sonnets, started some ten years ago by Mr. Sidney Lee, as to a subject thoroughly mastered in its details, with little expectation of new discoveries or radical new viewpoints, will find something to occupy itself with in Mr. Frank Harris's *The Man Shakespeare and His Tragic Life Story*,³ a book praised by its publishers in a quotation from some critic (name not given), which places it above Carlyle's "Cromwell" and Renan's "Life of Jesus," and by the side of Boswell's "Johnson." Let us take this statement *cum grano salis* for the moment, and content ourselves with saying that Mr. Harris has written a remarkable book, ingeniously conceived, and based on a comprehensive knowledge of the bard's works. He finds Shakespeare's autobiography in them, "from green youth, with hardly any knowledge of life and art, and then in his eventful maturity, with growing experience and new powers; and at length in his decline, with weakened grasp and fading colors. This tragedy of tragedies can be followed, experience by experience, from Stratford to London and its thirty years of passionate living, and then from London to village Stratford again, and the external shrouding silence." The theory is an ingenious one, and it is worked out with admirable resourcefulness, Jonson, Goethe and Coleridge being the only masters to whom the author says he has not turned in vain for light, tho even here often on the *lucus a non lucendo* principle. The book deserves far more leisurely consideration than can be given to it here at this moment. One thing is sure, it will interest lovers and students of Shakespeare, and prove of benefit to them, whatever the conclusion to which it may lead them.

"A comprehensive study of the origin, motives, ideals and psychological importance of this interesting branch of literature" is how Anna Robeson Burr describes her work on *The Autobiography: A Critical and Comparative Study*.⁴ The

book is all that, in a scholarly, suggestive, well-documented fashion, but it is something else as well, a capital companion for many a long, quiet winter evening. The student may go to it with serious purpose, and derive great profit; he may go to it for relaxation, and find it; and the general reader, that mysterious multiple person of whom we all are part at one time or another, will revel in it, for here is the material of many lives and many minds and many deeds brought into relation or juxtaposition, analyzed and interpreted, together with the manners and morals and points of view of many ages and nationalities. No less than 260 autobiographers have contributed the marrow of their writings to the making of this book—Cæsar, Boswell and Rousseau, Cellini and Alfieri, St. Simon, Balzac, Bassompierre, Darwin and Huxley, De Blowitz and Blavatsky—giving infinite variety to the treatment of the subject. It may be added, in conclusion, for the benefit of literary workers, that this is one of those books that no working library should be without, an aid where the card index of the general library generally fails one.

There be brief histories of German literature, many in English. To their number is now added still another one, which is a model of comprehensiveness for its size. Gotthold Klee's "Grundzuege der deutschen Literaturgeschichte" reached its eleventh edition early this year: Mr. George Madison Priest has translated, and in certain parts adapted it, under the title of *A Brief History of German Literature*.⁵ The book will serve excellently for class work in colleges, but will prove handy to keep around elsewhere, because its wealth of concise information is made readily accessible by a good index.

To the useful Reader's Library has been added *The Great English Essayists*,⁶ with an introduction by the editors, William J. and Coningsby W. Dawson, which is chiefly historical. The selections are grouped under the headings of classic essays, letter, short story, biographical and critical essays, the famil-

iar essay, and "impassioned prose." There is an index.

One wonders if there can be any sound reason for an English translation of M. Edmond Lepelletier's "Paul Verlaine," since the admirers of the French poet here and in England—the only ones

has been published in admirable form under the title of *Paul Verlaine: His Life, His Work*.² The work we know, its mystic exaltation and its grossness, its beauty of workmanship, and the best of it we retain as part of the treasure of French minor poetry. As for the life,

A PRESENTATION AT COURT
From Huxley's "Seven English Cities" (Hesperus)

to whom the work can be of interest—must needs be familiar with the tongue in which this defense and tribute was originally written. However, Mr. E. M. Lang has made the translation, which

it is sordid and pitiable, and it lacks the picturesqueness of Villon's, who was a criminal, which Verlaine was not. M.

PAUL VERLAINE: HIS LIFE, HIS WORK. BY Edmond Lepelletier. Translated by E. M. Lang. Illustrated. Duffield & Co. 8vo. \$3.50.

Lepelletier clears his memory of many slanders, not a few of them originating in the poet's own unbalanced impulse to pose as a master of vice, to accuse himself of imaginary transgressions, and philosophize on others still darker, but the rehabilitation is qualified by many admissions. Verlaine can only be referred to some successor of Lombroso; his was a psychopathic case, whose major symptom was a total lack of will power. And thus we take leave of our gifted, bad, sad, mad brother, thanking M. Lepelletier for his generous, loyal work, which will achieve its aim because it will probably be accepted as the standard on its subject, and the translator for an able and literary achievement of a by no means easy task.

Biography and Memoirs

One department of literature—biography—continues to furnish from year to year, with almost unbroken regularity, at least one work far above the average, if not positively great. And yet, time was, but a little while ago, when this very field appeared nearest exhaustion. The past seemed to have been winnowed down to the last full ear, the reapers were treading on the heels of the sower, Time, waiting for corn still growing on its stalk to ripen for the sickle. But ever some biographer born and trained to perfection for his task finds a new subject, or new material for the rewriting of an old one better than it has yet been done, or the past gives up an autobiography of exceptional interest.

This is the case, this year, with *The Autobiography of Sir Henry Morton Stanley*,¹ edited by his wife. Only the first nine chapters of the book are Stanley's own work; the rest is woven by his widow from strands gathered from his unpublished writings, journals and notebooks. Added to all this is the text of a number of his lectures, and a selection from his letters to his wife. It is not what Stanley achieved, but what he was, that makes this the important work it is. This autobiography is a self-revelation of gripping interest, a poignant lifting of the veil from the suffering of a

neglected childhood, from the wounds inflicted by an unheeding world on one of its disinherited, whose sufferings went to the making of its conqueror, which he became. In this regard the book is also a social document whose lesson is tellingly brought home to us, the lesson of personal responsibility for the faults and cruelties of a civilization toward its submerged; and as one reads on, he reaches the conclusion that the man was greater than the explorer. The autobiography proper covers the period from Stanley's earliest reminiscences of his childhood, leading to the St. Asaph Union Workhouse, to his capture at the battle of Shiloh, and his release from the Federal prison, Camp Douglas, near Chicago. Thereafter the hand best fitted to continue the story takes it up. If not "great," this autobiography is certainly a powerful human document. The publishers have done their worthiest and best in the matter of paper, type, page, illustrations and binding.

A retired British diplomatist, Sir Horace Rumbold, Bart., who some years ago published his reminiscences of a long career, has found further occupation for his leisure in writing *Francis Joseph and His Times*,² a book that devotes nearly a third of its pages to the history of the Austrian monarchy and its rulers since the beginning of the eighteenth century, and deals with the personality of its subject and the times of which it has proved to be so important a factor in a sufficiently informing way to be of good service to the layman in search of a serviceable general working knowledge. The author can only deal in outline with the complicated history of the empire under the rule that is now drawing to its inevitable close, but he fails to create a clear impression of the consummate statesmanship that made Francis Joseph so strong in adversity, and enabled him to master situations that would have mastered a less able man. One suspects, here and there, that the reticence which is binding upon a diplomatist as much after his retirement as during his active service never was far from the author's mind during the writing of these readable pages.

One welcomes with enthusiasm so de-

lightful, graphic and interesting a record of days that are past, and whose memory is well worth preserving, as Mrs. Roger A. Pryor's *My Day: Reminiscences of a Long Life*⁵ proves to be. The book has the literary merit of being written with a genuine simplicity that adapts itself invariably to the subject it is dealing with, whether it be the happy Southern life of the forties and fifties of the last century, the growing cloud of the gathering storm that cast its shadow before it, or the great catastrophe itself. The little Southerner was taken on a trip North, to New York and Niagara Falls, and the pages devoted to that experience, like all this early portion of the chronicle, already have the quaint, old-fashioned, attractive quality of times and customs and ways of traveling long gone, which will grow stronger and more alluring as they recede farther into the past. American civilization has drawn away from them during the last sixty years with bewildering and, after reading this book, one is tempted to say, with regrettable celerity. The record is carried down to our own day; the personal anecdotes cover a wide field, from Sheridan to Modjeska, from G. P. R. James to Mrs. Botta.

Count Lützow, who stands alone as the representative of Bohemia in international letters, has added to the list of his works in English *The Life and Times of Master John Hus*,⁴ a work whose importance demands review at greater length in these pages at an early day. To us, at a distance, Huss is the forerunner of the German Reformation, and nothing else. Count Lützow, who frankly confesses an ardent admiration for him, would make us know him also as a great patriot, the preserver, with Ziska, of his country's nationality, autonomy and language. Hence the "Life and Times," social, political and religious, of the title.

There is a striking appropriateness in the selection of Prof. W. E. Burghardt DuBois as the writer of the volume on *John Brown*,⁶ in the series of American

Crisis Biographies. The most impassioned of the champions of his race seizes the opportunity to speak again at length, and from his own individual point of view, which is decidedly not Booker Washington's, on the problem that the blood of Ossawatimie Brown failed to solve. We shall return to this book at an early date, as also to the second new volume of the series, *Stonewall Jackson*,⁶ by Mr. Henry Alexander White, Ph. D. Of the series as a whole (it now contains twenty-four volumes) it may be said that, in an age of many "series," it fills its place well and to good purpose.

The *Memoir of the Right Hon. William Edward Hartpole Lecky*,⁷ by his wife, is a chronicle of his outer life, of his activities and widespread intellectual interests and achievements, historical, philosophical, political, with never a glimpse of the man himself. This is a memoir of a wondrous brain, and to some extent of a character, so far as it exprest itself in thought and work, but of our human brother there is not a glimpse. This reticence is undoubtedly deliberate; it may be added that, within the lines thus laid down, the book is packed with diversified interest for the student of our own times.

More of the man is revealed in Mr. Patrick Carnegie Simpson's *Life of Principal Rainy*,⁸ but here, too, the chief interest is historical, not biographical in the closer personal sense—historical and sometimes almost controversial. This was unavoidable, for, as his biographer says, Rainy's "ambition was to study and teach or write Church history; his task, to make it." Rainy's close connection with the history of the Scotch Church during the last half century—its "apologia" Mr. Simpson calls him—has given the book its color and direction.

A well-written, concise *Story of John Frederic Oberlin*,⁹ by Augustus Field Beard, is most appropriately introduced by the President of Oberlin College.

⁵ *My Day: Reminiscences of a Long Life*. By Mrs. Roger A. Pryor. Illustrated. Macmillan Co. New York. \$2.00.

⁶ *A Memoir of W. E. B. DuBois*. By the Hon. W. E. B. DuBois. New York. \$1.00.

⁷ *The Life of William Lecky*. By Patrick Carnegie Simpson. Philadelphia. \$1.00.

⁸ *The Story of John Frederic Oberlin*. By Augustus Field Beard. Boston. Pilgrim Press. 12mo. \$0.75.

⁴ *My Day: Reminiscences of a Long Life*. By Mrs. Roger A. Pryor. Illustrated. Macmillan Co. New York. \$2.00.

⁵ *Count Lützow's Story of Master John Hus*. By Count Lützow. Translated by C. P. DuBois. New York. \$1.00.

⁶ *John Brown*. By W. E. Burghardt DuBois. Philadelphia. \$1.00.

Oberlin's was the true missionary spirit. What he began by example and wise guidance among the ignorant peasants of an eighteenth century Germany rural district was carried on after his death by the impetus of the spirit he had awakened, and still survives. The book is a welcome memoir of an all but forgotten personality.

Music and Art

Sir Hubert Parry's long-expected *Life of Johann Sebastian Bach*,¹ whose publication was deferred last year, has at last made its appearance, and proves to be

sight of proportions. A life of Bach must unavoidably always be mostly the story of his work, since that was his life with a rare perfection; therefore Sir Hubert's biography is first of all, and most of the time, a book for musicians, to be recommended to scholarly conductors, who will find in it a rich fund of helpful suggestion. Bach's temperament and character, his deep religious feeling, all his impulses and energies, went to the creation of music, the development of its powers of expression, the discovery of its possibilities, so far as they could be realized in his day, and in all this Sir Hubert is his biographer, indeed. Thus does he lead us to see the man as well as the musician, and his analysis of the period that prepared his coming, that called for it, is a model of exposition. The book has also the distinction of its author's wider culture, his wider outlook on the life of art, which stars his pages here and there with such observations as that "the only torsos which can be completed are those which are not worth completing."

The death of Edvard Grieg, in September, 1907, necessitated the removal from the series of studies of "Living Masters of Music" of Mr. Henry T. Finck's enthusiastic volume on Grieg, which is now issued as a separate work, in a revised and so greatly enlarged a form as to be practically a new book. In an introduction, Mr. Finck gives the letters he received from the composer in the course of their correspondence, preparatory to and in connection with the preparation of the original volume, letters that reveal the kindly, modest man behind the musician, and from one of which one cannot help quoting what Mr. Finck so frankly prints:

"I confess that your judgment of Brahms was a great disappointment to me. That you, with your great, wide hearing, have failed to discover the real Brahms is really quite an extraordinary, and shows how the most many-sided men have their limitations. For me there is no doubt concerning Brahms. A landscape, torn by mists and clouds, in which I can see ruins of old churches, as well as of Greek temples—that's Brahms. The necessity of placing him by the side of Bach and Beethoven is as incomprehensible to me as the attempt to reduce him *ad absurdum*. The great must be great, and a comparison with other great ones must always be unsatisfactory."

In this introduction Mr. Finck makes

HENRY M. STANLEY, 1885.

From the Stanley Autobiography. (Houghton Mifflin)

all that has been expected of it, worthy of both the Master who is its subject and the authority who is its writer. It co-ordinates and focuses the results of three-quarters of a century of study and research by many enthusiasts, chief among them, of course, the indefatigable Spitta, who, in his avidity for endless details, for trifles even, ended in losing

¹JOHANN SEBASTIAN BACH. By Sir Hubert Parry. M. A., Mus. Doc., D. C. L. With Portrait. G. P. Putnam's Sons. 8vo \$3.50 net

his confession of artistic faith: "If I am to be called uncritical because of my abounding enthusiasm for the best products of Grieg's genius, uncritical let me be called. The older I get, the more I become convinced that the alleged 'critical' faculty of our times is a mental disease, a species of phylloxera threatening the best works of genius. Let us enjoy the fresh grapes from which the harmless wine of musical intoxication is made, leaving the raisins to the analysis.

The enthusiasms of the music editor of the *Evening Post* are as abounding and vigorous where he disapproves as where he admires. The enthusiasm of *Grieg and His Music* is contagious.

world's great singers, pianists, violinists and teachers tell the secrets of their success. A mere mention must suffice here of this volume, which has not yet come to hand.

Mr. Birge Harrison has collected in a volume on *Landscape Painting* a number of his impromptu talks on the art, given before the Art Students' League of New York at its summer school in Woodstock, an American Barbizon in the making, let us hope, which may some day return to us as masters the students who go to it. There are twenty-one of these talks, practical, helpful and enthusiastic; a little positive, here and there, in their expression of opinions. Mr.

SAMBURU WARRIORS

³*Success in Music and How It Is Won*. By Henry T. Finck. Charles Scribner's Sons. 8vo. \$2.00 net.

⁴*Landscape Painting*. By Birge Harrison. Illustrated. Charles Scribner's Sons. 12mo. \$1.50 net.

Cary's *Artists Past and Present*.^o Rembrandt, Jan Steen, Carlo Crivelli, Callot, Fantin-Latour and Louis Barye represent the past; Mary Cassatt, Max Klinger, Alfred Stevens, Carl Larsson and the recent exhibitions in New York of modern German paintings, and of Zuloaga and Sorolla, the present. The note is mostly that of the fugitive magazine article, which is often of considerable immediate helpfulness in giving first aid to the benighted, but generally of little permanent significance. Miss Cary's "unerring common sense in full control of her critical function" will undoubtedly lead her to attempt to induce her publishers to tone down the gorgeous "blurb" on the slip-cover of her book.

Travel and Exploration

Mr. William Edgar Geil's *The Great Wall of China*¹ reveals to us an author entirely under the influence of his subject; an author, also, who loves violent contrasts and who writes in a vivid manner that has the picturesqueness of the best of newspaper correspondence. What are the Seven Wonders of the Western World, the roads of the Romans, compared with this Chinese wall? he asks—these Chinese walls, to be correct, for he informs us that not one, but a dozen, have been erected. To most of us this ancient fortification, stretching 1,700 miles from the Yellow Sea to Tibet, is but a Chinese curiosity, spoken of in our school geographies; Mr. Geil shows it to us as a boundary between two civilizations, that of the nomad and the herder, and of the agriculturist; as the dividing line in China between the age of fable and that of history, for the great Chinese ruler who built it, and who is the hero of this work, the Emperor Chin, destroyed the old books of his people, and forced them to write a new literature in characters that should bring it within the reach of all. But side by side with this antiquarian and historic interest, these pages hold a contemporary, living one, for the author has the knack

of giving life in a few phrases to the natives he met and interviewed. A book of exploration, telling of strange things unknown, it is also an altogether delightful book of travel.

A pioneer for the prospective Italian tourist to follow is Miss Anne MacDonell, in her *In the Abruzzi: The Country and the People*.² She, too, is an enthusiast about a region of the classic ground in which there is no art herded in galleries and carefully ticketed for the convenience of the tripper with a catalog, whose people are as yet untouched by the leveling international civilization, whose country is beautiful beyond compare—a *terra incognita* at the gates of hackneyed Rome. She discourses of past and present, of brigands and the simple, unquestioning faith of the mountaineers, of their singers and improvisatori, their folk-lore, repeating several legends well worth adding, on account of their charming *naïveté* clothing simple wisdom, to the international store of a science in which we have lost most of our interest—as a science. The fable with a moral, the legend conveying a truth of life, will never lose its charm for us. Then, having made us familiar with the people, the author describes her itinerary and what it led to in detail for the benefit of her successors.

The late Jeremiah Curtin's *A Journey in Southern Siberia*³ was undertaken some nine years ago, for the purpose of collecting the primitive folk-lore and myths of the Mongols as they have been handed down among the Buriats and still are told by them. The book is, therefore, only incidentally a narrative of travel, yet, with the more than Germanic thoroughness of its author, no incident of the trip is allowed to go unchronicled, no custom or trait of his hosts left unrecorded. As for the folk-lore that Mr. Curtin gathered, it cannot be said to be an important contribution to our store; these are mostly mere wonder-tales of giants and their deeds, without a perceptible *haec fabula docet*, and in themselves far less attractive than

the ones the West has of its own, or has made its own from other Eastern sources. One cannot conceive, for one thing, of their ever becoming part of the perennially fresh classics of juvenile literature. The book, which is introduced by Dr. Eliot, is, like Mr. Curtin's history of the Mongols, a storehouse of

the playful ease with which it can turn the least promising of material into something worth the doing, and so superlatively well worth the reading. Liverpool, Manchester, "smokiest Sheffield," who of the countless Americans that yearly visit England bethink them of including them in their itinerary? They

THE EMPEROR FRANCIS JOSEPH

information that makes rather hard reading.

Mr. Howells's *Seven English Cities*, slight in texture, is a pure delight, because it reveals so gracefully the beauty of the purely technical side of his talent,

need not hereafter, once they have read these charming brief papers, so full of their author's mellow humor, playing irresponsibly, yet always conscious of his serious viewpoint, with these wasted hours of a holiday tour. There is more in the book than this—a visit to Cambridge and to two Welsh watering places

—and a final series of "Glimpses of English Character"—glimpses, indeed, tentatively put down, yet leading far below the surface if one chooses to follow their suggestion, whose comparative view is always the American one.

The romance of Southern Europe—and of England—the American readily sees and appreciates; that of the bleak coast of Northern Germany, on the Baltic, appears, among artists, to appeal more potently to the painter than to the author. Mr. Robert Haven Schauffler has seen it and felt it in Danzig, and describes it well in the first chapter of his *Romantic Germany*,⁵ the artist helping the reader to visualize what he describes in excellent illustrations in colors and black and white. The romance of Berlin, if romance be the word to be applied to the youngest of the world's capitals, which is undoubtedly a very pleasant city to visit, preferred by many to Paris itself—the romance, or, better, the attraction of Berlin Mr. Schauffler feels but fails to convey, because it is hard to analyze and therefore to put down; but in his chapter on Munich he seizes the essential quality of the city, which is the temper of its people; and when he reaches Rothenburg he finds one of those abodes of old romance which the tide of travel ignores for years, suddenly to set toward them with an enthusiasm that may well make them self-conscious and weaken their charm, or even kill it. The other cities visited are Brunswick, Goslar, Hildesheim, Leipsic, Meissen, Dresden and Augsburg. The illustrations, by no less than six artists, are a notable feature of this book.

The territory covered by Mr. Edward J. House in *A Hunter's Camp Fires*⁶ makes it a book of travel as well as of sport. From New Brunswick and Greenland to East Africa, from Colorado to British Columbia, range the travels of this Nimrod in search of moose and walrus, giraffe, elephant and rhinoceros, zebra and oryx and gazelle, elk and antelope and caribou and grizzly, the interest of the narrative being often strangely at variance with the reader's expectation. One would expect a much more exciting

record of walrus than of moose hunting, for instance, but in Mr. House's book the reverse is the fact. A hunter first of all, he is also enough of a faunal naturalist to give a bit of information here and there. One feels thankful to him for refraining from proffering the now so customary excuses for delight and proficiency in one of the oldest of men's sports.

Dr. George Washburn's *Fifty Years in Constantinople*⁷ is chiefly a history of Robert College during the first forty years of its existence (1863-1903), but, in addition, exactly what its title implies, a record of much history in the making. Dr. Washburn's narrative presents a brief, concentrated view of Turkish rule and international intrigue and interference and their results since the Crimean War, when "England put her money on the wrong horse," in Lord Salisbury's cynical phrase; of the period of the ascendancy of French influence, the diplomatic struggle between Russia and England, the horrors of Bulgarian massacres and the war of 1876, with brief mention of Eugene Schuyler, but, *incredibile dictu*, never a word about MacGahan. Abdul Hamid, according to this lifelong observer, was the deceived tool of a camarilla, and the Young Turkey that rose to dethrone him in part the fruit of the reforms he had introduced. The future of the empire in Europe, he holds, is one of uncertainty, of dreams of union and centrifugal interests and aspirations.

In her comprehensive *Home Life in Turkey*,⁸ Lucy M. J. Garnett predicts the dignified and honorable withdrawal of the Osmanli Turks from Europe to Asia Minor, and the consolidation there of a great empire, stretching from the Caucasus to the Indian Ocean. Her closing chapter contains some suggestive references to the struggle, as old as history itself, between East and West in its latest phase, which stretches from Yokohama and Peking to the Pillars of Hercules. For the rest, her book draws a graphic picture of the true Turk at home, strongly tinged with the sincere friendship

which all come to cherish for him who learn to know him well.

North America is discovering the southern half of the continent with its customary thoroughness and celerity—in books, that is, for in commerce and industry and finance it continues to leave the field almost undisputed to English and German and French, to whom, of late, the Italian must be added. So here is another book on our nearest neighbor, *Mexico, the Wonderland of the South.* Its author, Mr. W. E. Carson, sketches

Mr. Homer Davenport's *My Quest of the Arabian Horse*¹⁰ has the double merit of being a capital, cheerful, observant and graphic narrative of travel in Turkey and Arabia, spiced with humor, and a tribute to the noble beast he went to seek whose eloquence will appeal to every lover of horses. There are photographs here of some of the best of them, and numerous drawings by the artist-author, among them a portrait of Abdul-Hamid, the first ever made, which was smuggled out of the Sultan's dominions

Spain,¹¹ the account of his trip from Gibraltar north across the peninsula retaining all the freshness of impression and observation that the trip itself had for him. As he observes, even the beaten paths of the tourist in Spain, if there be any, still retain their novelty. No attempt is made to discuss Spanish character or customs or modes of life from the necessarily superficial and hasty points of view of a first visit, but art and history and legend, city and country are described in a manner that will make the book of value to whoever follows its author's itinerary, the more so as he adds a chapter of very sensible hints on travel in Spain.

Books on Various Topics

Whatever theorists may say, quantity, not quality, is the basis of our industrial, as it is of our political, system: the heaviest battalions numerically, whether on the battlefield or in the factory, quantity so great and of so cheap a grade that the masters—the "quality" which itself needs much improvement—can afford to waste it without stint or thought of the morrow: witness the deterioration of our immigration as the organization of our industries has progressed. They demand now, not brains, but the cheapest brawn. The problem is so vast, however, and so important that much remains still to be done before a wisely organized propaganda of eugenics can be started. The first popular discussion of the whole subject, in its large outlines, is a hopeful sign of the times, therefore. Dr. Caleb Saleeby, already well known as a popularizer of science, perhaps inclined to be a little too hasty in his enthusiasm to be of service, has undertaken the task in *Parenthood and Race Culture: An Outline of Eugenics*,¹² which may be well recommended to those interested in a vital subject, as all of us should be. After reading the book, one glances backward to the bigoted prejudices, the hostility and persecution of thirty years ago, and realizes gladly that the world do move.

The conclusions drawn by Miss Helen

L. Sumner, Ph. D., from a protracted study of the working of equal suffrage in Colorado, and of its influence upon political and social life, are presented by her in *Equal Suffrage*,¹³ a well documented piece of work, whose weight should lie potently in the scale in favor of the movement. Dr. Sumner undertook this study in a strictly impartial and scientific manner, dividing her report into two sections, one concerned with public opinion in Colorado, the other with actual political and social facts. It is impossible to summarize briefly the contents of this conscientious, competent book, whose reading should be encouraging to champions of the cause and its followers, and give food for serious and unsettling thought to its opponents.

Miss Jane Addams's *The Spirit of Youth and the City Streets*¹⁴ is a serious indictment, indeed, of conditions that we allow to go on without concerted action, tho knowing so well to what they lead. Out of the fullness of her experience Miss Addams speaks to the point, asking for the remedies or, rather, the prevention she indicates. "The classic city," she says, "promoted play with careful solicitude; only in the modern city have men concluded that it is no longer necessary for the municipality to provide for the insatiable desire for play." And again: "Industrialism has gathered together multitudes of eager young creatures from all quarters of the earth as a labor supply for the countless factories and workshops. This stupid experiment of organizing work and failing to organize play has, of course, brought about a fine revenge." These chapters are not merely a socio-economic argument: they sound the note of direct human interest.

A concise, clear exposition of the scientific data of *The Conquest of the Air*¹⁵ will be found in a little book of that title by Prof. A. L. Ketch, of Harvard, director of the Blue Hill Meteorological Observatory. The author begins with a welcome description of what he felicitously calls the "new ocean" overhead, at

whose bottom we live, and of its physical conditions, familiarity with which will be the basis of future examinations for a master navigator's license of the air. Then follows a history of aerostation, the progress to aeronautics—the dirigible balloon, and finally the flying machine, with ample explanation of the differences between mono and bi, tri and multi planes. There is a final chapter on the future of aerial navigation. The little book is a model of the popular treatment of a scientific subject; the illustrations are truly helpful.

Another contribution to popular science of interest and value is Prof. Garrett P. Serviss's *Curiosities of the Sky*,⁵ a presentation, in untechnical language, and in an orderly, progressive, co-ordinated manner, of those problems—or mysteries—of the heavens which science has not been able to penetrate, if it can ever solve them, phenomena strange, marvelous and obscure, and of portentous magnitude. Star clouds, clusters and streams, conflagrations in the heavens, explosive and whirling nebulae, the mystery of the zodiacal light, the riddle of the asteroids are a few of the curiosities considered, nor is the great problem of Mars forgotten.

In connection with Professor Serviss's book may be mentioned here a welcome translation, by Dr. H. Borns, of London, of *The Life of the Universe*⁶ of Mr. Svante Arrhenius, director of the Physio-Chemical Nobel Institute at Stockholm, and author of the well-known "Worlds in the Making." The work is a historical study of the birth and growth of man's theories and knowledge of the origin of the world and the universe, from the earliest cosmogonies handed down to us in myths and legends, thru antiquity, the Middle Ages and the modern era to our own day. The book makes one realize more than ever before how much has been done in the last hundred years, whose results far outweigh all that was achieved in the nine hundred years preceding them, even tho the author warns us that "we cannot anticipate

the judgment which the future may pass on the real achievements of the present age." This series deserves attention, because it carries out in an admirable manner the sensible idea of putting works that are worth while into a compact format. Other books already published are Swinburne's "Three Plays of Shakespeare," Petrie's "Religion in Egypt," Tolstoi's "Teachings of Jesus" and Lodge's "The Ether of Space."

The well-written little series of booklets on "Philosophies Ancient and Modern" is carried on with *Plato*, by Prof. A. E. Taylor, of St. Andrews University, a personal impression of the philosopher's thought, avoiding controversy and maintaining as far as possible an independent attitude toward traditional interpretations, and *Scholasticism*, by Father Rickaby, S. J., whose little work is most timely in this hour of our awakening to the services of the scholastics to philosophy, long derided and denied.

American Foreign Policy,⁷ by "A Diplomatist," covers the whole field of our international relations within a little space. This evidently well-informed and experienced observer points out that, whereas the vast extension within recent years of our international influence has attracted much attention abroad, and bred not a little suspicion and resentment, it has come into existence almost unperceived by the American citizen at home, because as yet he gives to questions of international policy no serious consideration or consecutive thought. He still believes his country fortunately secure from international complications, whereas Europe and the Far East (and our statesmen) are fully aware of its potential importance in the balancing of power in world policies. The author takes up Europe, the Far and the Near East, the Latin-American republics, and the self-governing British colonies, only to find that always and everywhere our diplomatic service is insufficient, behind the times and their possibilities, individual ability of its individual members to the contrary notwithstanding. The meas-

ures he advocates so ably are all in the right direction; it is one of the aims of his book to bring them to the attention of the people with whom the ultimate power lies to bring about their execution. It may be added, in conclusion, that this diplomatist preaches an understanding with England far more close than the *entente amicale* of diplomacy, something toward which our people and press appear to be more than passively opposed.

Mr. Homer Lea's *The Valor of Ignorance*⁹, intended as a, we believe, uncalled for warning to us of the reality of the danger of a Japanese conquest of the Pacific States, is written in an amazingly highfalutin' style, bristling with historical generalizations and such satisfying mouthfuls as "commercialism is only a protoplasmic gormandization and retching that vanishes utterly when the element that sustains it is no more." Of Mr. Lea's seriousness of purpose there can be no doubt, nor can there be a doubt of our unpreparedness for defensive or offensive warfare on land, and none will deny what he says of the measure of utility of our militia in these days of scientific campaigning. He has the support of Lieut.-Gen. Adna R. Chaffee, who has written an introduction to his book, and of Major-Gen. J. P. Story,

who supplies a secondary introductory recommendation, remarkable for its vigorous expression of his belief in the Yellow Peril.

Both these eminent authorities bear witness to the soundness and comprehensiveness of Mr. Lea's military knowledge as applied to the problem of defending the Pacific Coast. *Decisive Battles of America*¹⁰, by different writers, and edited by Ripley Hitchcock, is avowedly a companion volume to Creasy's well-known book. The editor has wisely, and in accordance with modern historical methods, seen to it that a connecting narrative links the battles together, so that they are not presented as isolated facts, but as results from preceding events, and, in their turn, causes of or, at links, with later events. "The older writers of history," he says, "were fond of dwelling upon the pomp and circumstance and all the dramatic accompaniments of battle. Modern history is written so differently that we are apt to find battles summarized in paragraphs. Thus the pendulum has swung from one extreme to another, until it has become a difficult matter to find in the newest short histories accounts of significant military events which approach completeness."

The Year's Curriculum in Fiction

BY MRS. L. H. HARRIS

WE are still in school, all of us, whether we like it or not. The only graduating certificate we shall ever have showing that we have finished will be a burial certificate. Meanwhile we are having the usual troubles of students with the course. The texts we have are too difficult, so different from those we had last year. Or, they do not agree with the little "original work" we are doing ourselves in experimental living, like loving and marrying and working and winning and losing. When a man is fifty and has loved according to the feeling set forth in Keats's "St. Agnes Eve," married according to sentiments

in the romances published in *The Southern Literary Messenger*, and begotten his children according to some of the best Old Testament scriptures about replenishing the earth, it outrages him to be obliged to learn from some whippersnapper novelist that love is a procreating instinct surnamed by Darwin, that marriage is a connection which is changing and that children are merely anthropological results. He feels as if he had been turned back in his class, that he has lost the concealing decency of rhetoric and that it is scandalous to try for an A. B. degree in this new-fangled course. He becomes one of the ten thousand

⁹THE VALOR OF IGNORANCE. By Homer Lea. With Maps. Harper & Bros. 8vo. \$1.80 net.

¹⁰DECISIVE BATTLES OF AMERICA. Edited by Ripley Hitchcock. Illustrated. Harper & Bros. 12mo. \$2.50.

dunces of his times and goes down to his dust tagged one of those with "arrested development." Some of the best men and women among us get this kind of epitaph for their highly moral pains, and for all we know they are "kept in after school" to learn slighted lessons.

This depends, of course, upon whether they were right or the authors were right who prepared the texts they rejected, and that brings us to the subject of this article, the curriculum we have had this year in fiction. For while the historians may be compiling the higher mathematics of the race in the past and the economists may be jumbling at the formula of human fate in the future, it is the novelists who write the text-books of current life. And we find fault with them, as we do with grammars of the language. They do not agree on construction, nor on the relations of the female participle to the bass bassoon masculine gerundial. They garble their human parsing, their transitive and intransitive facts to fit the climax of the story rather than to fit the facts. But there can be no doubt of one thing—they do get the facts still warm with the blood beat of life before any other class of writers do. If you want to know what will be one of the paragraphs in history ten years from now, note the dominant feature that is being dramatized in today's fiction. If you want to know what the *World's Almanac* and the economists will be tabulating into figures and fears next year, read this season's fiction. Last year, for instance, THE INDEPENDENT published editorially the prophecy that this year would witness the return of the ghost, not merely to novels, but to the imagination and superstitions of men and women. That was because last year the ghost appeared so often in novels. This prophecy has been verified by the widespread interest manifest in psychic phenomena. We have got a sort of universal séance going on, the purpose of which is to materialize apparitions whether they are material or not. We call it "Psychic Research" and one thing and another, but really it is the homesickness of the human who has been bereaved of his superstitions by accurate sciences for his old family pitty-pat ghost. You can get rid of faith and religion if you take a sufficiently stringent

course in theology, you may escape from your dearest beliefs in luck and ill-luck, but there is just one thing none of our institutions of higher learning can do—rid the unteachable human heart of its everlasting desire for the supernatural. The novelists caught the cue, felt the cool breath of it coming last year, a momentary revulsion in this particular to the primitive. And everybody from DeMorgan to Hamlin Garland sent out announcements of the return of the supernatural interest in the form of ghosts or medium hysterics. The economists will worry with them next year as a bad phase of the social consciousness, and then again they will be "laid" for a time, only to bob up again, never really as ghosts, but as reversions to the type of prehistoric faith in man before he could think God. Just watch the novelists and you can tell months beforehand when he will appear at midnight on your staircase or in the family burial ground.

The experienced reviewer is so familiar with the prophetic quality even in the poorest class of fiction that he easily distinguishes between a novel that was written two years ago even if it appears now for the first time with the new-born books. Take "The Southerner," for example. The author has attempted a dramatization of the leading problems in Southern life, political, industrial and educational. But since he conceived and wrote his story these problems have been complicated by the introduction of new and strange difficulties so obvious that no representation of them would be adequate that did not take in the ecclesiastic complications in education, the disclosures of degrading commercialism in politics, and the assaults of ill-health among the working class, peculiar diseases that belong to the situation. Besides, the book would probably be behind the times even if it had been written at the last moment, for the author is evidently a sort of "denatured" Southerner. And the dramatic instinct of any kind of Southerner never reached to the twelve o'clock hour of the present day. Something in his power to imagine remains antiquated, narrow, thin, inadequate to the last. It is the land of pastorals, not epics. It has too much memory, too little imagination. In courage and moral-

ity the Southerner is far and away the greatest common man this country has produced, but he has got a couple of tight ribs somewhere in his intelligence that never give way or expand. And when he writes they show, especially when he attempts to grasp a big situation in a broad-minded way as does the author of "The Southerner."

He is not a vice writer. He is too much inclined to let his imagination run naked in the sun, but he can take one look at his Nubian hills and come nearer telling a certain truth that will still be the truth when the Nubian hills have crumbled into sand than David Graham Phillips could if he strained at it thru all eternity. Mr. Phillips has a short-sighted,

ILLUSTRATION FROM "MARGARET'S SOUL"
(Lane.)

In speaking of the year's curriculum in fiction I have reference, of course, to the tendency novels, those that follow the annual currents and mark the year's high tide in the sea of life. There are other, and usually better, books which belong to the middle flood, to the deeper element, the rise and fall of which do not change from century to century and never will change. Mr. Hichens's story of "Bella Donna" belongs to this class.

strictly modern intelligence. We who have observed his career as a novelist have observed him swing like a big swimmer out of one phase current into another every time the tide changed. He has been nearly everything as a writer of fiction that the moment's fashion in thinking dictated. And he has a sort of financial agility for changing the theme of his stories to make his insult to life suit the present hour. This is why his books

sell so well. He follows his market with the right stuff. What was his truth year before last will in all probability be the fallacy against which he rallies his powers year after next. Now Hichens is called the novelist of the desert. He is supposed to know it and translate it as Phillpotts does his Dartmoor, or Norman Duncan does his Labrador coast. But really he is the one gospel writer we have of those arid places in the heart of man where the sphinx and the pyramids stand, mysterious, mute, but suggestive of sinister meanings, of terrible secrets. His last novel is a presentation of the desert tract in a bad woman, the place where no virtue grows or can grow. There are bad women who are not really bad, but they have been damaged or damned by forces outside of themselves. But Bella Donna is the other kind, who is evil because she is the desert. The place of love and life and fidelity and tenderness in her is merely the hot sands over which men travel till they die of hunger and thirst. And it is just as well to have her portrait now when the demi-monde is figuring so conspicuously as the saint in the fiction text-books. The author, who holds his hand concealingly before his face with the pen name "Ingraham Lovell," has given us a view of the other thing in the eternally good woman with his story of "Margarita's Soul." It is a flowering epic of the fertile meadow land of her heart, the quality of loving and giving that is imperative in her over the accident of her genius, and which yields her gift as a singer in the same spirit that any other worshiper offers her doves upon the altar of sacrifice. These features of good and evil are elemental in the character of women that do not change with the changing fashions in ethics. They last like the desert, and like corn-filled valleys. If you do not wish to be stirred and distressed year after year by changing your course of study in romantic diagrams of love and so forth, it is best to stick to them and the Old Testament.

But I come back to the curriculum of the fugitive phases of our living in fiction and that brings me to the largest group of novels of the year. And by far the largest subdivision of these are those that deal with marriage as if it were an

evil which cries aloud for a remedy. You may take your choice of a text here, a very wide choice, but bear in mind that they do not agree in their expositions, except that marriage is a fascinating form of bondage sought again and again by the same class of men and women who are forever striving to get out of it. Mrs. Humphry Ward alone offers a contradiction in "Marriage à la Mode" to the record. She thinks that whatever may induce American women to contract marriage, they are not easily tempted to enter it again once they are divorced. She gives a curious explanation of this diffidence, and declares that it is due to the poverty of the love temperament in our women. They are not ardent. They marry for ambition or for money, or to keep from being old maids, but not for much love. However, Mrs. Ward's observations appear to be confined to the international marriages, which, of course, offer all the diplomatic dangers of foreign relations in addition to the regular marital troubles. To be more explicit than Mrs. Ward we know that it is best for a Caucasian not to marry outside of his own race, or even outside of his own country. An American girl is sure to find an obnoxious John Bull trait in an English husband even if she married for love and not a title. And an Englishman will discover certain heel tricks in an American wife that prevent his keeping his seat with sufficiently stolid dignity in the matrimonial saddle.

One other point of view is common to all the novelists who are worrying over married life in fiction, and that is that in most cases it should be disrupted. The interest of the story consists chiefly in the different reasons offered. Hamlin Garland makes the best man in his last story sanction the elopement of another man's wife with her lover because the latter is the father of her unborn child. There is a pretty state of affairs for you. An author who for years strode with an almost too emphatic masculine hue thru the sacred pages of *The Ladies' Home Journal*, teaching love to the innocent young girl readers with all the personal airs of a too popular bachelor music teacher gone astray in his love ethics apparently from studying the mating laws among the wild animals of the

Rocky Mountains, where the strongest male gets the female. Some intelligent person should take up the Moccasin Ranch story where he ends it with his blessing upon the absconding pair and tell what becomes of the maverick wife when her conscience awakens, her lover's passion dies and she faces what she is. The mountains remain, law remains, and the human heart, which is older than the mountains, remains, and the voice of Nature is not the voice of freedom, but it is the voice of law, law. The reason why a wildcat remains a wildcat is because it practices matrimony according to the suggestions of Mr. Garland. And the reason why the rest of us are not nearer the wildcat standard than we are is because our ancestors had a better notion of the laws which underlie the practical evolution of the species than a lot of the emancipated people who write about evolution and freedom of law and what not. Just persist in idealizing this sort of moral salivation and presently we shall see a reversion to the monkey form.

Misfortune has its peculiar fascination. "The Bride of the Mistletoe" is one of the books of the year that is mentioned in all the lists of the "best sellers," North, East, South and West. In it Mr. Allen shows how love dies in the husband and survives in the wife, after marriage. He has written of the tragedy in language so beautiful that every woman in the country is almost tearful over it. They do not care much for what he means, and they do not believe it at all, but they are plumb carried away with his sweet anthem style, which is funny when one considers how seriously the author meant them to take it. Women are so made that they could take real pleasure in reading their own epitaphs provided these were expressed in poetic language. And in the case of Mr. Allen's book this disposition is a blessing. His readers are largely women, and if they had believed as he believes about love, the story would have precipitated a sort of universal widowhood upon all married women. And this reminds me of the embarrassed silence of the men, who are supposed to compose the bulk of Mr. David Graham Phillips's readers, since the publication of "The Hungry Heart." He appears to have got them

somewhere on the hip, convicted them of a meanness and a degradation of which they never knew they were guilty until he pointed it out. As a matter of fact they were not guilty, altho the author has taken advantage of all the circumstantial evidence in married life to prove his case. Mr. Phillips means well, but he does not know how. He is too everlastingly set to get at the bottom of things. Now the bottom of a good many perfectly natural customs can be so exploited as to look ugly. There are dregs at the root of the rose, and curious bad-looking instincts in the lower depths of the best man living. It is not fair to show these up in the innocent affectionateness of a husband to his wife. And if we had to judge Mr. Phillips by his books we should be obliged to conclude that he did not know how to create a decent woman. His good women are self-deceived hypocrites and his bad ones are private saints with all the habits of oxydized lady demons. I do not name any names, but if some of our bachelor novelists who are bent upon the destruction of the practical basis of marriage could be put in a bag like objectionable human tomcats, a stone tied to it and the thing sunk into the nearest pond, society would be better off. They do not offer the right kind of text-books of life.

The hardest of all the curriculum, however, is H. G. Wells's story of "Ann Veronica," and we are not sufficiently advanced in the new logic of the freedom of women in this country to make it a popular story. It is passion reduced to a scientific formula, and the "rights" of women set down by a man who has studied the women's movement in England as a scientist would study a new kind of migratory bug. Ann Veronica runs off to the Alps with a jaded middle-aged married man for what they call a honeymoon. The book ends with a fine speech in the last chapter about the expected addition to their family. "I'm greedy, I'm greedy! I want children like the mountains and life like the sky! Oh; and love—love!" One might think she was expecting to become the mother of another Agamemnon, instead of an illegitimate biolug. It is pathetic that a little thing like a little half-tested knowledge of biology can turn the heads of so many intelligent men in a generation.

Of course we shall get over it. We shall come back to our knitting and the hardpan of old-fashioned righteousness, and understand that nobody has the right to commit adultery even if everything that Darwin said is true. Meanwhile there is one queer thing about marriage which all the novelists have missed in this year's curriculum. It is not an arbitrary, ethical relation that may be changed every time we change our religion or our ethics; it is a natural relation like that between mother and child. Sex has not as much to do with it as these anti-wedding novelists think. It is founded upon something that lasts longer than the sense of sex. We shall be better off when the novelists begin to get back to that. It will be a sign that morals are improving in spite of our green-headed way of taking a little new wisdom about the origin of man. It doesn't matter how he originated, he and she are both old enough now to behave better than they have in the married life depicted in this year's fiction.

But referring to the prophetic quality of novels reminds me to call attention to another evidence that the novelist knows what is in the public mind often some time before it becomes articulate anywhere else. He began years ago to idealize the bad woman, to show that Camille was a saint as well as a sinner, but he is beginning now beforehand to voice a well-defined revulsion against the so-called good woman. The reader will find an excellent example of this in the "Silver Horde." The author brings one all the way from Chicago to the Salmon River in Alaska in order to bring out a contrast between her and another woman who sowed her wild oats in the Klondike mining camps, to the disparagement of the nice lady. And, of course, we can give ourselves airs and call the author a bad man with a bad mind, but the fact is the so-called "good woman" has not made good in spite of her chastity and her church work and her religiousness. There is something ignoble in the advantage she takes of the situation. She is little and mean, and a gossip who says her prayers and takes away other people's good names. She does not show enough good stuff to

make a heroine in spite of her dinky little nicenesses. The fact is good women have got to measure up to a better standard or we shall have more trouble than ever with the marriage evil in fiction. It is nearly always some noble bad woman that makes the trouble and chiefly because the wife is too thin and aemic morally to hold her own in spite of her little casket of virtues.

One other class of novels deserves notice. These are the Messianic stories. To say nothing of the play, "The Servant in the House," in which we get the socialist's interpretation of the God man, we have at least four other apocryphal Christs in the year's fiction. They are the result in part of the audacity of the modern imagination, and chiefly out of the spirit of our times to test the practicality of Christianity literally. And if these books do not accomplish anything else they demonstrate by contrast the surpassing dignity of the real Scriptures and the real Jesus of Nazareth. The stories are curious parodies in some instances; in others, like "Melchisedec," by Ramsey Benson, there is a real contribution to show an instance of sporadic divinity and how the awakening to the word came. In no case is the scene ever laid in the South. The South is no place for reformers. Of all the writers who might have showed such a character in his relations, say to the negroes of the South, nobody has dared. And another queer thing about these Messianic adventures in modern romantic scriptures is that the present times do not afford them the opportunity to die with sufficient dignity of martyrdom. A novelist cannot crucify such a hero, and none of them appear to have thought of getting him lynched. Jesse, the "son of Mary Bethel," who came from Nashburg, Vermont, and made New York his Jerusalem, dies from being struck upon the head by a policeman's billy. Jacques, the Western incarnation of Christ in Ramsey Benson's novel, dies in a fit. Hall Caine's "White Prophet" simply disappears in the desert. The only characters in our times who seem to get the chance to die grandiloquently like middle-century martyrs are atheistic socialists like M. Ferrer in Spain.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Sugar Frauds

It was known several months ago that the Sugar Trust had for years been robbing the Government by means of false weighing machines. The imposition of fines or penalties amounting to \$136,000 at the end of the trial of a test case led the Trust to seek a settlement, and the Government accepted \$2,000,000 as payment in full. This was not enough. The Trust was advised by its counsel, in a letter published at the time, that the Government threatened to sue for "nearly \$9,000,000." If the Government had a good case, it should have sought to recover every cent for which claim could lawfully be made. Surely this Trust was not entitled to be treated with leniency. Not satisfied with the tariff protection which it had lobbied in Congress to procure, it had been stealing daily from the Government in the meanest ways. It had conspired with railroad companies to violate the law against rebating. It had suppressed the competition of a new refinery in Philadelphia by a contemptible trick, and in this had, by its subsequent admission, violated the law. It had even stolen water from the city of New York.

Recent disclosures concerning the frauds and thefts which are the basis of indictment against employees of the Trust revive public interest in the scandal because they point to the complicity of prominent officers of the Treasury Department at Washington. It had been accepted that employees of the New York Custom House had corruptly served the Trust, and even that responsible officers of the Custom House had conspired with them. But the public had not thought that the trail led to Washington. The story told now, however, by Richard Parr, the investigator who obtained proof of the fraudulent weighing, leaves no room for doubt as to the exertion of influence in the Treasury Department for the protection of the thieves. His narrative points to an officer whose defense has not yet been given to the public. A former Secretary is also affected by Mr. Wakeman's charges, which are not disposed of by the answer of a mere denial.

It is because of these indications of complicity in the Treasury Department, and also because of evidence that for years the Government was defrauded by the manipulation of samples as well as by false weights, that there must be a thoro investigation of the whole matter by Congress, whose inquiries cannot be restricted by the statute of limitations. Such an investigation may show who have been the really responsible guilty men on both sides, who paid the bribe money and who received it. Those who most richly deserve exposure and punishment are not the day laborers who received a few dollars for fraudulent acts, or the dishonest weighers to whom a few hundred dollars were paid, but the officers of the great company who suggested the frauds and profited by them, and the responsible officers of the Government in New York or Washington who, for a share of the stolen money, permitted the frauds and persecuted those who sought to bring them to light. It may be impossible to convict and punish the men "higher up" in this case, as Heney has failed to convict the men "higher up" in San Francisco, but a Congressional investigation would at least expose them to public scorn.

Religious Congresses

The purpose of a religious congress, as we have had them among Episcopalians, Baptists and other denominations, is not to carry on the ecclesiastical work of the Church, or to extend its evangelistic service, but to afford a platform for the various intellectual and theological movements within the Church. Accordingly those of the most diverse views allowed within the body are invited to attend and press their opinions with the most positive expressions of them, that those of different schools of thought may get acquainted with each other, and a larger tolerance may be secured. Such a congress means a broader Church, more allowance for differences within the even looser bonds that unite the denomination.

One of the last of these congresses has been held by the Baptists, and of course close communion has been, as always, a principal subject. Such addresses were made as would not have been heard thirty years ago, at the time when open communionists were being forced out of the Baptist communion, men that they could not afford to lose, such as Drs. Pentecost, Behrends, Bridgman and Moxom, and when the chief Baptist organ in this city was thundering against such looseness of order. But the tide of Christian sympathy was too strong for Dr. Bright, and at present open communionism is, in these Northern States, nearly as much accepted as it has long been in England. Indeed Dr. Spurgeon's championship of it had no small influence in this country.

At the Baptist Congress last week President Faunce, of Brown University, the very headquarters of the Baptist faith, in Roger Williams's historic town, talked in this way:

"Baptists face a crisis. Unity is in the air and is pressing on us. What stands in our way, in our Baptist way? . . . Ritualism stands in our way of union. Baptists of today are not following after the practices of the fathers. They were independent. Many of us are slaves to a form. We condemn holy water, incense and all other forms of literalism as idolatry, or the next thing to it. Our immersion belongs with them, and when we cling to form we are as idolatrous as the rest. Practically everybody outside our ranks thinks we lay greater stress upon immersion, a form. Our services in missions and many other lines are forgotten. We must dislodge these

learned minds that we run to a ritual instead of to real spiritual life."

Think of the change since Dr. Bright's day, when insistence on immersion can be called ritualism, just like holy water! And President Faunce went on to say that he wished the Baptist ministers would preach the next Sunday from the text "Jesus himself baptized not"; and he compared the quarrels over baptism with debates over the colors of States. Baptists, said he, are destined to lay aside their ceremonial and put emphasis solely on spiritual character.

These utterances and similar ones by other speakers were warmly applauded, while the contrary views were coldly received. And it is not in the home churches only that this broader fellowship with other bodies appears, but also in foreign mission fields. We mention in British East Africa an effort of half a dozen missions to establish a united African Church, and the Baptist missionaries join with others and allow a form of infant consecration, whether called baptism or not.

Our Catholic brethren have taken up the congress idea, and are holding congresses all over the world. But with them the management is not in the hands of the priests or people, but of the higher ecclesiastics; and the purpose is not to allow a field for the airing of differences, but solely to maintain the unity of the faith. They are, says *The Catholic Register*, "all in the same vein." No theological questions are discussed, for those belong to higher authorities, but they express the determined stand of the Church for the same old things, for Catholic education, for the sanctity of the marriage bond, for the betterment of conditions among the poor, and for the rights of the Holy See. Of course, there is no room for Modernism in the Catholic congresses.

Psychologie Francaise

How deep are the differences between the Gallic and the Anglo-Saxon mind we more than suspected in the days of the Dreyfus episode. The Steinheil trial has confirmed the suspicion, and afforded us something like a measure of magnitude. That a people whose ideas upon a subject

of such elementary social importance as the conviction or acquittal of a person accused of capital crime are radically unlike those of Englishmen and Americans, should often be misunderstood by us, and that we should be misunderstood in turn, are mere matters of course. This, however, is no reason why we should not try to understand, and understanding is perhaps not impossible, even when it is hopeless to expect so much as an approach toward that "meeting of minds" contemplated by the Roman law.

To the American as to the Englishman, the inquisitorial process is repugnant. We tolerate it as employed by the New York Police Department, but happily not yet in the courts. We not only do not expect the accused to incriminate himself, but we accept as of practical importance the well established principle of scientific psychology that self-accusation may spring from antecedents in no way connected with guilt. Moreover, notwithstanding its practical inconveniences, and the frequent escape from punishment of persons known to be malefactors and probably guilty of the specific crimes for which they have been indicted, we adhere to the rule which requires a unanimous verdict of the twelve jurymen. Also, in every way possible, we try to keep the jury attentive to the evidence, and to shield it from prejudicial influence. That a jurymen, who is expected to pass judgment upon an hysterical and socially declassed woman, should be permitted to go home at night to talk the case over with *mater familias* and the all-wise neighbors, strikes Americans not only as improper, but also as distinctly Gulliveresque.

But to the French mind, apparently, all of these practices seem rational and pragmatic. The trial judge applies the third degree. A majority verdict condemns or acquits, and if the jury divides evenly, the foreman promptly settles the matter by casting two votes. The jury goes home to dinner and domestic advice.

Before we condemn this seemingly ridiculous procedure, however, let us inquire what it is intended to accomplish, and what, by way of contrast, the English-American forms are supposed to be good for. To answer the latter question first: We think it necessary to

prove "beyond a reasonable doubt" that the accused committed the specific crime with which he is charged, or to let him go free without reproach. We do not even accept the Scotch verdict of "not proven." Much less do we try to determine whether he is a person who, guilty or not of the specific offense for which he has been indicted, is in general so objectionable that he ought to be eliminated from society. Theoretically, the French people also try the accused to ascertain whether he is guilty of a specific act; but inasmuch as their procedure is wholly unsuited to that end, and, on the contrary, is admirably adapted to ascertain whether the community on the whole so thoroly dislikes him that they want him sent to Devil's Island or the guillotine, it is a fair inference that the French criminal trial is really for the purpose of ascertaining what disposition the public, on general and miscellaneous grounds, desires to make of the prisoner at the bar.

It must be admitted that on grounds of social utility our philosophy of the criminal trial is not necessarily superior. A good deal may be said in defense of the right of society to eliminate undesirable citizens. The New England colonists asserted it in very frank fashion, as in the vote of the townspeople of Dorchester forbidding any inhabitant to sell his house and lot to any person whom the inhabitants collectively should "dislike of." Our procedure undoubtedly allows thousands of murderers, burglars and lesser criminals to escape punishment. It would not be altogether easy to determine whether, on the whole, our way or the French way is more effective in maintaining social order. The French way is dramatic and spectacular. It has a certain artistic quality and precision not to be found in ours. It suits a people which can anticipate the pleasurable thrill of seeing a handsome woman beheaded, if she happens to be condemned, while making her offers of marriage for her delectation if she happens to be acquitted. Such a public to us seems—well, let us say, a bit theatrical, and we need feel no surprise if, to such a public, so *lumineuse* and *feministe*, the English folk and the Americans seem distinctly masculine and heavy-minded.

Stack-Rooms in Private Houses

Books are not intended as upholstery. They make the most expensive and least sanitary kind of wall-paper. Intimate association of books and people is not good for the books and it is not good for the people. The heat, light and moisture of a living room injure bindings, and the books cannot be kept clean and free from dust in spite of assiduous wiping, brushing, slamming or suction.

If the library is ornamental it is not useful. If it is useful it is not ornamental. The intellectual activity of a man may be measured by the proportion of unbound books in his library. The living literature of the day is in the form of pamphlets, periodicals, reprints and clippings. A bound volume is an emeritus work and when an author comes out in sets he is on the road to oblivion. The more durable the binding the less often it is handled.

But only the professional literary man, and not always he, can afford a study to be used solely as a workshop where his material may be arranged in the order of convenience. Most studies have social functions to perform and the books have to be in dress-suits and on their good behavior to appear in society. Many a domestic quarrel has arisen between the housewife, who wants to keep the room orderly and presentable, and her literary consort, who wants what he wants when he wants it. The twelve volumes of Irving in yellow and the eight volumes of Prescott in red have the place of honor at his right hand, while the back number of his professional journal and the annual reports of his society and the bulletins from the department at Washington, looking cheap and disreputable in such company, are banished to the depths of a window seat box or packed in the back of some dark closet, or have been more or less accidentally burned up. If the things that are destroyed because they do not look well and there is no place for them could be saved a library might be increased a hundred per cent. in its working value without additional expense.

The difficulty may be solved in the private house the same way that it has been in the public library, by a book-stack in

a separate room. A closet or alcove can be fitted with cheap pine shelves or racks along the walls or down the middle, extending as high as one can reach, leaving merely passage way. The room should be lighted by a window or electricity, but need not be heated. A large number of volumes can in this way be put into very small space and be much more convenient than in a library or study because they can be arranged and rearranged by subjects as needed, all the bound volumes, periodicals, clippings and manuscript notes being laid together instead of being distributed in various bookcases and rooms according to their looks and size. Being shut away from the living rooms they would not need dusting so often, there would also be a saving of money, which would otherwise go for handsome bookcases and fine bindings. The careful housewife would probably be willing to grant her husband the use of her largest closet in consideration of the space gained by clearing out the books and pamphlet boxes from his study. All he would need there would be a few reference volumes and a book-tray containing the books and papers needed for the particular work on which he is engaged. When he gets thru with it or, to speak more correctly, when he is interrupted by a visitor, the tray can be put into the stack-room to await his next leisure.

It is, of course, not desirable to deprive the living rooms of books. The bedroom should have two or three magazines or volumes of small size and large type, light in weight and with cut leaves. Such *editions de luxe* and other rare volumes as one happens to possess may, with propriety, be placed where visitors can see them as they are in public libraries, but books are nowadays so common and cheap that it is hopeless as well as vulgar to attempt to give the impression of great learning or wealth by displaying all one's volumes on the walls of a reception room. As well should the lady of the house hang all her handsome dresses on the walls. Rooms are smaller than they used to be and doors and windows more numerous, so wall space, formerly abundant, is now at a premium. Probably few houses have a room sufficiently accessible for a book-stack, but occasion-

ally a man has the good fortune to plan a new house to suit himself and it would be an easy matter to attach such a book closet to his study.

Progress of Charter Reform

WHEREVER charter reform for our cities was an issue at the recent election, the progressive elements won gratifying victories. Boston, after a vigorous campaign, voted by a small majority in favor of "Plan No. Two," which embodies the recommendations of the original Finance Commission. Under it national parties disappear, at least from official recognition, and with them all the machinery of the caucus, convention and primary, which have hitherto stood between the voter and his final choice at the polls. The Massachusetts Legislature, while enacting the principal administrative features suggested by the Finance Commission, submitted to the voters at the election just held two plans, the first representing a rearrangement of the old elements, the second the modern tendencies in municipal government, including a small council elected for the whole city. Under the new plan the mayor will be elected at the December election for a period of four years, subject to recall at the end of two.

In commenting on the situation and urging the adoption of Plan No. Two, the Good Government Association impress upon the citizens that Boston had simply fallen down in the matter of selecting its public servants. To remedy this required in the first place a definite vivid standard for public officials on the part of the public, so that citizens might realize the kind of man they wanted in office, and in the second place some effective machinery to put him there. Beyond question, a civic spirit really does exist in any large city, and the majority of the citizens—Democrats and Republicans alike—really desire at heart good government. Many of the objections to charter reform are really reducible to the proposition that the people, if left to themselves, cannot unite and work out their own salvation, but require some artificial leading strings in the way of party nominations or designations to guide them aright.

Buffalo voted on the question as to whether the Legislature of New York should be asked to enact a charter in substance similar to the Des Moines plan. Altho approximately but 10,000 citizens voted on this question, a very substantial majority of those so voting declared themselves in the affirmative.

Topeka, Kan., by a vote of 2,662 to 2,146, adopted the commission form of government, under the Kansas law permitting its cities so to do. The normal voting strength of Topeka is 11,000, and only 8,000 registered for the charter election, and not two-thirds of these voted.

Virginia is the scene of State-wide effort to enable the cities of that State to determine whether they wish to avail themselves of the advantages of the system. The Illinois Mayors' Association, at its recent meeting, adopted a resolution referring the matter to a referendum vote. Tacoma, Wash., by a substantial majority, has adopted an advance form of commission government, as has Enid, Okla. Burlington, Ia., votes on the question on November 29.

The commission form of government continues its triumphal progress.

Thus the commission form of city government is making hopeful progress. It has not yet got the ear of the public as extensively as has the anti-saloon movement, but it is young yet, and its success in the cities where it is adopted will assure its general adoption.

The Professional Training of Women

THE question is often asked why the modern housewife regards her work as drudgery and unworthy of her talents, while her grandmother took a professional pride in her skill. One reason probably is that the housewife of a former generation was an expert and realized that she had no superior in the domestic arts. But nowadays the restaurant, the food factory, the school and the hospital have taken from the women of the household the higher branches of their former work and filled them with a sense of inefficiency and inferiority. But home duties and responsibilities seem likely to rest upon wives as much as be-

fore, and they need a training like that of their husbands, so that they will acquire the professional feeling of the importance of their work and their competence for it in the same way as a trained lawyer, physician or banker.

Some of the State and other coeducational universities have introduced many courses for the education of women for the specific duties that devolve upon them, but the women's colleges are still giving a masculine education. In order to call the attention of these colleges to the inadequacy of their educational facilities as a preparation for modern life, the New York branch of the Association of Collegiate Alumnae have the following outline of recommended courses:

1. Personal Hygiene and Its Social and Ethical Relations.—Required for all students. One hour a week for the first year, first half. To count toward a degree, and to require an examination. The course is to be given by a person of training and reputation.

2. Hygiene of Environment.—Required for all students. One hour a week the second half of the first year. Laboratory or field work in the community, or some suitable place. This course is to be given by a well-known authority on the subject. Courses I and II need not be given by members of the faculty of the institution.

3. General Biology and Bacteriology.—Required for all students. Two hours a week for one year, half the time to each subject.

4. Hygiene of Childhood.—Elective. Open to juniors and seniors. Two hours a week for one-half year. Prerequisites: General biology and bacteriology. This course treats the subject from the biological point of view, and includes the following topics: Heredity and environment; growth and development of the child from the physical, mental, and moral aspects; the special hygiene of adolescence. The laboratory work for this course should involve a study of the children in the schools, on the playgrounds, and in the industries, and of the effect of the physical condition upon the mental and moral development of the child.

5. The Family.—Elective. Open to juniors and seniors. Two hours a week for one-half year. Prerequisites: General sociology and economics. This course treats of the historical development of the family, the biological significance of the family; the social, legal, and ethical aspects of the family; the economics of consumption in the home.

6. A Short Law Course.—Required for all students. One hour a week for one year, or its equivalent. This course covers contracts, real property, personal property, banking, and social and domestic relations.

7. Political Science.—Elective without prerequisites. This course deals with the organization and function of government, general and local; politics and political principles.

8. History of Industries and the Status of Women in Industry.—Elective.

Further, the committee recommends that the problems of consumption be emphasized in courses in Chemistry and Economics; and that the head of college residence halls be a person capable of making the hall a laboratory for scientific housekeeping, for social, esthetic, and moral training, and that she be a member of the faculty.

Illinois's Second Disgrace

Illinois has had a second outbreak of lynching violence. As if the lesson at Springfield were not enough, another mob has murdered its victims at Cairo. In this latter case the crazy mob first hanged and burned the body of a negro accused, but not proved guilty, of assault and murder of a woman; and then, having the taste of blood, they took a white man out of the hands of the officers and lynched him. The mob owned the city, and the Mayor, to his shame, approved their action to the extent that he said it had done a useful thing unlawfully. The Governor, however, was not so complaisant, and he sent the soldiers down to the State's Egypt to restore the order which the Mayor was not much interested in. This horrible, lawless mob violence deserves summary control with loaded muskets. We like the nerve of the young woman who, the other day, when white-caps came to whip or kill her father in the tobacco war, stood in the door with a gun and threatened to shoot the first man who came near. The only excuse we have heard for lynchings is that the people, that is, the sort of people who do the lynching, let murderers go when they are brought before a jury. In the lynching region you can find in any town men who have killed their man and have never suffered for it. Of course such conditions breed mob violence when passions are aroused. What says wise old Habakkuk? "Spoiling and violence are before me. The law is slacked and judgment doth never go forth."

Riding on a Rail

Gravitation is again conquered. We are still amazed when we see men flying like birds thru the sky above us, with no fear of falling held up by thin air only; and now we have ocular demonstration of the

promised feat, the driving of a railroad car steadily on a single rail, and not tipping or toppling over on either side. There were forty passengers on the monorail car when it sped about the circular track at North Brompton, England; and when they crowded on one side of the car, instead of sinking downward it simply rose the higher, ruled by the revolving gyroscope, which is the most uncanny of all mechanical devices, a very miracle of paradoxical perversity. And this new monorail car is likely to revolutionize railroading, for the English and the Germans are rivals in developing it, and the Pennsylvania Railroad is in the way of securing the rights from the inventors. They say that the car can be made to run 150 miles an hour, and with much less jar than is felt on the double rail track. A further advantage is that the expense of leveling and laying the track will be greatly lessened. So the toy bicycle develops into a mighty railroad train equipped with swiftly revolving gyroscopes and outrunning a hurricane. The next will be the gyroscope encased in steamships to prevent rocking and making sea-travel safe for those of queasy stomachs. The inventor is Louis Brennan.

Extension of Civil Pensions It is announced that the New York Central Railroad and its allied lines will, with the beginning of the new year, inaugurate a system of pensions which will be of interest to 100,000 employees, and immediately applicable to 1,765 employees over seventy years of age. Under it all who at that age have served twenty years or more continuously will receive a pension of 1 per cent. for each year at the average rate of their salary for the last ten years. Thus a conductor who has served forty years, at \$1,500 during the last ten years, will receive \$600, which is better than nothing, the usual fate of a man who has been worn out in another man's service or in that of a corporation or of the Government. What the New York Central Railroad thus does is no more than other corporations had already done, and notably the Pennsylvania Railroad. During five years the

Pennsylvania Railroad has distributed \$2,370,000 in pensions, and it is now paying \$600,000 annually for this object, the recipients for 1908 being 2,176, at an average of \$250 per man. Now that these two great railroad systems have adopted this plan, because they believed it profitable, it may be expected that other railroads will, one by one, follow suit until it becomes the usual rule for this kind of corporation. But why not also for street railways, or telegraph and telephone companies; and where shall we stop? Such a provision for old age tends to develop good service and steady employment, and faithful performance of duty. One who hopes for a pension in his old age is less likely to neglect or slight his work. He feels a pride in it, and a right in it. He is less likely to make trouble or to provoke strikes. The principle applies to manufacturing corporations as well as to those which are related to the public service. Indeed some few such companies have already devised and are operating plans of the same kind. What these railroad corporations can thus do our national Government and our State governments ought to do for their civil servants, who deserve it as much as do those in the Army and Navy. Indeed, at an age considerably less than seventy the soldier or the seaman is retired on a fair pension. It is understood that a serious effort will be made at the next session to persuade Congress to pass a civil pension law and we hope it will be enacted. It is in line with the movements of the age, and it will tend to improve the service. That is a chief reason why corporations adopt it, not out of pure altruism.

Jewish Intermarriage

The American rabbis have been holding a national council in this city, and Rabbi Kohler, President of the Hebrew College in Cincinnati, declared in an address that intermarriage with Gentiles would be a nail in the coffin of the Jewish race, and his words met general approval. Of course he is right, if the purpose is to preserve the pure Jewish race; but is Judaism a race or a religion? Is the Jew-

ish religion the sole property of the Jewish race, coming by inheritance, to be acquired in no other way; the two, race and religion, so bound together that one who loses his Jewish religion is no longer to be called a Jew? Jews should consider what Rabbi Kohler's inhibition involves. It makes Jews a separate caste, one that forbids exogamy, and therefore one that invites business but not social relations with others. When Jews complain that they are excluded from mixt social relations it will be easy to quote so radical a Reform Jew as Rabbi Kohler, who says that Jews must not intermarry with Christians, not even with Unitarians, and not with agnostics and atheists who are not of the true blood. It is purely a matter of race, of caste, not at all of religion. They can marry agnostics and atheists, if they are only Jews, but not such who are of Gentile blood. The purpose is to maintain a separate people, apart from other people; and that invites aloofness and reprisals. We disbelieve in the aloofness and segregation on both sides, but the cause of it, on the Gentile side, is not all blameworthy, for it is provoked by those Hebrews who insist on social separation.

Gifts for Peace The late Edward Everett Hale is quoted as having said that a nation which has a Secretary of War and no Secretary of Peace will soon be considered unfit for decent society. We are in a fair way to have the influences for peace enlarged so as to compare with those for war. At Washington the atmosphere is military and naval, with great headquarters spending hundreds of millions of dollars every year, and surrounded by a host of men carrying the titles and dignities of war. But the late endowment of \$1,000,000 by Mr. Edwin Ginn, of Boston, for an International School of Peace, calls attention to the fact that it costs money to carry on the campaign of peace. There is an old American Peace Society in Boston which has been in existence for more than two generations, of which Mr. Trumbull is the efficient secretary and with which also Mr. Edwin T. Mead is actively associated, and of whose work Mr. Ginn has

been a generous supporter, as he has of other measures for the same end. Mr. Carnegie has given still more—\$1,500,000 for the peace palace at The Hague, \$750,000 for a building for the Bureau of American Republics in Washington, \$5,000,000 for the Heroes of Peace fund, and \$1,000,000 for a similar fund in France, and large annual gifts for various other organizations for throwing discredit on war. We may add the \$25,000 lately given by John L. Lundgren to the Northwestern University for instruction, prizes, etc., to foster international peace; and the support by Mr. Albert K. Smiley of the annual Mohonk Conference for peace. These amounts, tho large, are much smaller than what our Government taxes us for war, but the smaller money has behind it the larger argument, and truth will prevail in the end.

A Poetical Pilgrimage

There has been a great deal of speculation as to the purpose of Prince Ito's visit to Manchuria, which came to such a disastrous termination. It is therefore, interesting to note that, according to an announcement given out from Tokyo at the time of his departure, it was the intention of the Prince to devote himself to composing poems on the various scenes he visited. This shows how conscientious the Japanese are in their artistic craftsmanship. An American poet, even tho he should undertake a long and dangerous journey for the purpose of getting local color and atmosphere, would never think of taking with him a large suite of Government officials and diplomatists, or of calling to his aid the Finance Minister of the Russian Empire.

Temperance by Taxation

Mr. Lloyd-George is utterly impenitent. He refuses to be converted from the error of his ways by the complaint of the whisky dealers that he is ruining their trade by his Budget, or even of his Irish friends, who so love their liquor that, as Mr. T. P. O'Connor, M. P., says in his appeals for American money for Irish Home Rule, to increase the tax on whisky is a very serious matter in Ireland. The Budget has not

passed Parliament yet, and already the consumption of whisky has fallen in various districts from 35 to 70 per cent. Every one is astonished at it. This may be temporary, but the anticipations of the Treasury are that the consumption of spirits, whether of home or foreign manufacture, will be reduced as much as 20 or 25 per cent., and this means an enormous improvement in the habits of the people. Arrests for drunkenness have gone down by thousands in Glasgow alone. We do not presume that the whisky drinkers have become total abstainers all at once; they have probably taken to beer, but that is some improvement. Mr. Lloyd-George seems to rejoice in the improvement in morals, and believes that it is perfectly legitimate to regard national sobriety as a proper object of concern to the legislator. So we think in this country when we put a heavy internal revenue tax on whisky, or when we even close the saloons entirely.

Suicide of School Children

It has been generally supposed that the number of suicides among school children is on the increase. This is a mistake, according to the conclusions reached by Professor O. Gebhardt, in a recent book published by him in Berlin, entitled "*Ueber die Schülerselbstmorde*." His data are taken from the reports filed in the archives of the Prussian Cultus Ministerium, and extend back to the year 1880, and naturally deal only with that kingdom. The average number of suicides of school children in these years has been 14.3, but the number varies greatly. In 1904 there were only 8, but in 1906 it was 16, and last year it reached the high figure of 28, which, however, is a little less than it was as early as 1889. The average has been about 7 in a contingent of 100,000 pupils, which is much less than the number of suicides among the same number of youths from fifteen to twenty, where it was 17.83, or between twenty and thirty, where it was 20.30. Gebhardt further reaches the conclusion that fear of examinations, the disgrace because of a failure to pass, and other school disappointments, are not the chief causes for the suicide of school children. Out of

170 such cases, the causes of which could be traced, it was found that 31 were the outcome of inherited nervous affections, and 47 others had nothing to do with school matters at all.

Troubles of French Bishops

There has been much in the foreign news lately of the legal troubles of French bishops. On becoming Archbishop of Bordeaux last March, Cardinal Andrieu, before he had scarcely warmed his chair, abolished the associations for public worship established under the new law in the Gironde by his predecessor, Cardinal Lecot, and left untouched by Pius X. A petulant Frenchman did what the wily Italian dared not do. Next, on receiving his formal installation, Cardinal Andrieu in his address made a fierce attack on the Government of his country. A sentence was taken as ground for an indictment and Cardinal Andrieu was summoned to court, a new step in French history. Under the Concordat the Cardinal could only be cited before the *Conseil d'Etat*. He made his own defense and in the course of it declared that he was not obliged to obey any law against the dictates of his conscience. It may be remembered that a majority of twenty-two of France's episcopates voted favorably to the same law. And not even Cardinal Andrieu knew it was against his conscience till Pius X said so. Next Monseigneur Ricard, Archbishop of Auch, and five of his priests, were summoned for interdicting, in his diocese, the textbooks of Aulard, Debisdour and three others. The charge against Monseigneur and his five priests who followed him was that the interdict interfered with the carrying out of the laws regarding primary instruction. His Grace was fined 400 francs and every priest 50. When Pius X was Archbishop of Venice he never bothered his head about school textbooks; in fact, no Italian prelate does. Why, in Italy, the land which dealt the Papacy its worst blows, there is no such thing as a parochial school system. The children go to the common school, except such as have parents able to pay for them in convent schools or Jesuit or Salesian colleges.

The American College for Girls at Constantinople is gaining favor among the Moslems. Last year there were ten Mohammedan students; this year there are already twenty-six enrolled and others applying every day. The interest of the new Government in the college and in the promotion of education in general for women is shown by the fact that the Government is sending five Mohammedan girls to the college at its own expense, with the understanding that these girls, after they have completed the required course of study, shall teach in the primary schools which are to be established thruout the empire as soon as teachers can be provided for them. The Government hopes next year to send a still larger delegation to the college, which makes the announcement of a fine administrative building to be erected on the new site on the upper Bosphorus.

When the missionaries of eight societies in British East Africa met last summer to plan for a united native Church, they found no serious difficulty in agreeing on a new quadrilateral, the Bible only, the Apostles' Creed and the Nicene Creed, as expressions of the faith of the Church, the two sacraments to be administered, and a duly ordered and safeguarded ministry. They had the old knotty question before them, what to do with converts who are polygamists, and they agreed not to tell polygamists that they must put away all but one wife, but to admit such only as catechumens and not to baptize them. Perhaps that was too strict a rule, stricter than the Old or New Testament requires.

The *Psychologie Française* shows itself not simply in the conduct of criminal trials, but also in the attitude of the public toward such a loose woman as Mme. Steinheil confessed herself to be. It does not seem to have been thought so very extraordinary that she should have had a succession of lovers who should contribute to the support of her husband's profession, and the lovers themselves do not seem to have lost any reputation by having their conduct made known. Indeed, the defense

praised them as honorable gentlemen, and she is approved of and made the idol of the crowd. It is all disgusting from the American point of view.

We learn that an organization is to be formed of "Friends of Africa," with the purpose of improving the condition of the African people in Liberia and the rest of the continent. Those organizing it are Dr. Washington, Bishop Scott, whose headquarters are at Monrovia, and Dr. Lyon, the American Minister to Liberia. We hope the report of the commission to Liberia sent out by President Roosevelt will soon be published and will arouse more interest in the betterment of conditions there. We have our first obligation to those of the African race in our own land, but the future of the negro in Africa ought to concern, as it will affect, the whole world.

In a late address, Mr. J. S. Stemmons warns his colored friends of "a deep-laid and far-reaching scheme to supplant colored labor" both South and North. As evidence he calls attention to the effort to exclude negroes from the position of firemen on the Georgia Railroad and the Southern Pacific, and the agreement of Atlantic City hotels to exchange colored for white service. Further he mentions the effort to divert immigration to the South. Well, what of these few movements, which have no great significance. If the negro is to be submerged, it will take a great deal more than that to submerge him.

Madame Eusapia Paladino, the Italian medium who has puzzled the English psychical researchers, is in this country ready to give séances under the direction of the American society of which Professor Hyslop is the most active leader. At the first exhibition a table was lifted high in the air, and a stool danced up, and it was not clear what the fraud was, if any. We are slow, very slow, to believe that there is in these exhibitions any force other than those with which ordinary mechanics is familiar.

Insurance

The Reduction of Accidents

ESTIMATES made by the Fidelity and Casualty Company of New York place the number of fatal accidents to wage earners in the United States annually at between 30,000 and 35,000. The non-fatal accidents run up to something like 2,000,000. In view of this almost overwhelming casualty, the recent issuance of a book, entitled "The Prevention of Industrial Accidents," takes on vital importance. If it be true that more than 50 per cent. of these accidents are preventable, it is high time that preventive means are instantly taken. A death roll of 30,000 is far too high a price to pay for carelessness in manufacturing, in commerce, and in merchandising. The book to which attention is here directed is not a theoretical one, based on the imagination. It is not such a book as the closet naturalists used to write, in which the habits of the animals described were guessed at. This first attempt to gather together in a systematic treatise what has been settled by experience with regard to the prevention of industrial accidents has been done with the records of a great company constantly available for consultation and reference. The problems presented by a work of this kind must have been tremendous, but they have been worked out systematically, and as presented they are very helpful. No one will question the desirability of preventing accidents. The financial loss involved is, however, only one item. From German sources cited in the book it appears that the causes of accidents may be tabulated as below:

Per cent.

Inevitable risk	42.05
Want of skill and carelessness.....	20.25
Want of guards.....	7.82
Deficient factory arrangements.....	7.15
Acting against rules.....	5.44
Fault of other (third) persons.....	5.28
Fault of employers and workmen.....	4.66
Not using guards.....	1.92
Insufficient instruction	1.84
Superior force, casualty, etc.....	1.31
Carelessness	1.10
Unfit clothes	0.40

In considering this table it is well to remember that the precautions for preventing industrial accidents are far more complete in Germany than is the case in this country. Under the administration of the Workmen's Compensation laws and the pronounced tendency developed by them looking toward the practice of shamming, imposition and even fraud on the part of workmen, who deliberately impose on the accident fund, the invention and use of safety devices are encouraged and the use of such safety devices has in consequence become very general. Some of the items that make for accidents are noted as follows: Overcrowding machinery for the sake of economizing space, slippery floors tending toward accident, bad ventilation, the use of intoxicants and insufficient lighting. The "Boiler Room Rules" in the book may well be read carefully and frequently, even by the best engineers. The other chapters are full of interesting material, and as a contribution toward the effort that ought to be made to reduce the accident rate the book has great economic value.

A WRITER in the *Mid-City Dispatch* tells a rather good story about a man who had a house under construction and who was worried about the litter the workmen left about. He bothered them about it in the attempt to bring about reform. Finally, to cap the climax, he told them about some workmen who left shavings on the windowsill of a house in building out West. The sunlight came thru a bullseye pane in this window and set fire to the shavings and threatened the destruction of the house. One of the workmen asked if the house burned down. "No," he said, "it didn't, for the men were right there; but if that thing had happened in the middle of the night you just think how 'twould have been. Nothing would have saved that building," says he, "and more than likely the barns and outbuildings would have gone, too!"

Financial

The Year's Crops

THE Department of Agriculture issued last week its preliminary estimates of the principal crops. It appears that the yield of corn was 2,767,316,000 bushels, a quantity exceeded only in 1906, when 2,927,416,091 bushels were harvested. Comparisons with last year's crops and with a five-year average are given below, the last three ciphers omitted in each case:

Crop	1909 Bushels	1908 Bushels	Average 1904-1908 Bushels
Corn	2,767,316	2,668,081	2,587,777
Winter wheat ..	432,920	437,908	412,719
Spring wheat....	291,848	226,694	237,791
Total wheat.....	724,768	664,602	650,510
Oats	1,172,018	1,169,186	1,170,602
Barley	164,636	166,756	148,155
Rye	31,006	31,851	30,006
Buckwheat	16,692	15,874	14,554
Flaxseed	25,767	25,805	26,121
Potatoes	367,473	278,985	289,400
Hay (tons).....	64,166	70,798	60,671
Tobacco (lbs.)..	895,185	718,061	698,004

These crops, representing about 70 per cent. of the value of all the farm crops, are this year in the aggregate about 2 per cent. larger than those of 1908, and 9 per cent. greater than the average for the preceding five years. The wheat crop is only 24,000,000 bushels, and the oats crop only 4,000,000, below the highest records heretofore made. Potatoes and tobacco (both much above the average) show new high records. There was an increase of nearly 300,000,000 bushels, or about one-sixth, in the quantity of wheat harvested this year in the six countries of the northern hemisphere which, in 1908, produced two-thirds of the world's supply.

Wages and Cost of Living

SEVERAL increases of wages have recently been ordered, and demands for other advances have been made, notably by railroad employees, who point to the growing cost of living. Increases announced last week were as follows:

U. S. Steel Coal Company, an addition of 10 per cent. for the coming year. For 20,000 men, due to higher price of coke and scarcity

of labor. The company needs, it is said, 5,000 men.

Bethlehem Steel Company will add about 10 per cent., thus restoring the rates paid before the panic.

Reading Iron Company, about 12½ per cent. for 2,000 men.

The anthracite coal miners get an increase of 7 per cent., by the operation of the sliding scale based upon selling prices in October.

A general demand from railroad employees is impending. They will probably ask for an addition of 12½ per cent. A demand for a larger increase has already been made by the locomotive firemen on forty-two roads west of Chicago, and the demands of Western switchmen and yardmen are under consideration. While railroad employees direct attention to the cost of living, they also have in mind the restored prosperity of the companies, whose officers say, however, that the additional earnings are needed for new equipment.

The index number published for many years by *Bradstreet's*, and based upon an average of the prices of a large number of commodities, is 8.9173 for November 1. There has been a steady upward movement for many months past. The highest figures were for 1907, before the panic, the maximum having been 9.1293 on March 1 in that year. Following the panic, the average declined to a minimum of 7.7227 in June, 1908. Moving upward, the figures were 8.2631 on January 1, and they are now 8.9173, with indications of further increase. The heaviest advances during the last twelve months have been in food and clothing.

....Canada received 56,486 immigrants from the United States in the six months ending with September, against 34,259 in the corresponding months of 1908.

....The auditor of the Post Office Department says in his annual report that in the last twenty years foreigners in this country have sent back to Europe by means of money orders \$431,956,623 in excess of the amount received by them from abroad.

The Independent

VOL. LXVII NEW YORK, THURSDAY, NOVEMBER 25, 1909 No. 3182

Survey of the World

Dissolution of the Oil Trust Ordered In November, 1906, the Government brought suit against the Standard Oil Company of New Jersey (the central holding corporation of the Standard interests), alleging violation of the Sherman Anti-Trust law. It asked that a dissolution of the combination be ordered. The defendants were the company already named, seventy subsidiary corporations, John D. Rockefeller, William Rockefeller, Henry M. Flagler, Henry H. Rogers, John D. Archbold, Oliver H. Payne and Charles M. Pratt. The testimony thereafter taken covers more than 10,000 pages of print. On the 20th inst. a decision was announced, in favor of the Government. The opinion was written by Judge W. H. Sanborn, with the concurrence of Judges Van Deventer, Hook and Adams, of the Federal Circuit Court for the Eastern District of Missouri. As these practically constitute a Circuit Court of Appeals, the defendants' appeal will be taken directly to the Supreme Court. The decision declares that the defendant company is an illegal combination, operating in unlawful restraint of trade. It orders that the combination and its operations be discontinued. In the course of nearly 20,000 words the history of the combination movement in the oil industry during the last thirty-five years is traced. At the beginning, the court says, speaking of the Sherman act:

"Test of the legality of a combination under this act is its necessary effect upon competition in commerce among the States or with foreign nations.

"It its necessary effect is only incidentally or indirectly to restrict that competition, while its chief result is to foster the trade and increase the business of those who make and operate it, it does not violate that law. But if

its necessary effect is to stifle or directly and substantially to restrict free competition in commerce among the States or with foreign nations, it is illegal within the meaning of that statute.

"The power to restrict competition in commerce among the several States or with foreign nations vested in a person or an association or persons by a combination is indicative of the character of the combination, because it is to the interest of the parties that such a power should be exercised, and the presumption is that it will be.

"The combination in a single corporation or person, by an exchange of stock, of the power of many stockholders holding the same proportions respectively of the majority of the stock of each of the several corporations engaged in commerce in the same articles among the States or with foreign nations, to restrict competition therein, renders the power thus vested in the former greater, more easily exercised, more durable and more effective than that previously held by the stockholders, and it is illegal."

The decree of the court forbids officers, directors or agents of the company to vote the stock of the subsidiary corporations or to exercise any control over their acts; forbids the subsidiary corporations to pay dividends to the company, or to permit it to exercise control over them; and enjoins the individual defendants from continuing the combination, "and from entering into and performing any like combination or conspiracy, the effect of which is, or will be, to restrain commerce in petroleum or its products, or to prolong the unlawful monopoly of such commerce obtained and possessed by defendants as before stated." Certain methods by which this might be done are mentioned, and the use of them is prohibited. Judge Hook in his concurring opinion refers to this point as follows:

"It is thought that with the end of the combination the monopoly will naturally disappear; but last, instead of resulting that way, the monopoly so wrongfully gained be per-

...the maintenance of the physical property, and maintenance of the... as maintenance of the funds of a member of the combination, and by the liquidation and retirement from business of the other members, it is held that such a course would violate the decree."

He also says that he and his associates agree on the conclusion that "a holding company, owning the stocks of other concerns whose commercial activities, if free and independent of a common control, would naturally bring them into competition with each other, is a form of combination prohibited by the Sherman act." Assistant Attorney General Wade Ellis says there is much importance in the application to holding companies of rulings heretofore made in regard to plain combination agreements. Attorney General Wickersham says the decision is one of the most important ever rendered in this country. With respect to thirty-three of the seventy subsidiary corporations named, the complaint was dismissed for lack of proof.

Custom House Frauds at New York

Owing to the Sugar Trust frauds there have been additional removals at the New York Custom House. On the 19th, Collector Loeb dismissed nineteen persons, the most prominent of whom was James F. Vail, recently Deputy Collector, but for some years past Deputy Surveyor in charge of the weighing. Five inspectors and ten assistant weighers went out with him. There was no proof, the Collector said, that Vail had been corrupt, but he must have been negligent or inefficient. The Collector has set out to make a thorough housecleaning, and in this he has the support of Secretary MacVeagh. The latter said, after a conference with the Government's prosecutors, that retention in the service would not again be granted, in addition to immunity, for the testimony and assistance of confessing employees. The long story told by Richard Parr, who was employed in detecting the weighing frauds, pointed to James Burton Reynolds, recently Assistant Secretary of the Treasury and now a member of the Tariff Board, as the officer who had caused interruption of his work and apparently opposed it. Mr. Reynolds has replied, saying that he was Assistant

Secretary when the Sugar Trust was tried and convicted; that Parr was not the original discoverer of the device for fraudulent weighing, but (as shown by one of Parr's letters) was assigned to the work of investigation after the information had been given to the Department by another person; and that Parr was ordered away from New York, and to San Francisco, not upon the Department's initiative, but at the request of the prosecutor in New York, who desired in this way to restore Parr's health. He says that Parr is a claimant for a part of the \$2,000,000 recovered from the Trust, and that an order issued by himself in 1907 stood between the man and this money. There is reason to believe that the real discoverer of the cheating device was Richard Whalley or E. L. Anderson. The latter was formerly dock superintendent for the Trust, and he is now a claimant for a share of the \$2,000,000. A long story was published last week by ex-Appraiser Wakeman about the experience of Henry C. Corsa, an assistant sampler, who produced evidence that he had been bribed by an agent of the Trust. That was ten years ago. Mr. Wakeman spoke of his efforts to interest Secretary Gage and Secretary Shaw in this evidence. When George W. Whitehead succeeded Wakeman, Corsa was removed and he was never able to regain his place, altho Treasurer Treat and others made appeals in his behalf. Some of the New York newspapers recalled the history of the city's claim of \$525,000 against the Trust for stolen water. In this case, now in the hands of a referee, there has been much delay. One paper sees some connection between this delay and a contribution of \$25,000 alleged to have been made to the Tammany campaign fund by the Trust. It is reported that the Government will attempt to recover from the Trust something in addition to the \$2,000,000 already paid, altho the district attorney is said to have stated that this sum by agreement covered all claims. It is again asserted by one of the papers that an independent sugar refining company has offered \$600,000 in settlement of all possible claims against it on account of frauds like those of the Trust, and that another company, which the Trust controls, has offered \$500,000.

Senator Root's Plea for Subsidies

One of the speakers at the annual dinner of the New York Chamber of Commerce, last week, was Senator Elihu Root, whose subject was the need of ship subsidies. "Where," he asked, "beyond the confines of our own country do you find an American ship or an American flag, excepting as it is carried on an American man-of-war?" A carrying trade which once transported 90 per cent. of our commerce had sunk to a point where it carried less than 9 per cent.:

"The reasons are simple and plain. By our protective tariff we have raised the standard of wages and the standard of living within our own country to such a point that the moment American enterprise passes beyond the protective limit of that law it is impossible for Americans to compete on equal terms with the sailors and the ships of other nations. We have raised the wages, we have improved the homes, we have improved the food and the clothing of the man engaged in manufacture, of the man engaged in farming and of the men engaged in mining and in internal trade; but when we reach the seaboard and our ships put forth to compete upon the ocean with the ships of other countries that protection ceases, and, as a result, it costs so much more to run an American ship than it costs to run the ships of other great commercial nations that the American ship has to go out of business. Some years ago I was required officially to examine carefully the conditions affecting trade upon the Pacific to and from the Isthmus of Panama, and I found that by an analysis of the cost of operating the ships of the different countries upon the Pacific it cost from \$4.37 a ton to \$7.31 a ton more to operate an American ship than to operate a German or an English ship. The result was that if an American ship of 2,500 or 3,500 tons was attempting to operate in competition with the ships of another country, if the other ship was willing to do business for a profit of \$15,000 to \$18,000 and no more, why, the American ship had to go into insolvency. That is an artificial condition caused by the increase of wages and of the standard of living in our own country, and it cannot be cured, in my judgment, except by either abandoning the policy which puts up American wages and the American standard of living, or extending the policy to our ships.

"There is one other artificial condition which American ships have to make. All the other great commercial powers subsidize their shipping. Let me give you the latest figures: Subsidies or mail subventions from Great Britain, \$9,689,000; France, \$13,423,000; Japan, \$5,413,000; Italy, \$3,872,000; Spain, \$3,150,000; Austria-Hungary, \$2,084,000; Germany \$2,301,000; Russia, \$1,878,000; Brazil, \$1,300,000; Little Norway, \$1,102,000. Altogether, including some of the smaller commercial powers, \$46,907,000 paid to the shipping lines with which American ships will have to compete, if they

ever return to the seas! While we paid during the year 1908 to all American steamships put together for carrying our mails, \$1,477,000."

We could not meet these two artificial conditions, he continued, without pursuing the same policy. If our foreign commerce was to continue, our trade must be pushed throughout the world, and the best agency for pushing it was the American vessel with the American master and the American flag. He urged the Chamber to call upon the people for support of measures in Congress designed to put our commerce upon an equal footing with that of the great commercial nations. We were receiving for ocean postage \$6,000,000 a year, nearly half of which was profit. This might well be expended in advancing the merchant marine. He was confident that the people, when they should have time for careful consideration, would decide upon reasonable treatment of the subject. He did not believe that any civilized nation was contemplating a career of conquest, but all the European nations were striving to advance and protect their commerce. And so every merchant ship put on the sea was a hostage of peace as well as an argument for it. We should give such hostages and make ourselves a part of the international commerce of the world.

Telegraph and Telephone

It became known on the 16th that the American Telephone and Telegraph Company (commonly called the Bell Company) had acquired an interest of about 30 per cent. in the Western Union Telegraph Company by purchasing the Gould shares, and probably those of the Sage and Morosini estates. This, it was admitted, gave control to the telephone company. There were reports that the transaction foreshadowed a consolidation of all the wire communication companies, including the corporation called The Mackay Companies, which owns the Postal Telegraph and the Commercial Cable Company. These were due in part to the fact that the Mackay corporation is the largest single stockholder in the American Telephone and Telegraph. But Mr. Mackay says to the public that his interests had nothing to do with the combination, did not wish to join it, and were

not moved to do so. Their telephone stock, he adds, is held as an investment. Telegraph competition, he asserts, will continue and will be real competition. The Western Union has 1,382,509 miles of wire; the telephone company 8,098,670. Capital stock and bonds are as follows, in round numbers: Western Union, \$137,500,000; telephone company, \$550,500,000. Mr. Vail, president of the telephone company, points out that if one business is made auxiliary to the other, there will be "large economies for both the public and the companies." There is much to be gained, he says, by joint construction, maintenance and use of plant, and the public will be served by placing the millions of telephone subscribers in close connection with the telegraph offices. Some predict that in many places there will be a practical consolidation of the local offices. Current estimates of the saving in expenses range from \$4,000,000 to \$6,000,000 a year. Dispatches from Washington, while not giving official information, indicate that the Government will not interfere, unless the combination should clearly operate to the injury of the public. There may be, however, a movement for Federal official supervision and regulation of rates.

The Revolution in Nicaragua

News came to Washington on the 18th that two Americans, Leroy Cannon and Leonard Groce, who had been acting with the revolutionists in Nicaragua, had been captured by the Government forces near Greytown and shot by order of President Zelaya. It was afterward ascertained that they were shot on the 12th, after trial by court-martial, and that the charge against them was that they had been laying dynamite mines to destroy Zelaya's transports. This news caused some indignation at Washington. The President declined to receive Zelaya's new Minister. The warships "Des Moines" and "Vicksburg" were at once ordered to the Nicaraguan coast. They were near at hand, one in the Pacific and the other in the Atlantic. Secretary Knox sent the following cable message to our consul at Managua:

Terriblely sorry to learn that two Americans were shot on the 12th of the 18th.

captured Americans. This Government can scarcely credit the report of the summary execution of two American citizens taken with the revolutionary army. The Charge d'Affaires of Nicaragua here also has been asked to demand full information, for this Government will not for one moment tolerate such treatment of American citizens."

In answer to inquiries from steamship men, Secretary Knox also took the first step toward recognizing the belligerency of the revolutionists, saying that our Government would not interfere with their blockade of Greytown harbor (the city being held by Zelaya) if the blockade was effective and maintained in accord with the requirements of international law. Our consul replied on the 20th, reporting that the two men had been executed on the 12th, after trial by court-martial, the authorities asserting that they had confessed to laying mines in the San Juan River. "The case," he added, "is absolutely unprecedented.

The commander-in-chief of the army and the Minister-General opposed the execution. It was ordered by President Zelaya, undoubtedly, thru personal antagonism, altho Cannon had been involved in revolutions against the Government." The new Minister at Washington reported that the men had pleaded guilty, and, in fact, had been caught while laying the mines. At Washington it was said that laying mines was a legitimate act of war which should not call for such punishment as is provided for spies. Cannon, twenty-nine years old, a native of Harrisburg, Pa., had been for some years in Central America and he owned a plantation near Managua. Involved in a revolution in Honduras a year or two ago, he narrowly escaped execution, and he had practically been driven out of Nicaragua by Zelaya. Groce, thirty-two years old, a native of Texas, had made a fortune in mines, and it is said that Zelaya had persecuted him with the purpose of getting his property. It is reported that 1,000 prominent citizens have been imprisoned and put in chains by Zelaya, many of them because they would not contribute to pay the expenses of the war; also that about 500 have been put to death. The official explanation of the execution of Cannon and Groce was not regarded as satisfactory by our State Department. At last accounts it was ex-

pected that more warships and several hundred marines would be sent to Nicaraguan waters.

The trial of the bandits **The Islands** captured some time ago in the southern part of the Philippine archipelago, when their leader, Jakiri, was killed, was finished last week in Jolo. Five were sentenced to be imprisoned for life, five for twenty-five years, twenty-five for twenty years, and five for six years.—Fortifications of great strength have practically been completed on Corregidor and the three other islands situated at the entrance to Manila Bay. On one of these islands, El Fraile, there has been constructed what may be called a fixed battleship of concrete, bearing two revolving turrets in which 14-inch guns are mounted. It is said that these fortifications make it impossible for a hostile fleet to enter the great bay.—A naturalist employed by the Department of Agriculture, returning to Manila from the islands south of Mindanao, reports that the natives of one of these islands (Sarangani) are offering to sell young girls into slavery for small quantities of opium.—The crop of sugar in Hawaii is the largest ever known there. It is stated by the Planters' Association that experiments with Filipino and Russian labor have been quite satisfactory.—A bill, said to have the support of the Government, has been introduced in the Cuban Senate, providing for the establishment of the national currency upon a gold basis, with coins and conditions like those in the United States.

After the Chilean Foreign Office had agreed that the Alsop claim should be submitted for arbitration at The Hague, President Montt interfered, withholding his consent. On the 17th, the American Minister left Santiago. Chili was warned on the 18th that our legation there would be closed if the negotiations were interrupted. On the 19th, it was announced in Santiago that negotiations for arbitration had been resumed. The claim has been pending for more than thirty years, and Chili's attitude toward a settlement of it has repeatedly

displeased the authorities at Washington.—While riding in a carriage on the 14th, in Buenos Ayres, the chief of police of that city and his secretary were killed by a bomb thrown by a Spanish anarchist, who at once shot himself, but did not inflict a mortal wound. Martial law for sixty days has been proclaimed there.—Cipriano Castro, now in Spain, gives notice that he relinquishes all claim to the presidency in Venezuela and that he intends to reside in the United States.—In Ecuador, a revolutionary force led by Colonel Larrea was attacked and dispersed last week, and Larrea was killed.—Luis Undurraga, the Chilean civil engineer who has been seeking the support of European capitalists for the construction of an interoceanic canal on the Atrato route, has abandoned his efforts to obtain a concession from Colombia, that country being unwilling to incur the displeasure of the United States by promoting such an undertaking.

The Conflict of With their confidence strengthened by the Unionist victory in the Bermondsey district of London, the Lords have determined to make a stand against the budget. On November 22 Lord Lansdowne, as leader of the Opposition in the upper house, will move

"that this House is not justified in giving its consent to this bill until it has been submitted to the judgment of the country."

The Liberals deny the right of the House of Lords to force a dissolution of Parliament at its will and particularly on such a question, for since the revolution of 1688 the House of Commons has been regarded as supreme in all financial matters. The present Liberal Government has paid no attention to the rejection of its bills by the House of Lords. When one of its measures was vetoed it has simply passed on to the next piece of legislation in its program of radical reforms. Consequently, it has accumulated a large number of counts in its indictment against the Lords and added to the strength of its appeal to the country. The tone of the coming campaign may be inferred from this quotation from an editorial in the *Liberal Chronicle*:

The Lords have shown the way to destruction. It is the duty of every member of the House of Commons to work to bring the House of Lords before the people with all its impotence and its greed. Gold and unscrupled it is standing forth as the selfish defender of privileges in land and liquor and the champion of taxation on food. A more shameful conspiracy against the Commonwealth has never been unmasked."

Winston Churchill, President of the Board of Trade, presents the view of the Government when he says that the power to force dissolution is the prerogative of the Crown, and that finance is the exclusive privilege of the House of Commons. Therefore, he argues, the rejection of the budget is a double invasion by the Lords both of the royal prerogative and of the Commons' privilege, and that, further, if the Lords establish at the general election their right to control the country's finances they will make themselves the predominant power in the state by their ability to destroy the budget, stop the King's revenue, and force the dissolution of Parliament every year. Secretary of War Haldane says that the Lords have declared a revolution and precipitated a conflict in which no quarter will be given on either side. The endeavors of the King to act as peacemaker in this crisis, as he often has in foreign affairs, has caused the radicals to turn against him, and there are some symptoms of a revival of the republican sentiment which for many years has been unvoiced. Now some speakers go so far as to say, "The crown will go into the melting-pot with the coronet." Ex-Premier Balfour, the Unionist leader in the House of Commons, opened the campaign for the Opposition by a speech, delivered, curiously enough, in a free trade hall, before the annual conference of the Conservative Association of Manchester. He denounced the budget as a combination of bad finance and muddle-headed socialism, and came out openly for a tariff as the only practical alternative. He argued that a protective policy would be of especial benefit to the Lancashire cotton industry, which was seriously threatened by European, American and Japanese competition, and the growing difficulty of obtaining sufficient supplies of raw material. He commended the American and Australian prosperity

had grown up contemporaneously with the imposition of high protective duties. Mr. Balfour said that the adoption of a tariff would put into the hands of the Government a weapon of retaliation which the country had hitherto been too proud or too stupid to avail itself of, and would promote the unification of the empire thru a system of colonial preference. He believed that Lord Lansdowne was undoubtedly right in the action he had taken, however the country might pronounce upon the question at issue. He held that while the House of Lords was no longer co-equal with the House of Commons, it would be fatal to the country's institutions if it were deprived of the power to say that some matters were so grave as to necessitate an appeal to the country, and he asserted that the main function of the second chamber was to see that the Government of the country was a popular Government.

British Politics The success of the Liberals in the campaign which is expected to take place in January will depend upon whether they can make an agreement with the Labor men so as to prevent the three-cornered contests which have resulted in many Opposition victories. The Irish Nationalists, altho they oppose the budget because of its imposition of an increased tax on one of the few profitable industries of Ireland, the manufacture of whiskey, will unite heartily with the Liberals on account of their old grudge against the House of Lords for throwing out the Home Rule bills.—The suffragettes, as they become more violent in their methods, are receiving heavier penalties. Ellen Pitman, who threw a stone thru the window of a post office at Bristol, has been sentenced to two months' imprisonment at hard labor. Some of the suffragette prisoners are not only starving themselves, but refusing to wear prison garb even after their own clothes have been removed. The leaders of the militants have issued a manifesto approving of the attempt of Miss Theresa Garnett to use a whip on Winston Churchill, justifying it on the ground that it is by universal admission the appropriate method, where other means are

unavailable, of avenging an insult to womanhood, such as the denial of the right of suffrage.—On the same day, when the Hindu anarchists attempted to assassinate Lord Minto, Viceroy of India, his plan for a reform in the administrative system was promulgated. Under the new régime the natives will have a larger share in the government than before, altho the ultimate authority will remain, as before, in the hands of the British officials. The council of the Viceroy is to be enlarged from 126 to 370, of whom 135 will be elected, instead of 39, as before. The system of voting has been arranged with a view of securing the representation of both the Hindu and the Mohammedan communities. In order to prevent disloyal natives from getting into the council all members will be required to take the oath of allegiance to the British Crown. Further than this, the Government reserves a veto power over the elections and may declare ineligible to membership, in either the Viceroy's or the provincial councils, any person whose presence there is considered detrimental to public interest.

The French School Question

The war between the Catholics and the public school teachers is not confined to proclamations of defiance between the Cabinet Ministers and the bishops, but in various localities the people are taking an active and sometimes violent part in the controversy. The threat made by the priests of exclusion from communion of parents who send their children to the public schools has not in all cases had the desired effect. At Bayonne, the parents, instead of withdrawing their children from the public schools, withdrew their contributions from the church. In other places the children, in accordance with the instructions of the priests, refused to study the books which have been interdicted by the ecclesiastical authorities. At Chassigny-sous-Dun, in Saône-et-Loire, the mothers of the Catholic pupils in a girls' school made a bonfire of the proscribed books. The books which were designated as improper for use by the declaration of the French cardinals, archbishops and bishops include five school histories of France and certain books on civics and

morals. Some of these books have been in use in the private schools, even those under Catholic control. The objection to them is based upon their materialistic interpretation of history and their anti-clerical tendency. In one of the histories, for example, there is a picture of a heretic being burned at the stake by priests, which is regarded by the ecclesiastical authorities as an impious and malignant falsehood. On account of this public denunciation of these books of instruction as immoral, the authors and teachers in some cases have brought action in the courts for libel. The Church authorities, however, hold that the words moral and immoral are used in the Catholic sense, the Church having a higher standard than the outside world, and that for them to refrain from announcing what they regard as the sin and corruption of the world would be to abrogate their priestly function.

French Finances and Courts

The anticipations that Premier Briand would have difficulty in getting the Chamber of Deputies to approve of his financial policy were without justification. At the conclusion of a general discussion of the budget in the Chamber on November 19, the Government was given a vote of confidence. The amendments which had been proposed were withdrawn without action. The new budget carries more than \$40,000,000 of additional taxation, the burden of the increase being thrown chiefly on wines, tobacco, automobiles and inheritances. The inheritance tax has been raised from 20.5 per cent. to 26 per cent. in the case of large fortunes. It is expected that this increase will bring in additional revenue to the amount of \$10,000,000. The exposure of the financial difficulty has aroused apprehension among various classes, especially in view of the fact that the program of the Government for old age pensions and similar measures will necessarily involve still heavier taxation in the future. M. Jaurès, the Socialist leader, declared in his speech before the Chamber of Deputies that the financial crisis which is common to all European countries does not result from their

social reforms, but from the crushing peace armaments which are being maintained, owing to the rivalry between Great Britain and Germany. He declared that the frequent war scares, such as those of Morocco and the Balkans, were caused by this, and the result would be the bankruptcy of Europe unless it ceased. He urged the necessity of an Anglo-Franco-German *entente* as the only way of securing a reduction in military expenditure.—The Steinheil trial made conspicuous the injustice and inefficiency of the French method of conducting criminal trials. Minister of Justice Barthou has appointed a special commission to devise methods of reform in court procedure. The commission will be composed chiefly of magistrates and advocates. Two points on which the French system is acknowledged to be defective is in the conducting of the preliminary investigations and the custom of allowing the presiding judge to assume a hostile attitude toward the accused and take the part which in the United States is assumed by the prosecuting attorney. In a trial before a French assize court on November 19, the judge adopted the Anglo-Saxon plan and did not take part in the examination of the prisoner.

The Finnish Diet Dissolved

The Finnish Diet, by unanimous vote, on November 17th, refused to grant Russia's demand for \$4,000,000 for military purposes. A resolution was passed asking the Emperor to have the military question settled constitutionally. On the following day an imperial rescript was issued dissolving the Diet and ordering new elections on February 1st. The Russian Government absolutely disclaims any intention of incorporating the province of Viborg or any other part of Finland. According to the official Russian view of the controversy, the Finns are endeavoring to secure an absolute autonomy and separation from Russia and attempting to evade their just share of the imperial burdens. Finland the Russians say, was not a separate state under the Swedish crown, but a Swedish province, and after the conquest was permitted to retain the

constitutional rights that she had enjoyed under Swedish rule. In 1906, when the autocracy became a constitutional monarchy, the Czar's legislative prerogative was thenceforth to be shared with the Duma and Council of the Empire. This event necessarily involved a change in the whole mechanism of Russia's legislation, and perforce altered the relative position of Finland. Wherever imperial interests were involved, the legislative authorities of the Grand Duchy no longer had to deal with a Russian autocrat, but with a combination of sovereign and two Houses of Parliament. The Finns, however, obstinately declined to take this change into consideration. A mixed Russo-Finnish commission was recently appointed to deal with this question. Its labors have not yet advanced beyond the preliminary stage. The Finnish members demand a system of delegations; in other words, they treat Finland and Russia as equivalent entities. But their demands go beyond the dualism of Austria-Hungary. They insist that in case of disagreement the sovereign shall not have the deciding voice and that further legislation shall be blocked. The Russian Government proposes as a fair adjustment that all Finnish legislation affecting the Empire shall be introduced in the Duma as well as in the Diet, and, in case of disagreement, the Finns shall have delegates in both the Russian houses to set forth their objections. Bills could then be re-introduced in the Diet, but in case of a second disagreement the decision of the imperial legislature would prevail. According to the official Russian view, the Finns should contribute to imperial expenses in proportion to the population and resources of the country. This would make their share of the war budget about \$12,000,000, instead of the \$4,000,000 which they refused to pay. The attitude of Finland is also regarded by the Government as disloyal. The revolutionists have always found shelter and support there and carried on their importation of arms thru that country. The Socialists now hold two-fifths of the seats in the Diet. For these reasons, the Russian authorities consider themselves justified in insisting on the military assessment and in resisting the separatist movement of the Duchy of Finland.

Thanksgiving

BY CARLOTTA PERRY

No place in the rich man's world I hold,
No man envies me silver or gold.

No man grudges me princely wage,
Houses or lands or equipage.

Yet none who possess what I do not
May dare to mock at my simple lot.

For my humble roof is still wide to bless
With its shelter him who is shelterless.

Who by want to my door is led,
He may share my cup, he may break my bread.

Of the cheer of my home I can give a part,
In the warmth of my hearth he may warm his heart.

He may go his way as seems to him fit,
Grateful or thankless, what matters it?

For any good at my hands he has had,
'Tis I who am thankful, 'tis I who I am glad.

CHICAGO, ILL.

Polar Exploration, Peary and Cook

BY FRANZ BOAS

PROFESSOR OF ANTHROPOLOGY IN COLUMBIA UNIVERSITY.

THE intense interest in the Arctic regions that has been excited by the return of Peary and Cook has been directed largely to the feat of reaching the North Pole. It seems appropriate, therefore, at the present moment to call attention to the geographical problem of the Arctic area.

The numerous attempts at forcing the

Northwest and the Northeast passages and the explorations northward undertaken along the Greenland coast, from Spitzbergen and from Franz Josef Land, have made the outlines of the Arctic Ocean fairly well known. The drift of the "Jeannette" expedition, under De Long, from Bering Strait north of Wrangel Land; Nansen's drift

from Siberia north of Franz Josef Land and southward between Spitzbergen and Greenland; the Duke of Abruzzi and Cagni's dash northward from Franz Josef Land; Peary's exploration of the north coast of Greenland; Sverdrup's work in the region west of North Greenland; Mylius-Erichsen's successful exploration of the extreme northern part of East Greenland, for which he paid with his life; Mikkelsen's attempts to push northward in the region of the Mackenzie River, mark the outlines of the unknown territory.

The present conditions of our knowledge are indicated on the accompanying sketch-map, in which the entirely unknown territory is roughly outlined.

It will be seen from this sketch that the geographical problem of the Arctic lies in the area between the Arctic American Archipelago and the islands of New Siberia, and between Bering Strait and the North Pole; in other words, the North Pole, which has been the goal of the ambitious attempts of our explorers, is just on the boundary of the unknown area. The larger geographical problem relates to the region between Bering Strait and the Pole, and the heart of the unknown territory is approximately half way between these two points.

The only one among the recent explorers who tried to attack this great problem directly was Mikkelsen, who intended to ascertain the location of the continental shelf of North America north of the Mackenzie River. His expedition failed, and no further attempt has been made in this direction.

The delimitation of land and water area in this vast unknown territory is only the first step in its exploration, and the essential problems to be solved relate to its meteorological, hydrographical, magnetic, oceanographic and geological conditions, all of which require patient and long-continued work.

The great merit of the work of men like Peary and Cook lies in the contribution that they have made to the technique of Arctic travel. For we must not forget that the traveler who passes over a difficult route does not become by this feat an explorer. We expect the explorer not only to travel, but also to see and to

observe things worth seeing; and it would seem that Peary, with all his perseverance and skill in travel, has not practised this art, and has not added much to our stock of knowledge, measured by the amount of money and energy spent on his work. Even less does this seem to be the case in Cook's travels. The scientist will therefore gratefully accept the contributions to the technique of travel made by both men, but will pass over the adventurous trip as, comparatively speaking, irrelevant in the development of geographical knowledge.

It may be of some interest at the present moment to review briefly the development of the technique of polar travel.

All the early attempts at exploration of the Arctic were made by means of vessels, and it was naturally difficult to make headway against the dangers of the ice in vessels propelled by sails. A few attempts were made in early times to push northward by means of sledges from vessels caught in the ice, but none of these led to important results.

A change of method in Arctic exploration was brought about by the Franklin search expeditions in the American Archipelago. While the outlines of the long strait leading from Baffin Bay westward into the Arctic Ocean were ascertained by Parry in an exceptionally favorable year, the forms of the numerous islands and straits were laid down in detail by the laborious sledge expeditions which started from the numerous vessels that were sent into this area to discover the fate of the Franklin expedition. In all these cases the sledge expeditions were organized on board the vessels, without the help of Eskimos, and dogs did not play an important part in their management. The achievements of these explorations were great; but the expense of the journeys, the number of men required, and the necessity of bases of supply, made their work laborious and difficult.

A great improvement in methods of exploration by means of sledges was first introduced by Sir John Rae, who set out on his search for the Franklin expedition from the northwestern corner of Hudson Bay, utilizing the usual ways of travel employed by the agents of the

Hudson Bay Company. This mode of travel, with the help of natives, was not fully developed until the whaling industry of Hudson Bay and Cumberland Sound began to flourish, in the middle of the second half of the past century. It was particularly the merit of Charles Francis Hall, who later on commanded the American "Polaris" expedition, to have developed the technique of travel-

serviceable only as long as land formed the basis of progress. In Peary's and Nansen's attempts to utilize the inland ice of Greenland, new methods had to be developed; and in Peary's later dashes northward over the polar ice, as well as in Nansen's dash northward from the "Fram" and on his return journey, an element of risk is introduced which makes careful investigation on

MAP OF THE REGION AROUND THE NORTH POLE.

ing with the assistance of Eskimos. Altho the scientific achievements of his travels are not considerable, his contribution to the technique of Arctic traveling has been of great importance in the whole later exploration of the Arctic Archipelago, of the Smith Sound region, and of East Greenland. In course of time it seemed obvious that this method of exploration would, on the whole, be

expeditions of this kind well-nigh impossible.

Much more promising for the exploration of the open sea is a method which was developed during the second half of the past century. Ships have been caught in the ice on former expeditions and have been carried 'way out of their course. The studies of the hydrographic conditions of the Arctic had led

to a number of important conclusions. Altho De Long, when starting on his ill-fated expedition in 1879, still believed that a mass of land might connect Wrangel Land with Greenland, Bessels, a member of the American "Polaris" expedition, had proved conclusively, as early as 1870, that Greenland could not extend northward beyond the 84th degree of latitude. His conclusions were based on tidal observations made in Smith Sound. This, taken in connection with the strong current of Arctic water setting southward along the east coast of Greenland, suggested that in the long run the mass of surface water of the Arctic finds its way southward between Greenland and Spitzbergen. It seemed likely, therefore, that if a vessel strong enough to withstand the pressure of the ice could be driven into the Arctic ice, it would gradually drift across the Arctic Ocean and come out between Greenland and Spitzbergen. The existence of this drift was proved when the relics of De Long's vessel, the "Jeannette," were found several years after her loss in Greenland. Their probable drift thru the Asiatic side of the unknown territory is shown on our sketch-map. Later on Nansen, on the great expedition of the "Fram," which has contributed so much to our knowledge of the Arctic, tried to cross the Arctic by utilizing the movements of the ice, and it will readily be seen that similar drifts may clear up many of the geographical problems of the Central Arctic area. The great danger and difficulty in undertakings of this kind, starting northward from the American coast, lies in the fact that in many seasons the ice will be driven against the coast line of the Arctic Archipelago, extending from the Mackenzie region to the northeasternmost cape of Greenland. The descriptions given by the Franklin expeditions, which

explored the most western islands of the Arctic Archipelago, and the descriptions of the ice north of Ellesmere Land, are proof of the formidable character of these pressures. Still, it would seem, in the light of the extended experience of the past century, that for a well-prepared expedition retreat over Arctic islands would be possible.

Still another method of Arctic exploration has been attempted, directed more toward the observation of the physical phenomena of the atmosphere and the waters and magnetic conditions than to topographical exploration. The most systematic attempt of this kind was made in the year 1883, when the various nations maintained a number of circum-polar stations, both in the Arctic and in the Antarctic, whose observations have contributed much to our knowledge of the physical conditions of the earth. In connection with these expeditions will be remembered the attempts of Captain Howgate, who was one of the first to call attention to the feasibility of both geographical and physical observations supported by permanent bases.

It seems that we are destined to see in the near future serious beginnings of a new method of Arctic exploration by means of the airship. After the unfortunate attempt by André and the repeated failures of Wellman, the question of a systematic exploration of the higher regions of the atmosphere is to be attempted systematically by an airship built on the Zeppelin plan.

The topographical problems of the Arctic, as well as those relating to the physical conditions of the earth that must be solved in the Arctic and Antarctic, are of great importance, and it will be seen that the technical achievements of the last century have placed us in a condition which makes the solution of these problems feasible.

NEW YORK CITY.

High Prices

BY THE HON. COE I. CRAWFORD

UNITED STATES SENATOR FROM SOUTH DAKOTA

There is a good deal of complaint nowadays about high prices and the increased cost of living. It is a fact which none can deny that the prices of the necessities of life have, as a rule, steadily increased during the past ten years, and that from 30 to 50 per cent. more money is required in the support and maintenance of a family today than was necessary ten or twelve years ago.

A laborer getting a salary of from sixty to seventy-five dollars per month in 1896 could support his family in simple comfort and save something besides; but in 1908 he found it impossible, with the same wages, to pay his rent and keep even with his grocer, try he never so hard.

This increase in the cost of living, where no corresponding increase in wages and fixt salaries has occurred, has caused a bitter protest. People are inquiring into the cause. Is it a bad thing for the country to have an era of high and generally advancing prices?

That depends entirely upon the angle from which you view it. If you are a poor man or woman, dependent entirely upon a daily wage or a monthly or yearly salary which has not increased in the same ratio, the period of high prices is not a good thing for you, and you have a right to insist upon better pay or lower cost of living.

If, on the other hand, you are engaged in the production of articles of food and raiment, or other materials of general use and necessity—a farmer, for instance, or a banker, buyer and seller, investor, manufacturer, carrier of commodities, or a member of a labor union in a flourishing plant where, thru the union, you have compelled a corresponding increase in wages—the advance in

prices and the resulting activity in business has been and is a good thing for you. It has been a fine thing for

the farmer in the great Middle West, because, in addition to the enormous increase in the value of his farm, the prices of farm products have increased along with the general prices of the things he has to buy, and the steady increase in prices during the past ten years has made him rich. But notwithstanding the fact that the country has prospered marvelously during the past twelve years, and notwithstanding the fact that the shop, the store, the factory, the mine and the farm have brought rich returns, we must not overlook the burden which these high prices have put upon the family of the poor man whose wages have not increased in the same ratio. These more unfortunate ones are making a vigorous protest, and one of the live questions just now is: Why have prices gone up? Why is the cost of living so much more than it was ten years ago?

Some answer at once that the trusts and combinations in restraint of trade, crushing out all competition, have arbitrarily increased prices to the point of extortion; others charge that the protective tariff is to blame; others again tell us that these prices are fixt by the law of supply and demand, and result from the increase in the volume of our currency, and from other natural causes.

What is the correct answer to this serious inquiry? Can we attribute the general advance of prices to combinations in restraint of trade? If the price of crude and refined petroleum or the price of steel rails had advanced very materially during the past ten years, and the price of other staple articles had re-

remained stationary, or fallen, it would be a fair inference to say that the increase in the price of crude and refined petroleum and in the price of steel rails was because the Standard Oil Company and the United States Steel Corporation have a monopoly in the production of these articles.

But when we discover that the prices of ten thousand articles which neither the Standard Oil Company, the United States Steel Corporation nor any other trust controls have steadily advanced more rapidly than petroleum, and that the price of steel rails has not advanced at all, this explanation does not explain.

I am decidedly in favor of the most rigid Federal supervision of great monopolies like the Standard and the United States Steel. Such combinations should not be permitted to follow their own sweet will in fixing the price of any article of necessity. But it is manifest that their power to fix the price of oil, or of steel rails, has no connection with the high price paid for wheat, barley, flax, pork, mutton, beef, fish, lard, cheese, milk, butter, poultry, eggs, rice, rent, clothing, and countless commodities produced by individuals in no manner connected with any combination in restraint of trade. Monopoly can neither be defended nor excused, but it is not the cause of prevailing high prices.

Are excessive tariff duties to blame for these high prices generally?

I do not believe in excessive protective tariffs because they lead to grave abuse and injustice; but the explanation of high prices is not found there. If the prices which have so steadily advanced during the past ten years were confined to articles exclusively produced by a combination of American manufacturers under the protection of a tariff so high as to exclude all foreign competition, while the prices of other articles not so protected remained stationary or dropped into a lower scale, we would be justified in attributing the higher prices of such protected articles to the prohibitive tariff and to domestic monopoly; but that is not the case.

The United States Steel Corporation, in many lines, enjoys a monopoly, and yet its products have not advanced more than thousands of articles which it does

not produce or control and the production of which is not protected by the tariff, nor by any trust or combination whatsoever.

Grant that prohibitive tariffs are responsible for such advances above the general level as may be traced to them, yet this does not explain the generally high and advancing prices of innumerable articles to which they bear no relation.

There is a heavy tariff on sugar and the American Sugar Refining Company is one of the worst outlaws in the country. But sugar is one of the few articles that has not advanced in price. On the contrary, it has gone down. In 1907 we imported four billion pounds of sugar, which paid a duty of over sixty million dollars, and yet, while the price of food products not affected by the tariff increased over 26 per cent. during the past ten years, the price of sugar fell 1.6 per cent. This fall in price was undoubtedly due to overproduction, but it indicates that some other cause than monopoly and high protective tariffs is responsible for the general advance in prices.

Statistics collected by the Bureau of Labor show that the advance in prices has been worldwide, and that the products of the farm have kept pace with the products of the mill and factory. What, then, is the cause?

Manifestly, it is complex. Many elements enter into it. Variations in the harvest, changes in the fashions and habits of the people, the use of other articles as substitutes, overproduction, shortage in supply—all these, to a greater or less degree, affect prices.

But there is another very material factor which has not been taken into full account, and that is the substantial increase in the volume of gold, which measures the value of all commodities, and the increase in the circulating medium of the United States during the past twelve years. On July 1, 1896, the circulation per capita in the United States was \$21.10, while on July 1, 1909, notwithstanding the great increase in population since 1896, it was \$35.01 per capita, an increase of \$13.91 per capita. The world's coinage in 1896 was a little less than \$200,000,000; in 1907 it was a

little more than \$400,000,000. In 1896 the production of gold in the United States was \$53,088,000; in 1907 it was \$89,620,389. This enormous increase in the world's coinage of money and this enormous increase in the circulation per capita in the United States have obviously lessened the purchasing power of the dollar.

The value of commodities expressed in a cheaper dollar means, of course, higher prices. While this increase in money volume is not, of course, the sole cause of advancing prices, it is the prime cause, and for some reason it has been given slight attention in the public discussion so far. It has been the chief contributing cause to prosperity and good times, and no one could secure a hearing who would propose a contraction of the present volume of circulation.

While the laboring man, whose wages have not advanced as swiftly as the cost of living, and the man dependent upon a fixed salary which has not advanced at the same rate, have suffered and have

reason to complain, statistics show, nevertheless, that the average wage per hour in over 4,000 establishments in the principal manufacturing and mechanical industries of the United States in 1907 was 28.8 per cent. higher than the average wage per hour for the years from 1890 to 1899. The number of employees was 44.4 per cent. greater.

On account of money being plentiful and actively employed during these years of increasing money volume, labor has been quite generally employed also. From this condition of industry and production, it seems clear that what is needed is a fair advance in the wages and salaries of employees, where they have not kept pace with advancing prices, and not an attempt to reduce the general maintenance of good prices. With the volume of currency kept full and no restraint upon gold coinage, prices will go still higher, but the general result will be due to the increasing volume of circulating medium rather than to monopoly.

HURON, S. DAK.

The Fruit of Their Way

BY BOLTON HALL

"I WANT to buy military glory," said the Nation. "Your advertisement says that your price is Taxes and Blood and that you give a Business Boom as a premium."

"Quite so," replied the Devil: "the Boom is a recent inducement, because only soldiers and contractors want war for itself."

"But," said the Nation, "how do I know that you will collect no further price?"

"Ah, well," said the Devil, "of course there is a little vanity; you know 'he that soweth iniquity shall reap vanity,' but you won't mind that."

"No-o," said the Nation, "but I have heard that you are a liar from the beginning; what guarantee have I that I shall not get more than I bargain for?"

"Why, my dear," said the Devil, "you are guaranteed a fair deal by God, 'the righteous shall eat of the fruit of their doings and the reward of his hands shall be given the wicked.' Isn't that plain?"

"Then war be it," said the Nation.

After the Victory the Nation began to take account of stock, and found Monopoly and Bonds and the Man on Horseback and Imperialism and Corruption among the fruits of the war.

"Here," said the Nation, "you Devil! these don't belong to me. I was to have only the goods I ordered."

"Why," said the Devil, "be reasonable. Those are not the goods, those are only the wrappings that you took off."

"But where is the Business Boom?"

"Oh, the Monopolists appropriated that," said the Devil.

NEW YORK CITY

The New Mayor of New York City

BY FREDERIC W. HINRICHS

[Mr. Hinrichs is a prominent New York lawyer. He has served as counsel to the Mayor of New York City, and is well qualified to write on the subject treated.]

WILLIAM J. GAYNOR, the candidate of the Democratic party elected Mayor of New York, received contributions from friends to defray his campaign expenses—but he returned every remittance, and, furthermore, did not spend a dollar of his own means to insure his election.

And, in other respects, also, the Mayor-elect was a unique figure in the recent stirring political contest. He stood out as the most conspicuous example of a candidate for a great office—surpassed in importance and power by that of the Presidency only—openly and persistently defying the metropolitan papers to do their utmost in writing him down. The *New York Press* seemed, at times, to be the only prominent paper in the entire city faithfully and enthusiastically supporting him.

The circumstances leading up to Judge Gaynor's nomination were also unique. It is generally believed that he was not the real choice of the convention which nominated him, nor even of the political leaders who dominated the convention. Long before the convention met, however, he was clearly the most prominent mayoralty possibility before the people. And it cannot be seriously questioned that if the primary reforms advocated by Governor Hughes had been the law of the State, Judge Gaynor would have led in the primaries of both great parties. His Republican opponent would probably have polled but few votes, since he was politically unknown prior to his nomination.

The Republicans refused to make the Judge their candidate. The Democrats, *nilens-nilens*, promptly accepted him as their standard-bearer.

Owing to the peculiar situation which the campaign developed, Mr. Hearst entered the field as a third candidate for the office of Mayor, with substantially the same ticket behind him in a great part of the city as that behind Mr. Bannard, the Republican nominee. Judge

Gaynor was, as a result, the only candidate elected on the Democratic city ticket, while the combination of Republicans or Fusionists and of Hearstites was quite generally successful in the several boroughs of the city.

Judge Gaynor's election was by a plurality considerably in excess of 70,000 over his principal opponent, Mr. Bannard. Mr. Hearst drew from both parties. The vote for Judge Gaynor was not phenomenally large. In view of all the conditions of this singular campaign his nomination was apparently a popular one. The likelihood of such nomination forced itself upon Judge Gaynor's attention months before the campaign opened. His availability was admitted by most men in public life. His popularity and his subsequent nomination were undoubtedly due to his conspicuous record in and out of office. His subsequent election by a decided plurality may, therefore, fairly be called a personal triumph.

He was wont to exclaim during the campaign, with a measure of pardonable pride, "No boss ever made me and none can pull me down." It is not an exaggeration to state that the Judge's record compelled his nomination, and hence, in a large measure, his election. It is the hope of all of his well-wishers that no outside selfish influence will cause him to suffer an eclipse.

It is commendable in an American properly to aspire to high office. Yet, nevertheless, it is true that Judge Gaynor, as to this particular contest, long hesitated before he permitted his name to be used. If we look back to early spring when his name was first conspicuously mentioned, we shall find most men familiar with political conditions in both parties frankly admitting that his nomination would probably mean his election.

Many of his enthusiastic supporters undoubtedly expected for him a great majority. But after the campaign joined the complexity of the situation

was such that no one could truly predict the result. Never, it is believed, was there so much independent voting as in the last campaign. The event was as stated. The plurality was sufficient to elect the Judge, but not so large as to tempt him, even were he so inclined, to be reckless in his appointments or careless in the subsequent conduct of his exalted office.

Those who know him best believe that his "whole anxiety is to make good appointments and to get good government."

There have been many campaigns in the City of New York quite as exciting as that thru which we have just passed. But no campaign was ever conducted on a lower level. Personalities were the rule. Principles were almost ignored.

It is the belief of not a few well-informed citizens that the campaign of slander was instituted and maintained in order to prevent a presentation to the voters of the importance of city-built, city-owned, and city-controlled subways. The Democratic platform was outspoken upon this subject, and the views of most men who have studied the problem of rapid transit with an eye single to the city's interests were never so well expressed. This Democratic platform was from the pen of Judge Gaynor.

It distinctly declared in favor of the building by the city of its future subways. But, best of all, it provided that no operating leases should be permitted until the contracts for building had been awarded and partly or wholly completed. For the first time a party platform in a New York City election emphatically de-

clared in favor of awarding contracts for construction separately from those for operation.

Judge Gaynor was assailed from the start to the finish. He was charged with every possible offense and shortcoming. His integrity as a judge was questioned. His assailants did not hesitate to take up slanders long ago supposed to have been laid to rest. All of this finally culminated in a rumor which had its start in the West to the effect that the Judge was an apostate to his faith, and all Catholics were urged to vote against him.

The Judge at first failed to notice the bitter assaults made upon him, or referred for answer to his public record. At length, however, he retaliated in kind, and doubtless said much that he subsequently regretted—but the provocation was great. The last attack made upon him, so clearly un-American in character, reacted against its inventors, and, doubt-

less won for him many votes. The mingling of creed with politics is not relished by an American constituency, and still less, perhaps, by one so cosmopolitan as is the population of New York City.

Now that the smoke of battle has cleared away, even the professional critics begin to forget their criticisms, and the slanderers and backbiters have long ago disappeared. The spectacle was presented (and it was, indeed, a spectacle) of the man attacked sending to his principal detractor and oppo-

nents, after he had triumphed and they had failed, envelopes filled with clippings and the like, which he had recovered during the campaign, and which contained material hurtful to their reputations, but

JUDGE WILLIAM J. GAYNOR.
Mayor elect of New York.

which he had steadily refused to use against them. This action on the part of Judge Gaynor deserves general commendation.

Now, even in the ranks of the opposition, many of the Judge's fellow-citizens begin to speak of the real Gaynor as the people have known him for years. He was born in Northern New York in 1851, a member of a family made up of both Protestants and Catholics. He has in him a strain of Irish fighting stock. In his boyhood and early youth he heard frequent discussions in his family circle as to the relative merits of the different theological schools. For a few years, in early youth, he attended the school of the Christian Brothers. But he early tired of theological controversy and of a religious atmosphere, and as a mere youth determined to study law. For a while he lived in Boston, and then came to Brooklyn in the early 70's, not long after reaching his majority. While engaged in journalistic work he pursued the study of the law, and was admitted to the bar in 1875. That he made great strides in his profession is known to all. The bench and the bar recognized his admirable legal gifts. He early mingled in politics, and soon became known and feared as a foe of corruption in public life. One recent outline of his life correctly puts it when it says that he "gained national reputation by effective work in breaking up 'rings' within the Democratic party, of which party he was an adherent." His prevention of the Long Island Water Supply Company purchase by Brooklyn gained for him great prominence, and caused the promising political career of the then Democratic Mayor of Brooklyn to come to an end. The part which he took in securing the conviction of the notorious John Y. McKane, for election frauds, is known to all. As a consequence of this and of other public acts he was at first shunned by the leaders of his corrupt party machine. It required courage for young Gaynor to stand alone, and among his party associates he did for years in fighting wrongs within his party's organization. The people, generally, began to talk about him for Mayor of the old City of Brooklyn, on the Republican ticket, altho he was a Democrat. That nomination was not

accorded to him, but he was persuaded at the time to stand as a candidate for the Supreme Court Judgeship. In a Democratic district, against a Democratic opponent, tho upon a Republican ticket, he carried every county. This was in 1903, when he, with Edward M. Shepard and a few other well-known Democrats, took the stump for Mr. Schieren, the Republican candidate for Mayor of Brooklyn. It will hardly be denied by any one familiar with the facts that Judge Gaynor's advocacy of Mr. Schieren's election contributed, more than any other one element in the campaign, to roll up the astounding majority for the head of the Republican ticket.

After serving with singular zeal and ability as a judge for twelve years, Mr. Higgins, a Republican Governor, designated Judge Gaynor to sit in the Appellate Division, Second Department, of the New York Supreme Court, and this, too, without any suggestion from the Judge. In 1907, when his first term as judge expired, he was renominated by the Democrats, the Republicans and the Independence Leaguers for a second term, and was elected practically unanimously. The present Republican reform-Governor Hughes thereupon redesignated Judge Gaynor to a seat in the Appellate Division. From this court he resigned, as the Constitution required, when he accepted the recent nomination for Mayor.

It is well known to many of Judge Gaynor's friends that the nomination for Mayor of Brooklyn was once at least definitely offered to him by his party associates. It is known to the writer that the nomination for Governor could once at least have been had by Judge Gaynor if he had merely expressed a willingness to run.

As a judge he made many enemies among members of the bar, because of his occasional irritability and impatience, and what often seemed discourtesy and unnecessary harshness in the call of his calendars when sitting as a trial judge. Yet his very enemies of the bar admit his ability and his untiring energy, both of which qualities he has displayed as a trial judge and also as an appellate judge. He has accomplished great results in the rapid disposition of the business of the courts with which he has been connected. He has made better pleaders of the law-

yers who have appeared before him at a time when good pleading had become almost a lost art. He became a recognized authority on libel and many other branches of the law. His decisions have been cited all over the land, and his opinions quoted, and no judge in his judicial department has had fewer reversals.

This is a great record. Such a man as Judge Gaynor has proved himself to be cannot readily be disregarded or set aside. Thru hard work, "drudgery," as he prefers to call it, he has, in a sense, made himself. By "drudgery" he purposes making himself an acceptable Mayor.

Judge Gaynor is fond of walking, of his dogs, and of farming. He is more genial than many suppose. His stern aspect on the bench has led many to think that he rarely smiles. His manner is most democratic and he is popular among the plain people and the farmers of St. James, L. I., where is his country home, and among the wage-earners, and the many, many thousands of the city's population who are at times overlooked.

He has a deeply religious nature, altho occasional outbursts of irritability, accompanied by violent speech, would lead to an opposite inference. But those who have seen him in his great law library, or with his children, or with his farm pets, have learned to know the gentler side of this singular man, and have observed how he is given, at times, to meditation and to solemn introspection. When he recently said to a friend, in his sanctum, during the heat of the campaign, quietly and without affectation, "If I am defeated I shall be content. I did not want to be Mayor. If I am defeated I shall feel that it is because God willed it so." That friend believed that Judge Gaynor meant what he said. And when the judge added, "I may not be the best equipped man for Mayor, but should I be elected I shall sit at that desk and work, and do what I always have done—drudge, drudge, drudge until I learn," his friend recognized that in this he exhibited a quality of teachableness without which no man can succeed in any great undertaking. And when he ended by saying, "Tho perhaps not best fitted for Mayor by knowledge, I nevertheless

feel within me a power—the power to root out corruption in the government of this city," the friend felt that there was cause indeed to expect that the man before him would astonish his critics and adversaries, cement the ties of his supporters, and make for himself lasting renown as a great Mayor of the American metropolis.

What the future of the Mayor-elect may be, no one knows. In common with Mr. Roosevelt, he has a talent for saying and doing things which attract attention. Few men are better known in the United States than Judge Gaynor. He has always preached non-partisanship in city government. This must mean that he will know neither Republican nor Democrat in his appointments—that his sole desire will be good and efficient administration—and that the vast patronage, directly or indirectly, at his disposal under the terms of the charter, will be distributed because of fitness. Honesty and ability will be the qualities sought. The Mayor-elect believes that he can do something to lift government up, and to place its activities upon a somewhat higher plane than that which we have hitherto known.

His great powers as Mayor in the making of appointments give him a great opportunity. His commanding position in the important financial board of the city, the Board of Estimate and Apportionment, will place enormous responsibilities upon his shoulders. It is true that he has but three out of sixteen votes in that board, and that his colleagues in that body were not on the same ticket with him. Yet the Mayor is the conspicuous figure in the board, and where he sits is the head of the table.

New York City, under the last Federal census, contained one-twenty-second of the population of the United States. Every twenty-second person, man, woman, or child, in the republic lived, in the year 1900, in this city. Its population was only exceeded by four States in the Union, including, of course, the Empire State itself. There were more people in the City of New York, under the census of 1900, by 700,000 than in all of New England, excepting the State of Massachusetts. If Boston be included there would still have been 200,000 more

people in the City of New York. This meant that in a city election, in 1900, approximately 4,000,000 citizens were entitled to vote than in Maine, New Hampshire, Vermont, Rhode Island, Connecticut and the City of Boston combined. These facts reveal how important a national event an election in New York City is, and how important a personage its chief executive has come to be.

The mayoralty has been called a political graveyard. Few mayors have reached high distinction. Under the coming census of 1910 it will, doubtless, appear that one out of every twenty inhabitants of our great land dwells in New York City. The actions of the Mayor more directly concern and affect this twentieth part of the population of our country than do the deeds of the

President affect or concern the entire population of the land. The Mayor stands nearer to the people. His conduct is, therefore, easily observed and marked, and more readily meets with condemnation or approval.

A Mayor ought to be conscious of the millions of eyes in the metropolis which are fixt upon him. He should act in the fear of God and with great love for his fellowmen. If he so acts, and thereby wins applause, it will be well. If he so acts, and yet receives condemnation, it will still be well with *him*, at least. If he refuses so to act, whether his be a temporal gain or a temporal loss, he will have forfeited all that is worth having—the approval of conscience, the maintenance of self-respect, and the peace which comes from doing one's best.

BROOKLYN, N. Y.

A Defense of the Modern Church

BY FRANK CRANE, D.D.

LITERATURE runs in ruts. Styles are as dominant in magazine articles as in woman's dress. One of the newest things is a page or two upon the decadence of the modern Church. As a rule, popular periodicals steer shy of all reference to religion; it is a dangerous topic. Still, religion remains the most interesting topic in the world, and editors will drift back to it one way or another.

It is the modern Church that is belabored. The old Church of our mothers was all right, but the present-day institution is doddering. It is not drawing crowds, not increasing in membership, cannot get money as it used to, the preachers have lost influence, and so forth.

Now, there is something to be said for the defendant. It is not being said, either by the Church apologists them-

selves or by the able Philistines. Neither party comprehends that the modern Church is absolutely different, in its aims, methods and policy, from the medieval Church.

There are two aims for a Church; one is to increase itself, the other is to leaven and uplift the community. The former implies a saved island of saints in an ocean of sinners; the latter a sweetened ocean. The former is medievalism, the latter modernism. From its point of view, the Church of yesterday was right, at least consistent, for it regarded the Kingdom of God on earth and the Church to be synonymous. The Church of today distinctly repudiates any such idea. It does not seek to save the world by getting all the population to join the Church, but rather to leaven the world, stimulating and inspiring society to seek its own salvation in its own ways. We aim not for more members, but a better manhood; not to strengthen our

churches, but to strengthen the sense of God in the community. Ecclesiastical ambition is as suicidal as personal ambition. "He must increase, but I must decrease," is in the modern Church's mind. "He that saveth his life shall lose" is true also of organizations. Personal altruism conjoined with churchly selfishness and greed is a Machiavellian combination. We labor and pray, not for the reign of the Church over all men, but to make Church control of anything more and more unnecessary. We "seek a city," and the city we seek "has no temple therein."

Success, in the common acceptation of the term, is bought only at the price of sacrificed ideals. To have an "efficient organization" the best means is absolutism; German government is more efficient than American, yet we prefer our democracy because we value individual freedom above national efficiency. To attract great crowds we must appeal to the crudest emotions and prejudices of the people. Looking at the multitudes that throng baseball parks and theaters, we say, "We should like very much to have this success—but we are not willing to pay the price." You cannot eat your cake and have it, too.

The American Church finds itself in a position today that absolutely prohibits any such success. The moment you attempt to rationalize religion, and appeal to men to reject all spiritual authority save self and God, and to "work out their own salvation," that moment you have ruined your chances of ever controlling them. You have become a protestant. And Protestantism means individualism. You can never herd protestants except as you drive your flock toward the absolutism of the Dark Ages.

Knowledge isolates. Reason develops the individual and renders him unfit for use in a machine. Among those whose thought is free the only union possible is that of feeling and of work. Hence the only unity to be hoped for in the future of Christendom is that of love and of service.

These are the principles of our day, and it seems to me they have done and are doing fully as much for the world as the vast religious machines of history. We have done and are doing a great

work, tho we seem more disposed to whine over what it costs us than to rejoice over what we have gained. We have built no cathedrals, but we have filled a continent with public schools.

I submit: we have less and less Church schools where children are trained to be good churchmen, but we claim the public schools, and dare to say that if there had been no protesting, individualistic, non-church-magnifying, religious democracy, there would have been no public school system.

We are building no convents nor monasteries, and our theological seminaries (faded remnants of the monastic idea) languish; but we claim to have made Yale and Harvard and Williams and Bowdoin and Wellesley and Smith. And what if they have left us and we no longer command them? Children get along better to leave home when they become of age. God bless 'em and God speed!

We have no hordes of professional religious and similar poverty-coddlers in the name of charity; but we say that it is our spirit and largely our men and women that have made and keep the Young Men's Christian Association, the Young Women's Christian Association, the Associated Charities, the Day Nurseries, and many similar non-sectarian abolishers of ignorance, poverty and vice.

We have fewer and fewer Church-dominated hospitals and ecclesiastical orphanages, but it is traceable to the modern Church that the people by civic and private means have built city hospitals, deaf and dumb asylums, institutions for the blind, insane, and feeble-minded, and State reform schools.

We have outgrown the false idea of Church success, that it consists in a powerful, numerous, and wealthy organization. The Church has no business with power, numbers, and wealth. The Church is the exponent of the ideal. The institutional church will never thrive among us; we prefer to help support the Young Men's Christian Association. We aim at the individual, to make him a better man; we have no desire to weld him into a machine.

The Church is dying out! It is dying in! It is dying into the community. "Thou fool, that which thou sowest is

not quickened except it die." And there has never been an age morally quicker than this. We have no Savonarolas nor Knoxes, but when in history did laymen do such a job of moral house-cleaning as in the recent insurance investigations? We have no Luthers nor Wesleys, but this age has a better product in such laymen as Roosevelt, Heney, Hughes, and Folk. We preachers cannot control our flocks, but we can educate a people who

furnish the clientèle for the popular sin-lashing monthlies. Think of that—it is the magazines that expose the patent-medicine vampires and smash the sleek corporation brigands that are the money makers! I claim such a populace as the product of an individualistic, non-herdable conscience, the directly sought product of the Modern Church. "*Si monumentum quaeris circumspice!*"

CHICAGO, ILL.

Francisco Ferrer

BY ALVAN F. SANBORN

"When one speaks of Spanish matters, even if one has crossed the Pyrenees, read the papers and listened to conversations, one should hesitate before formulating the slightest judgment and should correct each affirmation by careful reservations."

EARLY in 1883 the Spanish newspapers printed appalling accounts of a reign of terror in Andalusia. They reported housebreakings, highway robberies, incendiary fires and murders to be everyday occurrences. They declared these barbarous and iniquitous acts to be the work of a secret order, a mysterious tribunal, "*La Mano Negra*," whose discipline was so relentless that "neither a father dared refuse to plunge a poniard into the heart of his own son, nor a son to bathe his hands in the blood of his own father, if the tribunal so decreed." Several sensational disclosures followed. Under a stone in the open country a bundle of papers, which included the complete statutes of the order,

and on a wall at Villanueva, the imprint of a black hand (*la mano negra*), the terrible symbol before which menstrous deeds were plotted and the agents for

the execution of them designated. Shortly after these discoveries, three particularly atrocious crimes were perpetrated which startled not only all Spain, but all Europe, and which have come down to history as the affairs: (1) of the Mill of La Parilla (the murder of one Campos, a member of the order, for breaking his vows); (2) of Arcos (the murder of a rural policeman, Montera, for refusing to join the order); and (3) of the Tavern of the Four Crossroads (the murder of the tavernkeeper, Antonio Vasquez, because he had incurred the displeasure of the order for one reason or another.

In connection with the affair of the Mill of La Parilla, more than one hundred persons were arrested. Among them were Francisco and Pedro Corbacho y Lago, Juan Ruiz y Ruiz (a schoolmaster), and Roque Vasquez Garcia, respectively president, vice-president, secretary and auditor of *La Mano Negra*, who were charged with having planned the crime and with having signed and sealed the decree of death in the "hut, cabin or cavern" of Ruiz,

FRANCISCO FERRER

and of having dispatched this decree to nine members stationed at the mill of Parilla, who had executed it the same night. Seven of the accused were garotted; six others were condemned to death, but had their sentences commuted to life imprisonment; and one, becoming insane in the course of the trial, was detained in the hospital of the penitentiary of Puerto de Santa Maria.

For the affair of Arcos, Cristobal Duran Gil and Antonio Jaime Dominguez were condemned respectively to imprisonment for life and to imprisonment for fifteen years.

In connection with the affair of the Four Crossroads, there were many arrests, and, if I remember aright, several convictions, tho I cannot affirm the latter positively, not chancing to have by me the record of this trial.

Twenty years later it was demonstrated that the order of *La Mano Negra* was a myth, deliberately created by the police for the purpose of discrediting the leaders of a movement for the organization of farm labor, the rapid progress of which was interfering with the selfish projects of the Castilian lords of the soil. The fires had been set and the robberies committed at the instigation and under the supervision of the police by persons who did not dare to disobey them. The death of the rural policeman (the Arcos affair) was due to a hunting accident. The tavern keeper (affair of the Four Crossroads) probably died a natural death; at least there was no evidence to the contrary. And Campos (affair of the Mill of La Parilla) was killed in a quarrel by his cousin, who had accused him of undue familiarity with the wife of a mutual friend. The confessions upon which the condemnations were based had been wrung from the accused by the infliction of terrible tortures prolonged during several days.

This cruel mystification of *La Mano Negra* is the most flagrant instance, no doubt, of the unscrupulousness of the authorities of modern Spain which it would be possible to cite; but it is by no means the only one. In fact, Georges Clemenceau, in the free-lance days, before he was under the dreary obligation of weighing the diplomatic import of his utterances, asserted in *L'Aurore* that

"the crimes committed at Montjuich and Alcala del Valle excused, in advance, the gesture of the coming avenger."

He would be a rash man who should venture, on the strength of the facts now at his disposal, to affirm that the recent condemnation and execution of Francisco Ferrer was due to a machination of the Spanish authorities; but he would be an equally rash man who should venture to affirm the contrary. The manner in which the evidence against Ferrer was collected leaves the way open to all sorts of suspicions, and it is impossible to dismiss with a sniff the striking analogy between the discovery by the police of the statutes of *La Mano Negra* under a stone and the discovery by the police in Ferrer's empty house of a typewritten manifesto calling for the burning of convents, the extermination of the religious orders, the destruction of banks and railroads, etc.

There are even signs that the anti-Ferrer plot (if plot there was) was participated in by the anti-governmental forces, and that Ferrer was done to death as much by petty party squabbles and by the personal jealousies of his supposed friends and allies as by the rancor of the militarists or of the clericals. The anarchists openly attribute the failure of the general strike to treason on the part of the Madrid socialists—a charge which proves the existence of serious divisions among the revolutionary elements. And the biography of Ferrer, just published in Paris by the Committee for the Defense of the Victims of the Spanish Repression, while straining so hard that it comes near bending over backward to make the priesthood responsible for Ferrer's death (the book even bears the title, "*Un Martyr des Prêtres*"), leaves no doubt that Ferrer himself believed that the radical faction had played him a mean trick. Thus, in a long letter to his friend, Charles Malato, a well-known Paris anarchist, Ferrer says:

"You know that I did not have the slightest knowledge of the plan for a general strike on the 26th of July as a protest against the Moroccan War; and I do not see how they have been able to spread the rumor that I was the promoter of it. Who started this rumor? Was it the Lerrouxist* republicans because the

*The Radicals who take their name from the Barcelona deputy Lerroux.

chism, nothing more, nothing less. Like all consistent anarchists, he regarded the public schools under state control, such as exist in America and the more advanced countries of Europe, as so many bulwarks of privilege deliberately designed to maintain the domination of the classes over the masses; and it is more than doubtful if he would have moved his little finger to endow Spain with an educational system of this sort. The public schools of France, for instance (stigmatized as Godless in certain quarters because they aim to maintain neutrality in religious matters), were all but anathema to him because they do not violently assail religion and because they insist on teaching respect for law and for property, love of country and the cult of the family. There were schools other than Church schools in Spain before Ferrer opened his schools, but they interested him little except in so far as he hoped to bring them under his control and impose his revolutionary textbooks upon them. I have on my table one of the textbooks of Ferrer's Modern School, a First Reader. It is entitled "Humanity—Interview of My Niece with Her Uncle," and the author is the anarchist, Paraf-Javal. It describes, in language supposably within the reach of the young, but which only intellectual prodigies might hope to grasp, "The Transformations of the Universe," "The Transformations of the Earth," "The Transformist Theories of Adaptation, of Heredity and of Selection," "The Transformations of Cells," "The Transformations of the Ancestors of the Human Beings of Today," and concludes with an exposition of the "Transformist Philosophy—Universal Transformism and Its Consequences for Humanity." From this concluding chapter I quote a few passages, necessarily fragmentary for want of space, but sufficiently representative to give a fairly correct idea of the nature of the instruction given in the Ferrer schools:

"Uncle—'If by universe we mean the *actual universe*, we may likewise say that the actual universe exists, because substance (that is to say that which is, that is to say, matter-energy) is transformed without ceasing. The universe at a given moment is the state of the matter-energy at that given moment. Hence, to understand the *why* of the actual universe it suffices, the indestructibility of substance

having been established, to follow its transformation up to the present. This is what we have done in eliminating imaginative fictions and in confining ourselves to the domain of observation and experience. We have shown *how* substance is transformed and this has shown us *why* the actual universe exists in its present state.'

"Niece—'In a word, uncle, the universe is the conception which man forms of the ensemble of substance. One question: Is there any objection to saying "Substance is God"?"

"Uncle—'Yes, a very great objection. The word *God* evokes the idea of a *creator*, of a species of *all-powerful bugbear*. Now, as we have already said, if substance is indestructible, nothing warrants us in supposing that it was created and nothing warrants us in applying to it the infantile conception of an all-powerful bugbear.'

Again:

"Niece—'So, uncle, it is probably advisable to cast away, along with the idea of divinity, the ideas of future life and the immortality of the soul?"

"Uncle—'Yes, and not probably, but surely. These ideas proceed from the crazy hope that, contrary to all known facts, a certain resultant of energy, observed solely in certain organisms in activity, will persist in the same form when these organs shall have ceased to function and even when they shall have been decomposed. It is easy to show that the existence of the individual is strictly limited to the period between fecundation and death. Apart from the existence of the individual, there can be no existence for the individual. It is during our existence, therefore, that we must seek our happiness, instead of resigning ourselves to the vain supposition of a posthumous existence.'

"Niece—'What you have just said, uncle, is probably what you mean by the *transformist philosophy*.'

"Uncle—'It is a part, but not the most important part. We have just seen that a knowledge of universal transformism conducts us to the abandonment of prejudices. We have mentioned only the prejudice of divinity; we might mention all the others (authority, fatherland, property, etc.) We shall see that this knowledge enables us also to test very exactly and beyond a possible doubt all human movements which aim at the organization of human happiness.'

Still again:

"Niece—'You believe, then, that lawmakers are incapable ignoramuses?"

"Uncle—'Evidently. Otherwise they would devote themselves to making known to men the *natural law* in order that each person might weigh it, detect its utility and utilize it. On the contrary, they devote themselves to imposing on others, by force, arbitrary opinions, without giving any guarantee that these opinions are interesting. The lawmakers of all countries are a band of megalomaniacs, afflicted with the folly of authority, for the most part slaves of alcohol and tobacco, full of inconceivable ignorance and recklessness.'

Ferrer's example in the matter of marriage renders superfluous the citation of his teachings upon that subject.

Whether Ferrer's evangel (the evangel of anarchism) is calculated to improve the race or the reverse, it is no business of this article to determine. But it is only fair to poor, abused Spain to observe that there are other countries in the world less "clerical" and less "backward" than she, where the establishment of a network of schools specially designed to teach children hatred of religion, antagonism to government and contempt for the flag would create something of a hubbub, to say the least.

The extremely special nature† of Francisco Ferrer's schools goes a long way toward explaining the ease with which his conviction was secured and the relative absence of Spanish protests against his execution. It does not justify, it does not excuse a court (not even a military court sitting in a community which has been declared "under a state of siege") in taking his life if he was guilty of no overt act. To invoke Ferrer's "moral responsibility" for an uprising to which his teachings may have contributed indirectly is to embark upon a course which, followed to its logical conclusion, would render normal living absolutely impossible for all time. Says Albert Delacour, in his *Lettres de Noblesse de l'anarche*:

"When the magistrates entered the cell of the bomb thrower of the Paris Café Terminus, Emile Henry, a book rolled from his bed to the floor. They picked it up gingerly, with edifying reflections on their lips as to the perversion of intellect by dangerous reading, but they stopped stupefied before the words were well out of their mouths, for, on the cover of this book, they read the words, 'History of the Ingenious Hidalgo Don Quixote de la Mancha.'"

Casario, the assassin of President Carnot, read the "Châtiments" of Victor Hugo assiduously.

Vaillant, who was guillotined for

†Paul Robin's former school at Compuis (France) and Tolstoy's school at Yasnaya Polyana bore a remote resemblance to the school of Ferrer.

throwing a bomb in the French Chamber of Deputies, divided his allegiance between Herbert Spencer, Flaubert, Hugo, Proudhon, Rousseau and Voltaire.

Le Temps Nouveau, the leading anarchist journal of France, depends on the impassioned passages of technically non-revolutionary authors for a considerable part of its contents. The "Hamlet" or the "Julius Cæsar" of Shakespeare may prove to be, in the last analysis, quite as incendiary as the direct appeals to violence of a *Libertad*. The historian who recounts impartially the exploits of the regicides and the liberators of history runs the risk of suggesting assassination to his readers. Every philosopher, poet, satirist, novelist or dramatist who exposes the follies, hypocrisies and injustices of society, the insolence of wealth and the corruption of governments, or who questions authority in any sphere, may play sad havoc with a morbid temperament. Said Emile de Saint-Auban, in his defense of the anarchist editor, Jean Grave:

"We were all accomplices, because we all have or will have the tragic disgust, the formidable frankness of which genius makes masterpieces and of which madness makes crimes. All, at certain moments of lugubrious clairvoyance, have perceived under the rent vesture the hideousness of society."

The daredeviltry of Kipling, the glorified hysteria of Dickens, the charming cynicism of Thackeray, the pessimism of Schopenhauer, the individualism of Nietzsche, the lyric indignation of Shelley, the blasting scorn of Byron, the thinly veiled flippancy of Bernard Shaw and the subtle nihilism of Stevenson, are capable of creating more dangerous discontent than the diatribes of the down-right revolutionists. Logic and equity alike demand that these idols be toppled from their pedestals and relegated to the limbo of the enemies of society, if the apostles of new ideas (however abhorrent these ideas may be to the average person) are to be sentenced to death.

PAUL THORNTON

Why Educated Women Do Not Marry

BY ONE WHO DID

FEW articles of more absorbing interest have recently appeared in *THE INDEPENDENT* than that in the issue for October 28, on "Why Educated Women Do Not Marry." It touches upon one of the vital problems of our modern life—the apparent failure of the higher type of women to be sought after as wives. Who is to tell us the reason for this state of affairs? The men try to, but I doubt if they themselves really know; the unmarried women cannot, for they also are ignorant; and the married women will not, as a rule, "fess up." As nearly as it is possible for two people to have the same characteristics, and be guided by the same set of circumstances, I was, before I was married, a duplicate of what the authoress of "Why Educated Women Do Not Marry" describes herself to be. Therefore, perhaps what I, a successful graduate from the sisterhood of "unwilling celibates," can tell the writer of the article in question may be of some value to her—if *THE INDEPENDENT* will be so kind as to place this in her hands. For, from what I have learned from my own experience, and from the confidences of other women, I feel firmly assured that the celibacy of the sisterhood is entirely their own fault. With all their education and culture they have never learned to recognize human nature as it is, to appeal to its littlenesses and its bignesses.

Thruout all the ages, human nature has shown a great hunger—one as deep, or deeper, as that for affection, or gold, or fame—the hunger for romance. In the early days bard and troubadour existed to supply this need; today, in this very "age of materialism," we demand romance, and the stage, the novels and even the newspapers bring it to us. Ro-

mance is the moonlight that silvers over the ugly or commonplace facts of our lives and makes possible the living of them. To this primitive need the educated woman usually fails to respond; altho she has often a deep, theoretical appreciation of the romantic, she neglects to throw about herself any of that glamour without which love cannot germinate. Therein the educated woman is to blame for her unsought state. With the fundamental honesty of an intelligent person she refuses to use what she calls "artifices," and depends solely upon logic, ability and other sterling qualities (and perhaps good clothes) as a means of attraction. While her less truly estimable sister must, to attract at all, cover her greater limitations with a cloak of mystery and appeal; have recourse to what are sometimes contemptuously called "tricks of the trade."

But are such things really contemptible, unless they are used in an unworthy cause? Is the brighter plumage of the birds in mating season contemptible? I, for one, find Ethel, who sits under a rosy lamp talking of love, as admirable as Mary Jane in the harsh glare of a mid-day sun, discoursing brilliantly on biology and sociology. At any rate, Ethel has a surer knowledge of the needs and longings of human nature.

Squat, swarthy, bandy-legged and ignorant, the Eastern woman has so shrouded herself and her personality in multitudinous veils that, for centuries, she has been the ideal of the painter and the poet. But the educated college woman scorns veils; her tastes, her opinions, her prejudices are all eagerly displayed. The only thing that she does hide is her human heart!

Most men's lives are hard and monot-

enous: is it any wonder that they turn from the thud of massive machinery and grind of business house and office to what appeals to their imagination and chivalry, rather than to what touches their brains and logic? Of course, no man would admit that he was sentimental or romantic; far from it. But the student of human nature knows that even the man who marries the heiress for her money is attracted not so much by the actual dollars and cents as by the glamor that riches cast, and that the imagination must be awakened of even the mere sensualist.

And the joke of the thing is that the same honey which catches the masculine fly is alluring to the feminine one. And the men, laughing a little at us in their sleeves, recognize that "the wimen do like a bit o' poetry like," and give us all that we want of it. Does not the youth, yearning to attract, hint of a dark and dreadful past; of an early love affair which left him crushed and heart-broken, intimating at the same time how deeply he still could love; or, Othello-like, tell of his prowess on land and sea. *He* knows that he must appeal to his lady's imagination. Dear me, does not "Unwilling Celibate" see that, when she is used as a confidant, the confider is unconsciously making himself interesting to her, appealing to her love of the unusual and the romantic? And, moreover, when he opens up his heart to her, that it is in response to her manifest charm? Then is her chance to show him that she, too, has a heart; to allow him to guess that she could be quite as sweet a sweetheart as the Polly Jones that he complains of. Of course, I mean for her to do nothing unwomanly, but only the prude finds anything unwomanly in being human.

Poor "Unwilling Celibate," how I laughed over her woes, and cried a little, too, for they are so akin to what were once my own. Like her I was thirty, and all my moonlight walks had been dotted up with Polly Jones as a sauce. I, too, alternated between pride in the friend removed in me and despair at "the mental impersonality" of it all. At last one man came whose Polly Jones was *quodlibet* had to be; deeply I resented her. That resentment was the "spark that fired the clay." It coincided with a

speech of my younger brother anent a girl that he knew: "I am sure," he said, "that if I ever did succeed in getting her she would make a good spooner. That is really why I love her." And I, all these years, had been living in fear that some mere man might think that I suggested possibilities of being a "good spooner," and to guard against a thing so obnoxious to my dignity, had been carefully erecting barriers of aloofness and prosaicness. When I came to analyze it, such I found to be my case. Realizing that even at thirty it is not too late to mend, I took a "brace," to quote my brother again. I gently but firmly declined my old attitude of elder sister; I forgot that I was a dignified college woman, and became merely a woman. It is difficult to tell exactly what I did do, for so much of the distinction consisted in having a different attitude of mind.

When the time came I decided that I did not want to marry the man whose Polly Jones had so changed my life, and he is now the husband of my cousin. Polly Jones having been but a short-lived dream. Before I finally did marry there were other men who came and went away again. And, when at last I made my choice, it was with the consciousness that I had had enough experience of men and their love-making to be sure that I had found the "right man." As it happened, I did marry one to whom my special intellectual gifts are very useful in his life's work; yet he confesses that he never once thought of them; he merely felt that I would be what my brother so crudely summed up as a "good spooner."

Another point visible to the reader of "Why Do Not Educated Women Marry?" is that its writer fails to hold *one* because she is too impartially friendly to *all*. It reminds me of a boy of whom I know, who confided to his mother that for six months he had been trying to propose to his Bessie, and at length had given up, because: "She was so darned friendly that I never got a chance, and she was just as sociable, too, with all the other fellows as she was with me." This is a day of specialists, and to be successful one must specialize, even in love and lovers.

The Negro and the "Solid" South

BY BOOKER T. WASHINGTON

A FEW weeks ago I made an extended trip thru the State of Virginia, spending seven days in visiting the different cities and towns along the line of the new Virginia Railway, which runs from Deepwater, W. Va., to Norfolk, Va. During the course of that visit I had an opportunity to observe for myself the condition of the colored people in the places thru which we passed and also to talk with a number of prominent and influential white people in regard to the progress of the negroes living in that section of the country.

One of the things that impressed me most upon this journey was the number and the character of the young white men I met who seemed to have, not only a very definite knowledge of, but a very sympathetic interest in the success and the progress of the colored people about them.

One of these men, for example, told me that, after finishing his studies in a Virginia college, he had traveled all over the North and West, hoping to find a place where he could settle down and go to work. After looking the whole country over he had decided to return to Virginia, where he was born and reared. He had settled in one of the little towns that have sprung up along the line of the new railway, and is now seeking, as he told me, to lay the foundation for his own fortune by doing what he is able to build up both races. He was one of many Southern men I have met recently who have discovered that their own success and that of the South lies not in the direction of holding the black man down, but in building him up, making him strong, mentally, morally and economically.

A few days after my return from Virginia there came into my hands a book, written by one of this same younger generation of Southern white men to which I have referred. In this book I found all that I had heard upon my trip thru Virginia and much that I had heard elsewhere, written out and expounded in

a systematic way, making of the casual statements I had heard a sort of philosophy.

In no book which has ever come into my hands have I ever found the policy advocated by some, which seeks to solve the problem of the Southern States by keeping the negro ignorant, so clearly analyzed and described, and nowhere, I may add, have I found this policy so thoroughly discredited and condemned as in this latest volume of Mr. Edgar Gardiner Murphy, of Montgomery, Ala., to which he has given the title, "The Basis of Ascendency."

The thing that makes the book significant, however, is not so much the fact that it condemns and discredits the policy which would deny to the negro the opportunity to advance along the lines in which he has the capacity to do so, but because it shows the futility of it, and outlines a policy which is based upon mutual good will, and gives to both races an opportunity to share in the upbuilding of the new South.

As the title of this book suggests, it is addressed particularly to the white people of the Southern States and seeks to define the terms upon which the Southern people can maintain the ascendancy of the white man in the South and regain for the Southern people that large influence in the affairs of the country and of the world that they once held.

In the course of his argument the author points out that the negro question is not, in its widest significance, a local nor a national question, but is one of the problems that in one way or another touches every people in the world. In the larger sense it is the problem of so adjusting the relations of the different peoples and races of the world that all can live side by side in peace and prosper. In such a world, however, the only chance for a superior race is that it should lift the races and peoples that are down. In no other way, says Mr. Murphy in effect, can the superior race prove its superiority and maintain its ascendancy.

In order to show that this is a stub-

born practical fact and not a mere sentimental idea. Mr. Murphy begins his book by showing how closely interwoven are the moral and material interests of both races in the South. Whether the white man desires it or not every element of the white man's civilization has, to some extent and in some way or other, become the heritage of the black man. In some way or other, and to much greater degree than is generally supposed, the character of the white man's civilization is determined by the uses he makes of it in his relations with the other race. The author says:

"Just as the black man has the use of every street, of every well constructed country road, of every railway, of every public utility of every sort—facilities chiefly demanded and supported by the commerce and intercourse of the stronger race—so he enters, also, however humbly or indirectly, into the heritage of every intellectual and moral asset of the country. If there be freedom of the press; if there be a press fit or unfit to be free; if there be a vital and spiritual religion; if there be books, artists, poets; if there be an historic and responsive language; if there be stable banks, equitable markets, courts accessible and for the most part just; physicians, hospitals, and by no means least—the kindly interest of the wisest and kindest of a more highly developed population—these are the negro's."

And then he continues, and these words suggest the central theme of all the succeeding pages:

"In so far as they are ours, they are his; in so far as they are not his, they tend, in subtle, inexorable fashion, not to be our own. In the fundamental sense we can no more make a bi-racial division of these things than we can of the sunshine, the rain, the returning seasons. It is the fate of the land. It is the tragedy of those of long ago, North and South, who tried at its birth to divide their labors without dividing their liberties. We but confront the fiat of reversal. Labor and freedom are indivisible."

Much has been said in recent years of a growing bitterness between the races. Mr. Murphy has described in detail the origin and development of this reactionary movement. Many people in the North and the South have been inclined to look upon this antagonism between the races as something mysterious and inevitable, which must continue to grow and increase until it ended in some frightful disaster. Mr. Murphy does not share this pessimistic view. He says:

"And yet this movement is among us. I think it will open the greatest intellectual and moral issues of the future as it has already the inter-

ests of our negro masses. Its mere radical spokesmen have proceeded by easy stages from an indiscriminating attack upon the negro's ballot to a like attack upon his schools, his labor, his life—from the contention that no negro shall vote to the contention that no negro shall learn, that no negro shall labor, and (by implication) that no negro shall live. Weaker groups, if they remain at all, remain to serve rather than to share."

But this plan is not altogether practicable. "It is the old effort," as Mr. Murphy says, "to begin where the land began but to ignore its history and its sins." He continues:

"There are some things which are not found among the established privileges of men. No man may choose his parents, nor may he choose his native soil. He cannot remake his country's past, nor alter the assumptions or the principles which have become his civil heritage. More important still, he may not put these principles into operation upon Monday, repeal them or modify them on Tuesday, and reimpose them on Wednesday."

"The fundamental political constitution of a people cannot be perpetually readjusted between meals by devices of application. It cannot be so altered, from instance to instance, as that it may 'hit the negro' in one case and in the next may let the white man off. The thing cannot be done. 'Accidents' will surely happen. The man who declares boldly that he will have one law for the white man and another law for the negro would like us to believe that the only opposition to his program lies in the negro, or in the 'interference of the North,' or in the Fifteenth Amendment to the Federal Constitution. But the real obstacle is something else. It is in the very nature of things; it is in the bone and being of the country; and—little as he may at first believe it—it is in himself."

"No American, North or South, white or black or yellow, wants that sort of country. We know, if we know anything at all, that our own experience is, somehow, the final authority against arbitrary methods."

"Moreover, the very institutions which our discriminations were at first invented to protect are soon, by the increasing bias of these very discriminations, emasculated of their proper power. If it is hard to convict a white man of the murder of a negro, it soon becomes equally hard to convict him of the murder of a white man. Courts which find themselves unable to punish the crimes of a stronger class against a weaker class discover that the legal precedents and the social habit which have stood between the strong and the weak are likely at the last to stand between man and man thru all the classes of the strong. And the failure to punish means the inability to protect. In any society human life in general tends to become as cheap as the life of its humblest representative."

Not only is the repression of the negro, as it has been proposed by some of the more violent political leaders, imprac-

ticable, but it is impossible and the South does not want it. Mr. Murphy says:

"An attitude of unreasoning and permanent repression is to us more intolerable than to the negro. We are too busy, too much interested in other things, too eager for larger enterprises and freer minds, to be consumingly engaged in the business of keeping some one down. The thing, moreover, is impossible. Not only is the negro daily growing stronger, but the whole world will daily add to his strength in direct proportion to the repression which he suffers. The universe—like the peacemaker in the streets—cannot hear our quarrel till the strong man let the weak man go. The South will never have its hearing till the fury goes out of certain eyes and the noise of certain of our public men is stilled. As the world takes the negro's part, as the negro gains in strength, as the South wearies of its more morbid preoccupations, as the cruder policies of repression begin to tremble in the rigid framework of their terms, the representatives of our reactionary leadership—in the honest but pitiful hysteria of their fears—would seek the remedy in *more* repression, and would attempt by the shrieking rancor of their appeals to galvanize into further life the old terrors, and to banish into still fainter distances the better angels of our age."

There is in the South today a class of sincere and honest men who have little or no interest in politics, who believe that the race problem would be solved if negroes would not merely acknowledge their present racial weakness, but accept a position of permanent inferiority, without hope or ambition of rising to a position of greater usefulness or importance than that which the masses of them now occupy in the Southern States. Mr. Murphy does not believe that the caste system is in any respect a solution of the racial problem. He says:

"A policy of fixt political humiliation toward any class of our population comports even less with our instincts than with our interests and our laws. There is no place in our American system for a helot class. Our country is a democracy; and whether we will or no we are the inheritors of a Constitution. This is the second irreducible factor of our problem. Not only is the negro a negro, and not only is that fact among the realities, but it is also among the realities that the re-creation of our institutions and the transformation of the political and social assumptions of our age are not among our privileges. Nor are such enterprises among our conjectures or desires. We want no fixt and permanent populations of 'the inferior.' We may in every personal or social sense desire separation—that is an issue of personal reserve. It trenches upon no legal or social right. It inflicts no degradation of personal, industrial or political status. It is

a dogma, not of repression, but of self-protection and self-development. But to legislate the permanent and indiscriminate political proscription of a whole population is to attempt the refounding of a country which is not exclusively our own, and the revival and reconstitution of an epoch of class autocracy which Jefferson, Washington and Marshall find themselves surpassed. Indeed, our own greater preference is our greater country. The men of the South—whatever may be their political expedients of the moment—have seriously no more interest in the reactionary philosophies of caste than in the political conceptions of Nicholas II. If the conscious and deliberate acceptance of such a status by the weaker group be the only condition of 'peace,' then we had better have something less than peace, for it would indicate an absence of manhood in the weaker population far more serious than an inadequate or belated political capacity, and an absence of moral sagacity in the stronger far more costly than any of the conceivable consequences of racial or political disturbance. To rear the population of a stronger race surrounded by an environment of the lowly and the menial is difficult enough, but to rear such a population—virile in spirit and sensitive to the finer instinct of self-dependence—thronged by the *deliberately* menial, by those who are not only inferior, but who have made a compact to be so, by those whose lot is an accepted subordination and a consenting suberviency, would be more difficult by far. The stronger group within the South, as I have already tried to illustrate, has suffered indescribably from being pressed upon, from either side, by a weaker racial life; yet this 'fate of the strong' has been light compared to the fate involving that higher racial group which thru long periods of time should be subjected to the personal, domestic and industrial contact of a race of men and women wearing the self-accepted and self-approving status of general proscription. It would involve a peril to everything in our life that is self-resourceful, wholesomely self-respecting and soundly strong. For the member of a weaker race to accept the plain personal fact, in this instance or that, that his race is inferior, that it has incapacities or weaknesses, is one thing; for a whole race deliberately to accept a fixt legal and collective inequality of status in a democracy is quite another thing; a thing as injurious to a stronger group as to a weaker; a thing, moreover, which there is a Constitution to prevent, and (should the Constitution sleep) the quick instinct of the South itself to weigh and to reject."

The remedy which Mr. Murphy proposes for present conditions in the South is, as has already been suggested, nothing fanciful nor even wholly new. The hope of the South is not in holding the negro down, but in lifting him up; not in degrading him, but in making him self-respecting. Like most other thoughtful men in the South he believes in the ed-

education of the negro. In regard to the kind of education the negro needs he says:

"At present, as things are, by their occupations than by their schools, there can be no ultimate education of society until the educational significance of economic situations and of economic employments—in their reactions upon individual and social character—are more consciously and more directly included among the policies of the State."

People who have been disappointed in the results of negro education in the South should consider in the first place the meager quality of the education which the negro now receives in some parts of the South. They should consider, also, how very few negroes have thus far received a thoro or a practically valuable education of any kind. But education, the ordinary education, in and of itself is not sufficient. Says Mr. Murphy:

"Education will not instantly avail. The intelligent do not at once make more intelligent followers (or leaders) than the ignorant. The first effect of education in any social group, whether among the poor of Russia or among the negroes of America, will be distracting and divisive. There must be experience also; and education is a necessity, not as a substitute for experience, . . . but because it is the one force which makes experience available."

Few people consider what this experience is like, particularly in the case of the negro who has received some education and has begun to enter into the larger world that is opened to him thru the knowledge which enables him to read. On this point Mr. Murphy says:

"This, after all, is the most significant aspect of the actual education which a stronger group gives to a weaker. It may not be amiss if, in a single sentence, the case be overstated to give it clearness; to teach any group of human beings to read, and then—in the daily press which encompasses it—to give it little to read concerning itself except the flaring records of its crimes or monotonous comments upon its faults; to awaken a mind (and the very contact of our time is awakening the negro mind whether we give it a school or not), and then to touch it only with contempt; sharply to demand the development of high character, and then to class it with the lowest; to insist upon thrift, and then to tolerate such conditions of disadvantage or insecurity to the life and property of the weak as to take from thrift its deepest economic basis—all this constitutes an 'education' which cannot be expected to train any race, much less a weaker one, into the life of a highly useful or happy population. This, . . . is the question. It is not a mere question as to the 'rights' of the negro, as to

academic and outworn contentions of 'the North' or as to the controversial justification of this or that political party. It is a question of practical and fundamental policy. Is the negro race at the South, a large and persistent factor in our economic and political organization, to be, in every fundamental sense, a retrogressive or a co-operative population? The negro masses need the schools, but they need even more profoundly that sort of education, that form of unconscious training, which is found in the quickening of the fundamental economic motives—in the renewal of hope, the arousal of elementary ambitions, the stimulation of those industrial tendencies (such as economy, tenacity, frugality) which spring from a larger sense of security, from a more general confidence in the average rewards of industry and from the simpler satisfactions of educational and civic opportunity. So to touch them and so to use them in the larger policy of our affairs is to increase both their power to produce and their power to purchase, and is to add increasingly to the forces which must contribute to the common development of the South."

Much has been said and written in regard to the manner and the extent to which the South has suffered because of the presence of the negro as a slave and a free man. Mr. Murphy has certainly not tried to minimize these disadvantages. He has pointed out that the very weakness of the black man has been a constant source of temptation to the white man to take advantage of and wrong him. Says Mr. Murphy:

"It is not a good thing for any race to be perpetually dealing with another race with which it does not have to argue, which it may control without explanation, for whom it may think without an attempt at persuasion, and for whom it may act without any real partnership in responsibility."

Notwithstanding this fact, the same weakness of the negro which tempts the white man to wrong him, gives to the white man an opportunity to help him. The author continues:

"In each weakness of every lower social group there lies an opportunity for exploitation; but in each weakness there lies also an opportunity to help. You may use the weak man or the weaker group in the one way or in the other, and by the nature of the use of this man or this group your capacities and faculties (which take their quality from use) are yielded to an education which assumes descending and contractive—or ascending and expanding—forms."

"This is the reason why, altho the average man deteriorates under habitual contact with weaker groups, the exceptional man—in whom the occasions of weakness have developed the co-operative rather than the coercive instinct—is, whether alone, as was Livingstone in Cen-

tral Africa, or submerged in the slums of our greater cities, the highest human type we know. Nor is this the least of the reasons why the exceptional citizen of the 'Black Belt' of the South is so often regarded as a most adequate representative of our gentler and nobler life."

It is from this point of view that Mr. Murphy believes he is able to define the real issue before the South today. The South has the opportunity, by dealing with the negro wisely, justly, and in a spirit at once of humanity and justice, of regaining that position of ascendancy it once held in the affairs of the country and of the world. Says he:

"The issue is always there, for the stronger race so to dwell with the weaker as to upbuild a common state upon the basis of the common welfare, and expressive of the common happiness, may be called the distinctive task of the democratic imperialism, or of an imperial democracy. Yet it is—in either case—the supreme problem just now challenging the political capacity of modern peoples."

This, Mr. Murphy thinks, is the distinctive task, so far as the United States is concerned, of the South. And he adds:

"We may dislike the task, and may shrink from it, may much prefer to deal with the issues peculiar to other localities and peoples, but we cannot escape it; it is the problem which, in the phrase of the period, is 'up to us.'"

I have sought in this brief review to present the question discussed in this book in the spirit and, as far as possible, in the words of the author. I cannot hope that I have succeeded, in the few quotations I have made, in giving a complete and wholly satisfactory review of what is, in many ways, the most searching examination that I remember to have read of the racial question.

In conclusion, I cannot do better than quote the final paragraph of Mr. Murphy's book, in which he says:

"Those lands which are conscious of a great difficulty are not poor. The poor land is that which, having no great difficulty, busies itself with the fictions of its importance; or the land having a great difficulty, but finding no way out of its imperturbable complacency. It was thru the negro in our experience that the South once lost her mastery, not over him alone, but over those opportunities for a national leadership and for an uninterrupted enunciation of service to which her capacities entitled her. It may be that thru this same strange waiting, baffling factor in her life, her ascendancy, in higher forms, may again return—in forms not threatening the estate and dignity of labor, the sway of freedom, the instinct and custom of our age, but bestowed by a labor which she has freed, and by an age and a democracy which, in her service to their profoundest task, she has supremely justified."

TUSKEGEE, ALA.

Monopoly a Failure

BY CY WARMAN

THE nearest approach to a successful monopoly in this corner of the continent, so far as I know, was the Hudson's Bay Company. For some centuries this company was the absolute ruler of the Northwest, known then as Prince Rupert's land. And they surrendered.

Only the other day the head of the Hudson's Bay Company in Canada said to the head of a big railway, which had things pretty much its own way for years: "Don't be a monopoly—we tried it, and it doesn't pay."

The main reason why there is so much more kicking against street railways than there is against real railways is because the former has a monopoly of the trans-

portation business in its particular territory, while the latter has sharp, sleepless competition all along the line. Where there is a non-competitive point the railway knows there will be complaint if it fails to deliver the goods.

All of which is by way of accounting for the growing demand for public ownership of telephones, street railway lines, etc., in Canada today. Also, by this line of reasoning are we able to understand why the demand for public ownership of these utilities is so much greater than the demand for public ownership and operation of railways.

I attribute the fact that the Prairie Provinces—Manitoba, Saskatchewan and Alberta—have taken over the Bell Tele-

phone Company's lines and business to the carelessness of that company. A few years ago there was a strike of Bell Telephone employees in Toronto. In the investigation that followed, the fact was brought out that the company had installed "listeners" on their lines so that any employee might put his or her ear to the wire and catch the conversation of the patrons of the line. The argument advanced by the company's lawyer was that this "listener" was for the protection of the company, presumably to see that nobody swore over the line; yet, in all probability, this very fact, or rather the knowledge of it, produced more profanity than had ever gone over the wire.

In another Ontario city, a few years ago, the Bell Telephone Company wanted to have its franchise renewed. It said to the city council: "Give us another lease of life and we will reduce the rate from \$25 to \$20 a year for resident 'phones." They got their renewal. The writer lived in that town, and when he had undertaken to talk over the \$20 'phone and found it impossible, he managed to make the local manager understand that he wanted to see somebody. The local manager went up to the house. The writer kicked—then the manager explained in a hurt, surprised way: "Oh! if you want a first-class up-to-date 'phone you will have to pay the old rate, \$25."

Mark you, there was nothing said to the city council about inferior 'phones; the supposition was that there would be but one rate and one sort of 'phone, but the public was deceived.

And so by these business methods they have driven the people of at least three Provinces into government ownership and operation of telephone lines; a new business of which the public, especially the politicians, who must direct the business, know nothing. I have talked recently with many persons in the Provinces, and I find that on the whole they are happy, or think they are, under the new arrangement. I have read the party papers and find that it is a good thing for the public. I have read also the opposition press and I find that public ownership and operation of the telephone is a fail-

ure. Having great respect for all newspapers, I put aside the decision of both and appeal to the people who pay for and who must patronize the telephone, and, as above stated, they seem to be quite well pleased.

By the taking over of the telephone by the public new conditions are created. The business is still a monopoly, to be sure, but the people being the monopolists may do what they will. They may experiment with all sorts of new devices. The present government may install automatic 'phones and fire the "Hellos." At the next turn of the political wheel a new government may smash the automatic and recall the girls. In some of the provinces they have already installed automatic telephones. A group of business men, in an Edmonton club, were telling me the other day, enthusiastically, how well the automatic worked and that there were no "listeners" along the line. I stepped over to the 'phone with a friend, who showed me how to manipulate the machine, and tried to get my hotel. Nothing doing. My friend tried and failed. Then he called "Central," who, he explained, was merely a mechanical man where "Central" used to be. In that way we got the hotel, but my friends assured me that that did not occur more than once or twice in a while.

So far as rates are concerned, I find that there has been very little reduction in rates. Naturally, so far, there has been no improvement in the service that is worth recording unless you talked with a man who had something to do with the taking over of the telephone. Later on, when the business has been organized, and the political papers have tired of talking about it for political purposes, we may be able to arrive at a reasonable estimate of public ownership of these utilities. One fact is evident everywhere, and that is that a monopoly cannot exist as a private monopoly. It is equally true that the State can do business successfully only as a monopoly. Wherever there is competition, government ownership is almost invariably a failure, and competition is, as we all know, the very life of trade.

EDMONTON, ALTA., CANADA.

The Military Worthlessness of Football

BY WILLIAM EVERETT HICKS

[Mr. Hicks is the associate editor of *The Army and Navy Journal* and is, consequently, closely the military side of football—EDITOR.]

THE chief argument against football, as it is played by the cadet elevens at West Point and Annapolis, is that it violates the fundamental principle of military athletics, which is that the fighting efficiency of the soldier shall not be impaired. Following every serious accident or death on the football fields of the Military and the Naval academies, we are solemnly informed that the present game of American college football must not be banished from cadet athletics, because of its great value in developing soldierly qualities in young men, and because without it an essential feature would be lost in the training of the future officers of the Army and Navy. It is not the business of an officer to court needless danger, nor should his physical training endanger his physique. Viewed as a necessary part of the training of a cadet, the game will be found not only unessential, but without question detrimental to the best interests of the military education of cadets and opposed to the spirit of modern tactics.

The college type of football has been outgrown by military science. It is a survival of the old days of fighting in mass, the days when General Braddock, against the advice of Franklin and Washington, sent his solid columns forward to fight the Indians and French scattered behind trees, or when Napoleon's Old Guard swept forward in majestic but exposed array. The day of the "mass" plays in war has passed. The battle fronts in the Manchurian war were often more than fifty miles in length. The solid columns marching to attack, which made so picturesque a feature of the old fighting system, but which invited slaughter, if not obliteration, have given way to lines extended so as to give the enemy as poor a target as possible. The Japanese carried this principle so far that they would advance their lines sometimes by digging up and moving trees forward in the night and pushing up their columns under the protection of

this movable forest. The great power of the modern rifle has made the old battle formations impossible, and college football, therefore, has become a relic of the past rather than a preparation for the exigencies of modern battle.

The writer of this was a spectator at the game at West Point on October 30 in which Cadet Byrne lost his life in the contest with Harvard. Before that unfortunate young man was stretched out diving on the field, half a dozen members of the Army team had been more or less injured in the "scrimmages," and had to be manipulated and stimulated before they were able to resume their places in the line. These men were hurt in no small degree, for they walked limping to their places with every evidence of pain, and such young warriors are not willing to assume an air of injury unless they have good grounds for it. How many players are badly hurt and give no sign, but bear up with stoic stubbornness, can only be guessed at, but the number cannot be inconsiderable.

Not long ago at an Academy game of football, a cadet in the grand stand spoke of the fine playing of a member of his team. "Quarterback Blank is playing a fine game today," he said. "Altho he was knocked out for a time the other day, he came around and finished the game, but how he ever did it is more than we fellows have been able to understand. He was so flighty that night that we told him all sorts of stories about his being tried before the commandant and dismissed, and, poor chap, he believed them all, but he woke up all right the next morning, so he wasn't hurt much." But was he all right? Who shall say that a young man can receive such a mental shock without the possibility of serious after results? The delicate mechanism of the brain may not show the effect of such a blow for years, but the effect may be traceable none the less directly to the shock on the football field.

So far as the student body at West Point was concerned on October 30, there was a distinct impairment of its physical efficiency as a result of the game, with no corresponding advantage gained. Had the body been ordered out for field duty that evening or the next day, there would have been a certain percentage, in addition to the dying cadet, whose efficiency would have suffered on account of the game.

The attempt to minimize the importance of these injuries in football at the academies by bringing forward the accidents in other games only weakens the case of the advocates of college football for the Army, because it focuses attention upon the radical difference between it and other sports. After the death of Cadet Byrne, Major General J. Franklin Bell, Chief of Staff, U. S. A., was quoted as saying, "More injuries are sustained in teaching cadets to swim, in baseball games, in polo and in general gymnastic work than in football." This is the defense often advanced by other officers. It seems to be a stock defense.

The weakness of General Bell's excuse and the fallacy of that line of apology lie in the failure to recognize that no cadet is injured in swimming by the efforts of other cadets trained to prevent his swimming, nor in baseball and polo are injuries received by players trained to interfere with their opponents even to the extent of inflicting physical injuries upon them. Occasionally a batsman is hit with a pitched ball, a baserunner is struck with a thrown or batted ball, and a player is injured by an opponent's spiked shoes, but these injuries are not inflicted by players trained to that end. Indeed, a high baseball official has already announced that the spiked shoe will be abolished, beginning with the season of 1910. For General Bell's excuse to hold, he should show that players in baseball are trained to hit their opponents with the ball or to spike them. The injuries received in polo would afford General Bell a legitimate basis of comparison if the players were taught to dash their horses against the mounts of their opponents and to dash the riders from their seats. The accidents in polo and baseball come in spite of every precaution to prevent them; the accidents

in college football come from every effort to produce situations causing them.

In college football, as in no other game, the ball can be held by a player and the point of the game is to get it away from him. In all other games, such as baseball, cricket, tennis, polo, golf, hockey and lacrosse, the ball is not held by a player, and consequently it is no part of the game to take it from him. The ball is always played, not carried, and in this respect such games offer no comparison with football in the matter of injuries. One might as well argue that skating is as dangerous as football, because many persons are drowned while skating.

That the carrying or holding of the ball by a player is the chief factor in promoting brutality and injuries in the college game is demonstrated when one considers a type of football in which the ball is not carried or held by a player, but is always kicked. Such a game is soccer, or association, football. In that game the injuries are practically nil. The reason for the virtually complete immunity from injury enjoyed by the players in soccer is that, the ball never being held, there is no necessity for players to touch one another, whereas in American college football, tackling and wrestling are vital and inevitable results of holding the ball. In the "scrimmage" in which Cadet Byrne lost his life, twelve players were piled on top of him and Minot, whom he had brought to the ground. A Harvard man outside the mass had hold of one of Minot's legs, trying to pull him toward the Army goal. That struggling, writhing mass at any moment was liable to break a neck or dislocate a leg or arm, and the victim, far down in the pile, half suffocated, could not make himself heard before it was too late.

A favorite idea is that all such brutality makes for manliness and prevents "mollycoddling," but military science looks for fighting efficiency; it cares nothing about whether a thing will be called "mollycoddling" or not. What it wants is results in fighting efficiency. If so-called "mollycoddling" adds to fighting efficiency, that is what the Army wants. The soldier of years ago would laugh at the sanitary rules of camp today as "mollycoddling," such as drinking only

boiled water, cleaning of the teeth and sleeping under mosquito nets. In 1898 a certain New York city volunteer regiment made sport of the surgeon, because he directed the men to carry abdominal flannel bandages for protection in the tropics. The green soldiers thought this was ridiculously "old grannyish," but they found to their bitter cost that the surgeon was right. Nothing that adds to fighting efficiency is coddling, and nothing that detracts from fighting efficiency is military. These are axioms of modern military medical science.

Some officers of the Army, going even further than General Bell in their approval of college football, overlook the chief reason for the existence of the soldier—that he may be an efficient fighting machine. Such is Col. James Parker, commanding the Eleventh U. S. Cavalry, who, in a circular issued to his regiment at Fort Oglethorpe, Ga., dated October 24, 1909, said: "The game of football is calculated to bring out and develop most valuable soldierly qualities—courage, ready obedience and unflinching fortitude under pain and stress." Here it is recommended by indirection that pain be inflicted, for if one of the "most valuable soldierly qualities" is "unflinching fortitude under pain," and the contest causes no pain, then the game will not develop all the soldierly qualities it might. While, of course, Colonel Parker is too good a soldier to favor the wanton infliction of pain, his laudation of existing football is capable of such a construction. We are content to dismiss his view of the elevating influence of the college game by observing that if his regiment had to undertake a difficult operation in which he needed every man, he would be the last to favor a game of football the day before, played by his men as it is played at the academies. Consideration of the fencing contests between representatives of the academies will make this point clearer. Suppose that in spite of the masks, shields and buttons, every now and then the foil would penetrate the brain or body and seriously injure or kill a cadet contestant—how long would fencing be permitted to continue? Would any officer defend it on the ground that it developed "soldierly qualities" such as "un-

flinching fortitude under pain"? The unanimous answer in that case undoubtedly would be that the importance of the other features did not, could not offset the injury often inflicted upon the fencers, and that the chief aim of physical training of the officer, or the enlisted man, is to increase, not lessen, his fighting efficiency.

It may be seriously doubted whether the "valuable qualities" developed in young men by college football, as enumerated by Colonel Parker, will counterbalance the temptations it offers to be unfair and unmanly. Without going so far as the suggestion made in the public press that many injuries are caused by premeditated attempts to put good players out of the game, one must admit that in the heat of a football struggle sudden anger is often engendered, and the man must be more than human if, with feelings of enmity toward an opponent, he does not embrace the opportunity in a "scrimmage" to revenge himself by a disguised blow or other unsportsmanlike act. A student once remarked that he was not particularly careful when he went down in a heap on the football field where his knee landed on an opponent's anatomy. Asked whether he deemed that manly, he replied: "I didn't at first, but after I had the breath knocked out of me several times, and, on appealing to the referee, was told that it was an accident, I made up my mind that I might as well profit by the excuse of 'accident,' so I began to do what the others did."

The popularity of college football with the public is advanced as a reason why the cadets should play it, but military science takes no thought of such criteria. It found khaki and olive drab for men and neutral colors for warships best for fighting purposes, and the gaudy cheer-evoking, glittering uniforms were laid aside. The morbid desire to witness pain or death is still strong in men and women. The death-inviting "thriller" is the chief card at a circus, but neither the West Point nor the Annapolis Academy is a circus, and higher standards should prevail there than those of a Barnum or a Forepaugh.

The assumption of the defenders of college football that to abolish the pres-

ent game at the academies is to take football out of the curriculum of athletic education there is wholly unwarranted, for in soccer football we have a game which is as much in keeping with modern warfare as college football is in harmony with the discarded notions of close formations of olden times. Soccer is par excellence the game of continuous kicking, and, as Lieutenant George A. Taylor, Coast Artillery Corps, U. S. A., himself only a recent graduate of the college gridiron, says, the open-order play promoted by and inseparable from the kicking principle of soccer makes it resemble the skirmish or extended order drill of the modern soldier. In the army of Great Britain soccer is played without any of the injuries that disgrace the American type of football. A game fitted for military use should cultivate activity and suppleness, but in any football team at the end of the season it will be found that players are suffering from some kind of injury or overstrain that stiffens, and that there has been no increase in agility, but just the contrary. The individuality of the American soldier is strong and the opportunity for individual work offered by soccer appeals more strongly to his nature than the studied technique of the college game.

The difference in the life of the collegian and the cadet after graduation demonstrates the folly of tying the prospective officer of the Army down to such a game as the civilian student plays. After graduation it is likely the collegian will not again handle a football during the rest of his life, but it is evident that the stronger and more active an Army officer is physically, the abler he will be to meet the demands which a sudden military emergency may make upon him. Therefore it is a waste of his time to teach him a game which as soon as he leaves the Academy will drop out of his life. He cannot play the college game or football in the ranks of the enlisted men on account of the element of personal contact, which would utterly destroy his disciplinary influence over his men. No officer could be thrown ignominious-

ly to the ground and rolled over and trampled upon in a football rush and expect to retain the dignity necessary to the control of the men under him. However, he could play the soccer game without at all impairing his dignity, for in that personal contact is eliminated entirely. Just as officers today take part in baseball games with enlisted men without any loss of dignity, so in soccer they could participate in the games of the men without discipline suffering. At this time, when, more than ever before, officers are expected to keep a higher standard of physical excellence, to make test rides, and to show their physical condition, it is particularly desirable that the new generation of officers in their cadet days learn a game which they can enjoy for twenty years after graduation.

The example of the cadets tempts the enlisted men to play a game which exposes them to injury, often of a serious character. The men in the ranks vary in age from eighteen to more than forty years, and that they may be efficient they must be kept limber and active and must not indulge in sports that militate against those requisites of a good soldier. Enlisted men are quick to imitate their superiors, and if in the academies football were played that cultivated speed, agility and clean manly playing and was free from injuries, it would not be long before the rank and file would adopt the same kind of game. Two considerations, apart from the game itself, would conduce to this. One is that it is easier to lay out a soccer field at the average army post than a college football gridiron, and the other, that the paraphernalia for the game are far less expensive.

In a word, the present type of football as played at West Point and Annapolis is of doubtful military value to officers and men, being opposed to the principle of physical efficiency in the soldier, and providing the cadet with no knowledge of a game which he can make use of in after life to maintain his physical vigor.

—Sergeant G. A. Taylor.

Literature

Melchisedec

A YEAR ago we had a remarkable book, entitled "A Lord of Lands," from Mr. Benson. It was a modern version of the "Swiss Family Robinson" adventures, and was written with such circumstantial veracity that most of his readers must have believed it contained a literal record of the trials and triumphs of a colony of poor people from a great city who migrated to the Northwest and became "lords of lands." But now we have our doubts. Mr. Benson may belong to that ever-growing class among us who have such strongly developed faculties for telling the truth about what did not happen at all. In any case, he has written another book* in the same certifying manner, the most improbable and at the same time one of the most veracious stories ever conceived. We lay it aside with the subdued feeling that he has again got the best of our credulity and we are willing to believe what he has written in spite of outraged common sense.

The tale is of Jacques, who is one part Indian, one part French and one part Scotch. Such a character is born for fiction, not for life. Too many different kinds of racial ingredients spoil a human. His temperament has nerve-worn places in it, his morals are often hidden from him, and his intelligence is erratic. If Mr. Benson is not a physician he is a student of biology and its effects upon psychology. This circumstance makes the error of his story, and also constitutes the strength of it. Jacques is a sort of scientific deduction in human form of three natures—the Indian, French and Scotch. He is developed logically from such parentage. This is the error. For human nature is so complicated with something we call "spirit" that it trips science as often as it confirms. Spirit is a thing only an author of fiction may deduce. In real life it cannot be foretold or explained

ancestrally as it is explained in this book. But granting Mr. Benson that power, the thing is phenomenal. Jacques is a sorry kind of Indian. He is slightly epileptic, has a Gallic soul that comes and goes. At first he is a neurotic boy wandering among the lumber camps, next he becomes a Frenchman under the tutelage of an old French physician. But all the time, being himself a sort of unnatural, he seeks the supernatural. And the author makes this ghost-craving disposition give an opportunity for expanding his own views of New Testament Scripture, especially in regard to the Atonement. The reader does not see this for the moment, however. He is arrested by extracts from the old physician's diary made during the time he is angling for the mind and soul of Jacques. At last, after two or three lapses into idiocy, contrary to accepted pathology in such cases, Jacques comes to himself as a Frenchman. "Les Miserables" is his scriptures and the old Bishop Welcome is his Christ-ideal. He is appointed to the pulpit in a Unitarian church, and begins in earnest consecutively to work out the author's idea that not all men can be literal followers of Christ, but that certain men in every age and generation have the divine sacrificial instinct, and that these become the atonement for many. We now also begin to understand the title of the book. Jacques is to be a priest like Christ after the manner of Melchisedec. Having stumbled, loose-lipped and half grotesque, into this class, illumined spiritually by the one idea of service, the story is made up henceforth of his small, simple but dignified Messianic adventures. These do not prevent him from flying off at a tangent, and, when his passion is aroused, attempting to commit what civilization regards as the most degrading of all crimes.

The reader is ready at this point to turn his back on Jacques forever, as a repulsive, neurotic, erotic impostor, but the author will not have it so. He thrusts him closer and closer to our amazed attention.

*MELCHISEDEC. By Ramsey Benson. New York: Henry Holt & Co. \$1.50.

and we begin to see the true-to-life Jacques, who can walk thru such a transgression as if he were treading the waters of his own stormy sea to some higher destiny of the soul. In the next chapter, adroitly, without hypocrisy, he guides his soul again to self-effacement, service, sacrifice, and he lives thru the remaining pages without the rhetoric of emotions, without any splendor of spirit, but literally Christian. The effect is sure to be startling to those who are able to appreciate the unglorified simplicity of goodness in what would be termed an inferior man, and who will grasp the spiritual audacity of the author in representing him thus. The significance is that a great mind can never be obsessed with only one idea; it is too fertile, too facile, but in the soul of the simple Jacques he is able to isolate one thought and motive, that of not only service, but protection, atonement. It is comprehensive enough to make a saint of him, whereas it would only be a coming and passing impression with a broader-minded man.

The tragic end of his ministry is inevitable, as it is for all the atonement souls since the crucifixion of the Great Nazarene. This is the author's own intimation.

Marcus Whitman

THE late Rev. Dr. Myron Eells (who died in 1907), missionary and historian, spent a good part of his life in collecting and examining material regarding the early history of Oregon, and particularly the part played in that history by Marcus Whitman. The results of his long labor appear in this somewhat formidable volume on the life of the missionary pathfinder.*

The Whitman controversy has been strenuous and keen. But it is evident that in spite of the talents and the prodigious energy of some of the anti-Whitmanites, opinion is settling, surely and permanently, in the side of the missionary. Thanks to the anti-Whitmanites the story has been pruned of some of its mythical and legendary features, but enough of solid proof and of prob-

probability have been saved from the attacks of the iconoclasts to confirm the main claims of Whitman's partisans.

Whitman was born in New York State in 1802. In 1835, with a companion, he was sent as a missionary overland to Oregon. He did not finish his trip, but returned East in order to get several assistants for his projected work. He was married in the following February, and together with his wife, the Rev. H. H. Spalding and wife, and W. H. Gray, again started for Oregon, arriving at Fort Walla Walla on September 1, 1836. For the next six years he engaged in missionary work. On October 3, 1842, with a single companion, he started East, and after incredible hardships, reached St. Louis in February. From thence he went to Ithaca, to Washington, to New York and to Boston, and in the spring started on his return to Oregon, where he arrived in company with a large emigrant train in October. On November 29, 1847, he was murdered, with his wife and twelve others, in an Indian massacre.

The Whitman controversy is a dispute over the purpose of the missionary in making his winter trip to the East, and the political results of that journey. The Whitmanites assert that his trip was chiefly for the purpose of saving Oregon to the United States, and that in large measure his influence was decisive. The antis assert that his purpose was solely to save his mission, and that he had no effect whatever on the political issue. They further assert that the "Whitman legend," as they call it, did not appear in print until twenty years after the journey and seventeen years after the massacre.

It is true that the story, so far as known, did not appear in print until 1864. Dr. Eells shows, however, that it was common talk among the pioneers from the time of the ride. Whitman himself in his letters repeatedly affirms his political motive. In the plainest words he writes (April, 1847): "It was to open a practical route and safe passage and secure a favorable report of the journey from the emigrants, which, in connection with other objects, caused me to leave my family and brave the toils and dangers of the journey." Many other excerpts from his letters declare

**Marcus Whitman: Pioneer and Pathfinder*. By Myron Eells. Portland, Ore.: The Allen Harrison Co., 1907.

his intention of settling the country with Americans in order to prevent British domination. The antis, however, discredit his testimony. The late Prof. E. G. Bourne considered that Whitman mistook his own motives. Dr. Eells quotes corroborative testimony from a round dozen of contemporary witnesses, but these, too, the stubborn antis discredit. One witness makes several errors, another makes his statement too long after the event, another is not specific enough; and so, one after one, they are dismissed. This stubborn skepticism cannot, however, prevail. A careful reading of the overwhelming mass of evidence in this book ought to put the matter of Whitman's purpose forever outside the realms of controversy.

What his influence may have been in saving Oregon is a less certain matter. Dr. Eells proves conclusively the small regard for Oregon then held in the East. By 1846 the current of opinion had changed, America demanded the Oregon country, and compromised on the line of the 49th parallel. The successful emigrations of 1842 and 1843, of the latter of which Whitman was virtually the guide, must have been powerful influences on Eastern opinion. Whitman's interviews with officials in Washington and with friends elsewhere, and his letters in the press, must also have had their measure of influence. At least he did all that he could toward an end that was achieved. The case for Whitman grows stronger with the years.

Tuberculosis Books

OF books on tuberculosis the name is legion, and all of them have a good purpose and some are worth while. The *Proceedings of the Sixth International Congress on Tuberculosis*, held in Washington last fall, are published in six bulky volumes,¹ and, as two of these volumes are divided, altogether there are eight large books in the set. All the phases of tuberculosis as discussed by the experts of the world are contained in these volumes. They are beautifully gotten up, and, while the papers are published in

the languages in which they were contributed to the congress, they are always followed by abstracts in other languages, so that it is easy for even the reader who knows only English to appreciate all the significance of the contribution in each case. The volume on "Human and Animal Tuberculosis" is especially interesting, tho also particularly unsatisfactory because we do not as yet know definitely just what are the relations between animals and human beings in regard to this disease. One thing is very notable in the general recognition of the almost universal diffusion of tuberculosis. Practically every human being who lives to be thirty has at some time had tubercle bacilli growing actively in his tissues. Instead of discouragement, however, this fact is encouraging. Seven out of eight human beings are perfectly capable of throwing off the disease without much difficulty. It is only unfortunate circumstances that make the disease fatal to others. These circumstances can readily be modified, and then normal resistive vitality asserts itself triumphantly. For those who want to know definitely the present state of actual scientific knowledge with regard to tuberculosis these volumes are invaluable. Besides, they furnish abundant evidence of how well organized the congress was and reflect credit on the officers and committee of arrangements.

Dr. Edward O. Otis, of Boston, has long been an authority on tuberculosis, so that we should expect his treatment of *The Great White Plague*² to be at once scientific and practical. The note in all our tuberculosis books now is optimistic. All that we need is diffusion of knowledge and proper direction of energies and the eradication of the disease is promised. Dr. Otis pictures how much would be accomplished if only the price of one battleship could each year be devoted to the prevention of tuberculosis. "If half of what is now appropriated for military purposes could be employed against this one disease, which carries away not less than 200,000 persons in the United States each year, with what strides we should see it disappear." Dr. Otis states in comprehensive, practical

¹TRANSACTIONS OF THE SIXTH INTERNATIONAL CONGRESS ON TUBERCULOSIS. With an Account and Catalog of the Tuberculosis Exhibition. Philadelphia: Wm. F. Fell Co.

²THE GREAT WHITE PLAGUE. By EDWARD O. OTIS, M. D. New York: Thomas Y. Crowell & Co. \$1.00

form what the attitude of governments, State and national, with regard to the disease should be.

Dr. Knopf's book⁸ is quite as optimistic as that of Dr. Otis, and is intended to show that "tuberculosis is a preventable and curable disease, rarely directly hereditary, and that in children of tuberculous parentage the hereditary predisposition can be overcome, if they are properly raised and their physique particularly the chest, well developed. Even a predisposition acquired after birth or later in adult life can be successfully combated by careful, sober and hygienic modes of life." Dr. Knopf gives some idea of the recent advance of the movement against tuberculosis. In 1905 there were 115 sanatoria and special tuberculosis hospitals. In that year fifteen such institutions were established; in 1906, 17; in 1907, 35; in 1908, 71, and during the first three months of 1909, 39, so that at the present time we probably have more than 300 such institutions in the United States. If the book is to be read, as seems to have been the intention, by tuberculosis patients, it is too bad that it was not made a little lighter. The heavy calendered paper makes it weigh several pounds and it is a burdensome book to hold in the hand.

Americans. By Alexander Francis. New York: Appleton & Co. \$1.50.

A preface dated from Calcutta states that some chapters of this book were written in America, the remainder in England, and all were revised in Russia. A globetrotter of such a range should see national life in proper perspective, and Mr. Francis does show a freedom from that insular narrowness which has sometimes spoiled the work of British critics of America. Being a democrat, convinced that the cure for the evils of democracy is "more democracy, the author sees most danger to American institutions in the tendency to establish "an elective despotism," under which "the Constitution is being changed by a show of constitutional means," "governors, mayors and commissioners having been elected for a term of years with

larger powers than Englishmen would surrender to any individual, however worthy, or to any commissioner, however carefully selected, even for a day or an hour." Even this foreboding, almost alone in a book singularly free from biliousness, democracy may find a way to disprove. Observations about schools, settlements and socialism, about Jews and negroes and their treatment, are less colored by the writer's national loyalty or personal preferences than is usual. The socialism of German paternity, he thinks, is finding an insuperable obstacle in democracy. Contrary to socialist prophecy, socialism is not coming fastest where capital is most concentrated. The writer admires the enthusiasm, almost religious in its fervor, which Americans, North and West, feel for the peoples' schools, and that friendly association with neighbors, free from patronage on one side and subservience on the other, which honorably distinguishes American from British settlement workers. Least effective is the chapter on Race Prejudice, which treats quite superficially America's most distressing and complex problem, the problem which threatens more than the tendency to "elective despotism," to put democracy to the decisive test.

Sixty Years with the Bible: A Record of Experience. By William Newton Clarke. New York: Charles Scribner's Sons. \$1.25.

There are almost innumerable treatises whose aim is to inform the inquirer of the results of modern Biblical criticism, to explain its methods, justify its results, and exhibit the Scriptures as still worthy of credence and affection. It has remained for Dr. Clarke, of Colgate, to adopt a most persuasive and effective method of achieving this end, that of narrating his own progress from the dim and unsatisfying light of a book mechanically inspired to the clearer vision which historical appreciation of the ancient records have made possible. There can be no question that Dr. Clarke has written with the purpose of convincing his readers of the truthfulness of modern views of Scripture. His book amounts to a defense of the higher criticism. But he persuades and defends by telling simply, with convincing sincerity and frank-

⁸ *Tuberculosis: A Practical Guide to Its Cause, Prevention and Cure.* By Dr. Knopf. New York: Charles Scribner's Sons. 1909. Pp. 112.

ness; how he himself was led very gradually, but irresistibly, away from the common view which all evangelicals held a half century ago to that which obtains among moderate progressives of the present. The process is described in detail, always with clearness and without the slightest touch of bitterness or partisanship. The result is an exceedingly persuasive book, especially for the many who still require, for their spiritual good, to be persuaded on this subject. One could easily name a dozen treatises which contain more information of the results which historical criticism has accomplished, and of the facts in history and the views in doctrine which it has brought to light, but it would be hard to name a volume which makes the change from the older to the newer view more irresistible to a thinking man, or one which guides the inquirer to a like change of attitude with such gentle persuasiveness. One feels all the time that Dr. Clarke has maintained his Christianity, that he has kept his faith easily and without struggle. That is the reason why his autobiographical sketch is so well fitted to do good. The ordinary apologia for the higher criticism terrifies and alarms many sensitive souls, and throws them into a state of resentment and unbelief. Dr. Clarke has made it possible for even a timid and hesitant inquirer, humble as to his own measures of knowledge and intellectual power, to acquire a modern, informed and reverent conception of the Bible without the paroxysms of a revolution, and it may be hoped that his gentle pages will fulfil this purpose for large numbers.

Romantic Legends of Spain. By Gustavo A. Becquer. Translated from the Spanish by Cornelia F. Bates and Katharine Lee Bates. Illustrated. 300 pages, 12mo. \$1.50.

Becquer was a little known writer whose merit was greater than his fame. His period of literary activity covers the latter half of the nineteenth century. He was emphatically a writer of the imagination, and his short stories, in which his work mainly appears, are largely made up of such interpretations of nature as appealed to his own spirit. While he somewhat resembled Poe, he

lacked the latter's virility and strength; he also lacked the bitterness which characterized Poe. His writings are well worth reading and are given to the public in excellent form in the volume before us.

Contemporary France. By Gabriel Hanotaux. New York: G. P. Putnam's Sons. \$3.75.

In this, the third and last volume of his history, M. Hanotaux maintains the high level of the earlier parts; but the period treated (1877-1882), being less dramatic than the years preceding, its story is perforce less thrilling. Details of party debates, which fill many pages, will interest few in America, where parliamentary duels are less splendid and less important, tho the sketches of leaders like Ferry, De Freycinet, Grévy and Simon are realistic and attractive. Gambetta, the electric campaigner, the fiery orator, the cautious thinker, is the central figure of the volume, his speeches and letters the most human of its documents, his delayed marriage and premature death its tragic climax. Like all heroes in a democracy, he found his earlier Olympian exploits did not prevent calumnious assaults by the "bourgeois in his buttoned coat, the man of coldness and correctness, with wooden face and impassive eyes," who "stood watching every movement." These bourgeois, with Grévy at their head, long kept Gambetta from his natural reward, the Premiership. It came at last, in 1881, but only to slip away in a few months. Jealousy of his personal dominion combined with fear of his policies to compass his overthrow. How fast ideas advance! Gambetta was too radical for his contemporaries, yet M. Clemenceau, who headed the *intransigeants*, for whom Gambetta was too mild, has himself been a Premier, supported by a majority against the still more disturbing Jaurès, the Socialist. The whirligig of time brings its revenges. Clemenceau alienated the extreme Left this year and sustained defeat because he sternly maintained order during strikes. Yet it was against the protest of this same Clemenceau that in 1880 the ministry declared: "We have the charge of the public peace, and you may rest assured, gentlemen, that we

shall keep order in the streets." That must be the language of all parliamentary rulers, whatever has been the talk of their last month.

Literary Notes

W. E. PATER, for some years connected with the editorial staff of Houghton, Mifflin & Co., is now connected with the Baker & Taylor Company, publishers and booksellers, of this city.

....King Edward has conferred the honor of knighthood upon Frederick Orridge Macmillan, the head of the English publishing house of Macmillan & Co., on account of his services as chairman of the National Hospital for the Paralyzed and Epileptic.

....*Real Letters of a Real Girl*, published by the C. M. Clark Company, Boston, undoubtedly bears an accurate title. There is nothing in them that any bright girl who had gone to the Philippines on an army transport might not write, but they have no particular interest except to her friends.

....Another "How to Be Happy" book from the pen of the author of the original one is entitled *How to Be Happy Though Civil*. Its best recommendation is undoubtedly the author's own unfailing consideration for the feelings of others while trying to mend their manners. His is not a book of etiquette, of social forms, perfect familiarity with which, and scrupulous observance of which, may be, and often are, accompanied by boorishness, but a treatise on the root of true courtesy, which is breeding, delicacy of perception, or, as the author himself prefers to call it, *bushido*. He points his moral and adorns it with many anecdotes. A book that should do some good in a generation where it is, oh, so badly needed. (Scribner. \$1 net.)

....There was once a nice girl who was snubbed by a superior young man. This happened in a Paris *pension*, but they were both Americans. She wished to punish him by snubbing him in her turn, then resolved to prove to him how nice she really was. He saw it, while she, in the process of revealing herself, discovered that he, too, was delightful. He went away from there, after they had agreed to correspond. Their letters brought them so close together that they feared to meet again, lest disillusion might result. Wherefore they kept apart for years, ever writing, ever drawn nearer to each other in spirit and sympathy by that wondrous correspondence. All this is explained in the brief preface to *Letters from G. G.*, the letters being the girl's. They are quite commonplace, entirely on the surface, dealing with the trifling facts of life, rarely and superficially only, with ideas or emotions. This not to explain the secret of the spell the preface tells us they cast over the other, or to reflect the attraction of his share of the correspondence. Wherefore one concludes that it was quite natural for him to marry some one else in the end, and for

her to follow his example. The idea was a good one, if old as the hills; its execution lacks distinction, the only valid excuse for utilizing it once more. (Holt, \$1.25.)

Pebbles

"SEE here, sir! Where have you been?"

"My dear, I will give you full particulars in due time. I have the data, but it has been entrusted to a friend."—*Kansas City Journal*.

HELEN—Why, he yawned three times while I was talking to him!

Myrtle—Perhaps he wasn't yawning. He may have been trying to say something!—*Modern Society*.

"I MAY be forgetful, ma," said Tommy, looking up from his book, "but I ain't as forgetful as sailors are."

"How do you mean?" asked his mother.

"Why, they can never remember the weight of their anchor. They have to weigh it every time they leave port."

THE host was one of the newly rich of the vainglorious kind, and he was explaining to his dinner guests the cost of the dessert.

"This pineapple, for instance, cost me \$5, and—er—Mr. Jones, can I offer you a slice?"

"Yes, sir, you may," rejoined Jones. "I will take about a quarter's worth, please."—*Will Carleton's Everywhere*.

"SPEAKING of accommodating hotel managers," continued Mr. Morgan, "the best I ever met was in a small Western town. I reached the hotel late in the evening. Just before I went to bed I heard a scampering under the bed and saw a couple of big rats playing tag. I rushed down to the office to complain. The manager was as serene as a summer breeze. 'I'll make that all right, sir. Here, boy, take a cat to room 23 at once.'"

A POMPUS man went into a drug store early this morning to buy a cigar. The only person he found there was the soda water dispenser. The boy was sweeping out the store.

"Sweeping out, eh?" said the man. "Well, that's how I got my start."

The boy looked him over and replied: "Aw, what do you want to discourage me like that for?"

When the man left he was frowning.—*Denver Post*.

"Father," asked the small boy of an editor, "is Jupiter inhabited?" "I don't know, my son," was the truthful answer. Presently he was interrupted again. "Father, are there any sea serpents?" "I don't know, my son." The little fellow was manifestly cast down, but presently rallied and again approached the great source of information. "Father, what does the North Pole look like?" But, alas! again the answer, "I don't know, my son." At last, in desperation, he inquired, with withering emphasis: "Father, how did you get to be an editor?"—*John's Herald*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Giving Of Thanks

THANKSGIVING and Christmas are both home festivals, as Independence Day and Decoration Day give honor to the nation. Christmas Day and Thanksgiving Day are both religious festivals, but Christmas is peculiarly so, for it thanks God for the gift of the Founder of the Christian religion, while Thanksgiving Day expresses gratitude for the material blessings of home, for abundant harvests, for sufficient income, for the provision we have been able to make for the dear ones of our families, and for the mercy that has given and protected them. Peculiarly is Thanksgiving Day the festival of the home.

Ours is a blessed land of prosperous and happy homes. Those who live from the soil and who supply the workers in shop and factory have reaped full harvests. If one doubts the good fortune of the dwellers in our cities let him follow the long lines of decent and comfortable houses that form the confines of our cities, where dwell the myriads of workmen and clerks who have moderate salaries, but who can save enough to rent or buy attractive residences and who constitute our worthy and responsible citizenry. It

is true that the rich are getting richer; it is also true that the main wealth of the country is with our common people. Let him who questions it look around him.

These people, the great bulk of our citizens, are better provided, happier, more successful, more comfortable than ever before in our history, and we are not sure that the poor are any poorer. They are probably better off than in the lauded old times. They have more comforts and suffer less oppression from Government and from those for whom they work. They have schools and they can and do rise.

It has been a good year for the nation. The depression in business has past by. A stricter public conscience rules us. Evils and wrongs have been searched out and are being combated. We have a good President, and, on the whole, good and wise national and State governments. We are treating our dependencies better, and they are more prosperous and better contented. The world is better. Freedom and self-government have made wonderful progress during these twelve months, and it is a better world than it was a year ago. We have reason to thank God for the special mercies that have blest our own land, and particularly for those that have so richly crowned our individual homes.

✱

Frauds of the Sugar Trust

THE need of a most searching official investigation of the Sugar Trust tariff frauds is shown more clearly as the days pass, each one giving to the public some new story of crime committed, informers or detectives punished, and men in high office permitting or ignoring theft. Convinced that prominent officers of the Government have either failed to do their plain duty or have sold themselves for bribes, the American people long to see all the facts brought out by a thorough official inquiry. They care very little about the indictment and prosecution of a few men who were employed to weigh imported goods on the docks or to carry samples of sugar to the custom house chemist. They read with little interest the news that a dozen more inspectors have been dismissed or that Collector Loeb has discharged 123 employees since March 4. They want to see the evidence,

if there be any, against past members of the Cabinet who now appear to be accused of negligence or something worse, and to know whether the Government can reach the importers who were primarily responsible for these frauds and who profited greatly during many years by reason of them.

Of course, the bribes paid by the Sugar Trust to custom house employees were a very small part of the money gained by fraudulent weighing, fraudulent sampling, and the like. There was a great sum left to be distributed, a part to the Trust's officers and stockholders, and other parts to Government officers who allowed the frauds to be committed and restrained the honest busybodies who desired to expose them. Some one in the Trust, having great power and exercising a dominant influence, suggested the frauds and paid the wages of corruption. Can the Government take him into court and send him to prison? This is what the people want to know. It may be that the most guilty man on the Trust side of these foul transactions is dead. But did he have no associates in the Trust, men still living, who joined him in the criminal conspiracy and approved his acts? And are they beyond the reach of the law? This is something that the people want to know.

They are moved by even a greater desire to be informed whether Collectors of Customs and Secretaries of the Treasury and heads of the Department of Justice were parties to this conspiracy of thieves. They are unwilling that the evidence against such officers, if there be any, shall be withheld from the public by a statute of limitations. Such a statute may prevent the successful prosecution of a Trust rascal or a prominent Government officer in the courts, but it was not designed to prevent exposure and such punishment as can be inflicted by public opinion.

In the mass of testimony that has been published during the last ten days there are charges and insinuations which should not hastily be accepted as well founded or as warranted by the course and character of the men involved. But there are parts of this testimony which should fill these men, if they are innocent, with a consuming desire for an opportu-

ity to defend themselves before a committee of inquiry. One of them is Lyman J. Gage, formerly Secretary of the Treasury. Mr. Wakeman, who was for some years Appraiser at New York, recently said that ten years ago he laid evidence of the Sugar Trust frauds before Secretary Gage; that the latter advised him to lay them before H. O. Havemeyer, the head of the Trust; that he did so, and that Mr. Havemeyer in anger almost drove him from his office. When this was published Mr. Gage said it was false. He denied that he had so advised Mr. Wakeman or that the latter had ever come to him with a charge that the Trust was robbing the Government. But Mr. Wakeman's assertion has since been confirmed by the testimony of W. B. Howell, who was Assistant Secretary of the Treasury at the time and is now a member of the Board of Appraisers. He remembers the incident, and he says that the Secretary did send Mr. Wakeman to Mr. Havemeyer. That was ten years ago. Everybody knows that there was no exposure, no prosecution, no restitution. And yet the evidence was convincing. Mr. Wakeman exhibited to the Secretary the bribe money which had been paid to a custom house employee.

We would not be understood as making a charge of corruption against Mr. Gage. But he should desire and should welcome an opportunity to explain why he sent Mr. Wakeman to the responsible head of the Trust, and why the frauds were not checked. The employee who gave Mr. Wakeman the evidence lost his place.

Mr. Wakeman, some time later, laid the information before Secretary Leslie M. Shaw, asking the latter to take the bribe money, which was a part of the evidence. He publishes the following letter, sent to him by the Secretary in reply, on July 18, 1902:

"MY DEAR MR. WAKEMAN—I have yours of July 8th, which has been unanswered heretofore on account of my absence from the city. I note the inclosures and return them herewith. I can see no other disposition to make of the inclosures than to place them in the conscience fund, and if this is desirable it can be done in any way that seems appropriate."

We have not heard that the evidence was used in Secretary Shaw's time for the discomfiture of the Trust. It may be

that it was found to be insufficient. But there is something in this incident which calls for explanation, and Mr. Shaw should welcome an opportunity to make one before a committee of Congress. The average man will say that the Secretary might have found some use for the "inclosures," which were the bills received as a bribe by Henry C. Corsa, and should not have advised that they be placed in the conscience fund. We presume that Mr. Shaw has a good explanation. This is the time for giving it to the public, and it can be repeated before the Congressional committee of investigation.

Such a committee will be appointed. Public opinion demands such an investigation as Congress can make. The people want to know who have been faithful and who have been corrupt. They want to find out whether the Trust was enabled for many years to defraud the Government by the negligence or dishonesty of responsible and high officers in the Federal service.

The New Necromancy

It is new only in the sense of a revival, for the spirits, during their thirty-year exile from popular attention and credence, seem to have learned nothing and forgotten nothing. Their manifestations have neither disappeared nor improved in evidential value in this age of science. We do not yet know how to explain all these mysterious doings and we do not yet know whether there is anything here that requires explanation. There are today, as there always have been, thousands of persons claiming to possess supernatural powers, but not one of them can demonstrate it by any kind of experiment. A scientist who, in the physical, chemical, biological or even the psychological laboratory, discovers a new force or effect, no matter how delicate or under what complicated conditions, has no difficulty in promptly proving its existence to the satisfaction of everybody, but the forces which are said to pervade the séance room are strong enough to lift a table or a person, and they are sufficiently at command to be produced whenever anybody is willing to pay for them, yet they remain as

unpredictable, unrepeatable and elusive as ever.

Those who believe in spiritistic phenomena call upon their opponents to disprove their hypothesis, and hold, rightly enough, that if ninety-nine mediums are merely tricksters, it does not prove that the hundredth is not genuine. It is, of course, impossible to prove the universal negative of such a proposition. It is merely a question of probabilities. We can merely say that if spirits do return, it is extremely unfortunate that they can only return under those conditions which are most favorable for deception.

What these conditions are we can learn from the practices of amateur and professional conjurers. Let us approach the matter from another starting point than is usually adopted. Instead of speculating as to how departed spirits would manifest themselves to us, a matter which we can know nothing about, let us consider what a trickster would do if he wished to deceive the public into thinking that he was possessed of spirit power, a matter on which we have unfortunately a great deal of information. What conditions would he impose? What methods would he use? What difficulties would he encounter? The following are the chief characteristics of such fraudulent manifestations:

(1) Darkness. It is a general rule that the physical phenomena of spiritism are inversely proportional to the amount of light. Eusapia Palladino stands more light for some of her lesser miracles than most mediums, but not so much as good conjurers.

(2) Distraction of attention. This is the chief reliance of the parlor and stage magician. The most striking things in the séance room occur after the sitters are tired of watching and have been looking for something different.

(3) Unexpectedness. An experimenter lets us know what effect he is trying to get, and even if the experiment does not work he does not palm off some entirely different phenomenon and claim he has succeeded. The feats of the conjurer—and of the medium—are capricious and unforeseen. That is why trickery cannot be guarded against by precautions in advance.

(4) Control of conditions. The conjurer and the mediums alike insist on having lights, furniture, sitters and apparatus arranged to suit themselves. On the other hand, the primary requisite of an experiment is the control of conditions. It is, therefore, incorrect to speak of experiments with mediums. They are usually merely observations, and that under circumstances most unfavorable to correct observation.

(5) Suggestion. This is the main reliance of the magician, next to distraction of attention. He palms a coin while pretending to throw it into a hat or into the air. Our eyes follow the motion of his hand and interpret it according to the intent. It is easy under favorable circumstances to cause collective hallucinations of smell, sight or sound. Our sense of hearing is particularly liable to be deceived as to the character and direction of a sound, such as the raps and scratches which are the commonest of mediumistic phenomena.

(6) Concealment. A prestidigitator for his most difficult tricks requires some kind of a table, shelf or screen, but he rarely demands so convenient a shelter as the medium's cabinet or curtain.

(7) Tied or held hands. The releasing of hands and feet when they are bound, knotted and sealed is the cheapest of tricks. We have seen a man handcuffed by a policeman, tied in a bag and thrown into the river, yet he came to the surface promptly with his hands free.

(8) Involuntary assistance. The respectable and well-meaning gentlemen whom the audience select to represent them on the stage do not interfere with the magician. On the contrary, they often aid as well as give him countenance. The magnetic girl who used to throw strong men about the stage was really utilizing their strength, not her own. Where several persons have their hands on a table it is impossible to prevent their taking an active part in its motion.

(9) Emotional excitement. An experimenter must preserve a cool and somewhat detached demeanor. Now, even the most convinced skeptic cannot witness unmoved such violations of natural law as these, purporting to prove the existence of another world, and especially the

presence of his deceased friends and relatives. The photographs taken of the séance room show us not merely that the table is suspended in mid air, but that the witnesses, watching it with bulging eyes, open mouths and strained attention, are incapable of critical observation.

(10) Muscular movements. If the medium were really lifting tables and throwing things about it would be impossible for her to prevent showing some evidence of it by her movements and expression. The scientific men who have observed Palladino have scrupulously noted that whenever anything heavy moved, even at a distance, there was a simultaneous contraction of the muscles of her limbs and a strained expression on her face just as if she were pushing or pulling it. They also observed that when the table or other object was lifted her skirt or the curtain bulged out and touched it.

(11) Detection. It would be impossible for a trickster to avoid being caught in the long run. Most of the mediums who have indulged in physical phenomena have been exposed, but that does not shake the faith of their disciples. The late Professor Lombroso, the most distinguished convert of Madame Palladino, recognized that she cheats, but accounted for it in this way, that she is a very suggestible person and in the presence of those who suspect her of trickery she is impelled to resort to it. We know of no argument which would have any effect upon the mind of a person taking this view of it. If she is caught cheating it is because a skeptic is present. If no skeptic is present the phenomena is genuine. It is an invulnerable position.

People used to believe that the planets moved because there was an angel on each one guiding it. People used to believe that when a mine blew up it was the work of a demon. Some people believe that when a table tips unaccountably it has a spirit in it. All these things may be believed by those who wish, for it will never be possible to prove that there is no angel in the planet, no demon in the fire-damp and no spirit in the table, because we do not know what moves the planet thru space or generates the gas in the mine or lifts the table in the séance, tho we think we can come nearest to explaining the last of the three. But an

explanation after all is merely an alternative viewpoint, and there are many persons who will always prefer to use "supernatural" in place of the word "unknown."

Interreligious Courtesy

WE have briefly commented on the discussion on intermarriage in the conference of Jewish rabbis concluded last week in this city. In that discussion the ablest men in the body pronounced strongly against intermarriage, on the ground that it would be the death knell of the Jewish faith. We do not question that it would be fatal to Judaism as a separate community.

But there was another incident in the meeting which deserves special mention. At the same time the convention of the Episcopalians of the State of New York was in session, and it sent to the conference of Jewish rabbis a special message of good will. It was received with no little emotion as an unusual if not unexampled expression of fraternity and was most cordially responded to.

May we not believe that this act of the Episcopal convention was itself the result of the peculiar and marked courtesy toward the Jewish body of the late Dr. William R. Huntington, of Grace Episcopal Church. Half a dozen years ago there died a greatly honored aged rabbi on the East Side of New York. Fifty thousand Jews united in a funeral procession thru the streets. When the head of the procession reached Grace Church its bell began to toll, and before the church for two hours stood Dr. Huntington, bareheaded, to show his respect, not to the deceased rabbi only, but even more to the ancient faith which the Jewish people have so firmly held thru the centuries against persecution and opprobrium. It was a most gracious act, and one not singular to him; and we think we are not mistaken when we say that this latest expression of fellowship was meant to maintain the sentiment of good will and of honor which was felt and shown by the beloved rector of Grace Church, who has so lately been removed from his unique position of influence in his denomination of Christianity.

As one considers such a meeting as this of Jewish rabbis, one is constrained to raise the question of the future of Judaism in this country. Judaism is now very strong in our cities and growing stronger, altho almost unknown in the country districts. It is divided into two wings, one of advanced and progressive Judaism, which tries to fit itself to its age; and the other of the strictly rabbinic Judaism of the immigrants on the East Side from Eastern Europe. The conference here held was of the liberal, not the conservative Judaism. It does not speak Yiddish, but English. It maintains the more distinctive Jewish rites, but not the multiplicity of rules imported from Russia and Rumania. The conservative Jews on the East Side talk Yiddish, have Yiddish newspapers, and hold fast to the elder traditions. But the children are taught English. In Jewish schools we have heard children not a month from the steerage repeat poems from Longfellow or Tennyson, and then give the meaning of them in Yiddish. These Jews will sacrifice anything that their children may learn. They are the best scholars in our high schools and universities. When they seek employment they are compelled to break the Jewish law of the Sabbath, and that means that they begin to go over to a more liberal interpretation of Jewish rites, for the strict letter of the commandment must be explained away. Yet the great majority of Jews, living in separate communities, attending their humbler local synagogues, are what they were in Russia, while the richer Jews, scattered over the best sections of the city, and attending the wealthy temples, are of the liberal school. While members of both wings remain enthusiastic Jews, equally loyal to their nationality, to use the word in the Turkish sense, they have little to do with each other except in the way of charities; and the East Side Jews have roundly denounced this conference of rabbis as unbelievers, little better than Christians and infidels.

But what of the future? During the next thirty years we shall see no such enormous Jewish immigration as we have seen during the past generation. Russian proscription is already relaxed. The pales are extended, and Jews, in

limited numbers, are admitted to Russian universities. Jews would rather live in Russia than in the United States, if not persecuted. We believe that the Jewish immigration will be greatly reduced, as the Irish has been. Then our Jewish population will be rapidly Americanized thru the influence of the public schools and the English language, and that means liberalized. The future belongs to liberal Judaism, not to rabbinism. Whether such a liberal Judaism can permanently maintain the separation of the faith it is too much to say. The difference between liberal Judaism and the extreme liberalism of certain Christian bodies consists chiefly in the Abrahamic rite and the pride of Abrahamic ancestry. Of the Jews carried captive from Palestine all were lost except the few whose sterner faith took them back to be segregated in Jerusalem. Whether the larger intelligence and pride of ancestry of modern Judaism will be able to keep them distinct we are unable to say, but it is clear that our American liberal rabbis will have no intermarriage, none of what Zangwill calls the "melting pot."

What Is a Gentleman?

NEWSPAPER letter writers get "spells." These are bad in proportion as the writers feel the importance of defining something. A while ago they were in a preternatural state of seriousness over the definition of religion. No two of them could accept the same definition, a characteristic of newspaper letter writers. More recently they have been demonstrating their deep concern over the definition of socialism, and their inability to determine it. At the present moment they are working at the definition of "a gentleman."

In colonial days we had not strayed far enough from English usage to have a relatively large number of "gentlemen" in the population. "The prefix of respect," as the amiable Mr. Savage phrases it in his "Genealogical Dictionary" when he means plain "Mr.," was conceded to men who had been landowners in England before coming to these shores, to certain members of the

great London trading companies, and usually to clergymen. Most other inhabitants were known as "Goodman" this or that.

With the constitutional prohibition of fine old privileges like rank and primogeniture, which followed close upon the reforms that Jefferson initiated in Virginia, the inherited basis of distinction between gentlemen and other men was destroyed in America. For a while Americans professed to be glad that it was gone, but distinction is too dear to finite human nature to be given up without a pang or effort to re-establish it. For seventy-five years, at least, Americans have been trying to discover some new kind of a "gentleman," and especially some indisputable hall mark for "a lady."

It cannot be said that the quest has been rewarded with success. The older society of Boston, New York, Philadelphia and Baltimore, and of the larger Southern cities as well, believed for a time that it had found in pedigree a selective test to which no one, even in a democratic land, could object. Yet it was not at any time satisfactory. What did it avail a Winthrop or an Endicott that the blood of colonial governors flowed in his veins if he had no more sense than to take up his abode at Worcester or Danbury? Could any one regard a Rittenhouse as a gentleman if he lived north of Market street? Obviously, we had not found the perfect definition.

Then things grew worse, and before long got desperate, when money began to "talk." How could anybody be a gentleman who could not lavishly entertain? What could it profit an ambitious social leader that she was Knickerbocker of the Knickerbockers, if she could not give monkey dinners, or build as good a house at Newport as the pork-packer's daughter or the soap-boiler's son? So it comes about that we find ourselves now in a stage of social evolution where the only pragmatic way to decide questions of social precedence is to consult the table of multimillionaires in the World Almanac.

This leaves something still to be desired, and every now and then an ideal-

istic mind ventures the suggestion that we might create an order of gentility on the basis of fine manners, or of refinement of nature, or of intelligence, or of good conduct, or of some other equally intangible differential. He is quickly put down for his pains, with the unanswerable argument that all these things are "un-American. Is not the car-conductor, forsooth, a gentleman? And is not "the laundry-lady" a human being with "feelings" like the rest of us? Plainly, none of these things will do.

Meanwhile, however, in circles here and there, a queer notion has grown up that we might apply the designation "gentleman" to a man who combines a sense of honor with decorum in his bearing and courtesy of demeanor toward his fellowmen. Cheating at cards has long been regarded in most parts of the world as ungentlemanly conduct. Why, then, should it be quixotic to regard cheating in business as in some degree ungentlemanly? Of course, to apply such a rule generally would cut swaths of death and destruction thru our "best society." Still, we might have the satisfaction of discovering that a nucleus of gentlemen survived the wreck, to start the world over with. It has commonly been thought ungentlemanly, too, to wear freak clothing on the street or to parade in front of hotels with atrocious placards on one's back or chest for advertising purposes. Would it then be absurd to say that a gentleman ought not to place advertisements offensive to decency and good sense on street billboards or in subway trains? Yet to convert this notion into a rule and enforce it, would, we fear, carry pain into the bosom of some millions of our most "cultivated American homes."

The day may come when the dreamers of iridescent dreams and the definition-loving writers of newspaper letters will hit upon a test or mark of "the American gentleman" and "the American lady" that we shall all recognize as a true brand. We do not despair. But, as conscientious reporters of the news of the day and the state of mankind, we have to acknowledge that as yet the question, What is a gentleman? has not been answered for the American public.

The Decision of the Lords

IT is settled, as nearly settled as anything in the future can be, that the English House of Lords will dare the worst and reject the Budget. It is a most dangerous and fateful course. That way is chaos.

According to the Constitution, as much of a Constitution as Great Britain has, the House of Lords has no authority over money bills. They must accept them as they come from the House of Commons, just as the King must accept and sign a law of Parliament. The House of Commons grants a money bill, and on its passage the Speaker presents it to the King, and the King thanks the Commons, and not the Lords. It is six centuries since the Commons began to claim prevailing right over financial legislation; and since 1671 the Commons have asserted and exercised exclusive right. In 1678 the right was thus positively enforced:

"Aids to his Majesty in Parliament are the sole gift of the Commons; and all bills for the granting of such aids or supplies ought to begin with the Commons; and that it is the undoubted and sole right of the Commons to direct, limit and appoint in such bills the ends, purposes, considerations, conditions, limitations and qualifications of such grants; which ought not to be changed or altered by the House of Lords."

This momentous action of the Commons, in defiance of the Lords, occurred during the tyrannous reign of Charles II, and the next year was enacted the Habeas Corpus Act. The Lords attempted to reassert their authority over financial grants, but no evasion was successful. Not since 1678 has any but the most inconsiderable amendment been offered in the House of Lords of a bill presented for acceptance. Since 1816 the Budget, or consolidated money bills, has been passed, without debate, by the Lords; but it is true that in 1860 a paper tax, separate from the Budget, carried thru the Commons by the bare majority of nine, was rejected by the Lords, with the assent of the Prime Minister. The next year the paper bill was included in the Budget, passed by a majority of only fifteen, and the Lords did not dare to reject it.

The result of such a decision as the ruling party in the Lords have made has been anticipated by Prime Minister Asquith as chaos:

"It means, in a word, financial and administrative chaos—a chaos how profound, how far-reaching, how fraught with injustice to individuals, and danger to the state, it is no part of my business tonight—I trust it may be no part of my business hereafter—to demonstrate and to make plain."

The reason why it will be financial and administrative chaos can be made plain. When rejected by the Lords the Budget Bill will be dead. It is not a bill for next year, but for this year; and there are only four months of the year left. The action of the Lords looks to no new bill; it looks to dissolution and a new election. Remember that, in anticipation of the sure passing of the bill, from the time the Commons have passed the Resolutions in favor of it and before the bill has been finally adopted, its provisions have become operative. That is a curious way they do in England. The taxes have already been collected, a good part of them, the new taxes on the bill which will now be dead. To be sure certain permanent imposts that run on from year to year may still be demanded, but all the new ones and others that require annual authorization will cease to be collectable. Last year the Income Tax, annually renewed, brought in \$128,000,000, and the Tea Duty nearly \$24,000,000, while the new taxation is reckoned at \$64,000,000, a total of about \$216,000,000, gone, lost, which is about one-third of the total revenue. Let the Lords kill the bill and all legal authority to make this collection of a third of the needed revenue fails.

What would be the result? Some of the new taxes, such as the Death Duties, have already been paid on the presumption that the bill would pass. But now all the taxes of the year will have been rejected by the Lords, against all precedent. It may be expected that people will refuse to pay taxes for which there is no statute. Tea and tobacco would come in free, or the import be collected by illegal force. Or else, what would the law courts say? Would they decide that the taxes can be collected under a resolution of the House of Commons? In that case the Lords are beaten and it is settled that they have no word to say. But it is doubtful if the law courts would

thus decide, and if they did it would take months, and there is chaos in the meantime.

Of course, the Lords would like the Commons to cringe and pass a new Budget bill such as they could approve; but, of course, the Commons will no do such thing. That would be utter submission and the yielding of all that has been gained and maintained during these centuries. They cannot thus surrender their rights. Nor do we believe that the Government would consent to make a loan. It might be necessary to make a sudden and drastic reduction of public expenses. A stop might be put to the building of a bigger navy, or to new expenditures for the army. In every way reduction would be in order, and officials might have to wait for their pay. Indeed, we can hardly guess what form the chaos might take, for the condition is wholly without precedent, and that in a land whose Constitution is a succession of precedents.

Now a general election must follow, and a most mixt and confused campaign it will be. It will be a fight against the Lords, very likely for the reorganization or overthrow of the Upper House. But back of that will be the battle between free trade and a protective tariff. The Conservative party has gone over utterly to protection. They claim that with a high tariff it will not be necessary to put these new taxes on land. Tax the corn which the poor man eats and let the rich man go. So to defend the rich landholders they will put new burdens on the poor. The next few months will be a very interesting period in British history, and there is likely to be but a small majority for either side in the next Parliament, with the Irish members holding the balance of power, and demanding Home Rule as the price of their votes.

Senator Root's Plea

What will the Republican insurgents have to say about Senator Root's plea for subsidies to American shipping? He told the merchants at the dinner of the Chamber of Commerce last week that it is the protective system that has killed our commercial navy. Once our ships covered the sea; now the American flag is seldom to be seen in a foreign port. Why? Because, says the Sen-

ator, we have protected everything else so highly that we have raised the standard of wages and of living, and it costs more to run our ships, and we cannot compete with the cheaper paid seaman-ship of foreign nations. Therefore, says he, let us give subsidies to our ships to make up the difference. We question if that is a full explanation. Ours is not the only country in the world that holds to the protective system. Germany protects equally, and so does France, and they have commercial fleets. One recourse would be to let us buy our ships abroad and then let them fly our flag. Another would be to reduce tariffs, at least on what goes into the construction of ships here. But a chief trouble with our lack of a navy is said to be the fact that other nations give bounties, subsidies, to steamship lines. Of course, that gives them an unfair advantage, and the only defense would seem to be for us to do the same. That argument is hard to meet. To give bounties is a bad device, and it is said that Japan, which has gone into the plan largely, finds it does not pay; and yet, so long as all other nations give subsidies we may have to do the same, so as to compete with them, until all can agree to give up the plan, as they have given up bounties for beet sugar. But the question is, What will the insurgents say to the plan? They don't want the high tariff, which Senator Root says is the cause of the trouble. They represent the consumers, who want to get products cheaper, and who will not care to pay taxes to raise the present cost of importation. They will say, Let them do the sea-carrying trade who will do it cheapest, and so most to our advantage. We are not clear that Mr. Root has done wisely to put the cause of our loss of the commercial marine on the tariff.

More than an Editor

A great editor is more than an editor; he must have various outlooks. Mr. Gilder, whose death last week we lament, had been the editor of *The Century Magazine* from its foundation, and before that was on the editorial staff of *Scribner's* when it was merged in *The Century*. The editorship of such a magazine peculiarly hides the personal qualities and views of one who controls it, and who is seen only indirectly in the

quality of those whose writings are selected for publication. As editor Mr. Gilder was judicious and catholic; but the man was known better by his other activities. He was the writer of a number of volumes of refined and excellent verse, which gave him an honored place among our current poets. He was also a lecturer of much esteem, but he claims also a most worthy place from his interest in all matters of public concern for the improvement of the condition of the people. He was of delicate physique and limited strength, but he never lacked energy and purpose to serve the public. The last work of his life was directed to an appreciation of the political services and personal character of President Cleveland, who was his dear friend and companion. Now we may think of him, as he bade us, in his literary fellowships:

"Call me not dead when I, indeed, have gone
Into the company of the ever living
High and most glorious poets! Let thanks-
giving
Rather be made. Say—'He at last hath won
Rest and release, converse supreme and wise,
Music and song and light of immortal faces;
Today, perhaps, wandering in starry places,
He hath met Keats, and known him by his
eyes.
Tomorrow (who can say) Shakespeare may
pass,—
And our lost friend just catch one syllable
Of that three-centuried wit that kept so
well,—
Or Milton,—or Dante, looking on the grass
Thinking of Beatrice, and listening still
To chanted hymns that sound from the
heavenly hill.'"

Mrs. Stetson's Excommunication

One would think, from the talk about it, that "Christian Science," more properly called Eddyism—for it is not science, and oddly Christian—was one of the prevailing religious cults of the country; but it is not, for the Religious Census gives it but 604 organizations, with 85,717 members, of whom 72.4 per cent are females, a much larger proportion than in any other denomination in our land. The high-handed action of the cabinet which rules not the Boston First Church alone, and we may presume rules Mrs. Eddy, but also rules despotically the whole "Church of Christ Scientist" thruout the country, is made much of in the press. We take it that it rules chiefly, or mainly, because it holds possession of the prophetic

whom it keeps immured in seclusion. If she were to die, and her death be known, we presume rebellion would arise. We cannot help suspecting that the fantastic quarrel between the Boston magnates and Mrs. Stetson, and her New York trustees, comes from the ambition of Mrs. Stetson to grasp the succession to Mrs. Eddy, and the determination of the Boston cabal to keep it in their own hands. Outsiders can have no more than an amused interest in the trial in Boston of Mrs. Stetson, resulting in her excommunication notwithstanding her humble submission to what purported to be Mrs. Eddy's direction. The main charge against Mrs. Stetson is that of certain uncanny practices but no more uncanny than are all the practices of the Church of Christ, Scientist. The Boston contingent declare that it is most legitimate to use "mental suggestion" to affect a person, when used with his consent and knowledge; but she is charged, in her meetings with her practitioners, with having used "mental suggestion," mentioning their names, against those who had an "aggressive mental attitude" against her, that is, we suppose, her enemies. Of course, she would not tell them that she was trying, with the aid of her practitioners, to overcome them by her superior "mental suggestion." This she holds to be legitimate, and the Boston rulers say it is wrong. Yet on this she was ready to submit, but they were determined to get rid of her anyway. As to the ethics of all those spells, wizardry, charms, counter-charms and fee-faw-fum, it is enough to say that to will the failure of an opponent, or his return to a better mind, is no worse than to speak, write or vote against him. All depends on whether the motive is malicious. But enough of this nonsense, which appeals to imaginative and non-scientific souls, no matter how much miscellaneous undisciplined culture they may have obtained.

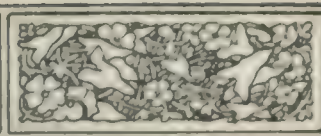

William M.
Laffan

The death of Mr. Laffan, proprietor of *The Sun* of this city, was not expected, altho he had been in poor health for months. He was an unusual character, and he made *The Sun* an unusual jour-

nal, such as attracted many who did not agree with its policy or principles. His rule was to secure in every department the most competent, scholarly men possible, who must not only know, but know how to write brightly as well as intelligently. His paper represented his prejudices and even his hostilities. He had not much use for the new philanthropic schemes that aimed to regenerate society, for the old business ways that brought prosperity were better for him than all President Roosevelt's schemes, which, and whom, he hated profoundly. But he was beyond all criticism and worthy of all praise in his broad attainments and knowledge, and especially his service to the art interests of the country. He came first on *The Sun* as its art editor, and was the adviser of Charles A. Dana, who founded *The Sun*, in his large and noble collections, as he has been of late years a very close adviser of J. Pierpont Morgan in his larger collections. When Mr. Morgan became president of the Metropolitan Museum, Mr. Laffan became a member of its board, and gave, we suspect, more time to the Museum and to Mr. Morgan's library than to *The Sun*. His heart was in it. He was an expert in ceramics and prepared the splendid catalog of the Morgan collection in the Metropolitan Museum, and left unfinished other work of a similar sort for the Museum, besides overseeing the work of editing the privately printed volumes of the Morgan Library. His frequent visits to Europe were devoted to securing additions for the Museum or the Library, and his advice was almost conclusive. What was beautiful about him was the intense interest with which he gave himself to the art interests of the country, and particularly the city, so that his avocation almost, but not quite, mastered his vocation as publisher and editor. His somewhat wilful independence appeared in his conflict with the Associated Press, and his establishment of his own rival agency, whose news, collected from all over the world, is daily reported, over the subscription "*Laffan's Agency*," to a multitude of items on the foreign news page of the *London Times*. In his own paper his name was never exploited, nor those of his editors, until the shroud of death lifted the shroud of life.

Insurance

Stock Control of the Equitable

As the result of the wide discussion of the subject which resulted from the investigation of 1905, and which continues with little abatement, the insuring public have acquired a more intimate knowledge of the principles and practices of life insurance than they ever before possessed. The immediate results of that investigation were, in some directions, destructive. In itself, this was not to be regretted, for, in the main, the elements eliminated were injurious and should never have been permitted to find a place in the system; but in this work of regeneration it was inevitable that the entire structure should fall under public suspicion. Happily, the institution as a whole possesses inherent merits of a character so substantial as to render it impervious to hostile criticism, and its hold on public confidence was never seriously feared.

This, however, is not saying that in particular spots all the blemishes have been removed. Necessarily, the work of reconstruction proceeds slowly. Wherever this is essential to permanency, the public must cheerfully accord its hearty approval. But where no good reason is apparent for the failure to make reforms of an unquestionable character, it is natural that, as in the case under consideration, there should be inquiry respecting the delay.

It will be recalled that some time in the late summer or early fall of 1905 the Hyde holdings in the capital stock of the Equitable Life Assurance Society, being at least a majority thereof, passed by purchase, the consideration being something like \$2,500,000, to Mr. Thomas F. Ryan. On the face of it, such an investment is devoid of every element of cupidity, for it is well known that the entire interest increment on the whole of the Equitable stock is limited to \$7,000 a year; besides which there were assurances from Mr. Ryan at the time that his motives were wholly benevolent. His intervention ended the Alexander-Hyde feud, took the possible control of the big company beyond the reach of

sinister influences and placed it in the care of men of high standing. Arrangements were planned for admitting policyholders to a share in the government of the company's affairs, and this was subsequently effected by amending the company's charter providing that twenty-eight of the fifty-two directors be chosen as representatives of the policyholders. Matters have run along in this shape since, the company's business has recovered from the effects of the serious troubles which afflicted it, and, to all appearances, the interests of the policyholders are just as secure as they can be in any stock-mutual life company.

Right there is the point. Why does not Mr. Ryan go one step further in his beneficent work by relieving the policyholders of the possible future domination which, in some probably unexpected way, the stock control may exercise. It is beside the question to say that the present status is of such a character that the control by Mr. Ryan can never be used against the policyholders. There will always be doubt on this head as long as the present owner retains his grasp upon it. If the majority stock should later be acquired by other interests, this fact would still be true. The trustees are men of the owner's choosing, and their representation of policyholders' interests is purely perfunctory. Just so long as \$100,000 worth of 7 per cent. stock, valued at several millions of dollars, continues to control the half billion dollars of Equitable assets, the policyholders of that company have good reason for feeling insecure. The temptation is too great, and it increases annually. Until that stock is sold to the policyholders and retired, the mutuality of the Equitable remains where it was in the days of Henry B. Hyde, with the difference largely in favor of Mr. Hyde, its founder, whose life was bound up in extending the company's greatness. The stock control of the Equitable is a menace and it should be terminated. In the interests of sound life insurance the Equitable Life should be a policyholders' or a purely mutual company.

Telegraph and Telephone

THE announcement of what is practically a consolidation of the American Telephone and Telegraph Company with the Western Union Telegraph Company, near the beginning of last week, was followed by no sensational movement in the market value of shares affected by the transaction. At the end of the week Western Union's net gain (at $79\frac{3}{4}$) was less than one point, but there had been sales at $85\frac{1}{4}$. The net advance for telephone shares was $1\frac{7}{8}$. For Mackay (Postal Telegraph) shares there was a slight gain, on small transactions. There was unusual activity, however, in Western Union and telephone stock, sales of each exceeding 70,000 shares. It should be said that advances which had been gained were cut down on Saturday, when the Standard Oil decision caused a general decline.

Mr. Vail, the telephone company's president, has pointed out that harmonious co-operation will serve the public and permit a large saving in operation. Undoubtedly this is true. The greatest saving will be due to the avoidance of costly and unnecessary duplication of wire plant, office space and office force. Probably even the officers and managers of the two corporations do not now realize how much can be done in this direction. And, as a rule, the economies of combination will, in this case, or should, improve both the telephone and the telegraph service. The public will probably gain something, even if the price of service be not reduced. We assume, of course, that there is no thought of increasing it. That would be the greatest folly. With the evidence of saving, and of enlarged earnings, clearly to be seen, the public will expect lower rates. For demands that reductions be made, the companies must be prepared. In this matter of rates, the telephone company in New York has in recent years shown much good judgment and tact. If the parent corporation's attitude toward the public shall prove to be the same, much difficulty will be avoided.

•What it will be possible fairly to do in the way of reduction, if anything, can be ascertained only by a practical test of the economies for which the door has now been opened. It may be borne in mind that better service at the old rates will virtually be a reduction. An advance of rates would at once invite legislation for official supervision and regulation. And refusal to make any concession whatever in price might cause such restrictions to be applied. The capacity of those who control the combination to deal wisely with the public will be tested.

....During the first nine months of 1909 railroad systems, traction companies and industrial corporations in this country issued \$1,217,305.080 of new bonds, notes and stock, against \$1,073,354,626 in the corresponding months of 1908.

....October's output of pig iron was 2,592,516 tons. This is a new high record. According to the *Financial Chronicle*, October's bank clearings were greater than those of any month in the past. There is no longer any surplus of freight cars. There were 332,000 idle cars at the beginning of the year, nearly 300,000 in April, and 207,000 in August. Instead of a surplus there is now a shortage of 5,467.

....There will be a meeting of the stockholders of the Fourth National Bank on December 16 to authorize an increase of the capital stock from \$3,000,000 to \$5,000,000 by the issue of 20,000 additional shares, which will be sold to stockholders at \$200 a share. Recent quotations have been \$245 bid. The bank has \$24,326,000 of deposits, and its surplus and undivided profits amount to \$3,324,700. It does an extensive mercantile business and has held a high place among New York's financial institutions. J. Edward Simmons, its president, is also president of the Chamber of Commerce. Its vice-president, James G. Cannon, is well known to bankers throughout the country.

Survey of the World

Secretary Ballinger's Report

The annual report of the Secretary of the Interior, Mr. Ballinger, excites more than ordinary interest because of the controversy about water power sites and Alaska coal lands. Much of it relates to the public lands and to projects of legislation required for the proper conservation of natural resources. The bold and vigorous prosecutions of land frauds by Secretaries Hitchcock and Garfield, Mr. Ballinger says, have restored a salutary respect for the law, and the public mind has rapidly grasped the importance of safeguarding the further disposition of natural resources in the public lands in the interest of the public good as against private greed. It is still necessary, however, to seek information as to violations of the law and to follow such violations with rigid prosecutions:

"In this present policy of conserving the natural resources of the public domain, while development is the keynote, the best thought of the day is not that development shall be by national agencies, but that wise utilization shall be secured thru private enterprise under national supervision and control."

Therefore Congress must be asked to enact remedial legislation. The Department should have authority to classify the public lands, and from time to time to reclassify them, according to their principal value or use. New laws relating to coal lands are needed:

"The inducements for much of the crime and fraud, both constructive and actual, committed under the present system, can be prevented by separating the right to mine from the title to the soil. The surface would thereby be open to entry under other laws, according to its character and subject to the right to extract the coal. The object to be attained in any such legislation is to conserve the coal deposits as a public utility and to prevent

monopoly or extortion in their disposition. This may be accomplished either thru a leasing system, by which the title would remain in the Government, under proper regulation and supervision by the Secretary of the Interior, or thru the sale of the deposits, and in either case with restrictions on their mining and use which would control the minimum output and conserve the deposits as a public utility. I believe the most advantageous method will be found in a measure authorizing the lease or sale of the coal deposits in the lands, subject to forfeiture for failure to exercise the rights granted, under such reasonable regulations as may be imposed. An exploration period of at least one year upon a permit basis, at a nominal charge, would insure to the applicant the necessary preliminary knowledge upon which to make the lease or purchase of the coal deposits and venture the necessary investment for operation."

Provision should be made for forfeiture of title in case of combination as to price or of failure to maintain a reasonable output. Similar legislation concerning oil and gas fields is recommended. All known coal areas were withdrawn from entry for classification and appraisal, pending the enactment of new laws. The Secretary has adopted a new system of valuation, determining prices on the basis of estimated tonnage. He has recently withdrawn large areas of oil land, and he suggests that Congress should authorize the President to reserve a part of this land in order that it may supply fuel oil for the navy. Secretary Garfield withdrew temporarily 1,702,520 acres of phosphate land, and this area has since been reduced to 4,471,480 acres by the elimination of land not containing phosphate. The deposits should be leased or sold in limited areas on conditions preventing monopoly and insuring domestic use. He asks for an appropriation to be used in surveying the 6,057,400 acres of railroad land grant timber lands (worth

\$60,000,000) in the national forests and subject to adjustment. For want of a survey, "these great timber land owners" now avoid taxation. There have been withdrawn from entry 603,355 acres, covering all locations known to possess water power possibilities on unappropriated lands outside of national forests. He would have Congress authorize the classification of all such lands and direct the disposal of them under the following conditions:

1. That the title to such lands be reserved in the Federal Government, and only an easement granted for the purpose of developing and transmitting electrical power for private and public use, and for the storage of waters for power, irrigation, and other uses;

2. That such easement be granted for a limited period, with a maximum of at least thirty years, and the option of renewal for stated periods upon agreed terms;

3. That entry shall be accompanied by plans and specifications covering the works sought to be installed, and covering the maximum horse power capable of development at such site; also, that a substantial entry fee be paid to show good faith, and that a transfer to the United States of the necessary water rights to permit of the estimated power development be made;

4. That the construction period allowed entrymen for the development of at least 25 per cent. of such power shall not extend beyond four years, or such further time as may be granted by the Secretary of the Interior upon a proper showing;

5. That a moderate charge shall be made on the capital invested, or upon the gross earnings of the project for the first ten years of operation, adjusted at each subsequent ten-year period, and equitably determined by appraisalment;

6. That all rights and easements shall be forfeitable for failure to make development within the limitations imposed or upon entry into any contract or combination to charge or fix rates beyond a reasonable profit on the investment and cost of operation, or entry into any agreement or combination to limit the supply of electrical current, or failure to operate the plant; and,

7. That all books and accounts shall always be subject to the inspection of the Department.

Unreasonable or narrow restrictions would prevent development. The new law, while giving the public full protection, should encourage investment in these projects. On June 30 there had been invested in irrigation works \$45,757,918. To insure speedy completion of pending projects he urges that the fund to be collected be anticipated by an issue of \$50,000,000 of bonds. He has undertaken to reorganize the field service

of the Indian Bureau and is weeding out the unworthy officers. Some of the non-reservation Indian schools should be abolished. The Department will seek to develop agricultural and industrial schools, teaching Indian boys how to support themselves by farming and the simpler trades and giving Indian girls domestic training. He has decided to impose upon concessionaires in the Yellowstone and Yosemite parks a franchise tax for the enlargement of the maintenance fund.

✱

The Trust Cases

Mr. Loeb, Collector of Customs at New York, removed ten more assistant weighers, last week, and then said that the housecleaning was probably at an end. Thomas C. Giddings, one of those removed some time ago, has been indicted for false weighing. Surveyor Clarkson, who was appointed in 1902, will retire on January 1, but it is understood that his withdrawal from the service is not connected with the frauds. Secretary MacVeagh says that the \$2,000,000 paid by the Sugar Trust was in settlement of only the claims on account of false weighing, and did not cover frauds of any other kind. He may have had in mind the use of fraudulent samples of sugar. Nor did that settlement, he added, grant immunity from criminal prosecution. Attorney General Wickersham explains that he has never acted as counsel for the Sugar Trust, altho his law partner, Henry W. Taft (brother of the President), was recently employed by the Trust. His statement indicates that the firm of which both were members was retained. It is evident that an investigation will be made by Congress unless it shall appear that such an inquiry will prevent successful prosecution of the guilty.—Representatives of the Standard Oil Company say that no new plan for carrying on the business will be considered until after the Supreme Court's final decision. That decision will precede any action by the Government concerning the criminal prosecution of the individual defendants named in the suit for the dissolution of the combination. The decision ordering such dissolution significantly directed attention to these defendants (John D.

Rockefeller, William Rockefeller, John D. Archbold and others), virtually pointing out that they had violated and were still violating that section of the Sherman act which provides punishment by fine or imprisonment for such an offense. William Rockefeller says that his associates and himself will comply fully with the letter and the spirit of the law as it shall finally be interpreted by the court of last resort.

Panama Canal Report

In the annual report of the Panama Canal Commission for the year which ended with June last, Chief Engineer Goethals explains why the estimate of the cost of the canal has been raised from \$144,233,358 (the figures of the Board of Engineers in 1902) to \$375,200,000. Since the original calculations were made, wages and the cost of material have risen. Prosperity in this country and the unsavory reputation of the Isthmus with respect to disease compelled the adoption of a wage scale from 30 to 60 per cent. higher than prevailing rates here. Moreover, the eight-hour law was applied. Therefore unit prices were materially advanced. Changes in the plans increased the quantity of work to be done. Additional and more thoro surveys enabled the Commission to make the revised estimate which was submitted to Congress in February last. This showed that there was needed nearly 50 per cent. more work than the original estimate called for, and that the unit prices had advanced about 20 per cent. And so the cost of engineering and construction rose to \$297,766,000, and the addition of the purchase money, with the cost of sanitation and civil government, made the total \$375,200,000. The maximum number of unskilled laborers employed, 33,699, was reached on April 28. The number of those from Europe has declined, owing mainly to Spain's prohibition of emigration to the Isthmus. The Tivoli Hotel, the nineteen messes and the twenty-one kitchens have been conducted at a profit; the seventeen hotels along the line at a loss. Health statistics show an improvement, the sick rate falling from 23.85 to 23.49 per thousand, and the death rate (with an aver-

age number of 44.261 names on the payroll) from 18.32 to 11.97. There were no cases of yellow fever or plague originating on the Isthmus. The schools have been reorganized and carefully graded. Besides the two high schools, one at Culebra and the other at Christobal, there are twelve for whites, with 622 pupils, and seventeen for colored children, with 1,073. At Gatun the builders are nearly ready for the concrete and masonry work on the great locks. President Taft is confident that the canal will be finished by January 1, 1915.

The Philippine Islands

W. Cameron Forbes, the new Governor-General of the Philippines, was inaugurated on the 23d ult. It was a general holiday in Manila and the buildings were gaily decorated. After taking the oath of office the Governor made an inaugural address, part of which was as follows:

"Capital demands a stable government. Capital is not particularly interested in the color or design of the flag; it wants just and equitable laws, sound and uniform policy on the part of the Government, just and fair treatment in the courts. The faith of the United States is pledged that all of these benefits shall be permanently assured to the Filipinos. No capitalist need feel alarmed as to the security of his investment provided it has been made in such a way as to fulfil the conditions imposed by law. The United States stands pledged to the establishment and maintenance of a stable government in the Philippine Islands not for the sake of capital which may be invested here, but for the sake of the welfare of the Philippine people and the faith of the United States before the world. The security of foreign capital is merely an incident in the general security of property rights to the Filipino, but both are now permanently assured.

"There is not on the horizon discernible any cloud which indicates the possibility of any kind of disturbance in the present status of these islands either from within or without, by war or insurrection.

"The United States is strong, determined, fixed in her policy and not to be dissuaded or coerced. The development of the Philippine Islands will proceed along the lines originally set forth, strictly adhered to by each successive Administration and by the gradual processes in line of declared policy—not by spasms or jerks.

"I am opposed to the admission of Chinese labor. Filipinos can do all the necessary work here if properly paid and properly treated.

"The Government should offer every reasonable inducement to capital and should make

more liberal the law and making law and lessen the restrictions which are at present discouraging investors."

Manufacturers of cigars in the country complain to the Government at Washington because cigars imported from the islands bear Government labels stating that the cigars have been made under sanitary conditions approved by the Board of Health. They say this is a kind of official guarantee which gives the product an advantage. In reply it is pointed out that the labels are affixed by the Philippine Government and not by Washington authority. Imports of cigars free of duty, as permitted by the new tariff law, are thus far at the rate of about 90,000,000 a year. The law allows 150,000,000. — In Hawaii, capitalists are negotiating for the purchase of Lanai Island, where they intend to grow cotton, employing Russian laborers from Siberia.

Nicaragua's Revolution Our Government sought, last week, to ascertain whether Groce and Cannon, the two Americans shot in Nicaragua by President Zelaya's order, were officers in the revolutionists' army. Secretary Knox said, on the 22d:

"If certain representations of fact which have been made to the State Department, concerning the Groce and Cannon case, are verified by inquiries that have been made, this Government will at once prepare a demand on the Nicaraguan Government for reparation for the death of these two men."

For a time it seemed impossible to get an answer from Vice Consul Caldera, at Managua. A report that he had been put in prison was denied by Zelaya. Many thought that the latter had withheld the dispatches. He had been accused in recent years of tampering with the dispatches of two United States Ministers. On the 27th a message from Caldera was received but not published. It was already known, however, that Groce and Cannon had been colonels in the revolutionists' army. Current reports said that Zelaya had distributed thruout Western Nicaragua posters bitterly denouncing the United States and had given orders that all American revolutionists captured should be killed at once. It was asserted that our Government had sent to him an ultimatum, the term of which was to expire at 10 p. m.

on the 28th. Several warships arrived last week at points on the Nicaraguan coast, and there were preparations to send others, carrying a considerable force of marines. At a conference in Washington, so it was said by a Nicaraguan who asserted that he was present, officers of our Government, representatives of the army and the navy included, questioned eight Nicaraguans to obtain such information as an invading force would need, and it was generally understood that our Government was ready to enforce its demands, if satisfactory explanation should not be made by Zelaya. On the 26th he sent a cable message to a New York newspaper. Having said that he desired "to explain to the American people the grave motive of my Government for executing the Americans, Cannon and Groce," in order that "the effect of intentional false reports" might be counteracted, he continued as follows:

"The revolutionists occupied a strong position at the mouth of the River San Juan, with a view to blow up the steamers conveying Government troops. One mine was exploded near the 'Diamante,' which had 500 soldiers on board. Cannon and Groce were captured in the act and they confess voluntarily their guilt. They were tried by court martial, were given every legal privilege to introduce an ample defense, and sentence was pronounced according to the military code. Cannon had taken part in various revolutions since 1897. The Government of Honduras pardoned him on the express condition that he would abstain in future from Central American civil troubles. When Cannon and Groce were captured they were serving as officers with the revolutionists."

The rifles and ammunition sent to the revolutionists from New Orleans were safely received, and it is said that larger quantities ordered by Zelaya were intercepted and captured. Vice-Consul Caldera reported to the State Department on the 28th that he had been threatened by Zelaya. He asked for permission to occupy the legation premises in Managua, for his own safety, and permission was given.

Lord Lansdowne's Amendment

It was recognized by everybody as one of the critical points in the history of the British empire when the Marquis of Lansdowne, as leader of the Opposition, rose in the House of Lords on November 22d to amend the

motion for the second reading of the Budget Bill by the amendment that

"This House is not justified in giving its consent to this bill until it has been submitted to the judgment of the country."

The House was more crowded than it had been since the Lords rejected Gladstone's Home Rule Bill in 1886. Many peers who had never before been seen in the House of Lords came to this session, and the chamber was not large enough to accommodate all those who were entitled to seats. The galleries were crowded with foreign diplomats and distinguished men and women. Young King Manuel of Portugal, now in England in search of a wife, sat in the peeresses' gallery between the Portuguese Minister and Lord Granville. Lord Lansdowne began by acknowledging that his amendment was a grave, perhaps an unprecedented, proposal, but he contended that the preamble of the bill showed that it required the consent of the House of Lords to become a law and this involved the right of rejection. Altho the House of Lords could not amend a finance bill, they had full right to discuss it and to reject it. In 1907-08, the Lords threw out the Land Valuation Bill and in 1908 the Licensing Bill. Both these measures, however, in more objectionable forms, had now been tacked on to the Budget Bill and it was held that the Lords could not act upon the measures so presented. No self-respecting second chamber would tolerate such treatment. What, he asked, was to prevent home rule from being introduced in the Finance Bill. There was no limit to such abuses. The Unionists opposed license duties because they were crushing in their severity; the same applied to land taxes. The people, he said, not having been consulted, the Lords had a clear duty, not to decree the final extinction of the bill, but to insist that before it became law the country should be allowed an expression of opinion. The proposed taxes were outrageous and oppressive. The liquor business already yielded one-third of the revenue of the country, and it was proposed to tax it still more. The land taxes Lord Lansdowne objected to because they were unproductive and cumulative. Land owners who were contented with a moderate return on their holdings were entitled to such favor as an investor in American

stocks, who altogether escaped. Land taxes were directed against a single class of people and were capable of unlimited extension and abuse. The bill would render every transaction in land more complicated and difficult, and would therefore retard the opening up of land. The bill was confused and obscure in its wording. Some people were taxed not once or twice, but three or four times for the same piece of property. He believed that the time had come to reconsider the question of free trade. With a more and more restricted market and higher barriers erected by foreign countries, this policy could not longer be maintained.

✱

Lord Rosebery on the Budget

Lord Rosebery occupies a peculiar position on the pending finance bill, and his speech in the House of Lords was awaited with great interest and not a little anxiety. He was Prime Minister of the Liberal Cabinet of 1894-95, but in a recent public address announced that he had dissociated himself from any party and that he was strongly opposed to the finance bill drafted by the present Liberal Ministry. Still, in the House of Lords he made an earnest plea against the rejection of the budget, as proposed by Lord Lansdowne's resolutions. Lord Rosebery declared that the measure would poison the sources of national supremacy, and that this was vital, but in view of the immediate and even the remote future, there was something more vital to the country, and that was the strength, efficiency and security of the second chamber. The budget was a crude and vindictive measure and had already done incalculable injury to public credit. Like a fog spreading over the country and breeding miasma, the bill had brought the disease most fatal to a commercial country, want of confidence, and this, too, at a time when Europe was being hurried headlong toward bankruptcy by the insane competition for great armaments. He said the one maxim that had been burned into the British political conscience by bitter experience was that there should be no taxation without representation. "Disregard for that maxim," he said, "lost us the United States of America, and we are not likely to offend against it again." The budget

bill, however, taxed the Lords freely and abundantly without their having a word to say or a vote in the matter. No such measure ought to be put into force without a referendum to the people. At the same time he warned the Lords against a defiance of the Commons. That would be entering into a fight upon an unfavorable battlefield and risking the very existence of the House of Lords on this issue. He regarded this as the gravest political movement in the life of any man born since 1832. Since that time the Lords have not assumed the power to reject a budget passed by the House of Commons. He considered that the only possible circumstances justifying the Lords in exercising such a dormant power would be the direct authority and condemnation of the nation itself. Such a circumstance might arise if a budget were presented which lowered the defenses of the country to a point which the nation considered dangerous. He said:

"I do not speak of menaces. The House of Lords has lived on menaces ever since I can remember, and it is still thriving. But the menaces now used are used by men bent on having a single chamber. Their efforts are revolutionary in essence, if not in fact."

He looked with considerable apprehension to the result of an appeal to the people on an issue in which the unreformed Upper House was involved. He suggested that the decision of the Upper House would have more weight on the country if, instead of having Lord Lansdowne's motion voted upon by all of the peers who were entitled to appear in the House, the question were referred to a select committee of 150 of the most distinguished peers, to whom should be delegated the right to vote upon the motion. The best policy would be, in his opinion, to allow the budget to pass and give the country six months' experience of its intolerable imposition of bureaucracy and loss of capital and employment. They would then achieve when next they approached the polls a victory that would improve themselves.

✧

Further Discussion of the Budget

Lord Loreburn, the Lord High Chancellor, opposed the motion of Lord Lansdowne to reject the budget. Because he said it was a revolu-

tionary proposal. There was nothing in the budget bill that did not by constitutional precedent belong in the province of the House of Commons. Lord Lansdowne, he said, asked them to accept a direct invasion of the prerogatives of the Crown and the privileges of the Commons. Their lordships were invited to overthrow the Constitution which was the envy of all other nations. What was embodied in the bill was not new in either the United States or Germany, and had been approved not only by the present but by the late House of Commons. Lord Loreburn was understood to threaten that, in case the House of Commons persisted in its present attitude, the Government would create a sufficient number of new peers to carry thru any measures they wished:

"If we fail at the coming election it will be but the beginning of a conflict which can end only one way. If we succeed, as we hope we will not flinch from what will have to follow. It is my opinion that it is impossible that any Liberal Government can ever again bear the heavy burden of office unless it is secured against a repetition of treatment such as our measures have had to undergo for the last four years."

Lord Cromer, speaking for the Opposition, expressed his entire disapproval of the finance bill, but stated that he feared the consequence of the passage of Lord Lansdowne's amendment and should abstain from voting. He had come to the conclusion that, objectionable as the budget might be, the Lords could not reject it without incurring other risks of a more formidable character. Even the moderate Liberals would be obliged to engage in ceaseless agitation to secure a profound modification of the constitutional functions of the laws. Lord Balfour of Burleigh added his voice to those of Lord Rosebery and Lord Cromer in opposing the rejection of the budget. The Lords, by voting for the Lansdowne amendment, would be walking into a trap set by their opponents. There never was a time in the history of the country when a strong and conservative second chamber was more necessary and he considered it impolitic to mix the question of the defense of that chamber with the taxation of food. Lord Balfour declared

"If you win a victory it will be only a tem-

porary one; if you lose, you have prejudiced the position, power, prestige and usefulness of the House of Lords, which I believe every one of you honors and desires to serve as heartily as I do myself."

The Archbishop of Canterbury stated that, this being a party question, the bishops would not take part in the discussion. The Bishop of Hereford, however, felt impelled to decline to comply with the wishes of the Archbishop of Canterbury on this point. If the bishops had any function to perform it was to speak for the multitudinous poor, he said; therefore, he supported the budget, which was a social welfare budget based on sound finance. He was convinced, he declared, that the country's answer to an appeal to the ballot would be in clear English that never again shall the fundamental liberties of the people be endangered by a privileged class. He wished that the budget might be passed as a protection against the rapidly growing spirit of revolt among the democracy, which might become dangerous.

Persia's Difficulties The first parliament of Persia since the re-establishment of constitutional government by the revolutionary movement was opened on November 15, with great state. A double guard of honor composed of Bakhtiari and Cossacks escorted the young Shah in a carriage drawn by eight white horses from his palace to the parliament building. Behind his throne were the priests, on his right the diplomatic corps, and on his left the cabinet. The speech from the throne, read by the Sipahdar, stated that the relations of Persia with the other Powers was excellent. The only unsatisfactory point was the presence of foreign troops in the country and the hope was expressed that they would soon be withdrawn. This refers to the Russians, who, when the Bakhtiari tribesmen marched from the south on Teheran, transported across the Caspian, landed at Resht and marched to Kasvin, but did not find it advisable to go on to the capital in defense of the Shah. Since the deposition of the Shah, the leaders of the two revolutionary forces, the Sipahdar

and Sirdar Assad, have had control of the Government and have maintained order so satisfactorily that the Russians have had no excuse to advance further into the interior. Many of the troops, in fact, have been withdrawn from Kasvin and Tabriz, but recently disturbances on the Caspian, east of Tabriz, have given rise for Russian intervention. The Shah-sevan and Karadaghi tribesmen besieged the town of Ardebil and captured it, killing many and pillaging half the town. Satar Khan, who defended Tabriz and was also in command here, was forced to withdraw, and the local nationalists took refuge in the Russian vice-consulate. The insurgents are reported to have raised the standard of the deposed Shah, Mohammed Ali, but it is universally believed by the Persians that the revolt was instigated by the Russians in order to get a pretext for occupying another town in this region. Instead of drawing troops from Tabriz on the west or Kasvin on the east, a thousand men were sent as a sular guard. The Persian Government has been trying to start an expedition for the relief or recapture of Ardebil, but has had difficulty in raising the necessary funds. An attempt was made to obtain a loan on the crown jewels, but that was unsuccessful.

The Italian Program The Italian Chamber of Deputies is now in session. On the opening day Premier Giolitti brought forward a plan for financial reform, which will reduce the tax on the manufacture of sugar by one-half and will gradually reduce also the duties on imported sugar. This reduction will cost the treasury \$8,000,000, which will be made good by an increase in the death duties and in taxes on income from house property and land. Signor Bertolini, Minister of Public Works, announced a bill for improving the condition and raising the salaries of railway servants; the increase of expenditure is to be met by a slight increase in the rates for passengers and goods. The chief opposition to the Government will be on the inefficient and extravagant management of the State railroads and the proposed ship subsidy bill.

GREAT AMERICAN UNIVERSITIES—XII.

JOHNS HOPKINS UNIVERSITY

by EDWINE SLOSSON Ph.D

THE Johns Hopkins University has no marble palaces or Gothic dormitories. There are few undergraduates and they are not distinguished for their prowess in football or for spectacular eccentricities.

It does not undertake to do the work of the shop, the patent office, the lyceum, the theater, the government, the church or the home. It indulges in no fads and frills. It has no ancient history. It is destitute of traditions and picturesque customs. It is distracted by no class wars, faculty feuds, moral revolutions, student rebellions, newspaper scandals, or political persecutions. The chief student activity is study.

Consequently there is nothing left to talk about except the two things for which all universities exist, learning and

teaching. It is an institution after Woodrow Wilson's own heart; where the side-shows do not draw from the main tent. Here are no cannon ball jugglers, Circassian ladies, learned pigs, astrologers, fire-eaters or street parades, such as rival concerns have. The whole show is under one canvas, or rather two in different parts of the city.

The Johns Hopkins is free from the common vices of our universities, namely, pomp, pretentiousness, frivolity, superficiality and extravagance. This is not the same as saying that it is the best of universities. The greatest men are not those who have the fewest faults, and the same rule applies to institutions.

Let no one imagine that the freedom of Johns Hopkins from these easily besetting sins is due to a virtue imposed by necessity. It could profit as much as any other university by the vigorous blowing

GREAT AMERICAN UNIVERSITIES—This is the twelfth of a series of articles on the present condition and future prospects of the larger universities of the United States by one of the editors of *The Intelligencer*. The dates of publication of these articles are as follows:

of its own horn and it is under the same temptation to neglect the fundamentals and spend money on the things that are attractive to patrons and the public. The

of a university and a hospital seemed like a big thing thirty-five years ago, tho nowadays it would get only a dozen lines in the financial column of *Science*, ac-

IRA REMSEN,
President of the Johns Hopkins University

university was born rich, but its character was not spoiled by it, Mr. Carnegie's theory to the contrary notwithstanding. A bequest of \$7,000,000 for the founding

company by an editorial note expressing the hope that the management of the new institution would be in the hands of its faculty.

The fortune of the Baltimore financier passed on his death in 1874 into the control of the twelve trustees whom he had appointed for that purpose seven years before. The founder had not defined his idea of a university or placed any limitation on the use of the fund except that the principal should not be spent for building. The trustees accordingly asked Eliot, of Harvard; Angell, of Michigan, and White, of Cornell, to tell them what a university was and who should be its president. With remarkable unanimity all three of these gentlemen answered that a university was a very different thing from the institutions over which they presided, and that Daniel C. Gilman should be president of it. They were right on both points. It was because of the lack of true universities in America that our graduates were going to Germany for their education. Some of them would have preferred to stop in England rather than bother with the foreign language, but John Bull tapped them on the shoulder and told them to move on. This was before Cecil Rhodes had opened Oxford for us with his golden key.

The essential difference between a university and a college is in the way they look. The university looks forward and the college looks backward. The aim of the one is discovery; the aim of the other is conservation. One gropes for the unknown; the other holds on to the known. Now, since students are *ex-officio* presumed to be in the acquisitive stage of their mental development, it follows that there is less temperamental difference between students and their teachers in a true university than in an ordinary college. In the university the seminar takes the place of the class. The reason why university professors are thus able to take the students into partnership with them is not so much because the students are older as because the professors are younger. The university professors, the pioneers of knowledge, are only partly grown up. Their genius consists in combining the inquisitiveness of youth with the powers of maturity. Their sutures have not ossified. They keep more gristle in their bones. The average college or high school professor, tho no more than thirty years of age, is apt to seem old and more awe inspiring than

the world-known savant whom he worships from afar. The former weighs his words to a tenth of a milligram. He feels that forty centuries are looking down upon him; or sixty, according to post-Napoleonic archeology. But the leader of a science feels that nobody is looking down on him. He plays with hypotheses as a juggler with balls. He pops out opinions on all sorts of subjects. He shows a certain elasticity, even irresponsibility, in his speech and action, which is in marked contrast with the dogmatism and dignity of the humbler members of the profession.

I make this comparison merely to call attention to the new educational impulse which we owe especially to Johns Hopkins. In 1850 there were eight non-professional graduate students in the United States. In 1875, when Johns Hopkins University opened, there were 309. Now there must be more than 5,000. This does not mean merely that these students are receiving a longer education. It means that they are receiving a different kind of education. They are being trained to be promoters instead of heirs. The mere extension of the period of high school and collegiate instruction is not necessarily a desirable thing. It may be carried so far as to defeat its own aim. Such is the opinion expressed by President Remsen:

"If it be conceded that the training of specialists is essential to the highest scholarship, then by advancing the age of graduation from our colleges, we are interfering with the development of scholarship in the highest sense, because the greater the age of graduation from the college the less will these graduates be inclined or be able to take up the advanced work that is essential to convert them into scholars."

This criticism does not apply to those universities where the later years of the college are devoted to advanced and specialized work. But now, when such strenuous efforts are being made to "save the college," we must look out that we do not injure the university. Perhaps the conflict may be settled by the recognition of two different types of mind among the students requiring different kinds of training, the "pass men" and the "honor men," but none of our universities has yet thought proper, or discovered how, to make such a distinction in a systematic or thoroughgoing way.

I heard a great deal of talk—in other universities—about the decline of Johns Hopkins. This decline is chiefly, if not altogether, relative. Johns Hopkins has been eclipsed by its own success. It is lost in the crowd of its imitators. In its specialty, the manufacture of Ph.D.'s, it had at first practically a monopoly. By 1909 it had dropped to the seventh place, having been passed by Columbia, Yale, Chicago, Harvard, Cornell and Pennsyl-

JOHNS HOPKINS FELLOWS OF 1876

Henry Carter Adams, Professor of Political Economy, University of Michigan.

*Herbert Baxter Adams, Professor of American History, 1878-01, Johns Hopkins.

*William Keith Brooks, Professor of Zoology, Johns Hopkins.

Samuel Fessenden Clarke, Professor of Natural History, Williams College.

*Thomas Craig, Professor of Mathematics, Johns Hopkins, 1879-1909. Editor, *American Journal of Mathematics*, 1894-99.

*Joshua Walker Gore, Professor of Natural

THE BOTANICAL LABORATORY.

The first building erected on the new site at Homewood.

vania. But in this field, above all others, it is quality, not quantity, that counts, and there is no way of calculating genius, especially prospective genius. All the world knows what was the quality of that first group of young men drawn from all parts of the country by their thirst for the new learning, but who knows how the twenty-seven doctors of 1909 will turn out?

Let me give the entire list of those first Fellows, for there is no better way of showing what Johns Hopkins has done and is doing.

Philosophy, University of North Carolina, 1878-1908.

George Bruce Halsted, Professor of Mathematics, Kenyon College, 1903-06.

Edward Hart, Professor of Analytical Chemistry, Lafayette College.

Daniel Webster Hering, Professor of Physics, New York University.

Malvern Wells Iles, Consulting Metallurgist, London.

William White Jacques, Lecturer, Massachusetts Institute of Technology, 1885-01.

Charles Rockwell Lanman, Professor of Sanskrit, Harvard University.

David McGregor Means, Professor of Political Science, Middlebury College, 1877-80.

Harmon Northrup Morse, Professor of Analytical Chemistry, Johns Hopkins.

*Deceased.

Walter Hines Page, Editor, *The World's Work*, New York.

*Deceased.

Now, what university president of today is willing to place beside this his list of Fellows for 1909 with the assurance that they will prove to be, on the whole, men of as much distinction as these? Why not? There are now many universities richer than Johns Hopkins was then. They have more prestige and power than that infant institution. They can offer a prospect of greater reward and the certainty of an easier pathway. They have a larger educated population

to select from. It might not be too much to ask that the new science of applied psychology, now making such claims of practical usefulness, should help us to discern in the adolescent organism the promise and potency of future greatness with more surety of success.

Nowadays the office seeks the man, but somehow it does not work much better than the old way of natural selection.

The president of a New England college visiting, last spring, a high school in his State, asked one of the Seniors if he had decided where he was going to college? The boy replied that he had not yet made up his mind, that he had had very flattering offers from Pennsylvania and Cornell, but he was waiting to see what Columbia would put up. It would seem that the universities might get together like the United Charities. Possibly, however, the United States courts might hold that to be contrary to the anti-trust laws as a combination for the purpose of restricting competition.

The scholarship net is bigger than ever, but it has a finer mesh, so is catching more of the smaller fry. Graduate work no longer requires the pioneer virtues of renunciation, self-sacrifice, energy and initiative. It is, on the contrary, along the line of least resistance. It takes more energy to stop studying and go at something else than to go on studying. Many of our graduate students have no other momentum than inertia.

President Gilman took as his motto "men before buildings," and it was to this policy that the Johns Hopkins owed its success. But in the application there was a difficulty. He consulted an eminent physicist about it:

"We cannot have a great university without great professors. We cannot have great professors till we have a great university. Help us from this dilemma."

His reply was:

"Your difficulty applies only to old men who are great. These you can rarely move. But the young men of genius, talent, learning and promise, you can draw; these should be your strength."

We have seen how wise he was in picking such young men as Fellows. Let us see who the professors were who drew them to that Baltimore garret in 1876. It was as close an approximation to Mark

FIGURE 1. THE JOHNS HOPKINS UNIVERSITY, 1876-1909.

Hopkins and the log. as we have seen.
Here is the first faculty :

PROFESSORS.

Basil L. Gildersleeve, Greek.
H. Newell Martin, Biology.
Charles D. Morris, Latin.
Ira Remsen, Chemistry.
Henry A. Rowland, Physics.
J. J. Sylvester, Mathematics.

NON-RESIDENT LECTURERS.

John S. Billings, of Washington, History of Medicine.
Francis J. Child, of Harvard, English Philology.
Thomas M. Cooley, of Michigan, Law.
Julius E. Hilgard, of Washington, National Surveys.
James Russell Lowell, of Harvard, Modern Literature.
John W. Mallet, of University of Virginia, Technical Chemistry.
Simon Newcomb, of Washington, Astronomy.
Léonce Rabillon, of Baltimore, French.
Francis A. Walker, of Yale, Political Economy.
William D. Whitney, of Yale, Comparative Philology.

To what university of today can a student go without coming under the instruction of some men inferior in ability to these?

But we are always unfair to our contemporaries in such a comparison.

Each generation has said, "There were giants on the earth in those days." It was because President Gilman had the ability to discover giants before they were grown up that Johns Hopkins became at once the leading university of America. And besides this, he had the courage of his ability. Not all presidents could, and fewer of them would, have chosen all these men as professors. The temptation is to stick to an innocuous and unexceptionable mediocrity.

Any normal school graduate could look down on Rowland because of his defective knowledge of the elementary princi-

DISTRIBUTION OF STUDENTS IN THE JOHNS HOPKINS UNIVERSITY. 1908.

ples of pedagogy. Yet the proverb is still current in our laboratories, "Better to be neglected by Rowland than taught by any one else." Unfortunately it has often served as an excuse for instructors who resembled Rowland only in their neglect of students. Of Sylvester, enough anecdotes of professional eccentricity are told to fill a whole number of the *Fliegende Blätter*. It required courage also to add Thomas H. Huxley to the list of lecturers in the first year, for he was at that time *persona non grata* to a considerable proportion of the American public. It is often said that a university, especially a young one, cannot be too cautious about choosing professors who are unobjectionable in all respects. President Gilman thought it could be, and he proved that he was right.

Of this first faculty of six, half were English and half Americans. Two of the latter had been educated in Germany, and

it was German ideals which molded the University. It introduced the German doctorate as its aim and the German seminar as its method. No better models could have been found. No influence could have been more needed in America at the time. Germany comes the nearest to Plato's ideal of a nation governed by philosophers. It is because the best of knowledge and the highest talent have been enlisted in its industries and statecraft that the empire has risen in wealth and power until now it challenges England for the supremacy of the seas. It was a transformation almost as astonishing as if the Balkan States should by 1950 become a great world power. In this country the State universities are of late coming to resemble the German institutions in the close relationship to administration and in the development of their technical departments, while the endowed institutions have taken to imitating the English colleges.

As I remember, it was in the later eighties that the Hopkins man appeared in the West. Students from rival colleges, meeting at an oratorical contest—this was before the toga had ceded to arms—would brag over the acquisition of a specimen of this new species of educator as they might nowadays over an okapi in the museum. "We've got a Hopkins man in our college." "That's nothing. We've got two of 'em. And one of them has brought a new science with him—biology, he calls it. I'm going to change my course next year so as to take it." "Well, ours is going to start a political science seminar, and all the fellows are going into it. No, it's not the same as a seminary." "Shut up, here come the judges."

The Western institutions, State and denominational, were originally stocked with Yale men. Later they drew from Johns Hopkins, and soon after the Harvard period set in. Now they gather their men from such a wide range it would be hard to point out any particular institution as decidedly dominant. It would be an interesting task to work out the genealogical table of American faculties.

There is something about the American atmosphere which compels to uniformity. However unique an institution

may be in its origin or original in its aim, it gradually grows into the type now defined as "the standard American university." Whatever it may have started from it develops the lacking parts like a crystal or a crab. Harvard, founded for the training of preachers, turns out electrical engineers and "Masters of Business Administration." The "Industrial University" of Illinois labors to make its graduate courses in philology equal to any in the land. Cornell, "the poor man's college," and Pennsylvania, "the charity school," become noted for the luxury of their student lodgings. State universities impose tuition fees in one way or another, and endowed universities give free lecture courses. So the Johns Hopkins University, started primarily as a graduate school, is now developing most rapidly on its undergraduate side.

It has been prophesied that the founding of institutions devoted to research, such as the Rockefeller Institute, the Carnegie Institution, the museums of New York, Chicago and Pittsburgh, and the scientific departments of the Government, would draw the men having the greatest ability and inclination for investigation, leaving the universities to lapse into their former state of teaching colleges. But there is another tendency equally noticeable. The men who have left the universities, rejoicing that they had thrown off the burden of instruction and administration, and were free to work all day at their hobbies without interruption, come in time to realize that students are not the unmitigated nuisances they once thought them. Gradually students creep in as assistants, apprentices and disciples; these require teaching; collateral branches have to be added; dormitories are put up; athletics introduced, and there is no telling how far the process may go. We may live to hear of classes in Belles-Lettres at Cold Spring Harbor and a professor of Sanskrit on the Dry Tortugas.

It seems that the peculiar combination which has developed in the United States of instruction and research, graduate and undergraduate students, letters and technology, has some advantages which more than compensate for the alternative advantages of specialization of function. The case of the Johns Hopkins Univer-

THE LABORATORIES OF THE JOHNS HOPKINS ARE WORKSHOPS

sity is significant because it has recently been forced in self-defense to add a Freshman year of undergraduate instruction at the same time when other universities are trying to cut their courses down to three years, and even talk of dispensing with both Freshman and Sophomore. To be sure, the change is not so great as it appears on paper. It has always been necessary to have some first year classes for students not fully prepared, and it is possible to complete the present course in three years. To accomplish this the student is granted four opportunities: he may enter with advanced standing, he may take extra studies, he is allowed to make up one course by vacation work elsewhere, and he may reduce the requirements for graduation by 5 per cent. if "he has an average of not less than 9 for the work of his third year, and has not received a mark as low as 7 for any of his courses since admission to the university."

Some of the reasons why the Johns Hopkins has been impelled to extend downward its collegiate work may be surmised. In the first place, it helps out the finances, because the buildings and equipment are already there and the fees of the undergraduates relieve part of the heavy burden of graduate instruction. Then there is an advantage in bigness. It is the fashion to speak deprecatingly of "mere numbers," but mere numbers mean a wider range of influence, a larger body of alumni, and a greater popular appreciation.

There was also the difficulty of connecting with the preparatory schools. If the student is to enter the university as Sophomore or Junior, where will he take the one or two years of collegiate work? Most of the high schools, particularly those of the South, naturally tributary to Johns Hopkins, do not provide it, and if a student starts in at another college he is likely to stay there for his entire

PHYSICAL LABORATORY.

course, unless circumstances, over which he has no control, oblige him to go elsewhere. The sentiment of college loyalty has been so strongly developed in America, chiefly thru athletic contests, that a man is regarded as guilty of traitorous or unfilial conduct if he seeks another college. The worst of it is, that this allegiance extends into the graduate school. The universities depend upon their collegiate departments for most of their advanced students. The graduate is more or less blinded by his four years of training in "loyalty"; he is known to his professors and he finds it easier and often more profitable to stay where he is than to fare forth into a strange land. If students in America migrated from one university to another as they do in Germany it would serve as a stronger stimulus to the graduate schools than any now influencing them.

Since the Johns Hopkins University now provides a full course of instruction for college students, it is a pity that no more of them take advantage of it. The constituency of the University is quite local. One of 111 matriculated undergraduates in the last register all are from Baltimore except 14, and only one of

these is from a distance. If our young men were as eager for good instruction as they are for a pleasant and exciting college life they would flock to Johns Hopkins from all over the country. Nowhere else can they get so much personal attention from such competent men as here.* The ratio of students to instructors is the lowest in the United States, only 3.7. Princeton, for all its preceptorial system, has eight students to an instructor. Some of the classes in Johns Hopkins are, indeed, below the limit of greatest efficiency. The visitor feels this when he enters a classroom and sees a scholar of international reputation teaching an elementary subject to four or five students. If there were a dozen or fifteen of them each one would get more out of it.

But for one who is hunting for bargains in the educational line there is no place like Johns Hopkins. It has less money to spend and it spends more per student than any other of the great universities. The total expenditure for salaries of the instructing staff divided by the total number of students gives for Johns Hopkins \$324. Nearest to this stand Columbia, \$250; Princeton, \$235, and Stanford \$230.

But opportunities for learning and culture and association with scholarly men are not what draw boys in large numbers to a university. The less personal attention they get from the professors the better some of them like it. And of the really popular attractions to students the Johns Hopkins affords very few. The undergraduates being Baltimoreans, they regard this university as a sort of superior high school. There is no dormitory or club house to serve as a center of collegiate society. They have a gymnasium and a Y. M. C. A. building, but their principal resort is a dingy basement barber shop, and their chief pastime, according to my observation, is pitching dimes in the alley. The only student publication is the *News Letter*, a magazine of uncertain character and time of appearance.

It is apparently significant of the changing nature of the university that the first building erected on the new site at Homewood is a concrete stadium. The

*See article in the first article of this series.

plans provide also for a gymnasium, nine dormitories, a dining hall and all the other modern conveniences. It was originally intended that the University should occupy a site in the suburbs, but as there was no money for buildings two private residences in the city were made over for temporary occupancy. Later a few buildings were put up and the plan of moving out was in abeyance. Now, however, the Homewood tract has been made accessible by trolley lines and paved streets, and an architectural scheme for its development has been adopted. The proposed arrangement of the grounds and building is indicated on the plan herewith published. It will make an ideal campus, spacious, diversified in contour and well wooded. The old Carroll mansion, in the colonial style, will remain in its place and give a touch of historicity to this most modern and unromantic of universities. The new buildings, in accordance with the spirit of the institution, will be plain, substantial and unpretentious. President Gilman, in his inaugural, expressed the hope that the permanent buildings would not be "a medieval pile, but a series of modern institutions; not a monumental, but a serviceable group of structures. The middle ages have not built any cloisters for us. Why should we build for the middle ages?"

According to the architectural plans tentatively adopted for Homewood there will be two groups of buildings; one, an avenue of dormitories with the gymnasium at one end and the dining hall at the other. The other group is arranged like a Gothic cathedral, with a library as the choir, with a chapel on one end of the transept, and an auditorium and administration building on the other end, with laboratories down both sides of the aisle, and with a museum at the foot of the cross. The plans are astonishingly modest compared with the ambitious projects of California, Chicago, Princeton, Wisconsin and other universities. For example, the largest and most expensive building contemplated is the library, which, according to the specifications, is to provide room "for present and future books, to number about 300,000, with appropriate and comfortable reading space." This is about twice the number

of books that Hopkins now has, but it is fewer than Columbia, Harvard, Cornell, Princeton, Chicago and Yale have at present, and certainly less than any great university should expect in the future. For the new library building of the University of Chicago \$814,000 has been raised.

President Remsen estimates that the seven or eight buildings actually needed at the beginning, library, recitation hall, dormitory, Y. M. C. A., gymnasium, and four laboratories, chemical, geological, biological and physical, can be constructed for a sum between \$750,000 and \$1,000,000. I do not see how he can do it for that, but I hope he will soon have a chance to try. The General Education Board has offered to give \$200,000 to the university if a million can be raised for the removal to Homewood. An institution which has done so much for America and for the world as the Johns Hopkins University, and is capable of doing as much more in the future, ought not to have its work impeded for lack of an amount of money no larger than other universities put into a single edifice. The fact that Mr. Johns Hopkins has not

HOPKINS HALL
Departments of Geology and Mineralogy

been dead so long as Mr. John Harvard or Mr. Elihu Yale ought not to deter a man of wealth from contributing to the

support of the institution which bears his name.

President Remsen is a man of varied ability, but it must be confest that he is not a good beggar. He does not carry around in the vest pocket of his dress suit a collapsible cardboard model of his next new building, ready at the psychological moment to set it up on the tablecloth beside his coffee cup.

Some college presidents regard the collection of funds as the most important work they can do for education, and perhaps they are right in so thinking. But President Remsen has other things that he prefers to do, and, strange to say, the trustees approve of his singular view of presidential duties.

Being without millionaire patrons and a large body of rich alumni, it might be thought that the university would turn toward the third fountain of revenue, the State treasury. There is no State university in Maryland, and altho the work hitherto done by the Johns Hopkins is not of the kind that receives popular appreciation and support, yet it could add the vocational training and administrative services without interfering with its higher functions. Maryland is not a large or rich State, but if it were as generously inclined toward education as Western States of less resources it could be giving a million a year to the university. Occasionally the General Assembly has come to the aid

PROBABLE PLANS FOR THE BUILDINGS AT HOMewood

of the university by the appropriation of a paltry sum, say \$25,000, but there seems to be no disposition on the part of either State or university to make a closer alliance.

The University maintains, with assistance from the State and Federal Governments, three official bureaus: The Maryland Geological Survey, the Maryland Weather Service, and the Maryland Forestry Bureau. The first has been running for thirteen years, and has prepared topographical and geological maps of the State and monographs on the fossil plant and animal remains. The extensive projects of the State Government for the construction of good roads thruout Maryland are being carried out under the direction of the Geological Survey. The Weather Service was established eighteen years ago, but the Forestry Bureau is a new undertaking, started in 1906. In many other ways the University has been of service to Baltimore and Maryland, most conspicuously in education, in instigating and directing reforms in taxation and sanitation and in the discovery of improved methods of oyster culture. Many of the lectures given at the University by its professors and distinguished visitors have been thrown open to the people, tho not so many have taken advantage of this opportunity as one would expect in a city like Baltimore. Above all, the city derives an inestimable advantage in being known thruout the world as the seat of such an institution of learning and culture as the Johns Hopkins University.

A new movement toward the extension of the advantages of the University is the opening this year of College Courses for Teachers, in co-operation with the Woman's College of Baltimore. These are given between 4 and 6 on weekday afternoons and on Saturday forenoons. The classes are open to both sexes, but in order to maintain formally the distinction which is required by Eastern ideas of propriety the degree of A. B. in the case of women is conferred by the Woman's College, even tho three-fourths of their work may have been done in the Johns Hopkins University. This may ultimately lead to some such relationship as exists between Barnard and Columbia and Radcliffe and Harvard. The Woman's College has a sufficiently high stand-

ing in the educational world so that it would not be a *mésalliance*. President Gilman, in his inaugural of 1876, expressed his desire for some such arrangement as this, and said:

"Of this I am certain they are not among the wise who deprecate the intellectual capacity of women and they are not among the prudent who would deny to women the best opportunity for education and culture."

This work for teachers is not altogether a new departure. As early as 1877, Dr. Martin had a class of sixteen, mostly women, meeting Saturday mornings for the study of physiology.

The Medical School has been open to women from the beginning, chiefly thru the influence of the ladies of Baltimore, who raised a fund for its buildings. A little more than a tenth of the candidates for M. D. are women, and there are four women on the medical faculty. Dr. Christine Ladd Franklin has had for many years a lectureship on the theory of color vision in the University. Women were admitted to the graduate department of the General University in 1907, but in deference to the feelings of a few members of the faculty it was provided that an instructor who objected to their presence in his classes could exclude them. I believe the veteran, Professor Gildersleeve, is the only one who still holds out against them, but as few women would want to attend his classes, anyway, the restriction is not serious.

Among the daringly sensible innovations of the Johns Hopkins University at the start was the recognition of the futility of maintaining various degrees where the studies were largely elective. Three degrees were established: M. D. and Ph.D. for graduate and research work, and A. B. for undergraduate work. To these was added last year the degree of M. A., the requirements for which are practically the same as for Ph.D., except the dissertation. This is probably as simple and definite a system as is now attainable, and the example of Johns Hopkins is to be commended to those universities which are still wrangling over the subject or have adopted as a compromise a meaningless or misleading distinction.

A man might as well write X. Y. after his name as B. A. or B. S., for the distinction between these, if there happens

to be any, can only be determined by careful study of the catalogs of the college for the particular years he was there, supplemented by research in the minutes of the faculty committees who may have taken "special action" in his case. Yet it is the importance attached to these meaningless titles by the academic mind that prevents the adaptation of education to individual needs and causes friction whenever a student would pass from the high school to the university,

how much labor and anxiety we spend on unessentials. The English make fun of us because we talk about "graduating" our students. They do not realize that in this country we are apt to devote more time to the "graduation" of students than to their education. We are graduating them all the time, at hourly, daily, weekly, monthly, mid-term, term, annual and quadrennial intervals, and for a professor to neglect it is the unpardonable sin. He may be in the habit of coming

Anatomical Building.

MEDICAL DEPARTMENT

Physiology Building

from one college to another or from one department to another of the same university. The impossible ideal would be to cut away all this red tape and let any student enter any classes of any university for which he could prove himself qualified, and leave at any time with a simple certificate stating what work he had done or what proficiency he had acquired. There are a few professors in almost every faculty who hold and even discreetly advocate this extreme view. But however impracticable it may be, it is well to keep it in mind to remind us of

into his classroom without a preconceived notion of what he is going to say; he may sit on the edge of a desk and occupy the hour telling funny stories, and nobody will object. But if he is a day late in sending in his grades the registrar, the dean and the president will get after him. And how little these grades and degrees mean after all!

Altho the bachelor's degree does not indicate the character of a man's mind or training, it might at least be expected to give the number of years he has spent at some kind of collegiate work, but even

here it fails. There is one point in our educational ladder tolerably well fixed, that is, the entrance requirements to a reputable college, probably defined with as much exactness as is practicable. It is becoming the rule to require for entrance to professional training one, two, three or four years of collegiate work. We need designations for these periods of preparation. Why not let the degrees sink into innocuous desuetude and simply indicate by some name or symbols the number of years that a man has spent in study since he left the high school? A "biennarian" would be ready to enter most of the law and medical schools. A "septennarian" would be ripe for a Ph.D. if he had demonstrated his ability to carry on original research, or for a corresponding teacher's degree if he had demonstrated that he had the ability to teach. If he did not belong to either of these naturally limited classes the university would not be obliged to stultify itself by saying he did, out of consideration for his perseverance and industry. He would have full credit for seven years of satisfactory work, just what he is entitled to and nothing more. Instead of meaningless initials a few symbols would summarize a man's whole educational history. For example:

John Doe, I, II Pr., III Y. (Chem.), IV, V Har. (Biol.), VI, VII J. H. (Med.).

This, which looks a little like a dental formula, stands for a very creditable and consistent course, probably better than the student would have obtained if he had stuck in one institution. He took his first two years of undergraduate work at Princeton, then went to Yale for a year's specializing in chemistry, followed this with two years of work, chiefly biological, at Harvard, and finished with two more in Johns Hopkins Medical. The anilin dyes are exhaustless, so our collegiate dressmakers would be able to put all this on his gown in accordance with the taste for sartorial symbolism which is so characteristic of savages and savants.

What I like about Johns Hopkins is its honesty and earnestness, its freedom from affectations and extravagances. The laboratories and libraries are not show places, but workshops. Yet not such workshops as we are accustomed to

see filled with clock-watchers and task-masters, but rather a communistic atelier such as William Morris might have dreamed of, where there is no question of hours and wages, of schoolmaster and pupil, of discipline and regulation, but each man works for the joy of working, at his own gait and in his own way, and with such inspiration and energy as he has been endowed with. There is no compulsion except the compulsion in the atmosphere. But this is sufficient to stimulate the most sluggish and to drive the ambitious into an almost fanatical zeal for learning and discovery. The only time the University officers have to exercise their authority is in driving the students out of the laboratory at night. Every university, of course, has men of this kind, but in most places they are lost in the crowd of more or less indifferent youths. But here the undergraduates are few and inconspicuous, while there are 693 men who have finished their college course, have sown their intellectual wild oats, and have settled down to business in their chosen life work. I count professors, instructors and graduate students all together because they are all together at Johns Hopkins. You cannot tell them apart by age, spirit or bearing.

Whatever have been the vicissitudes thru which the Johns Hopkins University has passed there has been no decline in the spirit of research. Its income was cut down by the depreciation of its securities; rival institutions have risen, richer and larger and louder, outbidding it for students and professors, but the Johns Hopkins University has never lost courage or lowered its ideals. When a man needed books or apparatus for his investigations he got them, whatever else went short. In some universities a different idea of relative values prevails.

I shall not attempt to count the proportionate number of the faculty actively engaged in research as I have in some cases. There are 175 names on the faculty list and I presume it would not be safe to leave any of them out. If there are any who ought not to be so counted enough graduate students could be put in to make up the tale. Nor can I explain the importance and significance of the work being done in the various

departments, one reason for this omission being the inability of the reader to understand the technicalities involved. But without attempting to be comprehensive or critical, I will mention, in the way of samples, a few bits of its work which have happened to catch my attention. The real monument to Johns Hopkins is not built of marble or bronze, but of more permanent stuff, namely paper. It is the pile of monographs, periodicals and dissertations which, to quote the words of Dr. Gilman, is "gathered like a bibliothecal cairn in the office of the trustees to remind every officer and every visitor of our productivity in science and letters."

At the time when the University was founded American scholarship was scarcely recognized in Europe. This was not altogether because there was so little of it worthy of recognition, but because it had no national coherence and distinction. But the Johns Hopkins, following the example of Yale in the *American Journal of Science*, launched immediately the *American Journal of Mathematics*, the *American Journal of Chemistry* and the *American Journal of Philology*, which not only stimulated American science but secured for it proper credit. The University now publishes fifteen such periodicals besides many independent volumes.

Running thru the list of doctorates conferred in the last four years (1905-8) I find the following are the leading departments: Chemistry, 34; physics, 17; political science and economics, 11; history, 8; Greek, 8; mathematics, 7; French, 7. Here as everywhere the relative popularity of the different graduate departments depends partly upon the ability of the professors to attract and to inspire students, partly on the opportunities afforded for successful research and partly by the chances of future employment. In this case all these influences combine to give chemistry an advantage. Professor Remsen has been preëminently a teacher of teachers, and there are few laboratories East or West which do not contain men he has trained. Tho now president he still does as much classwork as anybody. The research work of this department shows how absorbing has become the question of the constitution of solutions which used to

be thought too simple to need attention. The work of Professor Morse on the direct determination of osmotic pressure, that of Professor Jones on conductivity and of Professor Acree on organic reactions, all deal with this newly discovered borderland between physics and chemistry. Sylvester and his *Journal of Mathematics*, Rowland and his gratings, gave the Johns Hopkins the lead in these two branches. The physics department of almost every university has on its walls a frieze of Rowland's solar spectrum, made by the lines cut in steel by the diamond point working away night and day alone in the darkness of the Baltimore cellar.

Of the "Big Six" who constituted that first faculty there is left, besides President Remsen, only Professor Gildersleeve, now seventy-eight years old, but still in active service. He is a standing refutation of the common notion that the critical study of texts necessarily blinds a man to the true value of literature. Professor Gildersleeve knows not only the origin of words but also what they are for and how to use them. There are those who take the *American Journal of Philology* solely to read the spicy editorial comments on men and books. The facilities for classical instruction have been recently increased by the acquisition of a considerable collection of original inscriptions on marble, and of household utensils and ornaments from Greece and Italy.

In the graduation list of 1879 appears the name of Maurice Bloomfield, of Illinois, receiving the doctor's degree for a dissertation on "Noun-Formation in the Rig-Veda." In the last president's report, thirty years later, there is an announcement of the completion of Professor Bloomfield's "Vedic Concordance," a large quarto volume of 1,100 pages, indexing the entire Vedic literature, some 120 texts in all. The reader's imagination may interpolate between these dates. This is an age and a land in which haste, superficiality and utilitarianism are all powerful, still it seems that these temptations can be resisted.

It might naturally have been expected that the study of religion and of the Bible would be monopolized by those colleges which were founded primarily for ecclesiastical purposes and by those

theological seminaries which have more endowment than pupils, but on the contrary this purely secular university has been one of the leaders in this work. Even the layman, uninterested in Semitic philology, can appreciate something of the work of Prof. Paul Haupt, for he is acquainted with the broad, flat, square, thin, red volumes of the Polychrome edition, popularly known as the "Rainbow Bible"; marvels of complicated typography, distributing fragments of copy among the various redactors with the skill of the managing editor of a metropolitan newspaper. It is a pity that the series was suspended for lack of financial backing before the completion of the Old Testament, for it came nearer than anything else to giving the English reader the viewpoint of the specialist. It cleared away the mists of mis-translation and brought him face to face with the original. But the Polychrome was merely by-play for Professor Haupt; his real work has been the study of Assyriology and the training of Assyriologists.

In this connection it is convenient to note that altho the Johns Hopkins is a secular institution and devoted to science and the higher criticism, the relations between the University and the Roman Catholic Church have always been friendly. Many scholastics from the Catholic institutions of Baltimore and Washington have taken work in the University, appearing usually in their ecclesiastical garb. When they go to Harvard, however, they wear mufti. In the State University of Minnesota, near the great Catholic center of St. Paul, I saw many Sisters in their black gowns.

The department of philosophy and psychology has had a checkered history. It was in accordance with the scientific character of the University that the new experimental methods should be adopted, but G. Stanley Hall, who opened a psychological laboratory here in 1884, left in a few years to start a psychological university of his own at Worcester, Mass. In 1904 J. Mark Baldwin, he of the big Dictionary of Psychology and Philosophy, came from Princeton, but Mexico proved to have greater attractions for him than Baltimore, and G. M. Stratton, who came to Johns Hopkins about the

same time, has gone back to California. Now a new turn has been given to the work of the department thru the acquisition of J. B. Watson, of Chicago, whose specialty is white rats, and E. F. Buchner, of Alabama, who takes more interest in white children. H. S. Jennings, who is devoted to the education of starfishes and the eugenics of the protozoa, is separated from his co-workers in psychology and sociology according to the catalog classification.

America is deeply indebted to the Johns Hopkins departments of history, political science and political economy, both for the methods and results of their studies. History has never been studied here in the antiquarian and academic spirit, but as "past politics," as a thing of real importance and interest to the people of today and tomorrow. Laboratory work was substituted for class study and now this in turn is developing into field work, which leads the student still farther from the scholastic cloister. One of the fruits of such excursions comes to my hand as I write this, a bulky volume on the typographical unions of the United States, by Prof. George E. Barnett, a study of men rather than of books, and of conditions rather than of theories. Another instance of the spirit of the new political economy is the satisfactory settlement of the financial affairs of San Domingo by Prof. Jacob A. Hollander, acting as the Special Agent of the United States. *The Johns Hopkins Studies in Historical and Political Science* is now in its twenty-seventh year. An interesting feature of this work has been the encouragement given to students from the different States to attack the historical problems of their own localities.

The Homewood tract of 176 acres, tho not yet to be occupied by the University, gives the botanical department an opportunity for expansion. A botanical garden has been started there on a system as elaborate as a Dewey library index.¹ It is divided into four sections: the first illustrating all the different forms of vegetative organs, roots, stems and leaves; the second, the various methods of reproduction; the third, the gen-

¹See *Johns Hopkins University Catalogue*, Nov. 6, 1909.

ealogy of plants; and the fourth containing specimens of economic plants, useful and ornamental.

The *alter ego* of the University, the medical department, is as much a thing apart as the Harvard Medical School, in Boston, is from the University in Cambridge. It is situated in another part of Baltimore, near to the hospital, and separated from the rest of the University buildings by a long trolley ride. To do justice to this department would require

connection between the school and the magnificent hospital which was created for this purpose by the other half of the Hopkins fortune gives the students a great advantage over institutions where the hospital facilities are inadequate, at a distance or under alien control. The Johns Hopkins has a larger number of beds under its direct control than any other university.

But hospital treatment after all is but cobbling at best. The new and brighter

THE JOHNS HOPKINS HOSPITAL

another article—and another author. Starting in 1893, the medical school soon caught up with the philosophical department and now has double the number of students. Tho every medical school in the country has its peculiar superiorities to boast of, they would probably all vote that the Johns Hopkins stood second. Harvard is its nearest rival in the higher branches of the profession. Both require a college degree for entrance. The Johns Hopkins has, of course, no such palatial buildings, but, as I have said, they do not care much for show. The close

field that is opening out to our physicians is that of preventive medicine, calling for men who will insure good health to the community and the individual. This must be based upon the experimental research which has been the chief characteristic of this University in all its departments. This work requires its martyrs, and volunteers are not lacking—such men as Dr. Lazear, of Johns Hopkins, who gave his life to the stegomyia that men might know how to conquer the yellow fever. Just now national sanitation is in the commission

stage and Hopkins men have done much of this form of public service, for which their proximity to Washington gives them special facilities. Most prominent among these promoters of "administrative medicine" has been Prof. William H. Welch, whose executive ability and genial manner have made him the leader in many scientific movements of national scope. On the wall of McCoy Hall, the main building of the University, there hangs the portrait group of the four men who made the fame of the Johns Hopkins Medical, Doctors Halsted, Kelly, Osler and Welch. At the time when this picture was first exhibited the *London Times* made one of its usual kindly comments to the effect that it was fortunate that these gentlemen had their portraits painted by John S. Sargent, R. A., for they otherwise would be unknown to posterity.

The latest advance in the Johns Hopkins medical department is the establishment of a Psychiatric Ward thru the gift of a million dollars from Mr. Henry Phipps. A large building of five stories has been erected and fitted up with all imaginable conveniences for the treatment and accommodation of patients of all degrees of mental aberration.² No gift could have been more welcome and useful, for the American people are the most nervous in the world or regard themselves as such, which is just as bad, but we have not kept up with Europe in the study of nervous diseases.

I should like to say something about another branch of the medical work of especial interest, that is the Johns Hopkins Hospital School for Nurses, but I have only space for a mere mention.³ There are this year 131 women enrolled in the school. A three year course is given which includes not only attendance on the sick but much on sanitation, cookery and household economics.

I have, in dealing with some of these universities, ventured to forecast their future, but even my presumption fails in regard to the Johns Hopkins University. I cannot tell what is going to become of it. It may, of course, continue indefinitely in its present form, a most useful

and highly respected institution. But, like a small commercial establishment in the face of trust competition, it would find it increasingly difficult to maintain its efficiency and prestige. A big university grows like a snowball, with an acceleration proportional to the square of its radius of influence. A summer session is supposed to be impossible on account of the Baltimore climate, but the summer students are the most useful press agents a university has. On account of their migratory habits they get an unusual insight into the comparative merits of different institutions and they direct their own students accordingly. Then, too, the big schools of applied science and engineering which the other universities possess serve to strengthen an institution in many ways. The Johns Hopkins University has but one school of applied science, that is the medical. One reason why the medical department of the Johns Hopkins stands higher in comparison with other medical schools of the country than the rest of the University—the philosophical department—does, in comparison with its rivals, is, in my opinion, because here theory and practice go hand in hand.

If the University should get a windfall and move out to Homewood it would be likely to develop into an institution of the same character as many others we now have, a large suburban college community, living in dormitories with all that that condition involves. But all the colleges, large and small, draw a majority of their students from their neighborhood, chiefly from an area within one or two hundred miles. The region round about Baltimore, however, is not densely populated with college-loving youths. Neither is the South generally, from which Johns Hopkins would naturally draw, any better off in this respect, while to the northward it would come into competition with numerous well-established universities. If the University at Homewood should, as at present, do without vocational courses it would be involved in an incessant and unpromising struggle to "save the college," that is, to induce students to take what they do not want in preference to something else that seems to them more useful and attractive. But on the other hand, to add

²For a description of the building see *American Medical Journal*, September 11, 1900.

³For particulars see the official circulars and the *Johns Hopkins Nurses' Alumni Magazine*.

vocational courses on as wide a scale as the State universities and technological institutions are now doing is a great undertaking.

Something that President Remsen once said suggests a third alternative:

"It is becoming very difficult to find properly qualified men to fill vacant university professorships. Given sufficient inducements, and it would be quite possible to corner the market."

If the "sufficient inducements" are at bottom a matter of money, a windfall,

such as may reasonably be hoped for in the near future, would give President Remsen a chance to try for such a monopoly by adhering to the old policy of the Johns Hopkins, "men, not buildings." If he succeeded it would restore the University to its pristine position of leadership. If he failed, such a bull movement would have an excellent effect on the country at large in improving the market for prime sorts.

NEW YORK CITY.

Actress Versus Suffraget*

BY ISRAEL ZANGWILL

A PERFORMANCE at the Scala Theater, organized by the Actresses' Franchise League of Great Britain, has served again to draw attention to the close sympathy between the stage and the suffragets. Not only do the leading actors of the day endorse the demand of votes for women, but, what seems still more wonderful, the leading actresses.

A little consideration, however, removes the wonder. The stage is the sphere which women adorn equally with men, if not indeed with superior luster, and in which women have worked—when all of scandal is said—on those terms of sexless camaraderie which the new social development demands. It is the one arena in which their ability to make a living in equal competition has never been in question. To tell actresses that their place is "the home" would scarcely occur even to the most bigoted defenders of the hearth, for to all except the strictest sectarians, the actress has long proved her necessity as a factor of civilization. And yet it is well to remember that even in the acting profession there was a time when Rosalind and Ophelia could only be played by male.

It is, however, from the philosophic standpoint that the relation of the actress to the suffraget opens up the most interesting perspectives. For the typical

suffraget is, even in the popular imagination, no longer the unsexed virago, the unhusbanded surplus, the spectacled bluestocking. Manliness does not go even with militancy. Alike on the posters and in the cartoons the suffraget is now a young and pretty girl; in short, so far as feminine fascination is concerned, she is become indistinguishable from the typical actress.

And this approximation to the actress is even closer than mere bodily likeness. The suffraget, like the actress, appears on a stage or a platform; her charms are an equal, if a less conscious, part of her success, and her chief working asset is her voice. She, too, achieves her effects by words, which are sometimes even converted, under interruption, into duologs and repartees.

Where, then, lies the difference between actress and suffraget? The most obvious difference is that the suffraget speaks her own words, is authoress as well as actress. This, however, is not the essential difference, since the rank and file no doubt repeat the speeches of their betters, who in their turn may repeat themselves, almost as mechanically as an actress. Does it lie in the fact that the actress gets applause and flowers, and the suffraget malodorous missiles and hisses? Not in absolute logic, since eggs and sibilance are not unknown to the legitimate drama. But in practical logic this brings us nearer the core of

the matter. The actress asks for bread, the suffraget more often for a stone. She faces enemies rather than friends, she is speaking not to pleasure her audience, but to win it from its prejudices. In short, she is on the stage as herself and not as a puppet, a puppet, moreover, mainly worked by commercial showmen. Stevenson applied the phrase "The Daughters of Joy" even to himself and to all male artists who lived to please and must please to live. Without, however, taking so dour a view of the purveyors of esthetic pleasure, it must be admitted that they fall into a lower category than the artists who, like Wordsworth or Carlyle, are driven to their work by a fire which they do not utilize to boil the pot. And as high as, if not higher than, creative art is creative action upon the real world, action which molds it "nearer to the heart's desire," as a sculptor imposes more gracious forms upon his block of granite.

The world of art, as Schopenhauer pointed out, is a world without any necessary relation to will. Art, when enjoyed by the spectator, makes no demand upon his volition. It was only the naïve sailor in the gallery who, seeing the heroine of the drama thrown into the river, dived down to her rescue. And if the spectator of the play must surrender his will, still more is this the case with the player. The actor must move thru an action as fixt beforehand as that of the filmy figures of the cinematograph, as independent of his will as the movement of the slaves who serve as chessmen in those living games of chess played by Oriental despots upon their chalked-out courtyards. Some margin of liberty, no doubt, remains even to the breathing chesspiece. One bishop may look more sanctimonious than another as he swoops down upon a castle, a knight may permit himself a malicious chuckle at his contorted influence upon the enemy's queen, a humble pawn may swell visibly as he checks the king. And so a stage player, too, is not wholly the serf of the author of his being, not wholly his manager's mannikin. His personality fills out, even partially transforms, the part in his script. But within what narrow limits his free will operates! And even the

most individualized performance soon sinks into mechanism under repetition. According to Diderot and Coquelin such automatism is even the perfection of the actor's art; feeling, with its accidents of variation, is to be scrupulously avoided.

Now, the actress has long appeared to the crowd as the ideal image of freedom and spontaneity, and indeed as a pioneer of public work and wages for women she did shake herself free from many old-fashioned crampings and conventions. But so far as her actual profession is concerned, she is bound in even tighter chains than the ladies of the harem. The stage, in appearance so bohemian, is really the most rigid of all barracks. More punctually even than the bugle-call sounds the prompter's bell or the call-boy's voice. Not even upon the great railway systems must trains cross given points more punctually than actors and actresses must make their entrances and their exits. No more dreadful catastrophe could occur in a theater—outside fire and panic—than that a player should not appear at his cue, and a clever American story-teller, Miss Virginia Tracy, in her "Merely Players," has used this theme to work up a breathless excitement, as thrilling as any novel of adventure can evoke. Such a failure of second nature is almost unknown on the stage, so minute and punctilious a time-conscience does the player develop. It may be that outside business hours his chafed spirit rebounds in revenge to the other extreme, and that this is the explanation of his notorious instability, for it may almost be said that an actor never keeps an appointment off the stage nor misses one upon it. It is this element of slavery to an inexorable mechanism, and this substitution of pleasure-giving puppetry for personality, that have no doubt lain behind the traditional refusal of society to accept the profession as dignified. If the rite of Christian burial is no longer refused it, and even the rite of Christian knighthood no longer withheld from it, its emancipation from prejudice is still not universal. The actress in America has still no social standing; in China the son of an actor cannot be a mandarin. These are not actresses who run theaters or companies, or who have some power of choice over

their parts, or, best of all, play some serviceable rôle in real life, rise indeed beyond the puppet phase. But the actor *quâ* actor—and the average actor is an actor, wholly an actor, and nothing but an actor—must pay for his surrender of volition by a fall in status.

Hence it is that the actress takes lower rank in the scale of spiritual values than the suffraget, whose career is the continuous expression of her personality, her will-power, and, highest of all, her subordination of both of these to the interests of her sex. The ardor with

which the actress has embraced the movement for political enfranchisement may spring from some dim recognition of this inferiority, and from her desire to rise into complete personality and womanhood. Like her unpunctuality off the boards, it may be the reaction of her soul against a life too constricted. And assuredly the cult of a political cause, especially if crowned by self-sacrifice, is a far better form of reaction against the slavery and automatism of the theater, a far finer expression of independence and will-power, than the old bohemianism.

L. S. L.

The Jeanes Fund

BY JAMES H. DILLARD

PRESIDENT OF THE JEANES FUND.

I DOUBT if any gift for public uses were ever more timely than the one made about two years ago by Miss Anna T. Jeanes, of Philadelphia, for the purpose of assisting in the improvement of negro rural schools. The gift has come at a time when there is a general call for the betterment of conditions among the masses of the people living in the open country. Within the past five years there has been a remarkable spread, even in remote districts, of the talk for better rural conditions—for better farming, for better sanitation, for better roads, and, of course, for better schools. This movement is of special interest to the South, where the population has continued to be so largely rural, and its importance is heightened by the fact that 80 per cent. of the negro population is to be found in the country districts. Thoughtful men in the South are seeing very clearly that more must be done than has yet been done for the improvement of this large rural negro population, and more and more it will be seen that permanent improvement will depend upon the proper kind of training and influence that must issue from schools made to fit the special needs and conditions of rural communities.

In all the counties of the South, at

some time during the year, there are public schools for negroes, varying greatly as to length of term and efficiency. It is frequently quite surprising what a difference will be found in passing from county to county. In some counties the rural public schools for negroes are in session only two and a half months; in other counties provision is made for as much as seven months, and in a few instances for as long as eight months. It is difficult to get statistics for any one period in order to make a reliable average. I think it would be safe to say that the average is about four months, perhaps less than this. The pay of teachers varies in the same way, and there is the same difficulty in estimating the average. In some places the salary is as low as \$15 and \$20 a month, and in other places it rises to \$35 and even \$40 a month. All the States do not make reports annually, and there may be considerable difference from year to year; but we know the facts sufficiently to see that it is impossible to secure competent teachers for the short terms and at the salary paid. It is in this way that the South is really wasting much of the money that is being spent for negro education. The shortness of term implies shortness of salary and shortness in the

quality of teaching. There are many counties in which the appropriation of a little more money might make effective the school work, which, as it is, is almost useless.

Another fact about these schools is that they have been left almost entirely without supervision. Scattered thruout the counties and difficult of access, some of them are never visited, and others only once or twice a year. Not even the central negro school, located in some town in the county, receiving more of the public funds and perhaps some assistance from outside sources or religious organizations, is likely to know anything about these outlying schools. There they are for a few months in the year, using the churches or the rudest kind of houses, and nobody has cared much about them except the people in the immediate community, who may be making pathetic and heroic efforts to lengthen the term or to build a school-house. In many cases, it should be said, these efforts have received the support and assistance of the white people of the neighborhood.

These schools attempt nothing but a little "book learning." The newer ideas of education have not reached them. The central negro school of the county may be attempting to teach some "domestic science" or other simple industrial branch, but no one seems to have considered the possibility of doing any work of this kind in these small rural schools. Yet the negroes thruout the South are anxious for training in manual work, and I do not know of a single school established by themselves which has not the word "industrial" in the title.

Now it must be remembered that it is upon the rural public schools that the great masses of the negroes in the South must depend for what training they are to receive; and the time has come for an effort to improve these schools. First, the public school authorities must awake to the fact that the school term must be lengthened in order to make the money spent to be of much avail. Secondly, these schools must have some sort of supervision. They need some one who would come, if only once or twice a month, with words of criticism and encouragement. They need some one to

suggest that the bench or window be mended, that the school room, however rude, and the surrounding grounds, be kept neat; some one who can watch the teaching and make suggestions; some one who can encourage and assist the teacher in organizing improvement associations in the neighborhood. Thirdly, there is an urgent need for the introduction of simple and useful forms of manual work. The particular kind of manual training might very well vary in different localities, but there are certain simple and inexpensive forms which can be almost universally adopted. Girls can be taught to sew and mend neatly. Boys can be taught the proper use of a few tools. Both boys and girls can be taught how to plant seed and attend intelligently to the growing of plants and vegetables. Then at various places local occupations will suggest themselves if the teacher is capable and wide-awake.

It is to assist in calling attention to these needs in behalf of the neglected rural schools, and as far as possible to aid in effecting their improvement, that the foundation known as the Jeanes Fund will be devoted. Miss Jeanes had already given \$100,000 each to Dr. Frisell, of Hampton, and to Dr. Washington, of Tuskegee. The income of these gifts has been most wisely used in parts of Virginia and Alabama. The present donation was made for the purpose of assisting in extending the work thruout the South. The legal title of the organization formed to carry out the purpose of the gift is The Negro Rural School Fund, Anna T. Jeanes Foundation. The donation amounts to only \$1,000,000, the income of which is a small sum when we consider the great territory over which it is to be extended, but it is hoped that the influence of its use along the line indicated will be effective in inducing the regular school authorities to extend the work. From superintendents of education all over the South, have come expressions of willingness to co-operate.

The organization of the fund was not perfected until February, 1908, so that the last session marked the first year of its operation. Some assistance has been given in building schoolhouses, in improving equipment, and in extending terms, but the main work has been in the

introduction, at favorable points, of manual training into small rural schools. During this first year the fund has paid the salary of seventy-three industrial teachers in schools connected, except in the case of four reform schools, with the public school system, and in many places the assistance has been given at the instance of the county superintendents of education. From talking and corresponding with superintendents, I am convinced that the best method of securing the needed increase for the support of the rural schools is to point the way for making these schools more effective.

A line of work which has been most successfully carried out should be particularly mentioned, since it seems to point the way for combining helpful supervision and the introduction of simple forms of manual training. At the request of the superintendent of Henrico County, Va., we supplied the salary of a competent teacher for the twenty-two negro rural schools. This teacher spent her whole time in visiting these schools, in showing the teachers how to take up simple forms of manual training, and in helping to organize the communities for school and neighborhood improvement. As an illustration of her work, I take the following items at random from the report which she published on her own account:

JETER'S SCHOOL, TEACHER, MILDRED A. CROSS.

Enclosed the school with hedges, set out trees and flowers, taught sewing, making mats, and carpentry. Much interest is being manifested in the school garden. Amount collected, \$22.23. Expended, \$6.63. Balance in the treasury, \$15.60.

MOUNTAIN ROAD SCHOOL, PRINCIPAL, MARGARET L. BROOKS.

Whitewashed trees, taught domestic science, sewing, and carpentry, kept the yard in good condition. Amount collected, \$23.00. Expended, \$12.63. Balance in treasury, \$10.37.

COMMITTEE SCHOOL, TEACHER, BETHEL F. FORD.

Taught sewing and paper cutting. Could do no improvements on yard, because property did not belong to the county. Amount collect-

ed, \$5.00. Expended, \$2.00. Balance in treasury, \$3.00.

BETHEL SCHOOL, PRINCIPAL, ESTELLE FORD.

Made a 10-foot walk in front of school with flower borders, taught sewing, and making shack mats. Amount collected, \$9.42. Expended, \$1.91. Balance in treasury, \$7.51.

The reports from the other schools are similar to these. Naturally, much of the work was of a very simple, and even crude, character. The carpentry, for example, began with making match-safes and went on to the making of benches and tables. But the exhibition at the end of the year was kept several days in the county courthouse and received the commendation of the School Board.

A modification of the above plan has also proved successful. In many counties, whether from lack of schools or the wide separation of those that exist, or the shortness of the term, or the incompetence of the teachers, the plan of a supervising teacher for the whole county is not yet feasible. The modification of the plan is that a teacher be located at some central school where she would herself teach two, three, or four days in the week, and would give the rest of her time to the neighboring schools which might be within reach, with the intention of introducing the industrial work into these schools, supervising it, and at the same time influencing the community in the way indicated in the Henrico plan.

Surely there is nothing that demands attention and earnest endeavor more pressing than the educational uplift of the masses of the negro population in the rural districts of the South. Nothing is to be said against the church schools or the schools established and supported by private philanthropy. These are doing their work, and it seems to me wise that in many places the public school authorities are co-operating with these institutions. But the thought must be prest home that the educational uplift of the masses must depend upon the rural public schools.

NEW ORLEANS, LA.

Halley's Comet and Solomon's Temple

BY

Henry Anselm Scomp

[Dr. Scomp was formerly Professor of Greek in Emory College, and has for some years been devoting himself to a comparative dictionary of Creek, Choctaw, Chickasaw, Seminole and other Indian languages under the direction of the Smithsonian Institution. His suggestion is, we believe, new and deserves attention.—EDITOR.]

JUST now the approach of Halley's famous comet to its perihelion is exciting universal interest among all intelligent people, as well as with astronomers.

Few of any generation are permitted to witness more than one of these periodic visitations of this, the most celebrated wanderer of the coma world; and we may be sure that for several weeks next spring millions of eyes will be intently watching this celestial visitor.

The average length of this comet's long cycles is estimated at 76.8 years, tho this period may be slightly lengthened or shortened by the perturbations of its orbit, due to the attraction of the great planets encountered by the comet on its passage, either outward or inward. Jupiter especially has exerted much influence upon cometary orbits, so much, indeed, that several minor comets are supposed to have been deflected from their courses by the nearness and power of the great planet and lost in space. Much depends upon the orbital places of the great outer planets at the time of the comet's passage.

Jupiter, or Saturn, may exert much influence upon a comet, should it cross their orbits in their vicinity, and these perturbations introduce slight variables into a comet's period. Even Kepler's law of equal spaces in equal times for the radius-vector of elliptical orbits is affected by their planetary attraction.

Our planets' orbits circle generally close to the plane of our own ecliptic, with which they make but slight angles at their nodes; and the great coma world seems to have a special inclination for the same general orbital belt. Many astronomers believe that comets, like planets, are of the solar efflux, *i. e.*, are born of the "sundust"; indeed, are but planets in embryo, or in the formative state; tho how long it may require for the coma mass to be wound around its nucleus into a properly organized planet is beyond the hazard of even a guess.

Halley's comet, in its well-ordered subjection to its parent sun, never wanders beyond the control of the great solar father. Even in its thirty-odd years of errancy beyond Neptune's orbit it never strays away into another sun system, but obediently returns on sched-

ule time, after its little outing, to the home of its own solar father. In this respect Halley's might be an example to some truants of the coma family which wander away from their own system and are never heard of more.

Science has never yet discovered that other great impalpable magnet in space, which always antagonizes gravitation, always works by its centrifugal force, always balances that power that would draw the worlds together. Where is the Newton who will search out the place of this counter gravity power and explain to us the laws by which it works?

From its regularity of periods we are sure that Halley's comet must have made us one of its regular visits in or about the year 1008 B. C. Its present visit is its thirty-eighth since then. From Chinese annals we have something like a history of the comet's visits since the year 12 B. C., and it is the best known of all our wanderers.

From our best chronological data, that ancient home-coming of the comet (1008 B. C.) occurred in the latter years of David's reign over Israel (1040-1000 (?) B. C.). True, some of our Bibles vary by a few years from these dates; and we must remember that something like accuracy in chronology was first attained about two and one-half centuries after David's time, when Ptolemy's Canon begins with its more rigid reckonings.

But 1008 B. C. must clearly be included in the reign of Israel's great harper king.

At that time David had already captured the Jebusite fortress on Zion, and had built his own palace on the same mount. He had, moreover, brought the Ark of the Covenant to Jerusalem and placed its tent near his own house on Zion. But the altar of burnt-offering and the "high place" were yet at Gibeon.

For some reason—we can only guess what—David was seized with an overweening desire to number his people. Whether warlike projects or personal vanity were at the bottom of this census-taking we are not told. But the Lord was displeased at this numbering, and thru Gad, the seer, offered David choice among three evils: famine, flight from enemies, or pestilence. David

chose the last, and the pestilence was raging from Dan to Beersheba, with a death roll of seventy thousand victims already to its charge.

About this time the affrighted monarch was horrified to see, as he looked eastward, the dreadful spectacle of an angel with a flaming sword, "between heaven and earth," over the threshing-floor of Araunah, the Jebusite, on Mount Moriah, just across the Tyropœon from David's palace on the northern brow of Zion.

The heavenly sword of flame seemed to threaten Jerusalem, and the frightened king sought how to avert the divine wrath; and he was advised by Gad, the seer, to build an altar at (or under) the spot where the sword appeared, and offer propitiatory sacrifices. David lost no time in obeying the seer's injunctions. He goes to Araunah, purchases the threshing floor, oxen, etc., builds an altar and offers sacrifice—after which—we are not told how long—the "angel sheathed his sword" and the plague was "stayed."

The season of the year was probably late May or early June, the threshing time in the latitude of Jerusalem—a time, too, not unknown to pestilence in Palestine, both anciently and in modern times.

We are all familiar with the story of cometary visits to our quarter of the heavens, and of the terror inspired by those flaming monsters of the skies, which were thought to be speeding toward our earth on a mission of destruction.

More than one monarch in times long subsequent to David's have been terrified, even to insanity, by these threatening portents of the heavens. Such extraordinary phenomena usually received a national, if not a universal, interpretation. Such "signs in the heavens" were too great for mere individual meanings. Monarchs thought themselves signaled out by such tokens; while nations thought that they were the objects of these celestial manifestations; and the comet was ever a portent of wrath, never of mercy; and Halley's comet, with its sword-like coma, could not but be regarded as a symbol of divine vengeance; no mercy in that terrible trail.

How long did this angel of terror hover over Jerusalem? How long before he "sheathed his sword" we are not told. But several days, possibly some weeks, must have elapsed. The court had gone into sackcloth. A consultation between David and Gad; the trade with Araunah; the preparations for the sacrifice, etc., etc.—must have taken some time. Other events, both before and after these, naturally happened during the interval while that terrible sword seemed to be menacing the city and the nation—all before it was "sheathed" and calm restored.

We know how the term "angel" was used, especially in the Old Testament literature—for any divine portent, more frequently of wrath than of mercy. Plague, disease, famine, war, slaughter—all were recognized as the direct work of an intermediary "angel." From the burning of the "Cities of the Plain," in the days of Abraham, down to New Testament times, the "angel" appears again and again as a demiurgic agent exercising divine powers directly and most frequently for punishments; tho in New Testament times he has become usually a messenger for help, a bearer of good tidings, but always regarded with terror.

Altar-building, from the very propitiatory nature and purpose of the altar, was always regarded as the most fitting marking for the place of the divine manifestation. So Jacob marks Bethel; and so the terrified Peter on the Transfiguration Mount involuntarily thought of building tabernacles to mark a sacred spot.

We see in the divine phenomenon of the flaming sword the reason why Moriah was chosen as the place for the altar and for the later temple. The home for the Ark of the Covenant had hitherto been undetermined, altho Israel had already been in Palestine for several centuries. Hitherto there had been no divine indication of a chosen site for the permanent abode of the tabernacle and the Ark. "The place which I shall choose," often mentioned in the Pentateuch, had never yet found realization. It was as yet undefined and both it and the tabernacle had found only transient homes.

The Samaritans have always main-

tained that Gerizim was the site divinely intended for the Ark's permanent resting place, and they support their contention by several plausible arguments. They allege the fact that Gerizim had been chosen before Israel had passed the Jordan as the mount of blessing; and that it, and not Moriah, was the "mountain in the land of Moreh" divinely chosen as the place for Abraham's offering of Isaac—a claim certainly better than Moriah's when the circumstances of the narrative are considered, etc.

Moriah was selected by David in his terror at the sight of the flaming sword, tho without any previous indication of the divine will in its favor, or any intimation that the heavenly portent had the slightest reference to the choosing of a home for the Ark and the tabernacle. Indeed, would such an omen of wrath have been likely chosen and at such a time to mark the place for national worship and national blessing? We have no evidence whatever of it. The narrative does not indicate that Araunah's threshing-floor was in anywise pointed out by the prodigy as the nation's future place of worship; the choosing was of David's interpretation of the portent.

But what was that "angel" with the flaming sword? May it be thought not irreverent to suggest that it was our comet on one of its long periodic visits to our central solar system? The times, as we have seen, have remarkable coincidence. The phenomenon of the "flaming sword" seems to agree with the broad sword form of the comet's fiery tail, even now most threatening and terrorizing to those who are ignorant of the coma's nature.

The period during which the comet was visible to the naked eye—the only instrument for comet inspection—seems to agree well with the time during which the angel hovered over Araunah's threshing-floor.

It is not likely that any other conspicuous stranger of the heavenly world was at that time noticeably, terrifyingly present in the Syrian sky; tho this writer must confess that he has not examined into the times nor the appearances of other B. C. comets.

The phenomena of Halley's comet, as they will be seen during part of April

and May, 1910, bear a most striking resemblance to the description of the "angel with the flaming sword," as given in II Samuel, Chap. 24, and in I Chronicles, Chap. 21.

The temples, pyramids and other great structures along the Nile were oriented from certain *fixt* stars, and this ancient plan of building helps us today in determining their era of construction.

Not so with Solomon's Temple. It could not be oriented by a comet, and no *fixt* stars gave direction to its sides. It simply faced eastward as its builders were accustomed to mark the cardinal points—and, perhaps, not very accurately. A celestial phenomenon interpreted

in David's own way determined the site of this house which has so marvelously affected the world's history. Can we find any more natural, or more rational, explanation of all the co-related phenomena of that extraordinary event than in identifying them with the well known phases of Halley's comet, now on its thirty-eighth visit to our world since that one in which it appeared as the angel of wrath, flaming over Israel and Jerusalem? Would it not add two-fold interest to contemplate our celestial visitor next spring as having probably influenced human history in so wonderful a degree?

PARKSVILLE, KY.

The Turkish Parliament of 1908-1909

BY FRANKLIN E. HOSKINS

[The Rev. Dr. Hoskins has been for many years a member of the Turkish Committee.]

THE Turkish Parliament has just closed its doors after a session lasting nine months and four days. According to the Constitution it should have met November 1 and continued for four months only, but circumstances delayed the opening until December 17, 1908, and kept the members busily engaged until August 21, 1909. It began its labors with the first national holiday in the history of the Ottoman Empire, amid the plaudits of its own people and the questioning admiration of the civilized world. Only four months later and the members were fleeing for their lives from Constantinople and the ship of state seemed foundering amid the rocks and shoals of Abd ul-Hamid's fiendish policies. After they had cast out that unlucky and unrighteous passenger the tempest subsided somewhat and they have come safely thru the many lesser dangers that have crowded this *annus mirabilis* of Turkish history.

This was the second session of Parliament in Turkey. The present Constitution was first proclaimed December 23, 1876, and the first Parliament gathered in great pomp on March 4, 1877, under

auspices as propitious as the best friends of Turkey could have wished. But only 108 days later, June 20, 1877, the members fled in confusion from Constantinople, the place of meeting was boarded up, Abd ul-Hamid threw off his pretended respect and reverence for constitutional government and the Empire was hurried into the gloomiest and most degraded period of its history. The Parliament of 1877 was never formally adjourned and its place of meeting was never even swept, so that when the old building was reopened a year ago it was still littered with the letters, the papers, the money and even the garments of those deputies who fled from it thirty-one years before. Nowhere but in Turkey could the same Sultan have played the same trick with another Parliament thirty-two years later.

When the Constitution was again proclaimed, on July 23, 1908, it was by a process entirely different from the ceremony of 1877. Then the Constitution itself was the great feature. This time the document was mentioned only by inference. The telegram sent from Constantinople to every Governor in the Empire

contained less than fifteen words in Turkish. It simply said: "The Vilayets will proceed to the election of Members for Parliament according to the law." Only those who were in the secret or conversant with Turkish history had any conception as to what the innocent looking message meant. Three days later the freedom of the press was proclaimed and two days after that the pardon of all political exiles. Then the people began to wake up to as mad a joy and festival as ever shook a nation. Said Pasha was made Grand Vizier on July 22, and he and his compatriots took for granted that the Constitution which had been trampled upon for thirty-one years by Abd ul-Hamid and his wretched pirate crew was again flying at the peak and the Ottoman Empire was again free.

Among the débris of the first Parliament was a draft of laws formed to govern the election of members to that body. It consists of five main divisions and eighty-three separate rules. The dust was blown from this manuscript and then it was printed and distributed throughout the provinces. Within less than five months the elections were all over and the Senators and Deputies were assembled in Constantinople and ready for their work. They were a picturesque and motley collection of men, embracing many languages, many religions and many types of human history. The civilized world has been interested and startled by the more spectacular events of this tempestuous year, but now that the Parliament has closed its doors, sober people will be asking what has been really accomplished.

In spite of the sinister influences brought to bear upon the members and the thorny issues connected with almost every item of business the session has been on the whole harmonious. It required fully a month to get organized and ready for business. The wicked Sultan made no delay in attempting to flatter and betray individuals and the Parliament as a whole. Banquet after banquet was laid for these humble representatives of the people amid the iniquitous splendors of Yildiz. His underlings cast apples of discord into the discussions of the Deputies while he slowly matured his infamous plot for the com-

plete overthrow of the Parliament and the new régime. When the crisis came in April every hazard was taken, bribery, mutiny, assassination and civil war. But both the army and the navy stood for the Constitution, the President of the Parliament and the Minister of Justice escaped with their lives, tho other members fell by the assassins' bullets. Plot after plot recoiled on his own wretched head so that the downfall of Abd ul-Hamid was complete after he had made an exhibition of infamy hardly equaled, certainly not surpassed, in human history. He was deposed from the Caliphate by the Sheikh of Islam and the most fanatical section of Mohammedans. He was dethroned by a resolution of Parliament for which forty-three Christians and four Jews voted with the Moslems, and a Christian and a Jew served on the committee that went to the palace to inform him of his fate. Then came his exile and imprisonment and the dismantling of his palace-fortress, Yildiz, the biggest den of iniquity ever opened and exposed to the gaze of the world.

Other events within and without the Empire have conspired to hamper the working of the Parliament. The matter of Bosnia and Herzegovina, almost involving war with Servia and Bulgaria, kept everything in suspense for months. The difficulties over Crete and the conflict with Greece, the fall of two Grand Viziers, the flight of the Parliament itself to San Stefano, outside Constantinople, the existence of martial law in the capital and other cities of the Empire, the awful massacres around Adana, were enough to shake the foundations of any régime and legislative assembly. But in spite of all these the session has reached a peaceful close and left some substantial results.

The great task of the Parliament was to revise and recast the whole organic law of the Empire and bring it into harmony with the provisions of the Constitution. They wisely agreed to refrain from tampering with the Constitution itself, altho its defects are glaring and well known. According to the closing speech of Ahmed Riza Beg there was much unavoidable delay on the part of the Government in preparing and sending in the drafts of these laws to Parliament, but

during the nine months seventy-three separate sections were received and fifty-three passed upon, leaving twenty still in the hands of the committees. These laws include every department of the financial, legal, military, naval, social and civic affairs of the Empire. Six hundred and sixty-eight memorials, embodying demands or suggestions concerning the revision of the Constitution and the organic law, reached the Parliament, of which 158 were accepted and consigned to the committees in charge of the various sections, while the other 348 were rejected. About 10,000 other petitions involving appeals, redress of grievances, calls for national aid and improvements were handled. Of these 5,200 were rejected altogether, 4,500 accepted and acted upon in some form, while 300 remain as unfinished business until next year. When it is remembered that each of these petitions was read three times, considered by both the Senate and the House of Deputies, it is evident that a large proportion of the representatives stuck closely to their business during the whole nine months.

When Parliament first met there were practically no laws in existence and the departments under the old régime were nests of foul vermin, swarms of ignorant, useless functionaries and officials who had been fattening on the vitals of the Empire. The cleaning of these Augean stables was a painful and dangerous process and the reorganization of these departments involved a great financial strain upon an empty treasury. The Parliament approved a number of loans, saved the financial credit of the Empire and made at least three temporary budgets before it attacked the greater problem in May, a real budget for the Ottoman Empire under the new régime.

The real uprooting of oppression was not possible until after April 13 and the deposition of Abd ul-Hamid. After the proclamation of the Constitution they plucked the leaves and clipped the branches of this upas tree, but while the old Sultan and so many of his fibre remained the roots were full of sap and putting forth fresh shoots all over the Empire. The 10,000 petitions referred to revealed many noxious schemes and tendencies and gave clear adherence to

the principle that the People's Parliament was above every department of the new Government and every official of these departments.

The Parliament also made good its right to review the acts of the Government, control the finances and question the Grand Vizier and the Ministers as to their policies.

The present Grand Vizier at the close of the second Parliament said that while the first Parliament in 1877 passed upon eighteen separate drafts or sections of new laws, only *one* of these ever came into use and that was the section organizing and governing town councils.

Among the more important sections of the fifty-two drafts passed by the Parliament is the Law of Public Gatherings. Immediately after the resurrection of the Constitution the people went wild in their newly found liberty. Public gardens and city streets resounded all day long and all night with the liquid fire of the orators. When cooler weather came cafés were converted into halls and night after night every one who wished took his turn on the platform. Self-appointed delegations waited on Governors and officials of every rank. These committees soon degenerated into mobs who called to criticise, to abuse, to terrify prominent men in every walk of life until it was no exaggeration to say that the cities were being ruled by mobs. Saner minds saw that this could not continue and the new laws, while not prohibiting, will aim at control.

Societies of all kinds came into existence like mushrooms. They claimed all sorts of purposes and these, like the public gatherings, soon degenerated into nests of disaffection. The Society of Union and Progress brought about the new era, but the infamous Mohammedan League attempted the overthrow of the Constitution and produced the massacres. Hence the Law of Associations, which is based upon the principle of liberty but not license. Section 4 forbids the formation of any club or association on a racial basis and has aroused considerable opposition among Albanians and Bulgarians. It is calculated, an Armenian says, "to accentuate racial differences by driving them underground."

The Parliament spent many weeks

upon laws dealing with the unemployed, which must have been a puzzle to many who had never heard of the existence of anything like industrial problems in Turkey. What these laws really mean is an attempt to get the riffraff of the Empire back to their original dwelling places. The events culminating in the massacres of April 13 cast their shadows long before and thousands of all sorts of rough characters, like birds of prey, crowded into the cities from Constantinople to Damascus plainly expecting opportunities for plunder, outrage and bloodshed. What this meant we all know from Adana and Antioch and the terror which seized cities like Beirut and Damascus.

The second general order from Constantinople on July 25, 1908, declared the Freedom of the Press, and the Constitution says, "The Press is free within the circle of the law." The oppressive and iniquitous censorship, a network of slimy spies covering the Empire, was instantly abolished, we hope, forever. The existing newspapers fairly revelled in the newly-found liberty of speech. The censorship had developed the vices of adulation and sycophancy until readers loathed the contents of the languishing journalism. The reaction was something startling in the use of human language but still hampered by the existence of the Sultan. Not until after April 13 were the vials really opened and since then we have read tales of the infamy of the old régime that are almost incredible.

With the Freedom of the Press sprung up a marvelous crop of new journals of every conceivable type and description. To obtain a permit under the old régime a man had to submit to indignities, blackmail, and, after smothering his manhood, join the ranks of the sycophants. After July 23 permits were given in answer to a telegram or two so that in a period of a little over two months the Government at Constantinople had granted permits for 380 new journals and thirty-eight new printing establishments.

As in the case of Public Gatherings and Associations, liberty here soon developed into license. After the papers had wearied themselves cursing the old régime, no prominent man was safe from attack and abuse. Individuals and

cliques actually founded newspapers to be able to get a fling at former enemies and the results were riots in ink. Parliament hardly dared to formulate any laws to control the situation and not until after the events of April 13 did the Government and the Deputies venture to draft a press law which is already felt to be unnecessarily severe in its restrictions and penalties. The justification has been that but for the actual license of the press the events of April 13 could never have come to pass. Newspapers all over the Empire joined the cry against the new laws, and the Senate was obliged to modify some of them to a considerable extent. They are still severe enough. A prominent Armenian journal has just been suppressed and all the newspapers of the Empire have been warned to abstain from references to differences of opinion within the army and to the continuance of martial law.

Among the new laws which affect foreigners are certain additions to the codes which govern the practice of lawyers in the Empire. The claim is made that many unfair conditions have been laid upon foreign lawyers and Ottoman lawyers who are graduates of foreign schools. It seems like a movement to squeeze them out and such a policy will be disastrous at a time when Turkey is begging for foreign capital to develop her latent industries and resources. There is an attempt to force the use of Turkish in all the courts and a specially onerous condition is to require the foreigners and foreign educated men to practice three years in Turkey and then undergo an examination in the language at the hands of twelve Turkish lawyers who possess Government certificates. There is a hope that the Senate may modify some of these unacceptable and unjust requirements in order that the rights and privileges of these foreigners planning to spend millions may be conserved.

The thorniest of all problems in the new régime and around which revolve some of the most difficult and far reaching issues is the composition of the Turkish army of the future. Hitherto none but Moslems could fight under the banner of the Prophet, for the Sultan claimed to be the Caliph of the whole Mohammedan world. Christians and

Jews thru the centuries have been condemned to pay a heavy military tax not because they were *excused* from this service but because their non-Moslem faith debarred them from the privilege of ever performing it. It was the army, led and inspired by men who no longer cling to this narrow Moslem restriction, that brought about the Constitutional régime and ultimately captured Constantinople and deposed the Sultan. It is well within the facts to say that without the close union of this progressive element in the army with the Christians and Jews of the Empire the revolution never could have been accomplished. Christians and Jews compose at least one-eighth of the Parliament and are to have their share of all the responsible posts of the Empire. Logically they cannot be shut out of the army. The Parliament has been slow to approach this problem and tho in the end two new laws have been framed making it possible, there is a lack of finality about it that plainly betrays the unwillingness of the Government to precipitate the inevitable difficulties. Even if the law was a final one no Christian could get into the army before August, 1911, and many things may happen in Turkey within two years. The heads of the Christian communities have laid down many conditions concerning the religious needs of their followers, the advisability of separate companies and regiments, and have suggested so many other difficulties that one must conclude that they are not really in favor of it. On the other hand it is equally plain that the rank and file of the Moslem population are not at all in favor of it. Those who still regard the military service as a Mohammedan *privilege* and sure gate to Paradise when killed on the field of battle, cannot conceive of sharing that with "unbelievers," to use no harsher term. The impossibility of ever employing a mixt army in a religious crusade or "holy war" is evident to all. Other Moslems decidedly object to placing arms in the hands of the Christians and teaching them the arts of war. It seems too much like suicide. Some veteran ~~commanders~~ in the Empire say that when you see Moslem soldiers entering battle under a Christian commander then reforms have actually begun in Turkey. Students of human nature will tell you

that perhaps 20 per cent. of the army are today patriots at heart; another 40 per cent. are time servers and for the present with the reformers; while the remaining 40 per cent. have no sympathy with the new régime especially if it involves the equality of Moslems with Christians and Jews. About the same is true of the Moslem population. Martial law, not civil law, still reigns in Constantinople which means that the army still holds the Empire, and humanly speaking it would be legislative folly to force an issue involving such risks as the splitting of the army and the certainty of a civil, if not a religious, war. It will come soon enough. The cry of the reactionaries only last April was, "We want the sacred law and down with the Constitution." Now the sacred law as construed in Moslem books has no privileges, no rights, much less any shadow of equality for "unbelievers." It may still be kept the rule within a strictly religious community but only a Constitution can fit a modern state. If the upholders of the sacred law can realize that the two codes belong to entirely different spheres and are mutually exclusive, there may be liberty and equality and brotherhood. Any attempt to supplant the one by the other in their separate spheres will surely result in conflict and loss.

Among the last acts of the Parliament was the granting of an amnesty in whole, or in part, to the 25,000 prisoners who were released or who escaped at the time of the reprocclamation of the Constitution. Of these 15,000 were in Constantinople and 10,000 in the Asiatic provinces. They comprise a large number of ~~untried, uncondemned men who were~~ thrown into prison arbitrarily during the old régime. Many of them are now living in hiding about Constantinople and ~~on the mountains about Baghdad fearing~~ rearrest. The Minister of the Interior and of Justice approved the request that many be pardoned and others given only half their sentences. Where highwaymen and robbers have returned to their ~~former homes~~ they are to receive double the former penalties, but crimes committed prior to April 1 of this year are wiped out if their author helped defend the Constitution at the fatal 13th of the same month. Many regard the whole matter of amnesty as a political blunder.

Another act was to repudiate the findings of the first court martial at Adana, to order a new investigation and to vote a grant of £100,000 to help rebuild the ruined cities and towns. This was followed by a proclamation from the Grand Vizier officially clearing the Armenians of any conspiracy against the present Government and explaining their armed activities as a protest against the iniquities of Abd ul-Hamid's reign and a purpose to help defend the Constitution.

The first anniversary of the new régime was celebrated July 23 in Constantinople and the Provinces. It was a sober festival compared with the celebration of a year ago. The great events falling within the year, the loss of Bosnia and Herzegovina, the taking of Constantinople and the dethronement of the old Sultan, the executions under martial law, the awful events about Adana, not to mention the minor tragedies and perplexities are lessons plain enough to be read by the humblest of men. The Parliament has done its best in placing drafts of laws upon the statute books, but the greater and infinitely more difficult task remains of translating these written statutes into action and the creation of a law-abiding spirit within the hearts of the people. What the awful elements of lawlessness comprise can be inferred

from the findings of the first Adana court martial. This court in a spasm of affected justice secretly condemned and hanged *nine* Moslems and *six* Armenians in a district where between 25,000 and 30,000 Armenians had been plundered, outraged and murdered with every evidence of foul and brutal cruelties. Then it further reported that another "800 deserve death, 15,000 deserve hard labor for life, and 80,000 deserve minor sentences, but in view of the reconciliation (*sic*) between the different elements the court-martial recommends a general amnesty!" The old regime never equaled this in formal statement. The hopeful sign in the new is that this report was rejected with execrations, a new investigation ordered, but the just and adequate punishment of the infamous authors and participants is still to be accomplished. The present Ottoman Government manifests a real desire to profit by the bitter lessons of the past, but neither they nor the real friends of Turkey must expect that the awful crop of iniquities, sown and watered with blood under the old regime, can be peacefully reaped with a paper Constitution and Codes of Laws no matter how excellent. There are yet many bitter lessons to be learned, many mistakes and iniquities to be atoned for.

BY EMILY HUNTINGTON MILLER

THE summer birds have gone without adieu,
The air gave back no sound of speeding wing.
We saw not when they passed; we only knew
The groves were silent where they used to sing.
Radiant the morning, yet we sighed and said,
"The birds have flown—the summer's joy is dead."

A singing soul has passed to clearer light
In some serener land, we know not where—
Singing he soared, with strong exultant flight.
And still the music lingers in the air.
Each tuneful cadence of the singer fled!
Throbs in the hearts that cannot count him dead.

Literature

Stories of the North

It must be the climate. Just as Mr. London took another man's dog story, so Mr. Beach has borrowed a dead author's plot for the commercial spider web of his story.¹ The title refers to the salmon runs in the Alaskan rivers. The scenes are laid among the salmon canneries on Kalvik River, and for a short time in the capitalistic centers of Chicago. Boyd Emerson determines to build a cannery and make his fortune. The enterprise requires \$200,000 and must be borrowed. It is at this point that the reader, who has been fascinated by the author's graphic descriptions of the cold and the hardships of the country, begins to recognize that he is really reading Frank Norris's "Octopus," with the scenes laid in Alaska rather than in California. Emerson discovers that he must "buck" the combined capital and influence of the "Pacific Coast Packers' Association" if he succeeds. He is circumvented at every turn. The banks refuse to lend him money, the railroads either lose or delay his supplies. An attempt is made on his life. The essential difference is in the temperature and scenery, and in the fact that the fishermen who fight the union men on the wharfs at Seattle do not resemble the plainsmen who make up the riot against the railroads in Norris's book. The author's purpose has been to give an impression of the commercial tyranny of capital in the far Northwest just as Norris interpreted the preying of the Santa Fé Railroad in the other West. And since the history of successful commerce appears to be the history of highly specialized thievery everywhere, it is just possible that every author who deals with it must use the same kind of plot; still, so far as this feature of his story is concerned, Mr. Beach must yield the palm to Norris, who discovered the method of dramatizing it.

But because of the similarity between the two writers, the dissimilarity is all

the more noticeable. Many will recall the way Norris made the land one of the characters in his story, after the manner of Zola. The prairies breathed, suffered and sent up epics upon the green spears of the wheat. But no man can make the Far North *live*. And Mr. Beach's distinction is that he has interpreted, not the death of it, but the absence of life, of animation; and the Promethean struggles of the hero with the cold are better done than his struggles with Chicago capitalists. But the newest, most amazing figure in the story is an Alaskan Falstaff. "Fingerless Frazer" is a crook with a music hall temperament and a sort of moral fickleness which keeps the reader guessing half the time as to whether it will change for honesty or dishonesty. His courage is peevish, cowardly and so ignoble that we never forgive him for doing a brave, unselfish thing. Yet he accompanies the chief characters thru heat and cold, thru adversity and the frozen sea with the kind of fidelity characteristic only of the Falstaff type and of useless but devoted dogs. In the end the reader is placed in the absurd predicament of having formed a warm attachment for a scamp who has no name, no morals and no ambition, an ugly human straw blown into the tale by the fickle winds of justice in a mining country.

It is only in a story of this kind that a woman sows her wild oats and settles down to an intelligent cultivation of the virtue she has lost along with principles that would do credit to a missionary, and as is usually the case with the author of such stories, this woman is Mr. Beach's favorite as contrasted with a good-for-nothing-rich-selfish innocent lady imported from Chicago, chiefly for the purpose of bringing out the sterling qualities of the adventuress.

Sir Gilbert Parker explains to his readers that the tales in his new volume of short stories² belong to "two different epochs in the life of the Far West. The first five are reminiscent of border days

¹ *The Great North*, by Mr. Beach. New York: Harper & Brothers, \$1.50.

² *Stories of the Far West*, by Sir Gilbert Parker. New York: Harper & Brothers, \$1.50.

and deeds," and the remaining twelve "cover the period passed since the Royal Northwestern Mounted Police and Pullman car first startled the early pioneer

is the duty of the reviewer to add that the stories belong also to different epochs in the author's literary development. Some of them appear to have been writ-

and sent him into the land farther North or drew him into the quiet circle of civic routine and humdrum occupations." It

ten after the inspiration and vision had passed, according to a pattern of Canadian scenery, waterfalls, sunshine and

love between simplified men and women. The emotions, for example, of the young Indian wife in the introduction of the first story are singularly like those of the white bride in the introduction of the fifth story. Two questions naturally arise in the reader's mind—first, would the young Indian wife of a white man of that early period think and act like a French soubret? And, second, could an Indian woman and a white woman feel the same way about anything, even the weather? One is tempted to suspect as he reads that while these stories may cover the "epochs" claimed, and while they may present in chronological order the changing circumstances of advancing order and civilization, if they represent the real character of the men and women who figured in them, many of the Canadian pioneers had sensibilities strangely like Sir Gilbert Parker's own. He writes all down, however, with a kind of pastoral sweetness, and presents the inevitable tragedies of those periods as if they belonged to the higher simplicities of life. And these qualities render even those stories where the incidents are slight pleasantly entertaining. And in the one or two others that equal the "Healing Springs and Pioneers" they give a fine distinction to tales that are vigorous and strong and written in the manner the author had before his knight-hood sweated so much of the pigment out of his life-colored words.

The Flute of the Gods. By Marah Ellis Ryan. With Illustrations by Edward S. Curtis. New York: Frederick A. Stokes Company. \$1.50.

This interesting tale is an attempt to dress in forms of fiction the customs and myths of the Pueblo Indians of the sixteenth century. Tahn-té is the son of a Greek refugee of the Narvaez expedition and of an Indian mother. He serves for two years under the friars of the Coronado expedition and learns the magic of the white man's books. Escaping, he returns to his own people, and in time becomes the head priest and chief power among them. His fatherhood and birth are shrouded in mystery—a mystery which invests also his mother, who is known as the Woman of the Twilight. Indeed, the wilderness of myth and fan-

tastic legend rather obscures the personality of the characters, all of whom—Spanish, Indian and Greek—move about in a somewhat dim shadowland. The narrative halts clumsily at times. Yet there is beautiful description, there are incidents of tender pathos and situations of great dramatic force and intensity. The cruelty and rapacity of the invaders, the Indian fear of the armored white men and their powerful god, are strikingly portrayed. The passionate and turbulent Apache maiden, Yahn; the cowardly, yet envious and ambitious Kayemo, are generally convincing, and Tahn-té himself is often a real figure. But the author's best powers are lavished upon the Bluebird maiden of the Navajos—her innocence, her trust, her love for Tahn-té and her tragic death as a tribal sacrifice to the offended gods. The mutual recognition of the Twilight Woman and the Greek, now the holy Padre Vicente, his frightened repudiation of her, and her death, combine to make perhaps the strongest dramatic situation in the tale. It is a story well worth reading, even for those who care little for primitive myth and legend. The illustrations, by Edward S. Curtis, are beyond praise. Their marvelous reality even suggests the suspicion that the story was written for the illustrations rather than that the illustrations were made for the book.

Butler and His Cavalry in the War of Secession. By U. R. Brooks. Columbia, S. C.: The State Company. \$2.50.

We cannot say that this book is history in itself or even the material out of which history is made. It is a scrap-book of reminiscences, speeches, anecdotes, of chatter of one kind and another, plentifully besprinkled with verse. The good verse is frequently misquoted, and the bad would be better if it were. There is no arrangement of any kind; everything is huddled promiscuously together. Bombastic glorification of Southern heroism, denunciation of Yankee cowardice and depravity, carelessly told accounts of engagements, incidents alleged to be humorous, are all thrown into the common heap and served up as a kind of historical hash. The book is about everything which such a book should not be.

Spain of Today from Within. By Manuel Andujar. New York: Fleming H. Revell Company. \$1.25.

This work might very properly be entitled "Spain, as Seen by a Protestant," for the author, now in charge of the Methodist Episcopal work in San Juan, Porto Rico, gives here his impressions of Spain as he received them during a tour in that country, of which he is a native. A thirty years' absence gives him a proper perspective, and his knowledge of the language and his Spanish nativity make it possible to learn much that is necessarily beyond the reach of the ordinary traveler. Mr. Andujar was converted from Catholicism by the reading of the New Testament during a residence in the United States, and later became a minister; consequently, valuable information about the country and people is perhaps unconsciously mingled with observations concerning the merit of the two religions. But this is not done offensively, and the reader will find himself interested from the beginning to the end of the book. The fact that the impressions are of the Spain of today, and not that of a generation ago, adds to its value.

Witchcraft and Quakerism. By Amelia Mott Gummere. Philadelphia: The Biddle Press. Pp. 60. \$1.

It could hardly be expected that even so sane and sober a body of men and women as the Friends could escape entirely the delusions of their age and environment. Nor does Mrs. Gummere claim exemption for the members of the Society of Friends in the seventeenth century from the commonly current belief in witchcraft. Her claim, and she is able to substantiate it by documentary evidence, is that the Quakers of the seventeenth and early eighteenth centuries kept their sanity while the rest of the community gave way to superstition to a dangerous degree. She traces very briefly the history of witchcraft in Europe and America, and shows that it was almost impossible in those days of dim and imperfect knowledge to rise superior to all belief in witchcraft. The question was rather of the attitude to be taken toward supposed witches. George Fox believed in the existence of witches as sincerely as did John Wesley a hundred years later; but Fox had no fear of

the powers of evil, and he felt that the right course to pursue in respect to a witch was to rebuke her for her evil doings and imaginings, and to bring her out of her servitude into the company of the children of God. Fox feared not the devil, however sincerely he may have believed in his existence. "I told them," he said of the men who were in a state of terror on account of the spirits that haunted Devonsdale, "if all the devils in hell were there I was over them in the power of God." Mrs. Gummere cites as an instance of Quaker sanity the verdict of the jury, in 1683, in the only witchcraft case ever tried in Pennsylvania: "Guilty of having the common fame of a witch, but not guilty in manner and form as she stands indicted"—a verdict which was followed by the discharge of the witch, the tradition being that, when she replied to William Penn's questioning that she had ridden the air on a broomstick, the only remark made by the wise Quaker ruler was that she had a perfect right to ride upon a broomstick and that he knew of no law whatever against her doing so.

Robert Y. Hayne and His Times. By Theodore D. Jervey. New York: The Macmillan Co. \$3.

The neglect with which Hayne has been generally treated by biographers and historians is shown by Mr. Jervey to have been unjust, tho not unaccountable. He was on the wrong side of the nullification question, and Webster's famous reply served to eclipse his real standing as a man of affairs. His career was active and brilliant, and his ability extraordinary. Born in 1791, he was admitted to the bar a month before his majority, was elected to the Legislature in 1814, to the Attorney-Generalship in 1818, to the United States Senate in 1822, and to the Governorship in 1832. In all of the affairs of his State, political and commercial, from his majority to his death in 1839, he was a powerful figure, and his leadership was often paramount, even in the prime of the mighty Calhoun's career. Mr. Jervey asserts that within five months of Hayne's entrance into the Senate "he was the undisputed leader of his faction," and that he held this position thruout the struggle which culminated

in the South Carolina nullification (1832), when he was elected Governor, Calhoun succeeding him in the Senate. The account of the great debate is thoro in manner and fair in tone, and tho a different estimate of Hayne's effort is given from that which ordinarily appears in history, Webster's achievement is in no sense depreciated. Mr. Jervey supports his estimate of Hayne's performance with a number of contemporary comments, in some of which the South Carolinian is even represented as scoring a complete victory over Webster. Many new facts are brought to light, and a good deal of valuable information regarding social and industrial conditions in South Carolina is given. Evidence of labor and care in gathering and using material is manifest thruout the work, and a judicial temper characterizes its general judgments. The occasional bitter and sweeping allusions to the Abolitionists, and in particular to John Quincy Adams, reveal a sectional bias rather than a historical weighing of causes and consequences, but these indulgences do not often obtrude. The work as a whole is to be warmly commended.

✱

The Poet o' Dreams and Other Poems. By Edith Pratt Dickins. New York: G. P. Putnam's Sons. \$1.00.

Mrs. Dickins has a happy knack of versifying agreeably the quieter and more sedate appeals of Nature—the message of wind and rain and sunset and sea to the pensive spirit.

Deep in the night, the long night heavy hearted,
Steals in the sound my soul has longed to hear,
Dear as the voice of some old friend long parted,
I know the sea is near.

Then sleep, O heart, forget the inland places,
In that brave song of patient tide to tide
That sings along the level, silent spaces,
And rocky headlands wide

✱

Conquering the Arctic Ice. By Ejnar Mikkelsen. With numerous illustrations and maps. Philadelphia: George W. Jacobs & Co. \$3.50.

Eight or nine years ago the two adventurous young men who were to try a novel partnership in exploring and exploiting the Arctic seas, and incidentally

to ascertain, if they could, the limits, under water, of our North Alaskan boundary, found indulgent fathers and friends and even geographical societies with spare funds, who in the course of years fitted out for them, not a noviak, but a small and rather old Japanese boat, tough enough for their purpose—a schooner 65 feet long, with the name of a duchess painted on it—and in this vessel the young men, with a young crew, set out from Point Barrow, September 5, 1906. Their schooner was wrecked in the course of the winter, rebuilt, and hovered for a time not far from the Alaskan coast, not far above the 70th degree. In this unpleasant but not very remote region, sledge parties were formed and expeditions made on the ice; frequent soundings were had, and the real jumping-off place was traced for a considerable distance. It was, of course, a submarine jumping-off place a couple of dozen fathoms below the surface, but it was very nigh "one of them deep holes," such as the two New Jersey ladies, under Mr. Frank Stockton's guidance, "trod water over." From a dozen fathoms to six hundred was about the average slip down. This was of value as submarine surveying, but, incidentally, it establishes the fact that there is no wandering island yet undiscovered up that way, as many had supposed; that is, no island sufficiently near our possessions to be easily fenced in. Neither of these discoveries constitute anything like the claim on public attention which, in the dry summer season, we would give to a drift over that ubiquitous "Pole." But the young men, Mr. Ejnar Mikkelsen, a Dane; Mr. Ernest de Koven Leffingwell, an Illinoisan, and another friend, who joined them as ship's doctor—George P. Howe, a Boston man and a Harvard graduate, evidently had a good time, and certainly the reader who is indulgent enough to like rather profuse details of Eskimo kitchen life will find choice reading for a winter's night before a sea-coal fire. We give one little detail to show what a glad life one may live even among the ice floes. It is from a letter home to his indulgent Illinois father, and it was written only two years ago, probably at

the very time when Dr. Cook and Commander Peary were getting in training:

"Please send up a lot of chewing gum. At the big dance yesterday all jaws were going full speed, with a crackling like a Gatling gun. Thirty souls (natives and three white men) in our house. All hands danced solos and duets, from babies to the old women. The older they are the more they seem to get excited. A whole box of candy and a lot of raisins went like wildfire. We topped it off with a big pot of dry pemmican and dried vegetables. Then gave each woman five yards of printed calico and each man a plug of tobacco. . . . I popped some corn, which excited the natives greatly; they thought there must be a devil in it."

Literary Notes

...Mr. Robert Sloan Latimer's *Liberty of Conscience Under Three Tsars, 1850-1909*, will be found serviceable on account of its broad outline of the history of the origin of the Russian sects, and their treatment by the Russian Government, which is the Orthodox Church. The book is not intended for serious students, but for the general public—the English general public, more by token, and, to judge from its sentimental tone, chiefly for its women. (Revell. \$1.50 net.)

...A little wistful, as the backward look toward days long since left behind must always be, Mr. Jacob A. Riis's *The Old Town—Ribe*, the Danish town of his birth and childhood—is a simple, unaffected book of memories, whose remote, Old-World atmosphere is gently restful. The life of the Ribe of that day is no more; in Europe, as well as here, modern civilization, with its rush and pressure, has killed it. Only in the memory does it survive, an alluring picture of simple joys and simple pleasures, of simpler days and simpler folk, a picture of which it were impious to say that distance lends it enchantment. The days of our childhood and youth, the ways of our fathers! It is only in later years that their lure grows strong, their memory dearest. (Macmillan. \$1.50.)

...A result of nine years' service in survey and exploration work in the Egyptian deserts is Mr. H. J. Llewellyn Beadnell's *An Egyptian Oasis* (Dutton, \$3.50), being an account of the oasis of Kharga in the Libyan Desert, with special reference to its history, physical geography and water supply. The author had charge of extensive boring and land reclamation operations, in the course of which he made his observations of the subterranean aqueducts constructed by the Romans, which he explored, the lakes which occupied the floor of the oasis depression well into historic times, the rate and mode of movement of sand-dunes, the formation and gradual elevation of the cultivated terraces, and the deep-seated water supplies. He adds a chapter on the economical aspects of the oasis, and, of course, being an Englishman, one on sport. While paleolithic and neolithic implements have been found in

the oases, their historic occupation by man cannot be traced back further at present than the eighteenth dynasty, 1545-1430 B. C., from which period date the earliest monuments yet found there. Mr. Beadnell doubts the estimates made of the past importance and prosperity of the oases.

Pebbles

DR. PILEM—You needn't worry about your wife. She has a remarkable constitution.

HENPEX—Say, doc, you ought to see her by laws, rules and regulations!—*Life*.

SHE—I'm living on brown bread and water to improve my complexion.

HE—How long can you keep it up?

SHE—Oh, indefinitely, I guess.

HE—Then let us get married.—*Boston Transcript*.

THE YOUTH—Miss Mabel, I'd like to, once in a while, with your permission, you know, call and see you.

THE HIGH SCHOOL GIRL—Mr. Sorreltop, you will pardon me for saying that I do not care for the attentions of a young man who not only splits his infinitives, but tears them wide apart.—*Chicago Tribune*.

THE BRIDEGROOM of a year went down to his office one day grinning all over his face. All morning long he hummed and whistled till his partner asked him what he'd had.

"My wife told me this morning that I am a model husband," he answered proudly.

"I don't call that much of a compliment."

"I'd like to know why not."

"Well, you just look that word 'model' up in the dictionary," was the advice.

He did, and this is what he read: "Model— a small pattern; a miniature of something on a larger scale."

Deep feeling is disclosed in the following notice which was sent to the agent of a German life insurance company by a man whose wife had just died, and which the *Journal of Commerce* discovered in a German insurance journal:

"Greatly shocked, I beg to inform you that my very dear wife, Anna Maria Louise L., who was insured in your company for mark 3,000, is dead, leaving me in the deepest despair behind. That happened this morning about 7 o'clock. I entreat you to send me as soon as possible the amount of insurance. The number of the policy is —, which you will no doubt find in your books. She was a true wife and an admirable mother. In order to enable you to attend to the formalities as quickly as possible, I am enclosing herewith the certificate of death. She has suffered much, which made my torture still more unbearable. I trust that you will grant me some consolation by sending the money as quickly as possible, in return for which I promise to insure my second wife with you for mark 6,000. The conviction that you will grant me the above consolation makes it easier for me to bear the terrible trial which has afflicted me."—*Rough Notes*.

The Independent

Entered at New York Post Office as Second Class Matter
Publication Office, W. B. Brown
100 Fulton Street, New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.
One Year, \$2.00. Single Copies, 10 CENTS.

Single copies will be sent for 25 cents. Postage to any foreign country for the Editorial Department, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be accepted for other foreign countries, and postage rates will be granted as they are ordered by the responsible agency.

Orders for change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on request a list of our articles, books, and advertisements, by mail.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 25 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.75 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should please pay attention.

Advertising rates will be furnished on application.

The Sherman Act

REPORTS from Washington say the President has decided that he will not recommend in his coming message any modification of the Sherman Anti-Trust law, because the recent decision against the Standard Oil Company has shown that the law is effective. It has not generally been regarded as ineffective when used in prosecutions. Decisions preceding this latest one have shown that it was available in proceedings against combinations. The prevailing belief among those who approached the subject without bias and with a desire to be strictly just, has been that it was too sweeping in its denunciation, and that, for this reason, enforcement of it throughout the land would probably do more harm than good. This has been the expert opinion of Mr. Roosevelt and others who earnestly desired that harmful combinations should be subjected to restraint or dissolution. Mr. Taft himself said, three or four years ago, in a public address:

Quoted literally, this statute could be used to punish combinations of the most artificial character, like cartels, or other legal and arrangements, concocted by all to be kept

made and proper, and the difficulty is its enforcement has been to draw a line effective to suppress the real evil aimed at, and to furnish a proper and clear rule for the guidance of business men, while not interfering with legitimate combinations which Congress had no purpose to prevent."

Very few persons complain because the statute is now to be enforced against the Oil Trust, and many regret that the Sugar Trust has avoided its provisions; but if the Government should undertake to punish every combination, beneficial or harmless, that exists in violation of it, there would be a public outcry.

A statute of this kind should not be effective against combinations or agreements which either do no harm or are clearly beneficial to the people. As the matter stands, from a great number of possible defendants a few are selected as objects of prosecution by a President or by the Department of Justice. It is true that, as a rule, the selections are wisely and justly made. The case against the New Haven Railroad Company may be recalled as an exception. It was dropped by the present Attorney-General. On the other hand, there are combinations which have been overlooked, but which should be prosecuted. The enforcement of such a law should not depend wholly upon the selection of defendants by the Department of Justice.

It will be very difficult to procure from Congress any modification of the law. Public opinion is so hostile to the Trusts that any attempt to improve the statute by confining its force to combinations which exist to the disadvantage of the people will excite suspicion and give rise to a charge that legislators who seek amendment are really acting in the interest of Trusts that deserve punishment. This should not restrain, however, members of Congress who are convinced that amendment is needed. But they ought to have the earnest support of the executive branch of the Government. The question is important enough to be made the subject of a special message from the President, altho it may be that such a message should follow, and not precede, the final decision of the Supreme Court in this Standard Oil suit. Mr. Taft has well defined views as to what is needed. So has Attorney-General Wickersham. At the proper time

they should lay their opinions and recommendations before Congress. With their support, a movement for amending the law may be successful; without such aid it will come to nothing.

The Fundamental National Problems

MR. S. S. McCLURE, of *McClure's Monthly*, in a lecture the other day enumerated the five fundamental problems of our country which it is the duty of the American magazine to consider and try to solve. It is to his credit that he thinks that a magazine has any concern with problems other than those of its own finances. We have a flood of magazines that have no purpose whatever any more than the beetle which wheels its droning flight. They give us nothing but wishy-washy stories and carefully avoid anything which will instruct or influence.

Not so Mr. McClure estimates the duties of a magazine. But we are concerned with his selected list of the problems of our modern civilization which he would have a magazine try to solve. They are as follows: (1) The conservation of our natural resources; (2) the danger from the immigration of inferior people; (3) the evil of corrupt civil government; (4) the white slave traffic; and (5) the abolition of war.

It is to the credit of Mr. McClure that he thinks a magazine should concern itself with these big questions, for it is by no means sure that their discussion will bring in the largest financial returns. There are more people that will want to read their stories than will care to concern themselves with these problems. Yet it is far better to make a magazine influential than it is to make it interesting or amusing or popular or financially profitable. The wise discussion of such problems gives a magazine a higher stand than that of the ruck of them, and brings it a stronger and more influential body of readers, and makes it a power instead of a nonentity.

The problems considered are important, but they do not include all of the first rank. That of the conservation of our natural resources is chiefly a pruden-

tial one, much after the fashion of Franklin's proverb, "A penny saved is a two-pence earned." Just what inland waterways should be created, what the next irrigation scheme should be, what mines or water-rights should be withdrawn from entry for a few years, are questions for wise investigation depending on financial resources. Whatever precautions the Government may take these valuable properties are sure to come into the possession of corporate combinations, and these will secure better and cheaper service, and hasten the time of public ownership.

The problem of immigration is not a serious one, for it is already being successfully solved. The first generation is not to be considered; they are a comparatively negligible quantity; it is their children that we must think of, and they are being assimilated by our public schools and our political system. We may call them inferior, but that means nothing. They are sturdy, thrifty working people, such people as are always needed, and always will be, to do the rough work of the community. They have not been trained to anything better, and they are satisfactory and satisfied, and no danger to us. We see no evidence that they are inferior, except in culture owing to their poor opportunities. But their brains may be as good as any ones' else, and their children are doing quite as well in school as are our own. We have got to look out or they will beat us and improve upon us. They are no problems, for we know just how to go to work to make them desirable citizens. We must only keep at it.

The third problem is serious, and has to do with city conditions. It concerns the securing of good and honest government, and, particularly, the breaking up of enforced prostitution. But the social evil is much larger than that horrible phase of it designated as the white slave traffic. That is not merely a hideous barnacle; it is a barnacle on a rotten hulk, an inseparable adjunct to a much larger vicious system. We are not of those who believe that vice in cities must be permanently retained and provided for—brothels no more than drunkeries. We are trying to exterminate the saloon; here is another evil quite as bad, quite

as corrupting, quite as dangerous to the public health, quite as deadly to the home.

Yet another problem presented is how to curb powerful and wealthy corporations, which tend to develop into monopolies. The evil is not as great as is often represented, for all our retail business is carried on competitively, and most of our wholesale business, and the larger part of our manufactures as well, such as cotton and woolen, as also all agriculture. There are certain monopolistic businesses, particularly in transportation, which need the closest supervision by Government, but we are in a fair way to meet this danger, and we are awake to it. The final result will probably be larger combinations under Government ownership.

The last of the great problems which Mr. McClure would have magazines concern themselves with is universal peace—and here we are at one with him. It is not to be hammered at all the time, but the end sought is clear, and the means are fairly settled and are being pursued. The world is not asleep on the subject, and the public conscience in all countries is being educated. They only need to be persuaded to do what they know they ought to do.

Of course, Mr. McClure has omitted several of the most difficult and puzzling of all the problems before our country. One is how to secure peaceful relations between laborers and employers. This involves lockouts, strikes, pickets, violence, boycotts, courts of arbitration, and all the examples which New Zealand and Australia, as well as Europe, are teaching us. We have hardly begun to reach a solution.

Another is the negro question, which would be no question at all if our people were willing to give negroes all the civil privileges which they give white men; but, as it is, the question is a very serious one, how ten millions of our ninety millions shall rise in communities that are determined to keep them inferior. Here is task enough. Involved in this, and on the largest scale, is the whole labor problem, the education problem, the problem of crime, and the problem of political rights. This is too big a prob-

lem to be overlooked, the biggest of all our problems.

We might add one more, the religious problem, which has many phases, related to the reconstruction of religious doctrine and faith in harmony with current science and history, affecting the Protestant and equally the Catholic Church. It is being settled for the Protestant churches more rapidly than for the Catholic Church; but it is imminent there, and it is a most serious one whether, or rather when, that Church shall cease to combat science and shut out the light. It is ridiculous, it is wrong, that the great and strong American Church should have but one single Cardinal as its representative in the governing body at Rome, and that one kept busy with episcopal duties in Baltimore. But the Catholic Church is patient and submissive, but it cannot help grumbling. The problem is the securing of intellectual liberty and a fair share in the government of the Church. This would much enhance its influence and strength.

✱

The Social Gyroscope

By becoming as a little child spinning tops the sapient inventor has learned—in part—the ways of the gyroscope. This, uncanny machine, designed and described by Bohnenberger in 1817, served no great practical purpose for nearly a century. The habit of its swiftly rotating disk, or sphere, to maintain its axis of rotation in one direction, has afforded opportunity for theorizing, and its gyrotory motion, in direction opposite to the motion of the periphery of the disk, has served to illustrate planetary motion. Now comes forward the twentieth century adapter of things preposterous to the achievement of things impossible, and, with his little gyroscope, makes a locomotive balance itself on a single rail, and round curves that no car or locomotive could "take" on a two-rail road. Not satisfied with this, he tells us that the gyroscope disk set going in a true north and south plane, will displace the untrustworthy mariner's compass as a pathfinder on the seas and in the skies, and that the treacherous automobile with gyroscope attachment will no longer "skid."

even on a sloping pavement greased with soft soap.

So the gyroscope no doubt "has come to stay," and will serve us in an hundred convenient ways which we do not now foresee. It is admirable, it is useful, and it is no less "queer" than it was before anybody thought of making it do anything worth paying out good money for.

And now that this new triumph of intellect over material conditions is assured, who will come forward to perfect and more practically apply our social gyroscope? Progressive society is an onrushing mass, which does not always maintain its balance, and which every now and then "skids" alarmingly. The skidding and the capsizing that occasionally destroy more lives and property in a year than mechanical accidents destroy in ten, are like enough no more necessary than the upsetting of an automobile or of a train of cars. But as it took nearly a hundred years to discover that the mechanical gyroscope is good for anything, it is no great wonder that we have wasted as long a time in learning what the social gyroscope can be made to do.

In every day speech the social gyroscope goes by the name of "democracy." Its queer characteristics are that its axis of rotation always keeps the same general direction, and that it develops a gyratory motion in a direction opposite to its rotation. Set democracy going in any community, big or little, complex or simple, and nothing can swerve it from the plane in which it moves. Private interest may try to deflect the plane to the side of privilege, and to the untrained eye deflection may seem to be effected. But before any great cycle of change has been completed it is seen that the main motion, all along, has been toward equality of rights, equality of objective conditions, equality of opportunity. At the same time, a gyratory motion in the opposite direction has been generated. Approximation to political and legal equality, and progress towards economic and educational opportunity for all, does not tend to make men subjectively equal. It does not destroy or level differences of personality. On the contrary, it increases and accentuates them. When it is impossible for an inferior man to lord it over his fellows by means of some artificial advantage of rank or station, or

because his father has left him a fund of capital to control, the community turns for leadership to men of mere natural superiority, of intelligence and moral power, who must depend upon these qualities for advancement. Democracy thus by its very nature and activities creates what Aristotle in the "Politics" and Harrington in the "Oceana" called "the natural aristocracy among men."

Having these characteristics of change, so curiously analogous to the characteristic motions of the gyroscope, democracy necessarily tends to maintain automatically and delicately the social balance. When the rotating disk of the gyroscope slows down, the gyration also slows down, and the rotating disk, or sphere, or "top," begins to wobble. When men's faith in democracy for the moment fails them, and they begin to halt in their war upon privilege, or in their efforts to equalize political power, legal rights and educational opportunities, the fine balancing performance of natural ability, of intellectual and moral power in the state, begins to fail. Artificial advantage begins to get in its skidding influence, and the nation begins to wobble.

If the engineer in the cab of the gyroscopic locomotive swiftly running on a monorail track should conceive the idea that it was dangerous to let his gyroscope disk run so fast, he would throw his train into the ditch unless an assistant had sense enough to seize his arm and keep the disk whizzing. The most dangerous man in a democratic republic is he who tries to stop the forward course of democracy. The cure for the wobbling of a swiftly rotating sphere is more rotation. The cure for the wobbling of democracy is more democracy.

The Heaven of the Mediums

IN previous editorials on the revival of spiritism ("Mediumistic Revelations," July 15; "Modern Witchcraft," October 14, and "The New Necromancy," November 25), we have considered the evidential value of the alleged supernatural manifestations and have shown that in spite of a widespread interest and much earnest research there has been nothing of importance added to our real knowledge.

This week we shall discuss another side of the question, the intrinsic value of the alleged revelations. The physical phenomena of spiritism, raps, table-tipping and tambourine-throwing, had been for some time neglected until the striking achievements of Eusapia Palladino brought them again to public attention. Owing to the ease and prevalency of trickery in this field, most of the investigators, even confirmed spiritists, had become skeptical of it, and had turned their attention to mediumistic communications such as those of Mrs. Piper. Here there is no question of fraud except where the medium gets surreptitious information about her sitters. The medium simply writes or speaks and these communications, if faithfully transcribed, can be judged on their own merits by anybody, by strangers even better than by those who were present and connected by ties of friendship or relationship with the "controls."

For fifty years now these revelations from "beyond the veil" have been pouring in upon us thru thousands of channels. Hundreds of volumes, some containing elaborate systems of cosmogony, theology and sociology, have been produced under such inspiration, not to consider the enormous amount of the unrecorded communications emanating continuously from the seance-rooms. Here then is a whole library purporting to have been written by the inhabitants of that undiscovered country in which we are most intensely interested, some of it from the greatest thinkers that this world has ever sent there. Yet the most striking characteristic of this mediumistic literature as a whole is its utter worthlessness. Probably no equal number of pages in the literature of the world contains so little of value to mankind as these spiritistic volumes and periodicals. No great poem, no inspiring sentence, no scientific discovery, no useful prophecy, no solution of social problems, no religious uplift, has come to us from this source. The most that the mediums have given us of practical information is some advice as to stock investments, some clues to lost relatives, or stolen jewelry, and some diagnosis of disease, on the average no better than ordinary guesswork. This literature is in both style and con-

tent extraordinarily inferior and rarely contains anything of interest, importance or inspiration.

In explanation of this it is said that the difficulties of intercommunication between the worlds are too great; that both the spirit control and the medium are in a semi-somnambulistic state with imperfect possession of their faculties. But judging by the copiousness of the revelations the channel must be pretty wide and easy. It is only in quality that they are deficient.

Surely in the half century since the Fox sisters were awakened by raps on the headboard of their bed some little indication of supernatural insight would have got thru. We would have learned more by the discovery of a new tribe of South Sea islanders than we have by thus getting into communication with the spirits of the mighty dead.

"Ye watch, like God, the rolling hours
With larger other eyes than ours."

This at least has been the prevailing belief for nearly 2,000 years. The psychological researchers sometimes wonder why Christian people look with indifference, even with aversion, on their efforts to adduce experimental evidence of immortality. One reason is that such evidence as they adduce is not confirmatory, but absolutely destructive to the Christian hope of immortality. This is, of course, no reason why it should not be investigated. We should lay aside all prejudice and candidly consider the evidence for such a spirit world just as we should in case of a reported discovery that no such individual as Jesus Christ ever lived, but it cannot be expected that we should rejoice to find it true.

Many a heaven has, in the course of time, been described to satisfy the longings of mankind, but never a heaven so unattractive as this, scarce even a hell so appalling. Buddha promised nirvana as the highest boon to a suffering world. Better that than a future life of the kind the mediums promise us. The Elysian Fields of the ancients were peopled with pale shades, spirits in prison clamoring to return to the upper world of light and solidity. But they at least retained the power to give to the poets who visited them sonorous stanzas whose music has not yet lost its charm. Mohammed of-

ferred as a reward to his followers a paradise of uninterrupted and unalloyed sensuous delight. But the spirits who return to the séances have defective senses as well as enfeebled intellects.

The latest and most businesslike attempt to establish a channel of communication with the spirit world is "Julia's Bureau," which W. T. Stead has opened on the Strand. Here calls from either side the boundary are recorded and messages received at all hours of the day or night by the clairvoyants and clairaudients in attendance, and at 10 o'clock every morning the staff assembles "to meet Julia, receive her instructions and report progress." "Julia" is the spirit of the late Julia A. Ames, a Chicago newspaper woman. A report of the first six months' work of the Bureau is published in the *Fortnightly Review* for November. Two prophetic messages are reported as evidence of superhuman knowledge, one a warning to a lady well known in English society that she would have during the week an accident to her motor car; the other a notification from Mr. Lefebvre, who had, unknown to Mr. Stead, been killed ten days before, that an aeroplane which he was going to see would not fly because something would happen to the engine. Now, not considering any prophesies which did not come true, what is the evidential value of these two cases? Judging from our own experience and observation the chances are about ten to one that a given motor car will go wrong some time during a week and about a hundred to one that an aeroplane will not fail to start at a given time because there is something the matter with the engine. In order to get expert judgment on the pending budget bill Mr. Stead called up Gladstone, but by a blunder quite inexcusable in so well-managed an office, it was Disraeli who came to the 'phone. It appeared that Mr. Disraeli's opinions have undergone a decided change since his death—he has become a protectionist. Whether this indicates progress or retrogression in the other world may be left to the reader. Here is a fragment of this interesting if not enlightening conversation:

W. T. S.—"How I hated you in those days like the very devil. Do you know that I wrote

a leading article every day for three years telling you to go to hell?"

DISRAELI—You must be very disappointed to find that your wish has not been granted. You will be surprised to hear that when you were talking last night Lord Salisbury was behind you influencing your words. He is very much opposed to the Lords throwing out the budget. He says they will be mad if they do. In the election, which is almost imminent, there will be an enormous number of the old fighters returning for a few brief days to the earth plane . . . I think you will find that there will be an election very soon."

This last also seems to us a safe guess, even for a person of less political perspicacity than the late Lord Beaconsfield. But it is disconcerting to learn from his own lips that he never cared for the primrose, but preferred the carnation. The Primrose League should now change its name and emblem. Mr. Gladstone, heard from indirectly thru his former opponent, is more concerned with the suffragets than with the Lords:

"He has a peculiar idea with regard to women that they should occupy their places, and he is very disturbed at the militant tactics that are in vogue."

Why peculiar? Do not we all believe that women should occupy their places, whatever these may be, and are not we all disturbed by the militant tactics? It needs not one come from the dead to tell us that.

From such a future life as that revealed by the mediums, good Lord deliver us!

It is impossible to deny that Dr. Cook the public sentiment is going against Dr. Cook, and has been going so ever since he was confronted by his guide at one of his public lectures. It is the result of his own conduct of his case, which has not been that which we should expect of an honest man; and in the last few days it has sunk to the level of an *opéra bouffe*. The most contradictory stories have been put forth by him as to the sending of his report to Copenhagen, and his behavior, and that of his counsel in giving out cock-and-bull stories as to the attempt to steal his report, and, further, as to his secret escape to Europe, have been what might be expected either from an insane man or one who had been driven to extreme fantastic measures to maintain a position no longer tenable. He has be-

come the joke and butt of the papers, instead of the hero of a few weeks ago. If he should be proved a colossal fraud he has yet made money enough by his venture so that he could retire to some obscure retreat and hide himself for the rest of his life from the scorn and contempt of all but himself. We suppose there is no law that would reach such an imposture.

Good Work for the Church

The obligation of the Church to care for the social conditions of the community is being more and more recognized. This is urged on the several denominations by the Federal Council of Churches, and the Presbyterians have a paid secretary whose duty it is to have charge of this department. The Episcopalians are following suit, and they have established an effective organization in the diocese of New York. Each parish is asked by its clubs and guilds to provide those who can do social work in neglected neighborhoods; among them two men who will act as "big brothers" for the weak; to supply if possible, those who will speak or sing at noonday services in factories. More definitely still each parish is asked whether it can furnish men and women who are willing to captain districts in their own parish or elsewhere; that is, to make themselves thoroly familiar with the district assigned to them, whether consisting of a block, two blocks, or a part of a block, as to ascertain whether there are any agencies for uplift in that district; whether there are any agencies for evil in that district; if there are tenement houses, to become familiar with the condition of those tenement houses—are they in a good sanitary condition, are the halls well lighted, are they infected with tuberculosis, are they well provided with bathrooms, are the bathrooms used, are the people crowded or not crowded, are the sanitary laws complied with, are the other tenement laws complied with, are there dangerous and demoralizing influences in the tenement houses, as, for instance, women of evil repute living or plying their trade there, massage parlors, etc.? If there are shops in their districts, to keep in general touch with the conditions

of employment in the same, whether they comply with the laws, whether the employees have one day's holiday in seven, what are the hours of employment and wages? Also, as to things sold: If, for instance, there is a stationer, whether there obscene postcards and the like are sold to boys and girls; if there be a factory in their district, to ascertain the conditions of employment, to keep in touch with and to endeavor to make provisions, if practicable, for occasional week noon-day services; if there are saloons in their district, to ascertain whether the same are run in accordance with the law, whether they are places of evil resort, to what extent they exert a beneficial influence, thru furnishing a place for men to spend their time decently, giving assistance in securing employment and getting help in times of trouble, cashing pay checks, etc.—performing, that is, those functions which a saloon is alleged to perform at times as a poor man's club—and to what extent the saloon is detrimental. The plan is most admirable.

If we did not fairly represent the attitude of the recent conference of Jewish rabbis on the subject of intermarriage, as we have been told, we would like to correct our mistake. A rabbi who was present tells us:

Dr. Schulman had the second paper on "Mixed Marriages in Their Relation of the Jewish Religion." In that paper the subject was discussed from a modern point of view and the author in terms clear and emphatic brought out the conclusion that the only reason the Jew today has and can have against mixed marriages is the religious and not racial reason. It is to safeguard Judaism and not physical Israel that the Jew opposes mixed marriages. And Dr. Kohler, who had no paper on the subject but who later discussed it from the floor of the conference, concurred in the conclusions.

Then how does the Jewish religion differ from the Jewish race? Is the religion monotheism? So is ours. Is it the Sabbath? So is the Christian. Is it the Ten Commandments? We have them also. In what does it differ from Unitarianism or Deism? Is it in anything but certain rites which are designed to maintain a racial distinction of which Jews have reason to be proud?

The Learned Societies

The learned societies take advantage of the holiday week for their annual meetings when the colleges are not in session. Under the lead of the American Historical Association and the American Economic Association, eight other societies of kindred purpose will meet in this city, December 27 to 31. A magnificent meeting with official welcome to these societies is provided at Carnegie Hall on Monday evening, at which Mr. Joseph H. Choate will preside, and President Taft, the Governor of the State, the Mayor of the city and the President of Columbia University will make addresses. For the general and special meetings long programs are announced, of interest to the members rather than to the general public; and the week concludes with a reception by Mr. and Mrs. William K. Vanderbilt. We are fast becoming a nation of scholars as well as of hunters of the dollar. Every college and university ought to make provision for its teachers to attend such meetings as these and those of the philologists and archeologists at Baltimore. And yet the value of the meetings is not wholly in the papers heard, for they could be read in print, but even more in the enthusiasm for investigation which they evoke, and in the opportunity given for scholars to meet each other and gage their respective abilities. It is very largely to the encouragement which these societies give that we are indebted for the advancement of learning and the extension of research. They give us the comradeship of letters.

Paul and Barnabas

A discovery of peculiar interest to biblical students, of a Greek inscription of probably the first century, was made last summer by Sir W. M. Ramsay and Prof. W. M. Calder, of Oxford, at a place not far south of Lystra, where Paul and Barnabas came so near being worshiped as gods. Paul had just healed a lame man, and the multitude, that is, the native population, not the ruling Roman colony, "lifted up their voice, saying in the speech of Lycaonia, 'The gods have come down to us in the likeness of men.' And they called Barnabas Jupiter (Zeus) and Paul Mercury

(Hermes), because he was the chief speaker. And the priest of Jupiter, whose temple was before the city, brought oxen and garlands unto the gates and would have done sacrifice with the multitudes." We are told that these were natives, talking Lycaonian, and the two gods must have been the two principal gods of the native religion there worshiped and assimilated to the Greek gods Jupiter and Mercury. The new inscription is a dedication of a statue of Mercury in a temple of Jupiter, and the names show that they were not Greeks or Romans, but natives. It reads:

"Toues Macrimus, also called Abdekantes and Batasis, son of Bretasis, made, in accordance with a vow and at their own expense (a statue of) Hermes Most Great, along with a sun-dial, and dedicated it to Zeus the Sun-god."

Here we have, in the neighborhood of Lystra, a site identified some years ago by Professor Sterrett, the worship by natives of two gods identified with Jupiter and Mercury. These two gods we are familiar with in the Syro-Hittite art of all Anatolia. One, Jupiter or Tarkhu (Terah), was of dignified appearance, the superior deity, clad in a long robe, and not usually carrying any weapons. The other, Mercury or Teshub, wore a short garment and a helmet, lifted a thunderbolt or other weapons as emblems of lightning, and led a bull by a rope as symbol of thunder. These were the two gods mentioned in this inscription, and the same whom the Lycaonian populace imagined they saw in the persons of the aged and dignified Barnabas and the younger and more active Paul.

Football Fatalities

An unusual number of football players have been killed this season, and that, too, after an effort had been made to "open" the game and diminish the crowding and tumbling in a pile on the man who holds the ball. Several institutions, after the death of a player, canceled the rest of their games, and the superintendents of the New York City schools have voted that the game must be abolished as too dangerous. But Gen. G. W. Wingate, president of the Public Schools Athletic League, hopes the Board of Education will veto the action of the superintendents. He says it is "a great

game," that it "gives the elements of team work, resolution and manliness." But he says boys ought not to play it unless "in good physical condition." We would refer to our hygienic editor the problem how to secure the physical condition which would save a boy's neck from being broken by his head being twisted over, as has been the case with several boys thus killed this season. The argument that it develops team work and courage is the true line of defense. But that can be done just as well in the safe and open association game, which ought to take its place, certainly with immature boys, and probably with college boys as well; and baseball gives team work as well, and takes some courage. In football the mass plays ought to be abolished, and it were well if the other football, so popular in England, and growing more popular in this country, should take its place.

The Budget in the Lords

Doubtless this week the British Budget will be rejected by the Lords and by a tremendous majority, composed of men who get their right to vote by their birth, and most of whom are so neglectful of their duties that they never attend except at the rare occasions when it is desirable to thwart the wishes and interests of the people. To be sure Lord Rosebery, Lord Cromer and Lord Balfour of Burleigh have warned the Lords that the rejection of the Budget, which they also dislike, will probably be almost suicidal to their existence as a second chamber, but they are determined to do the desperate thing. It is pleasant to know that one bishop has dared to speak in favor of the Budget, and that against the somewhat imperative advice of the Archbishop of Canterbury that the bishops keep a discreet silence and meddle not with political affairs. But the Bishop of Hereford claimed his right nevertheless to speak for the people, and to this extent justified the presence of the bishops as members of the House of Lords. Indeed, they are called Lord Bishops. The bishops are generally expected to side with the Lords and the brewers, and it is refreshing to see this rebellion by the bishop, whose name before his consecration was Percival, Master of Rugby.

Mrs. Stetson, founder, Is It the End? and long the reader, of the First Church of Christ, Scientist, in this city, not only submits to the will of Mrs. Eddy, as expressed by the authorities of the Mother Church in Boston, but presents her resignation as one of the trustees of the church in this city, and her membership also, but protests her loyalty to Christian Science and its founder. She had been expelled from the Mother Church, but let it be understood that expulsion from the Mother Church does not necessarily mean expulsion from the Christian Science body. Mrs. Stetson was a member of the Mother Church in Boston when she organized the First Church in this city, and she still retained membership there. Many leaders are members of both the Mother Church and of their local church. The "readers," as the ministers or pastors are called, must be members also of the Mother Church, so that they can be under central control. If expelled from the Mother Church they automatically cease to be readers. So the Boston despotism is maintained; but whatever they do it is submitted to and regarded as a benevolent despotism.

As if they had nothing else more important to do the Lambeth Conference of 1908 appointed a committee of seven of the best scholars to revise the translation of the Athanasian Creed from the purest possible Latin text. They have now presented their work, and the new translation differs in no special way from the old one. It leaves in all the old damnatory clauses, and it goes into the same useless and repetitious definitions as to things that no one can know anything about. Why modern Christian people should bother with it is a marvel of stupidity. It is a good thing for a museum, like a fossil trilobite or plesiosaurus. Why try to revive the dead?

We have received so many inquiries for "The Student's Ten Commandments," by John M. Thomas, which appeared in our issue of November 11, that we have reprinted this page in the form of an artistic card. Ten of these cards will be mailed to any address on receipt of 25 cents.

Life Insurance and the Moral Obligation of Employers

DARWIN P. KINGSLEY, president of the New York Life Insurance Company, made a notable address at the tenth annual dinner of the National Civic Federation at the Hotel Astor on November 23. He called attention to the class legislation to which insurance companies have been subjected and made a strong plea for reformation. He said in part as follows:

The growth of life insurance and the development of a deep sense of responsibility on the part of employers of labor toward their employees are contemporaneous and kindred phenomena. They represent a better knowledge of the value of human life and a recognition of the increasing demand now fairly made on the controlling forces of society, by age and industrial misfortune, as well as by infancy, congenital incapacity and weakness.

A system which teaches people how to protect themselves against menace is more in harmony with the genius of our institutions than a system which coerces them into action or a system which finally places the burden of their support and care upon general society. It does not follow that a system which works well in Germany would work well here; or that a system which appeals to the needs of the people of Great Britain will answer here. There are distinct advantages in the German plan—chiefly that it is compulsory and that the laborer is forced to make provision for certain benefits even tho he may have no very intelligent understanding of the wisdom of the plan or its effects on society. There is a difference between the compulsion of government, which tells the workingman that certain things must be done, and the proposition of a corporation which tells a man what the conditions of his hiring are. If the conditions named by the employer involve some system of life insurance, some system of deferred annuities, a man can study the question and take a position or leave it alone because it recommended itself to his judgment or otherwise. This is a slower process than the German method, and probably for a good many years will be more expensive; but it seems to me to be in harmony with our notions of individual responsibility and the rights as well as the obligations of American citizenship.

We have now reached the point when the

employer is beginning to do his part, but as yet he has made only a beginning. That he will do more is certain; that he will do much is almost equally certain. That existing insurance institutions will be utilized is, I believe, a necessity. But if this is to be done there are certain interfering conditions which must be dealt with before any such plan, however desirable, complete and beneficent, can be carried into effect.

First insurance—and other business, too—must be relieved of the annoyances and burdens which attach to compliance with the behests of forty-six sovereign masters—forty-seven now, since the General Government has decided to create a Federal Insurance Bureau for purposes of taxation only. When the Supreme Court declared that insurance was not even an instrumentality of commerce, I am constrained to believe that distinguished and honored body lacked information as to the part which fire insurance and life insurance even then played in the commerce of the country.

In a decision made a generation later the Court, on a question which involved the same principle, and brought insurance in indirectly, apparently overruled its earlier decree. But that brings no relief.

The possibilities of social betterment which lie in a wise joinder of the function of insurance in its various activities on the one hand, and the moral obligation of the employer of labor on the other, are substantially unlimited and as yet have been barely tested. But before any such joinder can be made in any effective way, interstate insurance must be placed under Federal control, and some so-called reform in insurance laws in this and in other States, must be revised and rewritten by fair-minded men.

A rather novel application of the insurance principle has been reported in connection with a recent policy taken out on the life of Commander Robert E. Peary for \$50,000 in favor of *Hampden's Magazine*. The insurance is designed to protect the publishers from any loss arising in case of the death of Commander Peary before the completion of his story of the discovery of the North Pole. The policy is written for a term of ten months and decreases at the rate of \$5,000 monthly as the various installments of the article have publication.

Wheat and Gold

AN estimate of the whole world's wheat crop is published by the *Liverpool Corn Trade News*, a leading authority. It appears that this year a new high record has been made, the yield exceeding that of 1906 (the previous high record) by 120,000,000 bushels, and that of last year by 283,000,000. The figures are as follows:

1909	3,346,968,000
1908	3,063,280,000
1907	2,918,280,000
1906	3,226,768,000
1905	3,109,520,000

The gains over last year's harvest are distributed (in part) as follows: Europe, 154,000,000; America, 77,500,000; Australasia, 7,000,000.

Altho previous records of production have been broken, the price of wheat continues to be high.

At the same time there is published the report of the United States Geological Survey and the Bureau of the Mint concerning the output of gold in this country last year, which was \$94,560,000, or \$4,124,300 more than the output in 1907. Gold output has been growing in our country, as in other parts of the world. For the last decade it was almost twice as large as in the decade immediately preceding:

Ten years, 1899-1908	\$830,497,300
Ten years, 1889-1898	428,813,981

It is expected that the world's output for the current year will establish a new high record. Taking the world's output for the two decades, we again find an increase of nearly 100 per cent.:

Ten years, 1899-1908	\$3,521,800,000
Ten years, 1889-1898	1,782,278,400

The effect of this enormous increase of the gold supply upon the prices of commodities must be taken into account whenever any explanation of the general advance in the cost of living is made.

Railway Net Earnings

THE increase of railway net earnings continues to furnish strong evidence of the upward movement. Figures for September are now available. They show

(according to *Bradstreet's* compilation, relating to 220,000 miles of road) a gain of 15 per cent., by the side of an increase of gross earnings amounting to 11.7 per cent. With this increase of gross, the addition to operating expenses was only a little more than 9½ per cent. Percentage gains for nine months are shown below:

January	4.6	18.0
February	7.9	32.1
March	11.8	25.0
April	11.8	21.3
May	15.1	28.8
June	15.0	21.3
July	12.0	14.6
August	12.9	17.2
September	11.7	15.0

Gross earnings for the nine months, \$1,792,134,581, showed an increase of 11.5 per cent., while the net earnings, \$591,962,883, exceeded those of the corresponding months in 1908 by 20.5 per cent. This gain, now beginning to yield higher dividends, is due largely to economies introduced after the panic.

....It is asserted in Berlin that Russia is about to close a contract with an American syndicate for double tracking the Trans-Siberian road thruout its entire length.

....The San Juan Stock and Produce Exchange, the first institution of its kind in Porto Rico, was opened last week. Governor Colton made an address to its members.

....Interest and dividends payable in December by railroad, industrial and traction companies amount to \$87,692,533, an increase of \$12,169,184 over those of last year.

....After making thoro inquiry, the *Monetary Times*, of Toronto, publishes a statement showing that the investments of United States capital in Canada amount to at least \$226,800,000.

....Herbert H. Dean, for eighteen years connected with the executive staff of the Equitable Life Assurance Society, and during the past five years in business in Wall Street, has become a partner in the banking house of Edward B. Smith & Co., of New York and Philadelphia.

The Independent

VOL. LXVII NEW YORK, THURSDAY, DECEMBER 9, 1909 No. 3184

Survey of the World

Zelaya Denounced by Our Government

Our Government, on the 1st, severed official relations with the Zelaya Government in Nicaragua and opened unofficial diplomatic relations with Señor Castrillo, the revolutionists' representative at Washington. It sent to Señor Rodriguez, the Zelayan Chargé d'Affaires at Washington, his passports, but at the same time offered to continue unofficial diplomatic relations with him. This action placed the two Nicaraguan factions on the same footing in Washington. It was announced in a remarkable letter addressed to Señor Rodriguez by Secretary Knox, and by him given to the public. At the beginning the Secretary says:

"Sir Since the Washington conventions of 1907 it is notorious that President Zelaya has almost continuously kept Central America in tension of turmoil, that he has repeatedly and flagrantly violated the provisions of the conventions, and by a baleful influence upon Honduras, whose neutrality the conventions were to assure, has sought to discredit those sacred international obligations to the great detriment of Costa Rica, El Salvador, and Guatemala, whose governments meanwhile appear to have been able patiently to strive for the loyal support of the engagements so solemnly undertaken at Washington under the auspices of the United States and of Mexico.

"It is equally a matter of common knowledge that under the régime of President Zelaya republican institutions have ceased in Nicaragua to exist except in name; that public opinion and the press have been throttled, and that prison has been the reward of any tendency to real patriotism. My consideration for you personally impels me to abstain from unnecessary discussion of the painful details of a régime which unfortunately has been a blot upon the history of Nicaragua and a discouragement to a group of republics whose aspirations need only the opportunity of free and honest government.

"In view of the interests of the United States and of its relation to the Washington conventions, appeal against this situation has

long since been made to this Government by a majority of the Central American republics. There is now added the appeal, thru the revolution, of a great body of the Nicaraguan people. Two Americans, who, this Government is now convinced, were officers connected with the revolutionary forces, and, therefore, entitled to be dealt with according to the enlightened practice of civilized nations, have been killed by direct order of President Zelaya. Their execution is said to have been preceded by barbarous cruelties. The consulate at Managua is now officially reported to have been menaced.

"There is thus a sinister culmination of an administration also characterized by a cruelty to its own citizens, which has, until the recent outrage, found vent in the case of this country in a succession of petty annoyances and indignities which, many months ago, made it impossible to ask an American Minister longer to reside at Managua. From every point of view it has evidently become difficult for the United States further to delay more active response to the appeals so long made to its duty to its citizens, to its dignity, to Central America, and to civilization.

"The Government of the United States is convinced that the revolution represents the ideals and the will of a majority of the Nicaraguan people more faithfully than does the Government of President Zelaya, and that its peaceable control is well nigh as extensive as that hitherto so sternly attempted by the Government at Managua."

Indications of a rising in the western provinces in favor of a candidate [Irias] associated with the old régime, he continues, disclose elements tending toward anarchy, so that there soon may be no definite responsible source to which our Government could look for reparation for the killing of Cannon and Groce, or for the protection of American citizens and interests. Therefore President Taft no longer feels for the Government of President Zelaya "that respect and confidence which would make it appropriate hereafter to maintain with it regular diplomatic relations." Notice is given that each faction, in the provinces which it

controls, will be held strictly accountable for the protection of American life and property:

"As for the reparation found due, after careful consideration, for the killing of Messrs. Groce and Cannon, the Government of the United States would be loth to impose upon the innocent people of Nicaragua a too heavy burden of expiating the acts of a régime forced upon them, or to exact from a succeeding Government, if it have quite different policies, the imposition of such a burden. Into the question of ultimate reparation there must enter the question of the existence at Managua of a Government capable of responding to demands. There must enter also the question how far it is possible to reach those actually responsible, and those who perpetrated the tortures reported to have preceded the execution, if these be verified, and the question whether the Government be one entirely dissociated from the present intolerable conditions and worthy to be trusted to make impossible a recurrence of such acts, in which case the President, as a friend of your country, as he is also of the other republics of Central America, might be disposed to have indemnity confined to what was reasonably due the relatives of the deceased and punitive only in so far as the punishment might fall where really due."

Demand for reparation is therefore withheld temporarily, and our Government, the Secretary says, reserves for further consideration at the proper time the question of "stipulating that the Constitutional Government of Nicaragua obligate itself by convention for the benefit of all the Governments concerned as a guarantee for its future loyal support of the Washington conventions and their peaceful and progressive aims."—On the following day Zelaya express surprise and reiterated his conviction that the execution of Cannon and Groce had been justifiable. Dispatches from Managua, undoubtedly sent with his approval, asserted that our Vice-Consul, Mr. Caldera, sympathized with the revolutionists and had been forwarding biased reports. On the 4th it was announced in Managua dispatches that Zelaya had asked our Government to send a commission of investigation to Nicaragua, promising to resign if its report should show that his administration had been detrimental to Central America.—Before the Secretary's letter was written, Zelaya had made overtures to the revolutionists, offering to retire if Congress were allowed to choose his successor. These were rejected. He sought to justify the execution of Cannon and Groce by saying they

were "powerful chiefs of the rebellion" and had lost the right to be protected by our Government. There is evidence that at his order their dead bodies were consumed by fire. Protest against their execution was made by the military commander, the Minister General and a ship captain who took them into custody. For this the latter was placed in prison.—The Mexican Government had suggested to our Government a plan for an amicable settlement. Foreign Minister Mariscal says Secretary Knox's action was most unexpected, because it took place while he was awaiting a reply. The Mexican press makes sarcastic or hostile references to the Secretary's letter.—Several of our warships are on the way to the Nicaraguan coast or have already arrived there. From them it will be practicable to land nearly 3,000 marines and sailors. It is said that the ships are required to prevent Zelaya's escape.

Railway Employees on Strike

Many industries were affected and the movement of freight in the Northwest was checked, last week, by a strike of the switchmen (about 2,300) employed on thirteen railroads doing business between the great lakes and the Pacific Coast. They had demanded an increase of 6 cents an hour, or 60 cents a day, with double pay on Sundays and other concessions. A committee representing the railroad companies had offered an increase of 20 cents a day, saying that an increase of 13 per cent. had been granted in 1906 and that the panic had caused no reduction. This committee suggested mediation and arbitration under the Erdman act, and President Hawley, of the switchmen's union, joined it in signing a telegram asking Interstate Commerce Commissioner Knapp and Labor Commissioner Neill to come to St. Paul. Afterward, however, the switchmen by advice of counsel (said to be Mayor Lawler, of that city) declared that under no circumstances would they submit to arbitration, and the strike was ordered on the 30th by President Hawley, without notice to the committee. Messrs. Knapp and Neill went to St. Paul, but found that the switchmen would not accept their services. The companies at once sought to fill the va-

cant places, giving notice that arbitration would no longer be considered on their side. Mayor Lawler, employed as counsel by the strikers, said at a mass meeting that arbitration under the Erdman act would simply place the men in the power of the companies and in other ways be to their disadvantage. For a time there was no movement of freight. The great flour mills closed down, work in the Montana smelters was suspended, and the employees in many industries of the Northwest were idle. The companies offered \$5 a day for strike-breakers. On the 2d they had 1,000. On the 4th they were handling 75 per cent. of the traffic, and orders were given that no more men should be hired, because no more were needed. At the end of last week there were indications that the strike was a failure. Some had expected that other railway employees would join the switchmen, but it appears that members of this switchmen's union had acted as strike-breakers in the places of striking trainmen some years ago in Texas, and this had not been forgotten. Therefore the president of the trainmen's union gave notice that he and his associates would stand by their contracts.—This strike is not connected with a general movement for an increase of 10 per cent. for about 100,000 employees on railroads east of the Mississippi. Union leaders are conferring in New York about this increase. Their demand will be presented on or about December 11 to thirty-two companies, and a conference with the companies will follow. It is asserted that wages on these roads are lower than on roads in the West. It is generally expected that if the companies reject the demand a strike involving a large part of the country's railway service will follow.—After a strike continuing for several months at the sheet and tin plate factories of the Steel Corporation (against the open shop) work was resumed last week at the mills in Bridgeport, Ohio, with former employees who returned voluntarily, owing to a split in the strikers' forces. Violence followed. On the 4th four of the company's guards were shot, and 1,000 militia were ordered to the place.—Workers in the textile factories near Philadel-

phia demand 10 per cent. increase and a week of fifty hours. Employees of three mills have been locked out; in two or three other mills a compromise has been made.

Trust Cases Statements made by Senators and Representatives in Washington indicate that an investigation of the Sugar Trust frauds will be made by a committee of Congress during the current session, unless the Attorney-General shall ask for delay in the interests of justice. At the trial in New York of Bendernagel, Spitzer and other employees of the Trust, which is now in progress, there are signs that one or more of the defendants will give testimony involving the responsible officers who induced them to defraud the Government. One of the witnesses has been Richard Parr, who was directed by President Roosevelt to make an investigation concerning the fraudulent weighing of sugar. He testifies that when he detected the steel spring used to affect the weight he was asked by Spitzer to name his price for silence. The man, he says, repeatedly urged him to accept a bribe. Wilbur F. Wakeman, formerly Appraiser, who laid evidence before Secretary Gage and was told by the latter to lay it before the president of the trust, resents the reported remark of Mr. Gage that he was "rattlebrained and inclined to see ghosts." He points to several cases in which his reports and discoveries led to successful prosecutions and a great saving of revenue. He also says:

"I refer Mr. Gage particularly to the Japanese silk cases and will ask him if he did not practically direct me to desist in my investigation of said cases. I will ask him if he did not give the importers a clean bill of health in connection with these cases on December 5, 1901. I will ask him if I was not called to the White House on January 8, 1902, and that the silk prosecutions were then instituted and prosecuted to a successful finish. I will ask him if he did not resign his portfolio in the Cabinet within forty-eight hours after these prosecutions were undertaken."

—For some time past the American Ice Company, or Ice Trust, has been on trial in New York for violation of the Anti-Trust law of the State. Owing mainly to the recent increase of the price

of milk to consumers, charges against the milk companies have been taken up for consideration by the Attorney General. In these proceedings a prominent Congregational church in the City of New York is interested. A committee appointed by the pastor has undertaken to make a thoro investigation and will report to the Attorney-General such evidence of unlawful combination as it may find.

The Rejection of the Budget

The House of Lords rejected the finance bill at midnight, November 30, and rockets were sent up all over the city announcing the beginning of the set struggle between the Upper and the Lower houses of the British Parliament. The vote for Lord Lansdowne's amendment refusing to approve of the finance bill was 350 affirmative and 75 negative. The six-day debate in the House of Lords was of an unusually high character, for all the speakers recognized the seriousness of the crisis. The most eloquent and significant speeches of the closing session were those by the Archbishop of York and Lord Curzon of Kedleston, former Viceroy of India. The Archbishop stated that he was opposed to Lord Lansdowne's amendment. The constitutional question, he declared, was one which would profoundly stir the people of the country, and many persons would prefer the passing of a bad budget to tampering with the fundamental principle of the constitution. The question was whether the Lords were competent, apart from the prerogative of the Crown, to dissolve Parliament or to compel the House of Commons to pass a budget not its own, but one acceptable to the Lords. The effect of the amendment proposed would be to endanger the existence of the second chamber, never more necessary than now. Lord Curzon said that he deprecated the suggestion that England would accept a single chamber system like that of Bulgaria and Greece. He agreed that the country was on the eve of a momentous struggle which might lead to the reform of the House of Lords, but he contended that they should not shrink from it. Neither

side of the House, he said, had a monopoly of the desire to ameliorate social evils. There are two pressing questions; the first was whether the nation was safe and the other whether the people were sound, but neither question could be settled by taxation.—The Earl of Crewe, Secretary of State for the Colonies, in making the concluding address for the Government, ended with this warning:

"It may be that when the new Parliament meets we will be sitting where you sit now; it may be that we will still be sitting here. In either case we must, after the action you are taking tonight, set ourselves to obtain guarantees—not the old guarantees sanctioned by the course of time and enforced by accommodation between the two Houses, but, if necessary, and if there is no other way, guarantees fenced about and guarded by the force of statutes, which will prevent the indiscriminate destruction of our legislation, of which your work tonight is the climax and the crown."

The Commons Declare Against the Lords

The House of Commons gave the Government enthusiastic and liberal support in making a stand against the House of Lords. The resolution offered by Premier Asquith that

"the action of the House of Lords in refusing to pass into law the financial provisions made by this House for the services of the year is a breach of the Constitution and a negation of the rights of the House of Commons."

was passed by a vote of 349 to 134. The Premier opened his speech with the following statement:

"We meet this afternoon in circumstances without example in the history of the British Parliament. In the speech from the throne the sovereign invited the Commons alone to make provisions for the heavy additional expenditures made necessary by the necessities of social reform and the national defenses."

He declared the sole responsibility for the chaos and loss of revenue rested upon the shoulders of the Lords. The session of Parliament was closing without making appropriations for the necessities of State, and the action of the House of Lords must result in the largest deficit yet faced. The taxes authorized by the House of Commons could not be collected and the only thing to do would be to borrow money. The budget represented, he said, in a greater degree

than any other measure of our time, the deliberate work of an overwhelming majority of the representatives of the people, and this whole fabric had been thrown to the ground by a body which admittedly had no power to increase or decrease a single tax. The House of Commons, he declared, would prove unworthy of its traditions if it allowed a single day to pass without making it clear that it did not intend to brook this grave indignity and arrogant usurpation of its rights. Ever since 1628 the Commons had asserted with ever-growing strength the exclusive right to determine taxation and expenditures of the country. There was not a single clause in the budget bill which was not relevant to the matter of raising revenues. If the contention of the Lords that in rejecting the budget they were only referring it to the people held good, no Liberal Government would be safe. They might have to refer all taxes to the people, and the Lords would have power to advise the King to dissolve Parliament. The upper house seemed to have the instinct of divination which enabled it to discern to a nicety, provided always a Liberal Government was in office, those matters in regard to which the people's representatives were betraying the people's trust.—Mr. Balfour, speaking for the Opposition, said that the Lords had an undoubted right to refuse to pass the budget before it had been submitted to the people. He hoped the use of this power would be very rare, but it ought not to be allowed to fall into desuetude. The Prime Minister and his party, Mr. Balfour said, had a strong passion for these abstract resolutions. They bind nobody, they help nobody and he was sure they frighten nobody. They were mere death-bed threats, but he greatly regretted that his opponents were to go down to their political graves uttering so gross a misrepresentation of the whole course of English constitutional history. He would for his own part have preferred to die in a more dignified manner.—Arthur Henderson, leader of the Labor Party, declared that the Liberals would have the whole-hearted support of the Laborites in the coming campaign. The continuance of the second chamber as constituted at present, he said, was absurd

and logically indefensible. The Lords, no longer content with their long record of obstruction, mutilation and destruction of legislation through which they had defrauded the people of many of the fruits of self-government, had become emboldened sufficiently, he said, to try their hand at a usurpation of the rights of the House of Commons in regard to matters of finance.

The Opening of the Campaign

Promptly upon the passage of the resolution of Mr. Asquith condemning the House of Lords, Parliament was prorogued until January 15, and dissolution will be announced before that date in order to allow for a January election. The two Houses were called together in the Upper Chamber to hear the Speech from the Throne proroguing Parliament, which was read by Lord High Chancellor Loreburn. The speech made brief references to the visits of foreign sovereigns and the friendly relations with other Powers, and commended the legislation of the session. The only reference to the budget bill was the following:

"Gentlemen of the House of Commons. I thank you for the liberality and care with which you have provided for the heavy expenditure due to the heavy requirements of imperial defense and social reform. I regret that that provision has proved unavailing."

—The outcome of the impending campaign is doubtful. The liberals have been losing most of the by-elections of the last two years, and this, in the opinion of the Unionists, indicates that the country has lost confidence in them, but on the other hand, the Liberals started in with an overwhelming majority, and tho they have gradually lost, as is usual for any party attaining power under such conditions, their parliamentary majority is still very large. In most of the by-elections also the sum of the Labor and Liberal votes outnumber the Opposition, and if the Labor men give their support to the Liberals, as their leaders have promised, the Government will be returned by a substantial majority. The Unionists and Conservatives will endeavor to make tariff reform, which in England means the adoption of a protective policy, the leading issue, but the

traditional free trade sentiment of the country is so strong that it is not likely to be overcome in a single campaign. The Liberals, on the other hand, will pay as little attention as possible to the tariff question and will concentrate their attack upon the House of Lords, which, as its best friends admitted, is indefensible in its present form and in need of reconstruction. The King is believed to be exerting a strong personal influence in favor of moderation. To him is credited Lord Rosebery's refusal to vote in favor of Lord Lansdowne's amendment, altho he had only a short time before delivered a strong speech against the budget. Both Mr. Asquith and Mr. Lloyd-George have disclaimed any intention of abolishing the House of Lords or of attacking the hereditary principle in general, and it is not likely that the Government will be forced to such an extreme measure as swamping the Upper House with new-made peers. The religious leaders, Anglican, Nonconformist and Catholic, will take the side of the Government in the campaign against the House of Lords. A big mass meeting held in Trafalgar Square by the National Democratic League passed a resolution declaring that the liberties of the people could only be maintained by the entire abolition of the vetoing power at present exercised by the House of Lords. Mr. Lloyd-George, Chancellor of the Exchequer, opened the campaign for his party at a luncheon of the National Liberal Club. He declared that, altho the budget had been buried, it was assured of an early resurrection. There are a few useful men in the House of Lords, he said, but the others were only the broken bottles on the park walls to keep out poachers. "With all the Lords' cunning," he concluded, "their greed has overcome their craft, and we have got them at last, and we do not mean to let them go." The reason why the House of Lords has taken such a strong stand against the budget is because this is the most direct blow that has ever been struck against the landed aristocracy. The extent to which they are financially interested in the issue is shown by the fact that the peers of all parties hold 16,400,000 acres, or one-fifth of the total area of the United Kingdom. The peers

who defeated the budget hold together 10,078,979 acres. The average holdings of the dukes is 142,564 acres each, of the marquises 47,500 acres, of the earls 30,217 acres, of the viscounts 15,324 acres and of the barons 14,152.—The rejection of the budget bill and the prorogation of Parliament has left the finances of the country in a chaotic state. Owing to a peculiar British custom the taxes provided for by the bill were imposed ever since the House of Commons passed the resolution approving of the principle of the bill, and they have been collected during the months that the bill has been under discussion and amendment in the House of Commons. Now, however, these duties cannot be enforced, but will be due in case the bill is ultimately passed. The Treasury Department has therefore recommended that the duties imposed by the finance bill on spirits, tobacco, beer, tea and motor fuel be paid without interruption, subject to return in case the bill does not pass.

French Affairs The vexed questions of allowing government employees to form unions for the protection of their interests in the improvement of their condition has again become acute during the formation of a National Federation of the Associations of State Employees, representing a membership of 181,000. Whether the new federation is legal under the association law of 1901 and whether the new combination intends to ally itself with the General Federation of Labor and claim the right to strike, are questions that the future alone can determine. The most embarrassing problem is the formation of a union of policemen. What would happen in case the police adopt the methods of other trades unions and struck in a body or indulged in riotous manifestations in the streets can hardly be imagined. Premier Briand, in an address before the Police Friendly Provident Society, urged the members of the force not to enter into a militant union. He said that, while policemen had the same rights individually as other citizens, they are also state officials, and they must not, in the effort to

advance personal interests, violate their functions as persons of authority responsible for the order of the state. The grievances of which the police complain are the excessive number of hours, small wages and severe discipline. Paris police are allowed to receive tips or extra payment for special services to private persons, and they complained that the common fund into which these are put is not justly distributed.—“King” Pataud, secretary of the Electricians’ Union, again gave a dramatic exhibition of his power by ordering the stage lights shut off at the Grand Opera House when a gala performance of “Faust” was being given in honor of King Manuel. The lights in the auditorium were not disturbed lest there should be a panic. The managers surrendered at once, promising to increase the wages of the electricians, and the curtain went up on the next act after twenty minutes of delay.—The Catholics, now entering actively into the political field, are endeavoring to gain favor with the working classes by espousing their cause in their disputes with employers. There are, in fact, three forms of labor unions now active in France—the “red” unionists, who are revolutionary in their aims and violent in their methods; the “yellow” unionists, who believe that they can gain more by working in harmony as far as possible with their employers rather than by opposing them, and the “green” unionists, who are Catholics, forming the industrial wing of the Christian Democratic Clubs.—We have referred before to the action of the Government in assuming the defense of the public school teachers who have been attacked by the Catholics. The first prosecution by the State has been begun at Grenoble against the local priest for placing the communal school under an interdict. The authors of the textbooks, which have been declared by the bishops immoral and irreligious, have instituted actions for libel. The first suit is brought against Mgr. Amiette, Archbishop of Paris.—The movement for judicial reform originating in the scandalous Steinheil trial has shown its first results in the report of the committee appointed to recommend changes in judicial procedure, which has decided to recommend that examinations

by presiding judges should be replaced by a summary statement of the case made by the public prosecutor. After this the accused will have the privilege of presenting a short statement. The judge’s rôle will be limited to preventing these statements from becoming discussions.

The Overthrow of the Giolitti Cabinet

The Cabinet of which Signor Giolitti was the head has had an unusually long reign for an Italian ministry, as it came into power in February, 1906. Its overthrow now is due to an incongruous combination of various factions in the Chamber of Deputies, in which, however, the radical element is most strongly dominant. The Government made an effort to retain its majority by bringing in a finance bill throwing the burden of taxation upon the rich to a greater extent than formerly by a system of graduated duties. There are five different classifications of death duties, ranging from 1½ to 4 per cent. on inheritances from \$5,000 to \$40,000 and above. The bill also provided for a tax on incomes resulting from land, houses or Government bonds, ranging from 1 per cent. on incomes between \$1,000 to \$20,000 a year, 6 per cent. on incomes of over \$40,000 a year. This, however, did not go far enough to suit the radical element in the Chamber, which demands not only a further relief of the burdens thrown upon the poor but also measures directed against the power of the Roman Catholic Church and the abandonment of the Triple Alliance. The Anti-Clerical party wants the suppression of the religious orders, the confiscation of their property, the secularizing of their schools and the subjection of the Vatican to the control of the Government. The foreign policy of the late Cabinet as directed by Signor Tittoni, favored the retention of the alliance with Austria and Germany as necessary for the protection of Italy, but at the same time cultivated closer and more friendly relations with England, France and Russia. A Catholic party, to be known as the Democratic Center, has been formed in the Chamber in order to fight the Anti-Clerical movement, but it is not likely to be recognized by the Vatican.

The Unrest in Central America

BY EDWIN EMERSON

The present situation in Nicaragua has drawn attention anew to Central America and the intolerable misgovernment that has become chronic there. Incidentally it has focused attention on the new diplomacy of our State Department under the guiding hand of Mr. Knox. Santos Zelaya, the tyrant of Nicaragua, has long been a thorn in the side of our State Department, largely for the reason that he would not take orders from our State Department, as transmitted to him thru our diplomatic representatives in Nicaragua. In this respect he has differed strikingly from his most formidable rival in Central America—Cabrera of Guatemala. This ruler, tho no less bloody a tyrant than Zelaya, has recognized the wisdom of "playing good dog" to American interests in Guatemala.

Hence the striking difference in the treatment of these two petty despots by our State Department. When Cabrera last found himself confronted with a revolution and civil war, the Guatemalan revolutionists were moved back from the Guatemalan border by the intervention of the United States, aided by Mexico. "General" Lee Christmas, an American soldier of fortune operating in Guatemala, was proscribed by Mr. Root as an outlaw without a country, who should be treated as a pirate by any American naval officer who might come across him on the high seas. Shipments of arms and munitions of war originating in New Orleans were promptly stopped by our Federal authorities. Now, on the other hand, when the object of the revolution was not Cabrera, but his rival, Zelaya, American soldiers of fortune, who have suffered the consequences of taking part in a war against a foreign government, are regarded by our State Department as martyrs. Revolutionary shipments of arms, so far from being stopped in New Orleans, have been directly encouraged.

dertaken by the *de facto* government of Nicaragua have been frustrated.

In plain terms, the latest revolution in Nicaragua has been an American-made revolution, financed by American capital, fomented and encouraged by the American State Department, and carried on with the connivance and active co-operation of all the American interests in Bluefields, Greytown, Georgetown, America, and other North American settlements on the Atlantic coast of Nicaragua, aided by Cabrera, of Guatemala. While the international ethics of such a proceeding may be called in question, there is no doubt whatever that Zelaya has long deserved his present fate. The trouble with Nicaragua, as with all the other so-called republics of Central America, has been its outrageous and long continued misrule.

Central America is a country rich beyond most others in natural resources and fruitful climate. Humboldt described it as the paradise of the New World. The bulk of the inhabitants, consisting of native Indians, are naturally industrious and thrifty. Unfortunately for them they have fallen under the domination of a small class of Spanish half-breeds and foreign financial adventurers who rule these so-called republics simply for their own personal exploitation. The result is misgovernment in its worst form and national bankruptcy. So long as this has continued, foreign immigrants and foreign investors, who alone could bring these countries back to their original state of prosperity, have naturally neglected Central America. Nobody but an adventurer cares to settle in a country where he and his people are in constant risk of being maltreated and robbed by the authorities. Nobody but a speculator cares to risk his money in a country where the governments themselves set the example of repudiating their national debts.

Lest this sound too harsh, or be taken

as a mere personal opinion, I quote from the report of a meeting of British stockholders in Central-American national bonds, published in the London *Money Market Review* not long ago:

"Of the five countries comprising the Central-American republics, Guatemala, Costa Rica, and Honduras are the most hardened defaulters, while Salvador and Nicaragua, likewise, observe their agreements with foreign bond holders only in a small measure."

Mr. Frederick Palmer, who recently published a series of articles treating of each of the five Central-American republics, arrived at the same conclusion. In his summary occur such sentences as these:

"In Nicaragua there is not a bank in the country. . . . Business is throttled by the rate of exchange. There is a little silver in the country, nothing like enough to redeem the flood of paper which Zelaya has poured forth. A Nicaraguan dollar is worth about 15 or 16 cents in our money with variations from day to day.

"The Guatemalan paper dollar is worth from 5 to 6 cents in our money. In all, Cabrera has issued about \$65,000,000 in paper, which has no more metallic backing than the dead leaves of the forest in autumn."

This same writer describes how the despotic rulers of Nicaragua and Guatemala make their victims disgorge by flogging and torturing them, or by killing their relatives. He names well known sufferers in Central America and gives specific instances.

All this, he says, is done "to the profit of politicians and money lenders." This is a fact only too well known by Central-Americans and by all fair-minded foreigners who have traveled in those countries or have done business in them. Politics and graft, indeed, have been and continue to be the curse of Central America.

People in North America have a well-

fixed notion that revolutions and civil wars are the curse of Central America. But those wars and revolutions are the outcome of politics and graft.

As a matter of fact, the wars of Central America, tho they may seem ludicrous to the people of a billion-dollar nation, have a certain amount of tragedy in them.

In the first place they are always civil wars, since Central America in reality is one country in which the different republics differ no more from one another than our States; in fact, not so much as some of our States. They speak the same language and hold to the same customs. Years ago they were united under one government and flag. Inasmuch as these wars are fought not on national issues, but for political reasons, it follows that the partisans of either party take sides with those of their own political party, no matter under what different colors they may be fighting. The rank and file of the soldiery being mere conscripts—mostly illiterate Indians—have no choice in the matter, but must march and fight or be

shot for insubordination and desertion.

Uninspiring as such wars are, yet they are fought with ferocity and much heroic endurance, worthy of a better cause. The percentage of the mortality, as a rule, is far in excess of anything endured in more civilized warfare. Partly because the troops come to close quarters; partly because those who are made prisoners are usually murdered; and partly because of insufficient or utterly lacking medical attention. For their commissary the

troops mostly have to depend on foraging. This spells untold suffering, the worst of it falling on inno-

NATIVE HUT NEAR MANAGUA.

cent non-combatants. In the wake of these revolutions and wars follow famine, want, epidemics, business failures, national bankruptcy, and worst of all, bloody persecutions, reprisals, and confiscations of property which wipe out whole families.

In the last war between Salvador and Guatemala, two years ago, a Red Cross surgeon on the Guatemalan side, Dr. Ruiz, was recalled and jailed, and afterward shot, because he telegraphed to his chief, President Estrada Cabrera, of Guatemala, that he could not do his duty at the front without medicines. Another Red Cross surgeon, Dr. Rigoberto Rosales Cabezas, on the Salvadorean side, was made a prisoner of war while tending the wounded on the battlefield with a Red Cross bandage on his sleeve. This man was made to march with his arms tied behind him, under a broiling sun, over a distance of some two hundred miles to the capital, where he was jailed and mercilessly flogged so that he nearly died of his injuries. Later, after he had been exchanged for a Guatemalan prisoner of

war, he testified that of the two hundred Salvadoreans who were made prisoners of war at the same time with him, only eleven escaped with their lives.

But our people do not understand that these apparently senseless revolutions and wars are simply the game of politics as played in Central America. In republics like Nicaragua or Guatemala the so-called presidents maintain themselves in power by force of arms for periods exceeding their constitutional terms of office over six and eight and ten years. The so-called elections are nothing but elaborate farces, in which the sole decisive factors are bayonets and machine guns. Hence, those Central Americans who are dissatisfied with their particular reigning form of despotism, if they wish to throw off the yoke, have no other recourse but revolutions or armed raids by exiles and sympathizers from across the border.

As in the case of Nicaragua now, it has been remarked that most of these wars and revolutions are financed, and often started, by North American financiers in New York, San Francisco, or

New Orleans, who have financial axes to grind. A war always means a loan, and incidentally it means profitable deals in firearms, supplies, and broken-down ships, armed and manned by Americans.

During a recent Federal investigation in San Francisco, concerning an armed expedition against Guatemala, which sailed out from San Francisco, it was shown in court that the two warships had been purchased and fitted out and manned with Americans by Salvador Blum, a naturalized American citizen, doing business in San Francisco and Salvador, who, on the strength of this war, negotiated a loan of \$25,000,000 to Salvador. Part of

the loan consisted of these ships and munitions of war furnished at fancy prices. According to Dr. Prowe, a German writer on Central America, Salvador Blum, for this money, draws no less than 46 per cent. interest, so that now the republic of Salvador owes to this financier seven-fold the amount of the money originally lent by him.

A similar condition of affairs obtains in Guatemala, where Salvador Blum's friend, Adolph Stahl, another naturalized American citizen doing business in San Francisco and Guatemala, negotiated the Guatemalan national war loan for this same war. This financier, who originally

CONSCRIPT SOLDIERS OF THE NICARAGUAN ARMY AT MANAGUA

went to Guatemala as a poor young man, is now a multi-millionaire. He it is who persuaded the present ruler of Guatemala to decree that all national debts of Guatemala should be paid in paper, while he himself recoups his loans to the government in gold, drawn from the coffee export duties placed under his management. This Jewish financier from Kempen, in Posen, does most of his business in Guatemala under the name of The American Syndicate. By virtue of this name he has obtained additional security to his government loans by a special clause containing a threat of interference by the United States in case the interest or principal on the loan should be defaulted by

ings into American property and entailing upon our Government the possible future obligation of defending this property against its former rightful owners.

Apart from these American holdings in Guatemala there are in Central America a number of American railroad companies, steamboat lines, mines and fruit companies whose concessions cover large tracts of land and exclusive rights of a sort that would never be recognized in our own country. Guatemala has a so-called American railroad, owned by the Banana Trust, which, besides getting government dividends of 6 per cent. on its original investment, has obtained as a free gift two wide stretches of territory

AMERICAN SAILORS TAKING ABOARD THE AMERICAN CONSUL AT NICARAGUA

Guatemala, as has been done with Guatemala's previous national debts to British and German bondholders.

It was also Adolph Stahl, so it is said, who advised President Estrada Cabrera's only legitimate son, now living in San Francisco, to abjure his Guatemalan allegiance to become an American citizen. Thus the ruler of Guatemala is to be enabled to assign and deed the rich estates which he has confiscated from his political opponents in Guatemala over to his son, thereby turning his dishonest hold-

all along its railroad line, now turned into banana plantations, so that no individual planter or landowner has a fair chance to make use of the railroad facilities, except from its terminal points. There the transportation charges are excessively high. Meanwhile the railroad fruit company ships its bananas for nothing. This is an improvement on rebating.

Thus we see our country, thru the unscrupulous acts of some of our citizens abroad, drawn against its will into the position of taking future active interest

in the doings of our Central-American neighbors. There is some foundation, therefore, in the resentment of European property holders in Central America at the workings of our Monroe Doctrine. "Our governments," they say, "cannot enforce payment of our national loans in Central America, nor can our diplomats afford adequate protection to our citizens wronged in Central America. Any attempt to resort to force is stopped by the cry of Monroe Doctrine and the danger of coming to blows with North America. Yet Uncle Sam is perfectly willing to reap advantages to himself, which he denies to other nations."

As an instance of this they cite a certain well-known episode in Guatemala. This was when Estrada Cabrera decreed that all foreign loans, originally contracted in gold, should be payable in paper. Against this dishonest measure a joint protest was entered by all the diplomatic corps, excepting only the American Minister. Estrada Cabrera simply laughed at the protest and the dishonest decree stood. Then it was discovered that Wall Street was affected, owing to the fact that much of the money for alleged American loans in Guatemala really came from Berlin and London. Thereupon the American Minister was instructed to lodge, singly, a protest on behalf of our Government against this repudiation. As soon as he did so, the Guatemalan President, now thoroly cowed, withdrew his dishonest decree. The point of the European criticism of this episode lies not in the fact that Uncle Sam took action, but in the fact that he did not act sooner and more forcibly.

Of course, there are Europeans who object to the Monroe Doctrine *per se*, but most foreigners in Central America object not to the doctrine, but to the fact that more is not made of it to safeguard the interests of humanity within the American "sphere of influence." Since our country has exceptional privileges in Central America, say these critics, we, as a nation, should also recognize our responsibilities. Accordingly, when foreigners are fleeced and unjustly jailed in Central America, and when the natives there are robbed, exiled, tortured, and murdered by their inhuman rulers, the people of other nations are inclined to

hold our country to blame. Thus it happened that when a German physician and traveler in Central America felt his sense of justice and humanity outraged by the horrors that he witnessed there, he address an open letter to *our* President about it. Thus it happened, likewise, that when a number of Guatemalan women found themselves widowed and orphaned by the murder of their men in Guatemalan jails they address their cry of wrong to the President of the United States. This point of view is considered perfectly logical by everybody in Central America. The only thing they do not understand is why people of the United States do not take the same view.

It all hinges on what is the proper conception of a "sphere of influence." When there are disorders in Korea the world expects Japan to put a stop to such disorders. When the Mad Mullah breaks out in Egypt, British red coats bring him to his senses. When there are disorders in Persia no one is surprised to see a Russian column marching into the country with the consent and approval of Great Britain. When there are disorders in Cuba or at Panama our country is expected to put them down. In the same way we are expected to maintain order and to uphold the laws of humanity in certain other countries coming within our "sphere of influence"—notably in Central America.

Central America lies at our very door. The distance from our shores to those of Central America is actually less than between our Atlantic and Pacific coasts. As has been shown recently, it takes but a few days to sail from our ports to Nicaraguan ports.

All these considerations only emphasize the expediency of our national interests in Central America. It is all very well to let such countries work out their own destiny, provided they do it well. But since they do it abominably, it becomes our plain duty, as their sponsor, if not to interfere by active intervention, at least to throw our moral weight into the balance so as to make them behave themselves. "America for the Americans," by all means; but not a little America of oppression, of bloodshed, and of shameless dishonesty!

NEW YORK CITY

Crime in Spain and Its History

BY CESARE LOMBROSO

[This is the work of the Spanish savant Quiros, entitled "Criminality in Madrid," will be published. To this book the world renowned anthropologist, Prof. Cesare Lombroso, who died recently at Turin at the age of 73, has written an introduction, the text of which we anticipate below. Professor Lombroso was a friend of Ferrer and he gives us his view of the conditions of which Ferrer was a victim.—EDITOR.]

UNTIL a few years ago Spain was the classical ground for the study of crime. Religious persecutions were pursued with great energy as late as the last century. In 1790 witches were still burned at the stake in Seville. If Spain could boast for several centuries of having produced great men in the fields of art and literature, she could not boast of having brought forth many men of science. The consequence of this was a general and enforced ignorance; it is noteworthy that the universities at the beginning of the last century denied the law of gravity and the circulation of the blood.

This ignorance was directly called forth by the measures of the Government, as, for instance, under the reign of Ferdinand, the minister Calomardo suppress the schools of literature and philosophy and replaced them by schools for bullfighting.

The conquest of America was the source of extraordinary wealth, for in little more than a century fifty-four millions poured into the country, which increased corruption and laziness.

Gold was gained without an effort and gradually it was thought no longer necessary to earn it by work. When these sources had run dry the Spaniards, accustomed to indolence and estranged from all culture, had no other resource than to depend on the charity of the monks. The art of cultivating the fields was lost and it was only due to the immigration of the peasants from Bearn that the country was not entirely desolated. The number of merchants had sunk to 34,000, whereas there were seven times as many priests—statistics show that at the end of the last century there were 250,000.

The consequence of this was an enormous impoverishment of the country as well as a regular depopulation, so that under the reign of Charles the Third the number of inhabitants decreased to nine million.

The struggle against the invasion of strangers, beginning with the Moors and ending with the French, the wars of conquest, the habitual use of the large knife *Navaja*, which every Spaniard carries from childhood, their inferior elementary education, produced partly courage and a feeling of independence, but at the same time a strong tendency to violence. Saragossa has become famous in the history of war for its many murders and massacres. Thru all this the pleasure developed of seeing bloody and violent spectacles. The hospital of Valencia was solely supported by the corridas and toreadors. The school for bullfighting, which was founded in Seville in 1830, is closed now, but until seven years ago seven newspapers flourished there which were solely dedicated to bull fights. If a torero is not treated as a demigod in Madrid today, as formerly, he is still put on the same level as a literary or political genius.

The Government increased the mischief. The Constitution, which was more purely decorative than in other states, had been lowered to nothing more than a military dictatorship under the disguise of liberalism. Even men like Prim, Serrano, Navarros, Espartero, annually proclaimed a more or less masked state of siege over the country, in which justice was replaced by arbitrary power. For years the ministers of finance of the country tried to hide the bankruptcy of the state by foul means; frequently their poor state officials were not paid at all; arrear taxes were allowed to accumulate, in consequence of which thousands of properties were sold at public auctions.

In the nineteenth century Spain experienced a renaissance and rose to the plane of other civilized nations. But if it rose from extreme demoralization, it was not thanks to the very inferior or very unremarkable governments, but was solely due to the hated French invasion, which had aroused the personal energy

lying dormant in the country and brought into circulation the enormous riches which had gathered in the convents. It was at the cost of great violence, for those who plundered and killed the monks and soldiers were plundered and killed in turn.

During the last years the merit of this comparative advance is due especially to foreign money and influence, primarily of England, Belgium and France, who sent numerous chemists, engineers and workmen into the country together with a capital of more than two and one-half milliards of francs. If the hopes of profit were not always realized, it was sufficient that this turn of affairs raised the condition of the country; the arrivals exploited the mines Huelva and Linares, exported oil and oranges from Valencia, grain from Castille, cattle from Galicia, and wine from Andalusia and Catalonia. In this way numerous factories sprang up. In Catalonia lines of steamers formed a perfect network along the coast.

But in spite of all this progress statistics showed that the after effect of the sad old social conditions was still visible in crime. Whereas in all civilized countries of Europe the number of severe crimes diminished, it rose in Spain so that in the years from 1883 to 1889 there were 84,888 on record. And in the years from 1896 to 1899 there were 91,915. Of this number the crimes against the person, viz., shooting with firearms—which is equivalent to our murder—had risen from 1,072 in the year 1883 to 1,633 in the year 1899.

There is a slight decline in acts of violence and in acts of public resistance, viz., from 1,157 in the years 1883-1885 to 1,110 in the year 1897, especially in the last years in Saragossa, which is so celebrated for its military and patriotic bravery.

It is natural that a people whose education historically has tended to favor personal violence and arbitrary power, who inclined toward bloody crimes, as we have seen, who consider bloody patriotism against all foreigners and a hate against heretics as the height of virtue, that such a people who have been called the tragic Gascons and who are not satisfied with the threats of bloody

doings alone, but who take delight in the cruel fate of human beings who are torn to pieces in an arena and who deify a torero, it is natural that such a people easily tends to the desire to solve the complicated problem of political misfortune, which originates in so many atavistic causes historically as well as climatically, by the thrust of a knife or the explosion of a bomb. Anarchism is therefore in full blossom. Who will be surprised if a society which is so satiated with power will now and then unload itself violently in storm and lightning. It is not possible to sanctify power or the ulterior motive without going unpunished, nor to prescribe that it should only be used in a certain direction. Sooner or later, some one will come who will transfer the gospel of Might from one political faith to another. In face of these facts modern man should reason with himself and abjure the iron religion of brutal Might, whose adherents humanity has been until now, and he should understand that the basis *that Might is always immoral even when it is used to suppress violence* is not inspired by sickly sentimentalism, but by the logic which itself results from the observation of life. We must proclaim this new religion in order to hurry the great change which is taking place in the midst of our modern civilization, otherwise the European, with all his science and civilization, would be very little superior to the Australian who answered Bonwick when asked about Good and Bad: "Good is when I take the wife of another, Bad is if some one takes my wife."

A criminality which has arisen in this way has also left its traces in a special literature. Cervantes in his "novels," Mendoca in "Lazarillo de Tormes," Quevedo in "Buscon," Gil Maestre in the "Granja da Ciudad" and in "The Crime of Barcelona" (1888), also in "Malhecors da Madrid" (1883), all these works describe it thoroly. The work of Quiros, "Crime and Prostitution in Madrid," completes this sad picture in a truly wonderful way by including observations on criminal anthropology, in which the author is a master, so that he has not only been able to create a great and remarkable work, but also a highly scientific one.

A SECTION OF THE KULING ESTATE
It is 3,500 feet above the Yangtse River. The 150 houses are built of concrete. The estate is owned by the Chinese government.

Broken China

BY J. H. DE FOREST

[This article, written earlier in the year, by one of our most intelligent Americans in Japan, describes conditions frequently occurring in the Chinese Empire.—EDITOR.]

BROKEN by famines that never end; by relentless floods that bring sorrow, wretchedness, death to millions; by an impossible currency that delights forgers and thieves, but discourages commerce; by humiliating ex-territoriality that controls her entire coast and pushes foreign steamboats and gunboats into the very heart of the empire; by foes within and foes without, this great historic people stands before the world, suffering from the smart of repeated defeats, indemnity punishments, humiliating apologies; her pride broken, her resources coveted and seized by outside Powers, her authority flouted.

This is my overpowering impression as I touch Chefoo, Tientsing, Peking, and cross from there via Hankow and Kiu-kiang down to this famous summer resort, Kuling, 3,500 feet above the Yangtze River Valley.

Broken by famines that never end. Three years ago I saw a vast distressing camp of starving men, women and children on the edge of Nanking, the sight of which hopeless suffering was sickening. No sooner did I touch Peking than rumors of famine were audible on every hand. No rain had fallen for months, and the wheat crop in places was blasted by drought. Raising wheat in North China is always a speculation, and farmers take the chances; only they plant other crops that ripen later and barely save them from starvation when the wheat fails. They raise no rice up that way.

Well, crops of all kinds were failing in the Kansu Province, where they have failed for the last three years, and the famine is on in full swing. I heard of a governor of one of the Yangtze Provinces who was ordered into the fields to

IN KIANGSI PROVINCE.

different nationalities are represented. It is the most unique summer resort of the Far East.

pray for rain and to stay there till it came. It is natural that officials and people should turn toward Heaven with pitiful prayers as they see the coming horrors of famine. I used to think of Chinese famines as coming only occasionally. It is truer to think of China as never knowing the year when large portions of her population are not in profound misery and mourning from sheer starvation.

Broken by relentless floods. I have only to raise my eyes from my paper to see tens of miles of the distant Yangtze, whose valley is the richest of the whole East. But that huge yellowish river, bordered on either side by millions of rice fields, is now forty feet above its low level, so that its conquering floods have taken wide possession of the plains, making great lakes here and there. Only a few days ago the Han River, which empties into the Yangtze at Hankow, brought down its burden of mountain rains and melted snows in an irresistible wall of water fourteen feet high! A telegram of warning was officially sent to Hankow, but was misunderstood and

neglected with appalling results. The river was full of native boats that had crowded into its mouth to avoid the strong current of the Yangtze, and suddenly this wall of water, coming as if from a broken reservoir, burst at midnight over the helpless boats grinding them and their occupants into one mass and vomiting all together into the Yangtze.

Only yesterday I heard from one who had seen swollen bodies floating down the river from another flood farther in the interior. And people coming up the river from Nanking say that trips to the Examination Hall and to the Ming Tombs are impossible, because the city is so badly under water. The morning paper says a town near Nanking is five feet under water, the worst known for twenty years. That means that the rice crops of all that level are in peril or past all hope. The poor governor who prayed for rain received far more than he asked or dreamed of.

I used to think of China as an enormous plain—the great prairie of Asia—thru which flowed the largest rivers of

THE PAILOU

The German Emperor compelled China to erect this to the memory of Baron von Kettner, who died on this spot during the Boxer siege of the Legations, 1900. The three inscriptions are visible at the top.

the world. But from this Kuling Range one can see in every direction endless chains of mountains retreating one back of the other until piled up against the horizon. In geologic times the Greater Pacific rolled over all these low lands and covered China's plains all around Peking and south thru the entire Honan Province. For hundreds of miles the present valleys of the Yellow and Yangtze Rivers were under the Pacific. The mountainous Shantung Province, where the English hold Weihaiwei and the Germans seized Kiaochau Bay, used to be a group of distant islands. Then the powerful river torrents went to work and gradually brought down soil enough to make the basis of broad plains. The blinding winds joined in and blew sand and dirt from Mongolia into hundreds of miles of the shallowing Pacific until the rich farm lands of the empire were brought into existence.

There is no need of letting these great

rivers that have been China's greatest blessing become "China's sorrow." Only let the fatalistic spirit of the East loosen its grip, and the humane spirit awaken a little more rapidly, and then China will plant forests over her vast mountain ranges and apply science to the taming of her now murderous rivers, and so bring safety and food and life to her broken millions.

To say of the currency of China that it is broken beyond expression would mean little to a Westerner. But to be in a country where they have Mexican dollars, Dragon dollars, Straits Settlement dollars, French dollars, American trade dollars, Spanish dollars, Japanese yen, all with relative, not fixed, values, all of these silver coins changeable into paper at varying rates, the difference of exchange varying with every province and every city; with a fractional silver and paper currency that is good in one place and no good in another, and is always at

a discount with dollars; with customs and telegraph and post offices run in taels, which have no existence as coins—the term *tael* being a weight of silver—and varying with every open port—to go around in such a country requires a native banker to carry and compute your cash. Yesterday I “cashed” a \$25 (Mexican) check and received ten Mexicans, and as that was all the silver I cared to be freighted with on a hot day I asked for the rest in paper. Two men went

pressing of all Chinese problems. Yet petty bankers and money changers, tens of thousands of whom live and have their being on buying and selling this wretched currency, are dead set against reform. Officials who control private mints see no need for a change that would tap their incomes. And big merchants who have the privilege of issuing their own paper money are not eager for reform. All the same this wretched money system feeds the gambling spirit.

CHINESE GROUP

The central figure is a leper in an advanced stage of the disease. Such human beings are permitted to beg in public.

into an inner office and were gone so long that I feared my fifteen paper dollars were forgotten. But when the two bankers appeared with both hands full of paper and told me there was so many thousand “cash,” I found the stuff would fill both pockets of my jacket, and felt for the first time in my life that I had money to burn.

I understand now why everybody says that financial reform is one of the most

cheats every one but the professionals, and adds to the misery of the poor chair-carriers and farmers and coolies upon whom ultimately fall the burdens of the endless discounts. If a man must slave for ten or fifteen of our cents a day, and feed himself and family, a sound currency would add a little to his wages, and would bring a higher morality into common life.

But all the sorrows of famine and

flood, and the evils of an impossible currency, have not broken the pride of this historic people as has the wide-reaching network of extraterritoriality, the like of which has never been known. The "rights recovery" spirit; the growing resentment toward all foreigners, including Japanese and Indians; the foreign hand in exploiting China by means of railways and steamers; the foreign settlements and administrative power over natives; the pressing necessity of having speedily a large army; the extraterritorial rights of missionaries; the seemingly strange political position of native Christians; the foreign postal systems; the administration of customs; these and other problems are but phases of the extraterritorial questions which, in my poor judgment, is the one great problem, not only of China, but of the entire world. For it concerns the increasingly friendly or hateful attitude of more millions of

human beings toward one another than is involved in any other problem of practical world-politics.

In this paper I can give only a shadow of its evil side, by means of two apologies.

If there is any way in which a great people can be stingingly irritated and exasperatingly humiliated, it is by forcing from them such public apologies as makes them lose face. It may be true that the Peking Government was responsible for the shocking Boxer attempt to kill the accredited representatives of Western nations, and therefore deserved the severest condemnation of the entire world. The victory was ours, and for punishment were lootings worthy of barbarians; the destroying of sections of Peking and of neighboring towns; the execution of high officials; the ruin of thousands of innocent homes; the voluntary suicide of 1,100 women in one city

FAMINES AND FLOODS PRODUCE THOUSANDS OF THIS TYPE IN CHINA.
A group of beggars at a station on the Peking Hankow Railroad.

who feared the brutality of Western soldiers, and preferred death to dishonor; heavy indemnities; new concessions.

All these are among the usual horrors of war and terms of peace. But the German Minister, Baron Von Ketteler, was unfortunately killed. For this the Chinese Government was forced to erect a permanent marble-arched triple gateway across the main street where he fell, and inscribed high up where the words cannot be mutilated, in three languages, with an apology for the deed: "The Chinese hate it!" is the very natural way of sizing up its effect upon the officials, the scholars and gentry of the capital. It is a standing peril to pleasant international relations, and requires the presence of a policeman at its base night and day. If now, William II, ruler of a great and powerful and glorious empire, could see his way to ask the Peking Government to quietly remove that monument as a proof of his real friendship for China, he would have taken a step that would touch the heart of the Chinese people more than the return of indemnities. It would mean that a victorious nation had no intention of permanently and openly humiliating a defeated foe.

One more apology is in evidence as I write these lines. No one can set foot in Shanghai without being surprised at the sight of tall, turbaned, black-whiskered, dark-skinned, fierce-looking Sikhs patrolling the streets as police, with an occasional one mounted and armed. How the Chinese fear and hate them! And that seems to be one of the reasons for their employment by the City Council.

Now the government of Shanghai is no simple question. To about 14,000 foreigners there are some 400,000 Chinese in the limits of the settlement. In 1902 there were 83 European constables, 167 Sikhs and 604 Chinese police. There are now 456 Sikh police and 530 others employed mainly as private watchmen, making a community of about 1,000 Sikhs. And it is quite common talk that these Sikhs are overbearing, insulting, and even brutal in their treatment of the Chinese. A gentleman just now told me that he recently saw a Sikh knock down

a Chinese who was thoughtlessly going along on the wrong side of the road, and when the poor fellow got up, the Sikh violently kicked him. And for such treatment as this there is virtually no re-

RUINED TOWER IN PEKING

All that was left of the Presbyterian Church in the Boxer movement. The church tower is kept as a memorial of the outbreak.

dress. As a community these Indians are detested by Chinese men and feared by Chinese women for more than one reason.

During this month whole columns of the *North China Daily News* are taken up with the trial of three Chinese editors for writing articles abusive of the Sikhs and likely to cause public disturbance. They called the Sikhs "beasts" and "slaves without a country," and denounced their being employed as police and watchmen. For this they were called up and required to publish a written apology of which this is a part:

"In the course of our articles we have used many terms of abuse implying that Indians were not human beings, and in doing so it is clear that we were gravely wrong, and we withdraw all that we have said without reserve whatsoever.

For we know that Indians are men, like our brothers, and we regret that in the heat of passing anger at a

single case of crime (brutal assault on a Chinese woman), we have permitted ourselves to overstep the bounds of reasonable criticism!"

Well, the editors published the apology with indignation over the plan to make them call these Sikhs "men like our brothers." I do not know what sentence the court will pronounce on these editors, who have elected to live under government by foreigners rather than go a few blocks and come under Chinese jurisdiction. It is true that this community of nearly half a million Chinese is a wonderfully prosperous one. It is true that Englishmen in the East, whatever their faults, have done a splendid work out

here for which the whole world may well be thankful. But I can't help thinking that if they would carry back to India that thousand of hated Sikhs instead of extending this police system even to Tientsin, they would remove one source of constant friction in this vast extraterritorial system that ought to be worked in the most conciliatory manner possible.

"China has brought it all on herself"—may have answered for a nineteenth century snapshot judgment. Will it work for the twentieth century attitude toward this great historic people?

SENDAI, JAPAN

Marah

BY ROSE CHAMBERS GOODE

By Marah's bitter waters
I knelt me down and drank.
The desert was about me—
What matter if I shrank?
There were no other waters.
So I knelt me down and drank.

And my soul was sick within me,
And my parched lips rebelled,
And beneath my aching eyelids
The scalding tears slow welled;
For there were no other waters,
And my parched lips rebelled.

I said, I cannot drink it;
I said, Now let me die;
Around me burned the desert,
Above me burned the sky,
And the waters were so bitter!
I said, Now let me die.

I looked down in the water,
Which I knew I could not drink,
And I leaned upon the thirsty tree
Which grew there on its brink,
For even in that desert place
A tree grew on its brink.

And I looked long at the water,
Which smiled there at my feet,
Till my tortured brain cried out to me
All waters must be sweet
And I drank those bitter waters—
And I found that they were sweet.

BAFFIN, VA.

Its leaves drooped downward mournfully,
Down drooped its branches there,
As if to draw the water
To meet them in the air;
But the bitter, brackish water
Did not touch them anywhere.

I sorrowed for my thirsting self,
And for the thirsting tree,
And for all thirsting things on earth
I sorrowed bitterly.
(The desert wind breathed on the leaves,
And scorched them on the tree.)

I said, For me there is no hope;
But it may be, said I,
The tree can drink these waters,
Since it has grown so nigh,
And I will save the little leaves
Ere time for me to die.

I broke the drooping branches,
And I laid them in the pool,
And the water on my fingers
Seemed suddenly more cool
As I laid the little thirsty leaves
To drink there in the pool.

The Marriage Question

[We ventured the opinion in our editorial of November 18, in "Comrades and Sweethearts" that the personal experience published in that issue under the title, "Why Do Not Educated Women Marry?" was one of the most important questions to which we had ever given space. We are glad to find that our readers agree with us, as shown by the interest it excited. Taking a change of venue to the *New York Times* the discussion has been continued at the rate of a column of letters a day for the last month and is still running. In *THE INDEPENDENT* it was followed by an article on "The Unattractiveness of American Men" on November 11, accompanied by an editorial on "The Uncultured Sex," and another contribution from "One Who Did" in our issue of November 25. As a conclusion to the discussion we give below a number of letters from our readers, or rather quotations from letters, for none of them are published entire. Most of them are marked by the same note of sincerity that characterized the original article of the "Unwilling Celibate" and we feel that we have been justified in introducing an unconventional and what some would call an undignified topic. In our opinion, it is better worth talking about than the political crisis in Persia, with which most of our readers have little interest and none of them anything to do.—EDITOR.]

Pertinent Query.

Let me ask one question to my married sisters: Are we as a rule making our homes such homes for our children that young men visiting us will say: "Give me a future like this"?

A MARRIED WOMAN.

Ask the Men.

If *THE INDEPENDENT* really wishes a truthful answer to the question which it has raised it will have to ask the men of the United States why they do not marry; not only because these are equally remiss in regard to the duty or privilege of marriage, but especially because they have now, as they have always had, the larger freedom in the solution of the personal question involved.

A READER.

How to Do It.

If the Unwilling Celibate were a bit more willing to be waited upon and would for the time being sink her obvious cleverness, looking wonderingly up at a man, with "Isn't it wonderful?" "Is that really so?" "Did you do that yourself?" and would wear a bit of blue now and then, methinks things would be different. Afterward, as a wife, let her be as clever as she may. Until then she should be less of an Ann Eliza.

A CONSTANT READER.

Not a Sour Old Maid.

If a man is honest in his affections he can win most any good woman; but they are not, at least the majority are not; they like clubs and foolish women, and leave nice modest ones, saying nasty things about them, because of their slowness and stupidity. I think the writer of "Comrades and Sweethearts" is measuring the men by his standard; he is one out of a hundred, and, more's the pity, for nice girls there are not more. I am forty years old, and have no confidence in any; one bump is enough for me. I am not a "sour old maid." I like company, am affectionate

and am not taken for more than thirty-seven. I can't understand why some women will marry "any man" sooner than none.

A CONSTANT READER.

The Superiority of American Men.

I read the remarks of Miss "Amanda Saepe Quaesita" with much interest. Her experiences and mine do certainly not tally! especially in nationalities, for I have never met a foreigner—and I have known a few—who could hold a farthing rushlight to a nice honest forthright American. And my acquaintance has not been confined to organ men nor scamps. Only one ever was moderately attractive—a Dutch count—and he showed his essential Americanism by worshipping the Stars and Stripes to the extent of citizenship papers and a Yankee wife. I confess I don't see what American girls find attractive in the exaggerated mannerisms so different from our plain truth dealing American ways. And I had rather have a man honest than artistic—much rather. And, also, I had rather have him slow at lovemaking than so facile that he loves a girl on every street, that he may suit all moods, as was the airy theory of a certain Frenchman. There is surely something higher, and I cannot agree with your editorial that the "faults" of American men in their choices of wives can be cured by aping foreign ways.

THE UNWILLING CELIBATE.

The Dislike to be Waited On.

The caption to your editorial expresses the situation in a nutshell: She is a good comrade, but a poor sweetheart. That last I suffer from her sentence: "My other chiefest unfeminine characteristic is a dislike to be waited on." That tells the whole story. For a man's womanly duties largely lie in waiting on his sweetheart, doing her numberless little services and attentions, many of them of no real value or importance to her or importance except as tending to win her heart by striking a responsive chord in her nature. They are simply the instinctive reflexes of the man

wooing. But if they don't strike the responsive chord, if the woman's natural reaction to these things is to repel and avoid them, she is hard to woo, and not unlikely never to be wooed.

It is not true, of sensible modern men at least, that they like a woman to "show an utter dependence upon a man, . . . in order to flatter his sense of superiority," yet that does approach the idea. A man in love, at any rate, does want a woman to like to be waited on, to like to have things done for her. It is a man's way of making love. If your contributor's marriage is as improbable as she seems to think, it is her unwooableness, not her age, that makes it so. Thirty years of themselves make no woman an old maid, in these days of late marriages. But to marry your contributor, I fear, will take a man of some considerable determination and persistence, who will make up his mind that he simply *will* have her, and will resolutely force his way against her repulsions and obstruction—not her repulsion to his company, but to his wooing.

A MARRIED COLLEGE MAN.

The Degeneracy of the Male Sex.

The white races have inherited from the Middle Ages, the era of chivalry, the idea that the man should be a knight and champion for the protection and the control of the weaker sex. There were no scholarly women in those times, and their highest duty, from a romantic point of view, was to nurse the sick and wounded knights who were engaged in the incessant wars, domestic and foreign, of that age.

That age has passed. Men under the baneful influences of distilled liquors, tobacco and other drugs which were unknown to the human race until the sixteenth century, have become so demoralized and degenerated that many are no longer fit to be the support and protection of women, and others are afraid to undertake it.

This is the reason why so many women are seeking collegiate education, and are pushing their way into the trades and professions formerly monopolized by men, because they find it necessary not only to support themselves, but also worthless male relatives.

Under these conditions the movement by women for political power, and for a wider field in business and social liberty, will go on until the steady decline of the stronger sex will finally leave in the hands of the women all the power and all the control they demand.

The intellectual woman, other qualities being in harmony, and who is not an "assess" is the most charming creature in the world, but the vain and shallow fellow will be apt to avoid her. She will not submit to the assumed control of an inferior male creature.

—From an editorial in the New Orleans *Opinion* on the Independent article.

The Opinion of Her Husband.

I left the shores of my native land and cast my lot among strangers rather than marry the man chosen for me by my people—and why? For no other reason than this, that my very soul revolted at the thought of marrying a man whose interest in life never extended beyond the four walls of a drawing room, or, if it did, it was in paths forbidden to his wife.

And I married the American man of my romance—I married him nearly twelve years ago, and the romance, even today, is as bright as it was in the golden days of courtship, but it is surer and sweeter, and I would not, if I could, exchange it for any other earthly possession. Yet he is a college professor in a Western State university, and his opportunities for the cultivation of the social arts and graces are the opportunities common to all boys who worked their way to an education from a cattle ranch!

I called the attention of this husband of mine to the views set forth in the before mentioned article, and asked his opinion of them. He said: "My dear, I have spent many years among college women, and I know them pretty well. They are like other women, some have romances, others do not; but a romance is an affair of the heart, and if any woman tells you she never had a romance it is either because she has no heart or because she has never revealed it to the waiting world. Men are seeking the woman who possesses that rare equipment, and the woman who aspires to the hand of the true man must have a heart warm and responsive and a soul true and faithful."

And he said much more, tho I must not repeat it, but I gathered this much: That there are men, strong, tender and fullest of human worth who are not married because they have never found the woman who possesses this warmth of heart, this unselfishness and tenderness that true men require for the foundation of their homes.

THE FOREIGN BORN WIFE OF AN AMERICAN MAN.

The Newspapers to Blame

Perhaps one of the strongest factors in the apparent increasing aversion to marriage among educated women is the publicity given by daily and monthly journals to the unhappiness of such a large number of married people, and also the instances and statistics given of all kinds of crime, together with details of graft, fraud and corruption in different forms.

Women are still hero worshippers, and heroes or men of principle seem to be on the decrease. Not that I for one moment believe there are any fewer true men today than there ever were, but the presentation of the wrong side of life kept up so persistently by our writers and statisticians is a grave mistake. Even when we sometimes read of noble action or fine endeavor, there are always

those who can, and generally do, relate something to detract from the nobility shown; and often the doers of brave or noble deeds will themselves, if we can believe the printed reports, do or say that which shows the contrasting side of their natures. The constant "muckraking," as it is not inaptly called, and the unnecessary exposure of crime, make women—and men—too suspicious of all seeming good.

The thoughtful woman, after looking thru the average daily paper or certain of the monthly magazines, marvels that so little can be found in them to indicate that sense of honor and love of right which must still exist among mankind. The educated woman is the woman who reads these things with a knowledge of what they show of the tendency of men today, and not only of the men accused of wrongdoing, but also of the men who seem to find delight in making the accusation. To me, one is as little to be admired as the other. It is not a picture that is calculated to lead a woman's thoughts toward marriage.

The influence of these publications is subtle and perhaps not perceived by most women, but it is none the less sure that so much publicity of the evil actions of men of all grades is detrimental and has a pernicious effect on the minds of women and on their estimate of men.

She Knows Too Much of Men.

There are many reasons why the middle class girl does not marry, but I believe the training she received from the men of her own family, and from the men she has to know in her pursuit of bread and butter, is a large factor in the case.

Many a girl receives a self-conscious training from the men of her own family. In her family life, the girl frequently hears her brothers criticise frankly the conduct of a girl known to both. They often end such a criticism by telling the sister what she may not do or say to a man. The father frequently chimes in. They rarely tell her what she may do to make herself liked. As a result, when the girl is of a marriageable age, she is at ease only with married men or younger boys. She often wonders why all the nice men are married. Men her own age may respect and like her because she has no affectations, but after a certain point in their acquaintance they find an impassable barrier. This brick wall is the result of the well-meant brotherly "don'ts."

One masculine writer bewails the fact that women do not encourage men more. He thinks that under certain circumstances "a gentle pressure of the hand" may be admissible. The type of girl I am describing is quite willing to go thru numerous reincarnations as an old maid, but she positively refuses to—as she would put it to herself—squeeze the hand of a man. If she marries, the man in the case must make his wishes known so definitely that she cannot mistake his meaning. The probability is she will never be aware she has

had an opportunity to marry, unless he is exceedingly frank.

The middle class girl often works, and as she is not college bred her salary is small. Apart from her family acquaintance with men she judges them largely from her contact with them in an inferior economic position. To her the man who dresses better than his business position demands, while his wife is shabby, is selfish at home; the man who is irritable and fussy minded with his inferiors, is bad tempered in his family, and the man who presumes to insult a woman because she is his social and financial inferior is untrue to his highest obligations. Two years of business life will often shatter the young girl's faith in men as a class.

A DERELICT.

The College Women Who Marry.

The first writer seems to me typical of a certain type of girl, the very openness of whose nature, the freedom from mystery or coquetry, while arguing the best of wifely characteristics, nevertheless, fail to interest young men, tho they marry later, becoming the wives of widowers or more mature bachelors. That so many women of this temperament are college women possibly comes from the fact that they turn their attention to education because at the age when other girls are mating, no mates appear to turn their attention marriageward.

The writer of the second article, who finds the American men unattractive, does not seem to me to be quite the normal American girl. Possibly her acquaintance with people of other nationalities has changed her native characteristics, at least her sentiments appear to me very un-American. In foreign countries, where marriage is arranged by the parents of the girl, the suitor would undoubtedly have more or less of an arduous task in "making the girl love him" after "he has ascertained the size of her bank account." Now with the freedom and independence of the American girl in her courtship, a man would consider himself rather lousy if he proposed the momentous question before he had received what he would consider sufficient encouragement on the part of the young lady to warrant his making the venture. For my own part it seems to me a man would feel very foolish to work himself up into an ardent confession of love, under the cool, criticising eye of an unresponsive mature woman. With a young romantic girl it might be possible, but hardly with a woman with a doctor's degree after her name.

The persistence that she admires does not accord with my own sensibility. A matter of nine years separates a Harvard Freshman, with the possibilities of his own proposal to an old maid, from my Senior year in college and from a couple of more afterward. But this persistence without fair means arouses a sympathy which I cannot find very stupid in comparison with our American young men, who regard my readiness by their seeming fickleness. I think the usual

American girl would hardly have found the foreigner the writer speaks of as afterward becoming a bank clerk interesting. When a Junior in college a Japanese student thought he had fallen very desperately in love with me and offered to prove it by blowing his brains out. This was not nearly as effective in my case as when the football halfback that I admired repaid my own fickleness by asking another girl to go to the Junior Prom.

To have good friends one must be a good friend. And to have a good, true American lover, there must be a real, human sweetheart, for it is a touch of nature, not a touch of education, that makes the whole world kin.

ONE WHO DID MARRY.

The Fault of Training.

The Unwilling Celibate has had an experience which I believe to be typical of the life of thousands of college bred women. Seven-eighths of what she wrote is minutely true of my own life, and her character sketch of herself and her tastes, with the exception of a few words (notably those regarding her delight in dish-washing) I might truly have written of myself. Yet when I married, at the age of thirty-two, I married a man who had been my lover twelve years before, and loved me not for myself as I was at thirty-two, but for the little girl he had known in college. We are very happy, both of us, and we say very often: "How silly to have waited so long! how foolish and how nearly tragic!" But I know why we waited so long, and I think I know why the Unwilling Celibate is still waiting, and thousands more of the finest women in America.

A girl's training is radically wrong. I hesitate to say this from loyalty to my own and to thousands of other noble, devoted intelligent mothers, and of the earnest effort of hundreds of colleges where women are trained. But it is true, and it is a sad result of the evil that shadows the world, of the vice and disease which make marriage the hideous lottery it is for women. Moreover, we cannot change our girls' training as long as conditions continue as they are at present.

Your daughter and my daughter must be taught, as the Unwilling Celibate was taught and as I was, to be cautious, to resist, to distrust her own impulses. We must guard her thru that period when hand meets hand spontaneously, when the touch thrills and the cheek mantles; she must be taught self-control and imbued with the desire for learning, for anything that will save her from an "unfortunate affair" or an "unhappy marriage." The mating period past (and for most women it is past long before they reach thirty), then and only then, they feel the desire for marriage, for children—that desire which will grow stronger and more strong and will make them less and less attractive to the sort of men they themselves admire.

Isn't it true, little celibate, that you had small desire to marry, after the youthful period of dreams, until you reached twenty-five? But it was that it is only within a few years

that the longing for children has gripped you? I have seen the changes in many women—the three changes, the repressed impulses of girlhood, the indifference to marriage of the early twenties, and the turning toward it that comes as the thirties come.

Our modern system seeks to put the mating season too late. The race has not yet outgrown the habit of ages, and the result is delayed marriage, disease for almost 90 per cent. of our men, and enforced celibacy for thousands of the finest type of women.

Earlier marriages, more and better training on sexual subjects, a single moral standard for men and women, these are the only solutions I see for this vital problem.

Men's Achievements and Women's Culture.

Does culture mean taking "tea in charming corners, moonlight walks, sunset rides" games, pictures, pet dogs and "social experience"? Saepe Quaesita would have us believe it does; at any rate, she asserts that, owing to American men's neglect of these things and their whole-souled devotion to life's proper work, they "are not culturally on a level with the women" as European men are. Can this be the culture of Bacon and Emerson, or of Kipling and Roosevelt? Shame on such mollicoddle culture! Genuine culture is neither wealth nor leisure, and tho each of these may help to produce it, it is rather a by-product, and so far from being existent in direct proportion to them we might well say that culture varies as the cube root of wealth and leisure. Culture makes play subordinate to work. Saepe Quaesita makes play the chief end of man, and he that cannot play can be none of hers. He is an uncultured specimen of "the uncultured sex."

The experience tells us that women are in the majority, not only in the churches, but also at the lectures, concerts, operas, theaters, art galleries, libraries and study clubs." We are not told, however, that it is chiefly women that deliver the lectures, compose the music, paint the pictures, write the literature and perform the work discussed in the study clubs, for the writer of the editorial was aware that one does not need as many degrees as a thermometer in order to know better.

It is stated with a good deal of assurance that women are being better educated than men, which is certainly true up to the end of the high school course, but no farther. But, on the other hand, the experience of bookshelves and libraries in our public libraries shows unmistakably the strong relish of feminine readers for the latest, which, in comparison to the great, classic, and the books of the past, which the men are in overwhelming majority in the reading of that class of books and magazines to which the INDEPENDENT belongs, whose range of interests is not confined to contemporary stories, but which is world-wide in its scope of literature that devotes itself to the best thoughts and most

important facts in all the realm of human experience.

If "the lowest and worst concerts and operas are attended only by men," let us not make the mistake of comparing the best women with the worst men. Let us not make the mistake of placing schooling equal to education. "By their fruits ye shall know them." If women are better educated than men, why are they not making the discoveries, delivering the great lectures, at least why are they not composing the greatest music, writing the best books, and painting the best pictures? Certainly there is no lack of opportunity for them in music, literature and art, fields that have been open to them from time immemorial. Yet a history of the achievements of "the uncultured sex" in these, the favorite pursuits of educated women, would be substantially a complete history of the whole, the achievements and productions of women being comparatively negligible.

SUBSCRIBER.

American Inferiority.

THE INDEPENDENT has recently published two notable articles on the subject of American inferiority. In the first of these, which was remarkable for its courageous forcefulness, Miss Ruth Cranston declares that the American girl, whom we have been taught to revere as Nature's last and most perfect handiwork, is, after all, a greatly overrated young person, whose perfections exist largely in the minds of her patriotic countrymen. In the second article, Miss "Saepe Quaesita" maintains that the American man is notably inferior to his European kinsman. Now, are these statements but the vagaries of a couple of interesting young women, who, after the manner of their sex, seek to build sweeping generalizations upon an insufficient foundation of fact, or are they capable of justification? For my own part I believe that both are right and that however painful an admission it may be for an American to make, our people are notably behind those of England, France and Germany in intellectual development, if not in moral power.

The excuse we usually hear when attention is called to this state of affairs is that America is building up her civilization, and has no time for scientific achievement. Undoubtedly this is true of the West and South; but after we have allowed fifty of our ninety millions for the "building up" process, should not the remaining forty be equal to those of France or Britain? Does any one seriously believe that we have fewer leisured citizens than Denmark or Holland? As a matter of fact, we are the richest of all nations, and should be in the van, not in the rear, of the procession.

We are told, however, that if our men fall short of the European standard, our women make up for the deficiency. The answer to this view of the situation is brief but convincing: The United States has never produced a woman of genius in the whole of its history.

We have had women of talent, such as Margaret Fuller, Mrs. Harriet Beecher Stowe, and a few others; but so far we have produced not one who can fittingly claim the highest rank. Our women write novels, but we have never had a George Eliot, a George Sand, a Madame De Staël, or a Jane Austin. They write verse, but Mrs. Browning was an English woman. They may dabble in science and art, but we have no Rosa Bonheurs, no Chaminades, no Madame Curiés, no Bernhards. Even the bellicose Mrs. Pankhurst came from over the sea. If the reply be made that in this list we are including the great women of two nations and two centuries, it is only necessary to point out that Madame Curié, Madame Chaminade and Mrs. Humphry Ward are still alive, and that there are none of their kind in America. Our prominent women are the wives of millionaires who distinguish themselves by the amount of money they spend and not by their contributions to art, science and literature. With our great population, and our large number of leisured women, we should in this respect outshine England and France put together. Instead of so doing, we are inferior to either. And so the query suggests itself: If our women are not conspicuous in intellectual achievement, and are, as all the world knows, unwilling to be mothers, and inclined to prefer boarding houses to home making, of what does their much vaunted superiority consist?

The women of America, however, are not to blame. We may amuse ourselves discussing the relative merits and demerits of the sexes, but no one really doubts, and least of all do the women themselves doubt, that the leadership of the race belongs to the men. The American man, in gaining the world, is losing his own soul. The most energetic, vigorous and courageous of all mankind, he prostitutes his energy, vigor and courage to one sole end—materialistic success. Mammonolatry is the great American religion. Steeped in greed, and stupefied with the passion for gain, we have sunk intellectually and morally as we advanced financially. From Washington and Jefferson to Lincoln and Lee was no retrogression; but from Lincoln and Lee to Rockefeller and Ryan, what is that?

There is no reason for taking a pessimistic view of this situation, as bad as it may appear. The one hopeful feature of it is that, whatever else we may be, we are intensely alive. Let our energy be turned into the right channel and all will be well. Already we have shown ourselves physically equal to the races of the Old World; and no one supposes that we are inferior to them in natural capacity. But the same thing has happened to us, as a nation, that often happens to ambitious individuals. It is a matter of common observation that grasping men steadily decline in intellectual power and moral worth as they grow older; the accomplishments of their youth, their love of literature, art, society and pleasure, gradually atrophy and finally they become mere money-making machines. Such is the plight of the American people

EUSTIS FLORIDA

The Potential Power of the Small Investor

BY MONTGOMERY ROLLINS

A MAN not too abundantly endowed with a knowledge of finance, but yet of a class too numerous for its own welfare, had previously invested in some bonds. Later, having additional funds, he went again to his banker, and said, "I should like two more of those brown bonds you sold me a few years ago." His knowledge of finance, in this connection, was limited to but two things, the prompt payment of a generous rate of interest and the color of the bonds. As to the name of the issue he had not the slightest recollection. Times have changed somewhat since this occurred, and such pitiful ignorance is immensely less common today, for in no way has the American public been so rapidly educated in the last decade as in the subject of money and its investment. It is but fair to inquire into the reasons of this great enlightenment. It has been very largely accomplished thru the medium of the high-class magazines. What started the propaganda is an open question. Possibly it was an opportunity given them by the increased interest in corporate and municipal finance, engendered in the minds of the people by our only living ex-President. Perhaps it was Governor Hughes, and his stirring of the public conscience thru his insurance investigations. Or, mayhap, we should give a certain frenzied financier some credit, for whatever his motive—possibly in spite of himself—he certainly has helped to make us think.

The weekly and monthly publications went at the matter in an entirely different way from the dailies. The former started on the correct assumption that the great mass of investors was almost utterly ignorant of even the language of finance, and proceeded to instruct in simple, understandable words and terms; the newspapers, on the contrary, framing their information on the mistaken basis

of a well grounded knowledge of money matters on the part of their readers, which shot over the heads of the multitude. Again, the magazines did not hesitate to give out the truth; ladled it out in chunks—undoubtedly overdid it in many instances —told things which, for obvious reasons, the daily press omitted.

But, whatever the cause, the emancipation has been, and is, going on at a great pace, and sooner or later Wall Street, in its broader sense, will have to reckon with it all, but, the writer believes, to its ultimate advantage. The good work—and by good work is not included the mistaken policy of generating the belief that there is nothing good in Wall Street; honest enlightenment is one thing, destructive prejudice is another—the better periodicals are accomplishing, will eventually show its results in a most beneficial way.

In America we differ in almost all our financial methods from the majority of countries. Consider what a tremendous amount of all our exchanges are effected by the means of checks, and compare this with the deep-rooted custom in France of paying for nearly everything in cash. But from that country, nevertheless, we can derive more helpful lessons of thrift and prosperity than from almost any other nation. Take, first, the intelligent investing ability of the French peasantry, and their enormous absorption power of small investments or other investments in small denominations. Of the United States Government bonds—one of the safest of all securities—a wofully small percentage is in the hands of our common people. In France, the contrary is the case, for over 80 per cent. of their national debt is owned by the industrial classes; and out of that amount the great bulk of it by the peasantry.

It has often been stated that a French family could live off the food which an

American family throws away. Undoubtedly this is an exaggeration, but it contains a large element of truth, for the French are notorious savers, as well as the greatest small investors in the world. They have been taught to save and invest, whereas, here in America, some save, some invest, and many spend all they can lay their hands upon. It is undoubtedly true that if we could shut the door of waste, "we should easily and quickly become the richest people that ever dwelt on the earth."

The French investor is found everywhere in his land. Even those in the most remote towns and villages are in touch with the money centers, for the banking system there is such that rates are uniform thruout the land, and the investor has an equal opportunity to secure new issues wherever he happens to be. And the denominations of the loans are such that small sums can be as easily taken care of as our proverbial one thousand dollars. The whole financial system of that nation is based upon giving the small investor an equal opportunity; we have heretofore always pursued a diametrically opposite plan.

Whether one buys bonds, shares of stock, or purchases a home, it is investment just the same. And there, again, the Frenchman has a wonderful advantage over the American who wishes to possess his own house and land. About the only available opportunity in this country, for the laboring class, is thru such institutions as the building and loan associations, but, in France, that great banking institution, the *Crédit Foncier*, steps in and provides the means. And the rate is alike for all.

The direct investing on the part of millions of people of their own hard-earned savings must, in the nature of things, cause an intelligent interest in affairs—business and financial—and prove a tremendous bulwark of safety to the nation. What a safeguard to stimulate an interest in the public weal; in good politics; in sound-principled men to manage public affairs for the better economic disbursement of public income!

Possibly, the blessing of a small monetary unit, like the French franc, is an incentive to save. When we break a dol-

lar, altho we get back seventy-five or eighty cents in change, we are apt to consider it all as spent; we count our wealth by dollars, and pay no attention to the fractions.

With us, almost the entire outlet for the small investing class is in the savings banks. We have long been accustomed to issue bonds here in large denominations. Our investor, therefore, with fifty, one hundred, or two hundred dollars must seek the savings bank, where he frequently loses several weeks' or months' interest, owing to the rule of the banks, which allows money to go on interest only from certain dates.

This may be worth serious consideration: If, for instance, the five thousand depositors of a given savings bank should interest themselves directly in the various concerns—municipal or corporate—in which the bank funds are invested, it would be of vast benefit to this nation, where, as it stands today, practically only certain members of the trustees of the institution are so interesting themselves, and many of them most superficially.

Mr. Pierre Jay, recent bank commissioner for Massachusetts, gathered some interesting figures in relation to savings banks, which show what an enormous force the depositors in this country would become, if they should gradually assume the management of their own affairs. In New York, New Jersey, and New England alone, there are about six million people having on deposit \$2,500,000,000; the average deposit being but \$430, and the depositors largely wage earners and persons of very small means. Of this vast accumulation, nearly one-half is represented by stocks and bonds, which fact strikingly evidences the indirect interest which these people already have in public and corporate welfare.

After all is said and done, the savings bank idea is a very paternal one, but has served a beneficial purpose in this great country. Still, on the whole, would it produce a nation of brains and intelligence if from childhood up we were kept in swaddling clothes? It would be better that an occasional small investor suffer loss, if the people, as a whole, were making progress toward such a coveted condition of affairs as to

stimulate a desire on the part of every man to vote. Something must be done to compel citizens to value the franchise. The present inertia is becoming a public menace.

It must be understood that decided progress is being made. The small investor is going to get his deserts, and it will not be long before he will be considered as a matter of course. Here comes an issue of bonds of the United States of Brazil—offered in this country—in denominations of fifty, one hundred, five hundred, and one thousand dollars. Of the many issues of convertible securities, which have been one of the fashionable investments of late, thirty corporations have provided for bonds of denominations of less than one thousand dollars; two of the issues comprising those of fifty dollars each.

There is inclined to be a decided agitation in favor of the "odd lot" investor. The customary one hundred share lot, which is the ordinary minimum transaction of the large stock exchanges, is getting some hard knocks, and many sincere-minded Wall Street men are thinking of better ways to handle small orders. The small investor is of growing importance everywhere, which fact is most gratifying to know. He was one of the saving factors of the last panic, for he quietly bought at almost the lowest prices, and took such a quantity of securities off the market that many brokers' offices were worked over-time filling his orders. Never before, except to a limited extent, following one previous panic, did the small buyer come forward in this way. Whatever may be said in this connection, unquestionably the educational efforts of the magazines must have been largely influential in guiding his efforts in that direction, and Wall Street was incalculably benefited by his timely presence in the hour of need.

The farmer of the West is little considered, so far, as a general investor, but not likely to be in the future. He has,

heretofore, relied upon loaning his surplus funds, which are increasing at a stupendous rate, upon local mortgages, but the very persons who have previously been borrowers have not only been paying their mortgages off with great rapidity, but are themselves becoming lenders.

And we must not forget our own building and loan associations, and kindred institutions, to which a brief reference has already been made. What is this class of investing but simply the small denomination again. Certainly there is no method of direct investing which we have ever devised which provides so completely for the wage earner. Not only is it a most helpful way in taking care of our smallest of investors, but it is not inconceivable to believe that these institutions will, indirectly, build up such a condition of affairs as may be largely instrumental in preventing riot, bloodshed, and, possibly, civil strife; besides which, having a conservative influence on unreasonable labor unionism.

When a man has his family housed under a roof which he owns, he then becomes a citizen anxious for law and order; he does not wish anarchy to reign, likely to destroy his property. If he has such a home partially paid for, and other payments ahead, he will be slow to vote for a strike, which must throw him out of work, and jeopardise those payments, unless there is a good, righteous reason.

We shall eventually reach an era of educational influence when the small savers will make an intelligent investment study of their own funds. This will enable the corporations and municipalities to sell loans in small denominations, as is done in France; will enable them to get higher prices; will stimulate a desire on the part of this vast horde of investors to keep themselves well posted on public affairs; will result in a more intelligent casting of their vote; in the selection of better legislators; and, in general, a bettering of our citizenship, and a reacting influence to the great public good.

BOSTON, MASS.

Budget and Books in Westminster

BY JUSTIN McCARTHY

THE great political topic of the British public is still the question as to what the Peers propose to do with the Budget of the Liberal administration. The *Times* newspaper came out the other day, according to its fashion, with a statement on this subject professing to be authentic and authoritative. According to this version of the lordly policy the main object of the Peers in the course they propose to take with regard to the financial measures of the Government is solely and absolutely to protect the rights of the democratic majority and especially the rights of the poor against the audacious efforts of the administration to settle the taxation of the whole country by an autocratic ministerial decree. The object of the Peers is simply to compel Mr. Asquith and his autocratic colleagues to submit their Budget to the judgment of the popular vote by means of a general election before it can be passed into law. This is indeed to picture the House of Lords after a fashion in which I think it has never been exhibited to the public before. The *Times* holds up to us the House of Lords as the self-constituted protector of the humble and the poor against the tyranny of the representative assembly and therefore as deserving the sympathy, admiration and support of all true lovers of genuine freedom. But then unluckily the *Times* has made several startling proclamations within the recollection of many or most of us which did not prove to be absolutely authentic when the light of public inquiry came to be turned upon them. We have as yet received no evidence that the House of Lords have been carried away by any such patriotic passion as that which the journal professing to be in their confidence has thus ascribed to them. If, however, such were actually the present intention of the Peers and if they are really anxious to enter on an entirely new career in public life, the career of protectors of the popular majority against the tyranny of a Radical ministry, I think it is much to

be regretted that they did not authorize some of their recognized leaders to make this sudden conversion the subject of an authoritative proclamation. There is some comfort, however, to be found in the reflection that we of the outer world cannot long be left in a state of suspense. The Budget must, within the course of a few days, be brought under the formal notice of the hereditary chamber. Then we shall have to learn whether the Lords will reject the measure on its own account or will refuse to have anything now to do with it on the ground that it ought to be referred at once to the judgment of the whole English people at a general election in order to declare whether such a scheme is or is not fit to be passed into an act of Parliament. Many public men in this country, who hold what are called moderate opinions on political subjects, are still of opinion that the Peers will be persuaded not to show themselves in proclaimed and uncompromising hostility to the House of Commons and that advice will probably be given to them from the highest quarters, which may have the effect of persuading even Tory Peers to listen to the voice of reason. For myself I cannot help saying that I rather hope the Lords will hold out to their fullest hostility and will thus compel the country to proclaim at the earliest opportunity the national resolve as to the position of the hereditary chamber. I am certainly not opposed to or distrustful of the existence of a second and in a certain sense an overruling legislative chamber, but I fail to understand how the people of these countries can submit or have submitted so long to the principle which makes the seats in that chamber the birthrights of the nobility and inaccessible, by election, to any one.

Even amid all the excitement created by the debates on the Budget in the House of Commons and by the expected struggle on the same subject with the House of Lords a very widespread and deep sensation has been caused by the

LADY ST. HELLER

death of Lord Selby, better known to the public of these countries as William Court Gully, formerly and not very long since Speaker of the representative chamber. Lord Selby was a man of advanced years, but our public men have during recent generations been enjoying such a long stretch of life that a certain degree of surprise as well as of regret was created by the announcement of his death. He had been attacked by illness, but there seemed no idea among those around him that a fatal result was to be expected and it seemed to have been quite a sudden change in the character of the malady which brought about his death. Mr. Gully was by profession an advocate and had won great distinction in the law courts. He was a Liberal in politics and had been for several years a member of the House of Commons. He made himself much respected during his tenure of office by the absolute impartiality of his rulings, and a Tory member who rose during the course of debate and endeavored, as the parliamentary phrase goes, to catch the Speaker's eye might have felt well assured that he had just as good a chance of accomplishing his

object as the most devoted Liberal could have. Indeed, I feel bound to say that during the whole course of my parliamentary observation and experiences, there have been very few instances indeed in which a Speaker, to whatever political party he belonged, was accused or even suspected of showing any favor to a representative of the Speaker's own party when that representative rose among others to claim an immediate place in the debate. Any such personal partisanship displayed by the presiding authority of the representative chamber belonged to a ruder and less developed stage of our parliamentary existence.

It has come within my knowledge that a volume of memoirs is about to be published which will, I feel sure, arouse a genuine interest among American as well as among British readers. The volume is to contain a large collection of letters and other written memorials of the late Countess Russell, widow of the famous Lord John Russell, during a great part of England's modern history, the political and partisan rival of Sir Robert Peel. Lord John Russell was the head of the Liberal, or as it was called during his time the Whig party, while Peel was the leader of those who were accustomed to describe themselves and to be described as the Tories. Russell belonged to a great patrician family, that of the Dukes of Bedford, and until the rise of Lord Palmerston he was the most influential member of what I may call the Liberal party in the House of Commons. He was created Earl Russell and thus, of course, was sent to the House of Lords in 1861. His widow, the Countess Russell, outlived him for many years. I had the honor of being admitted to her friendship—I am proud to think that it could not be described as mere acquaintanceship—during more than twenty years and I can sincerely say that I never knew a more highly-gifted and more noble-hearted woman. I was a constant visitor at her delightful home, Pembroke Lodge, in Richmond Park, a home conferred upon her by the gift of Queen Victoria, where Lady Russell spent the greater part of her widowhood, and I found her the most delightful of companions, a devoted lover of books, of painting, of sculpture and of music, a

lover also of progress in every field of human interest, ever active and beneficent in the cause of charity. Her memoirs are chiefly made up of her letters, preserved and treasured as these naturally are by her relatives and friends, and the letters all set forth, connected and accompanied by a biographical exposition which the hand of her only daughter, Lady Agatha Russell, is contributing to this memorial. I may say that I have had the honor of Lady Agatha Russell's friendship since I first came to take a part in English political life. The editing of this forthcoming volume, that which I may describe as the practical and technical part of its preparation, has, I believe, been put into the hands of Mr. Desmond MacCarthy, a young author already rising into marked distinction and of whom I may be allowed to say, lest I should be supposed to be sounding the praises of one of my own household, that he is not a relative of mine. Many, indeed most of the Countess Russell's letters which are to appear in this volume might be described as living records—in other words are the history of a time and a country told by one who bore an influential part in the history of that time and that country. The Countess Russell possessed among her many other fine qualities a rare gift of wit and humor as well as of poetic fancy. I may add that she was a most enthusiastic and most consistent supporter of the Irish National cause and that her daughter, Lady Agatha, follows her mother's example in this as in most other, or, indeed, I might say all other, paths of service to the interests of truth, peace, freedom and justice.

It has been my pleasure before now to commend to my American readers certain of the novels of Mr. Percy White, but I have never done so with more pleasure than I now feel in speaking of his latest book, "Love and the Wise Men," published by Messrs. Methuen, London. Mr. White is one of those writers whose generosity of output is never marred by meagerness of imagination, and his new story is to my mind one of his very best creations, if not, indeed, his very best creation. Seldom has the joy of youth and the divine folly of young love been handled with so deli-

cious an irony and so tender a sympathy. The Wise Men and their un wisdom are treated with a daring and a skill that is worthy of the hand that set down "The Pilgrim's Script," and the characters are limned with a bigness of treatment that is unusual in the novels of these days. I will not hint at the plot. Let those that would be delighted learn it for themselves, and learn in so doing that it is not the plot that really matters, but the humorous, melancholy commentary on the plot, the knowledge of human nature, of the human comedy and the human tragedy. It is a book for philosophers; it is a book for lovers; it is at once an audacious satire and an exquisite idyll. The book ends happily or sadly as you please but the ending is only portion and parcel of the sustained irony of a philosophical romance that is very frank, but also very admirable.

A book which is now creating and is likely to create discussion for much time to come thruout London and indeed among the readers of books everywhere is the large and handsome volume entitled "Memories of Fifty Years" by Lady St. Helier.

LORD SULLY

The "Memories" are liberally illustrated and are published by the firm of Edward Arnold & Co., London. I may tell my American readers that if they were now to see Lady St. Helier for the first time they might be somewhat surprised to find that her memories of social and political life could carry her quite so far over that period of half a century as the pages of her volume assure us. Lady St. Helier is the widow of the late Lord St. Helier, one of the most distinguished lawyers of his epoch, who became highest judge of the Divorce Court and was raised to the peerage. When he married the authoress of this book he was Sir Francis Jeune, and his wife was the widow of the Hon. Constantine Stanley, a distinguished officer, and son of Lord Stanley of Alderley. During my acquaintance with her, which goes back thru some quarter of a century, and indeed I may say that it was rather a friendship than a mere acquaintanceship, Lady St. Helier was one of the most distinguished figures known to London society. She entertained most largely and liberally and it is not too much to say that in her London drawing-room or dining-room every one was to be met who was really worth meeting. For Lady St. Helier, altho she to those who preferred that family's never thought of limiting her invitations to those who proffered that family's political creed but chose her guests according to their personal merits and ac-

cording to her own appreciation of their claims to find a welcome among those whose welcome is worth having. This volume contains vivid, picturesque, and, so far as I can judge, very faithful descriptions of those who were present at the brilliant gatherings in her London homes, and her recollections of that London life are preceded by the memories of her life in the Highlands, for Lady St. Helier came herself from an ancient and distinguished Scottish ancestry. I may say that I have met many Americans in Lady St. Helier's London home and have indeed met there distinguished men and women from all parts of the civilized world. Extreme Radicals and extreme Tories, Irish Nationalists and Irish Orangemen met there and for the time at least on friendly terms, and I need hardly say that the stranger from the country, or from some foreign country, was delighted to find himself brought into temporary companionship with poets and novelists and painters and musicians and statesmen whose names were known to all the world. At a time when there seems to have been something like a revival of the scandalous form of memoir it is especially gratifying to find that so thoroly encouraging a welcome has been given to those delightful personal recollections by an authoress whose finest and keenest humor never carries a heart-stain away on its blade.

LIONEL LINCOLN.

The Singing Heart

BY CLINTON SCOLLARD

I met a traveler on the road
Who smiled beneath his leaden load,
"How play you such a blithesome part?"
"Comrade, I bear a singing heart!"

I questioned one whose path with pain
In the grim shadows long had lain,
"How face you thus life's thorny smart?"—
"Comrade, I bear a singing heart!"

I cried to one whom adversity
Could not make bend the hardy knee,
"How such brave seeming? Tell the art!"—
"Comrade, I bear a singing heart!"

Friend, blest be thou if thou canst say
Upon the inevitable way
Whereon we fare, sans guide or chart,—
"Comrade, I bear a singing heart!"

CLINTON, N. Y.

A True Story of Oliver Wendell Holmes

BY STEWART LEWIS, M.D.

MY father, a medical student in ante-bellum days, was in the audience when this incident occurred.

"The Autocrat" stood in the lecture-room of the old Harvard Medical School, one winter afternoon some fifty years ago. What a contrast between speaker and audience! He, polished, cultured, self-possessed, urbane—they—boys from East and West and North and South, from farm and desk and workshop and counter—many of them with education and manners only a grade above that of day laborers! The medical student audience of today is no easy one for a lecturer to face. He who stood before the one of that day, with its entrance requirements low or altogether lacking, surely needed to be well fortified with courage and philosophy.

On that day there was a stir of curiosity in the room, for on the table before the speaker stood two plates, napkin-covered, contents mysterious.

"Gentlemen!" Dr. Holmes was speaking, quietly, impressively, "I have before me some pathological specimens, which I have collected at considerable trouble—and some expense, and which I hope will make an impression upon you which will last thruout your lives."

The room was tense with expectant curiosity. Quietly the napkins were removed. The plates were heaped high with paper wads—in plain schoolboy English "spit-balls." They had been gathered from the floor of the lecture-room. Dr. Holmes's "expense and trouble" had been a twenty-five-cent fee to the janitor.

"The Autocrat" watched them a moment. A few of the boys laughed. Most stared in astonished silence.

And then the deluge!

Quietly, calmly, but with slowly gathering force, Dr. Holmes began to speak. Gone was the genial philosopher, the kindly teacher, whom they so well knew! Before them stood the professor, the

scientist, the physician, defending his college, his chair, his profession, against the levity, the low ideals, of their own disciples. Sternly, soberly, he talked to them—of the honor and traditions of their college, of the efforts and difficulties of their faculty; of their profession, its high ideals, its sacred responsibilities. He talked to them of the priceless opportunities which they were wasting. His brilliant eyes seemed to search them one by one. His wonderful voice, never raised, yet carried to the farthest corner of the room. His clear-cut phrases lashed whip-like about them. His wit stung them. His irony goaded them; till in all that rough assembly scarce a man but was in tears.

And then, almost without a pause their friend and teacher stood again before them, as with the ease of the born and practised speaker he swung back into the every-day.

"As we were saying at the close of our last lecture."

My first meeting with Dr. Holmes was at a tea given near the college. I was a first-year medical student—about as low down in the social scale of that time and place as one could be. He was at the zenith of his power—the lion of the college, the idol of the city, almost of the State. Among the many I was introduced to him, and to my delight a few minutes later he sought me out. "Are you going to my lecture? Then, when you are ready, we will walk together." "When *you* are ready," a little phrase scarce worth repeating, yet, coming from him to the young student, typical of the kindness which made all men love him.

He was an absolutely unconscious humorist. In lecturing to his students he would stop in amazement when some quaint phrase, some flash of wit, set the roomful roaring with laughter. For a moment his mind would travel back over what he had said, and then his genial laugh would join with theirs.

A Pithecanthropoid Romance

ANN VERONICA* is a young English girl brought up by a widowed father and a maiden aunt. The father is a peevish man who holds that women must be governed and protected, that they are minors by nature, irresponsible, and pass simply from the control of the father to that of the husband. The aunt has in her young days been evaporated mentally and morally by this process. She is a neuter thing of the female gender. It is not clear to us how Ann Veronica received her first emancipating ideas, but she takes laboratory work in biology in a London school, and gets a hint of her blood relation to the beasts of the field. She discovers that what is called decent society is merely the "wrappered" existence where men and women deny what they are, what they want, their natural desires and instincts, for the sake of decency and convention. She finds occasion to rebel at her father's supervision, leaves home, goes to London and enters the Imperial College in order to finish her course in biology and take her B. S. degree.

Her adventures in the streets of the city are so recorded that they read exactly like those of a female anything else in a jungle pursued by males. The effort at seduction in the most important instance proves unsuccessful, not because she has any moral scruples, but because she has a physical aversion toward that particular person. The author introduces this episode to take the "wrapper" off and indicate the attitude of men in general to women in general—just as he introduces Ann Veronica's honorable lover with the flowery knighthood sentimentality and ludicrous would-be-husband egotism to indicate the best fate of a woman under the present system of love and marriage.

We, and a certain demonstrator named Capes, are always present at Ann Veronica's biological experiments in the labor-

atory. In this way we presently discover that the real subject for dissection is but Ann Veronica, not what she has under her microscope. The horror of the performance is that the girl does this vivisection of herself with such perfect clarity. She discovers the analogy between her own feelings and the history of certain blood cells she turns about under the microscope. She becomes a cell floating down the stream of time looking for another cell. In this highly creative mood her eye falls on Capes. He is the other cell. She is in love. This is what love is, according to Mr. Wells.

In spite of the admirably decorous language in which the next chapters are written, the author's purpose is plain, to show what women are for in the economy of nature. Ann Veronica hurries thru all the "wrappers" and emancipative phases of her sex only to find that she has no "female class feeling" and that the thing she wants is Capes. The book probably contains more interesting and suggestive information on the suffraget movement in England than is to be found elsewhere, for Mr. Wells has evidently been behind the scenes and Ann Veronica tries suffraget service as a sick dog tries grass for its digestion, in her effort to escape the "Capes craving." She spends a month in prison for this purpose and the bacteria taint of her analytical thinking is suggested by what she calls her creed: "I believe rather indistinctly in God the Father Almighty, substratum of the evolutionary process, and, in a vein of vague sentimentality that doesn't give a datum for anything at all, in Jesus Christ, His Son." . . . Morality also is a mere phase. She gets thru that and decency—all "wrappers," in short—out-rages filial obligations, discards common truthfulness, everything that we have acquired and cherished as an evidence of advance in the scale of things—and all in order that she may get back to just the man Capes. Finally she declares to him her feelings and is not abashed when he tells her that he is married, that he

has figured as co-respondent in a divorce suit, that he is leading a dissolute life, and that he will lose his job if she does not leave him alone. Mr. Wells is evidently a believer in the matriarchal form of relations between male and female. Ann Veronica replies naïvely that she had thought she only needed him, now she understood that he was in great need of her. It is a revolting inversion of the old scene in love stories where the angel girl receives her contrite lover and declares she is willing to sacrifice herself in marriage with him in order to reform him.

Mr. Wells's implied contention is that it is the "wrappered" life which makes against comfortable marriages. The lack of frankness, polyp frankness, is the occasion of dissatisfaction and separation, that true mates are shameless to one another. This may be a good laboratory notion in biology, but really few men or women could endure to live with any creature so thoroly "unwrapped" and unashamed as Ann Veronica.

Meanwhile there is a discovery which pioneer thinkers like Mr. Wells ought to make before they write any more so-called love stories. That is, why, in spite of blood-fits and every other animal instinct, we keep on trying so hard to be something more than mere animals. There must be some explanation of this "craving" so different from the Capes craving. The trouble is no one has ever found the fossil of a human soul, and the Capeses have discovered that a certain vibration of the brain makes a man smile or a dog wag his tail with happiness. But that doesn't answer the question. There must be a good authentic reason somewhere else if it is not in anthropoid biology for this everlasting conceit of the human animal about a "higher nature." If a monkey can shed his hair, learn to walk on his hind legs, talk, think and pray, what is to hinder him in the course of time and evolution from getting the wings and immortality he wants? It is not scientifically honest to leave this part of Capes and Ann Veronica out. As a matter of fact the concluding chapter of the book is a gross departure from the scientific method followed in the other part of it. Mere animals, for example, are not contented out of their environ-

ment. And the mating of the hero and heroine in this story cast them out of society. Capes was obliged to earn a livelihood incognito. Yet these two are represented as having the human happy advantage of the situation. Experience shows that society likes its "wrappers" so much that it expels the naked and indecent with a kind of violence that is certainly not biological. The question arises then, Is this stupidity, or acting from a higher cause than Mr. Wells discovered in his laboratory studies? The human is a very queer animal; nobody seems to know for certain whether he is most entitled to a tail or a soul. But Mr. Wells ought at least to give him the benefit of the doubt.

Grover Cleveland

MR. CLEVELAND, as his biographer draws him,* and as his life, so well known to this generation, shows him, was of the very old Democratic school, and came of age too late to be much affected by the hard rub which the slavery agitation gave to his party. He was deeply human, of the New England type, where the family tree had taken root, altho by a happy accident he was born in New Jersey, and was not subject in his lifetime to the earlier environment. He was profoundly religious, yet never "churchly," or theologically inclined. Both body and brain were of stiff clay, in which opinion, once "set," was fixt forever. His faith as to the other world was hard-ground Presbyterian. His democracy never defined itself, as it did for so long in the South, as a close-fenced oligarchy, nor as a backstairs and very limited monarchy, as in New York City. The New York rural environment of his early years was earthy, sane, and wholly American in spirit. It would seem strained to class him with Nathaniel Hawthorne. Superficial differences were too marked, and imagination, which each had in the highest degree, took on such different garments before the world. Yet in many essentials of character they were types of American democracy. Both were men who knew other men deeply, of the

* *Reminiscences of Grover Cleveland*, by James F. Thompson. New York: The Century Company, 1913. \$3.00 net.

firmest reasoning powers, the least carried away by tumultuous, emotional sympathies, and yet both capable of great tenderness of heart, altho in neither case was the heart on the sleeve "for daws to peck at." Neither was capable of a diffuse philanthropy, which sometimes stumbles into righteousness. They were of the same unchangeable type, each unwilling in the highest degree to express his conclusion in any but his own way. Neither could be "drawn." Cleveland died at peace with the best men of all parties. He knew the tricky man in politics and dealt with him sometimes peremptorily. The evil in one's own party it is hard to ignore; but he, quite as often as any other man, put it behind him, ignored it, and went his own way. Mr. Parker quotes him as saying in one of his later communicative moods:

"I have been amazed since I entered the larger public life in 1882, at the spirit of patronage with which I have been treated by the so-called politicians. Somehow there seems to have been an impression that I was dealing with something I did not understand; but those men little knew how thoroly I had been trained, and how I often laughed in my sleeve at their antics. From the beginning I never felt at a loss in dealing with them, because I knew that, back of the machinery with which they surround themselves, there was still a great and interested mass of people who did not wait for permission to form their opinions."

Elsewhere he gives a closer view of that early association with plain people—drovers, farmers, wood-choppers, mechanics—thru whom he learned to know the rough, uncouth but shrewdly honest common people. "I came into contact," he says, "in the familiar way which enables one to understand human nature, with a class of men then much more common than they are now. Rude in many respects, with little of book education and less opportunity for obtaining it, they had strong, vigorous and independent minds. They had a great deal more of practical knowledge than they were then credited with, and infinitely more than the studies of that period now current lead our young people to know."

This is the kind of man whom the politicians sometimes unwillingly serve, but they do not love them. A man who knew the plain rule of thumb applied, in

the country store and at the rural town meeting, to the plain cloth of human weaving, got more accurate measures than is often obtained by the diplomat accustomed to the Machiavellian tape. This is the man whose life Mr. Parker traces, in a somewhat haphazard order at times, but lucidly and with knowledge of his subject. He is no Boswell, to ride roughshod over the sensibilities of the living. Much that is evidently personal, and might have been stated in Mr. Cleveland's words, he prefers to put in the historic form. In this way much that was known of Mr. Cleveland's life is confirmed, with fresh details. For his Venezuelan message to Congress Mr. Cleveland had no apologies to make. An apparent deficiency charged against his attitude toward the rebellion is cleared up. His loyalty was unswerving—as unswerving as the loyalty of the hundreds of thousands of good Democrats who laid down their lives for the Union. If he had qualms of conscience, after having favored the election of Buchanan in 1856, he manifests no wrath because his family had to furnish three recruits to the national ranks to undo the evil Buchanan forwarded. As he had been a traveler along the levels of our democratic life, on the main roads, where the largest number traveled, and on which fronts the widest variety of business, he liked in his later years to walk there still, and sometimes to hark back to the comforts of a time when the road seemed to him better than it does now, with its less agreeable aromatic smells. Like Lincoln, he had learned there the language of the common people, and what the common people of America are doing and what they are always thinking of, tho they camp at night in different camps, one may get a very correct notion of by a comparison of the lives of Lincoln and Cleveland.

Christianity in the Orient

WHILE this year at Yokohama they are celebrating the semi-centennial of Protestant missions in Japan. Dr. Otis Cary sends forth his history¹ of the work

¹ *The History of Protestant Missions in Japan*. By Otis Cary. New York: The American Board of Christian Missions, 1890.

done by men and women of the three great branches of the Christian Church in 400 years, from 1549 to 1909. It is pleasing to meet with so scholarly a treatment of the Roman Catholic missions (1549-1620), the results and influences of which never wholly died out. One of the first sights in the far interior of Japan, seen by the reviewer in 1870, was that of a company of sixty men, women and children in the red robes of the criminal and roped together much like a coffle of slaves, being taken under guard to a prison in the crater of an extinct volcano in the far north. Thus isolated from their fellow creatures, they were fed on rice and water, until the eyes of the Japanese statesmen were opened in America and Europe, and the protests of the envoys of Christian Powers were heard. Later, when the arm of persecution was lifted, Verbeck's instant appeal to the Foreign Office stayed the oppression. Today, these same people, or their descendants, walk in their own way, peaceably following their Master, unmolested by any, while the treatment of Russian prisoners of war in Japan surprised the world.

After three centuries and a half, the haze of romance hangs over the exact facts, but Dr. Cary is a critical scholar and has cautiously made difference between the original canvas of reality and the embroidery worked upon it. In every case he seems to have examined the traditions, consulted the most recent investigators and weighed the latest evidence. Hence we have a narration which bears the stamp of finality. No one, least of all Dr. Cary, would find in this work the genius of a Macaulay or a Motley and certainly not that of a Froude, but the first necessity of history, that of trustworthiness, is here.

The first attempt to carry the gospel to Japan was made by Christopher Columbus, but later and successfully by Xavier. Seemingly extinguished in persecution and hidden, as in catacombs, for nearly 250 years, the Church rose phoenix-like, to brilliant resurrection in 1858, so that in the twentieth century it has expanded and is fulfilling a noble task in the uplifting of the Japanese. The Catholic population in 1908 num-

bered 70,000 souls, but their great work done in the training of children and the healing of the sick is hardly more than hinted at. In the transition of the nation from a status wholly agricultural to one complex, with maritime, industrial and manufacturing enterprises both at home and abroad, the Catholics suffer far worse than the Protestants. Tho in entering Japan they had the advantage of continuity of labor, they lose many of their converts in the modern movements of population to cities and foreign lands.

A vast literature in several languages has made the Roman story comparatively familiar, but that of the Greek Catholic Church mission, or, to speak more scientifically, the work of the Russian bishop, Nicolai, in Japan, is to Americans almost wholly new. Ceaselessly active in his ministrations in Tokyo in 1873, as we remember well, Nicolai is still busy presiding over a Christian community numbering 30,000. When in 1904-05 73,000 Russian prisoners in Japan needed consolation, the native Japanese ministers of the Holy Orthodox Church led their worship, wrote for them their letters home and taught the illiterate *mujiks* how to read and write their own Russian vernacular! This, besides making a brilliant chapter in the history of war, shows some results of the Hague Conferences. Shortly after the Russian Consulate was established at Hakodate, in 1859, Nicolai made the overland journey from St. Petersburg and began the mastery of that language, which he has used with such astonishing skill and power. One of his teachers was Joseph Neesima. In Tokyo he has built with funds from Russia what is regarded as the finest edifice in Japan, the white marble Cathedral of the Resurrection, where 400 male singers chant the service and show what the Japanese voice is capable of. During the war Nicolai remained in Tokyo, to his own credit and that of the Japanese Government, in perfect safety. With the historian, we believe that the lessening of foreign aid (from Russia, since the war) will prove a blessing in disguise.

More familiar is the story of Reformed Christianity in Japan, almost every phase of which comes under criti-

cal review. Even things painful are not shirked, for of much of what has been accomplished Dr. Cary has been witness and part. With excessive modesty, he underrates, rather than exaggerates, not only the good done directly to Japan, but the inexpressible debt of the Japanese nation to the American missionaries. Maps and index add their value to this standard work of reference.

*By the Great Wall*² is the story of the beautiful life of a woman missionary in interior China, from the days of sailing ships to the Boxer outbreak. The book is eminently readable, because it has in it great adventure, great psychology, wit, fire, fun, fact, fancy and pathos.

Grown to a portly volume of over 600 pages, this seventh annual issue of *The Christian Movement in Japan*³ is directory, encyclopedia, history and yearbook combined. The names of its editors, who are veterans in work, Ernest W. Clement and Galen M. Fisher, guarantee the accuracy of a book indispensable to the student of Japanese Christianity of today.

The veteran Dr. De Forest's book,⁴ "a work as delicate as it is important," comes to us in a revised edition. To praise it would be to paint the lily. It is full of grit, grace, tact and power.

Of all the books on Korea, the body of this one by Mr. Gale,⁵ despite his learning as lexicographer and translator, has the most red blood in it. It pulses on every page. It is written by a man whose heart overflows thru his pen from the well of deep experiences. Edited with skill, and ideal for purposes of study, it is the best presentation of Christian Korea in our language.

The Mother and the Father. By W. D. Howells. New York: Harper & Brothers. \$1.20.

This is a drama of three acts in blank verse, with stage directions thrown

in, treating of three great moments in the married life of two people—the birth of their child, the hour of her marriage and the hour of her death. The first act is in the "upper chamber" with the young mother, father and baby. The conversation between the parents is concerning the origin of the child's soul and is a hackneyed discussion of pre-natal memories and other topics typical of mothers' clubs, where the mothers have taken an afternoon off to explain the world-old miracle of life and its consequences. Some remarks made by the two as to this soul-source are worthy of quoting:

The Mother—

"Where did she come from? I do not mean her body or its breath.

"That came from us. But oh, her soul, her soul!

"Where did that come from?"

(The father is silent, and she pulls convulsively at his hand).

"Can't you answer me?"

The Father (in distress)—

"How can I tell you such a thing as that? You know as well as I. Somewhere in space, Somewhere in God, she was that which might be,

Amidst the unspeakable infinitude
Of those that dwell there in the mystery,
From everlasting unto everlasting."

The second act—the hour of the daughter's marriage—is commonplace and unpleasant, whereas normally it should be tender and reminiscent. The mother, anxious for the happiness of her newly married daughter, busies herself in picturing to her husband the present and future emptiness of their home, the possibility of sorrows coming to their child, and withal seeks and prods every sensitive place in the father's heart until any man save Mr. Howells's perfect gentleman would have sworn with vexation. The third act—the hour of the daughter's death—is nothing more than a spiritualist séance, in which the bereaved parents pursue and find their child in realms forbidden the minds of normal people. When we have finished the book our chief sympathy is for the daughter who had to bear with the nerves of her parents and the husband who had to be a foil for his wife's hysteria. Mr. Howells should have given the woman four or five children and then written a drama of life, but—in prose.

New Poems. By William Watson. 16mo.
Pp. 85. New York: John Lane Co. \$1.50.

These *New Poems* are forty-four in number, of which about thirty are allowed to occupy a page each, while much the longest of them, that to "Miranda," consists of seventeen sonnets, and that to "America" has sixty lines of blank verse. In quantity the volume is not large, and in quality it would add little to Mr. Watson's just fame—for the poems are generally slight—but for one that immediately became the most famous poem of the year, that which denounces "The Woman with the Serpent's Tongue." The first poem in the volume, "The Blacksmith," the third in number of lines, has twelve verses of four short lines, but ought to have been printed in two-line verses. Such a verse as this offends one:

"As a crag looking down on
The flood in their ire
He looms thru the spray of
His fountains of fire."

It is against all right laws of verse to allow a line to end so inconsequently, with such inordinate stress on the closing words of the first and third lines; but if we join the offending lines we have correct prosody at least. As poems by far the best of them is a drinking song:

"When winterly weather doth pierce to the
skin,
Then hey! for a bottle of wine from the bin;
And hey! for a tankard, and ho! for a tankard,
Sing ho! for a tankard of ale at the inn . . .

"The parson, God bless him, he says it's no sin,
When winterly weather hath made the blood
thin,
To toss off a tankard, to toss off a tankard,
To toss off a tankard of ale at the inn.

"For duns and the devil he cares not a pin
Who is rich in a bottle of wine from his bin,
And the cream of all wisdom is quaffed from
a tankard,
A heart-easing tankard of ale at the inn . . .

"The lads must have lasses and woo them and
win,
And the business of wives is to bake and to
spin,
But men love a tankard, but men love a tankard,
ard,
But men love a tankard of ale at the inn."

This has lilt, which few of Watson's poems have. We judge that Mr. Watson is no friend of the present British budget. Indeed another poem is address "To a Fair Maiden Who Bade Me Shun Wine." In what has been called satire,

but what is really savager than satire, pure denunciation, Mr. Watson excels. His previous poems denouncing Abdul Hamid may match those of Swinburne against the Czar. Of this type "The Woman with the Serpent's Tongue" is an extreme example. That a woman such as is described,

Malignant lipp'd, unkind, unsweet,
Past all example indiscreet,
Hectic and always overstrung,
The Woman with a Serpent's Tongue,"

really exists and prevails in high British society it is not easy to believe, while to point her out as close to the highest political station is "past all example indiscreet"; and so the publisher thought when he wished the poem omitted, if it does not also match the first line in the verse above. That a particular woman is meant is "told in shrugs and whisperings," and such seems to have been the purpose of this cruel liberty. One other poem or sonnet, denouncing "Leopold of Belgium," has the same bitter strength. It is in these denunciatory poems that we catch the serious heart of the writer. Otherwise it lacks the elevating sentiment which we expect to meet in verse that lives. This quatrain, which occupies a page, raises a question mark:

"Think you, demoiselle demure,
That to be cold is to be pure?
Pure is the snow—till mixed with mire—
But 'tis not half so pure as fire."

One can suspect the reason why Queen Victoria did not choose him for her Laureate in reading this poem and such as the following, entitled "The Church of Today":

"Outwardly splendid, as of old—
Inwardly sparkless, void and cold—
Her force and fire all spent and gone—
Like the dead moon, she still shines on."

Or the two verses on a churchyard, the last of which reads:

"And around me was dust no less,
And the fleeting light and the Regress,
And the infinite pathos of human trust
In a God whom no man knows."

Possibly not quite so agnostic, but bitterer against institutional religion, is this:

"When 'whelmed are altar, priest, and creed,
When all the faiths have passed,
Perhaps, from darkening incense freed,
God may emerge at last."

We thank Mr. Watson for his lines to

"America" and to Mr. Gilder, and we recognize real strength which ranks him among the chief of living British poets; and yet we do not find the high or the fine sentiment which we like to feel in poetry, nor even the sensuous beauty of form which charms the ear. He scorns, for the most part, the artful aid of well-yoked vowel and consonant sounds, and rather trusts to words that fit virile strength. Indeed, with a few exceptions, this is a padded volume of trifles. For example, this is not worth putting into rimed and unrimed lines:

"The Wye and the Severn are offspring
Of dark Plinlimmon's side;
And there they were nursed as playmates,
And then—they were sundered wide.

"In ways far parted they travel,
By city and castled shore;
And at last, after great adventures
They meet—very old—once more.

"They are kings, grown gray amid homage,
And clothed with renown and pride;
But they babble of how they were playmates
On dark Plinlimmon's side."

But the poem that stamps on a woman gives the volume distinction, and the drinking song is as jolly as Shakespeare.

Literary Notes

....It is likely that *The Wayfarer in New York* owes its publication, at least in some measure, to the recent centennial celebrations, but whatever the cause of its being, it is welcome. It draws upon a multitude of writers, native and foreign, for its contents, beginning with an extract from the log of Hudson's first mate, Robert Juet, and proceeding thence chronologically from the seventeenth century to our own day, and topographically from the Battery to the Bronx. Washington Irving, Mrs. Trollope and Charles Dickens, H. C. Bunner, Gertrude Atherton, E. C. Stedman, James Bryce, Henry James, Marion Crawford and F. Hopkinson Smith, Albert Bigelow Paine, James L. Ford and Stephen Crane, Walt Whitman, O. Henry, Jesse Williams, Rupert Hughes, Edgar Fawcett, Richard Hovey, Harry Thurston Peck, Mrs. Schuyler van Rensselaer, E. W. Townsend, G. A. Sala and G. W. Stevens are but a few of the authors laid under contribution for sketches, reminiscences, and opinions, and, of course, the New York press is represented. Mr. Edward S. Martin furnishes a readable introduction, which neatly outlines the salient characteristics of the city, its life and inhabitants—and of its visitors. (Macmillan, \$1.25 net.)

....The house of B. G. Teubner, of Leipsic, is publishing under the editorship of Prof. Paul Hunnberg, of Berlin, an exceptionally

valuable and scholarly set of works entitled *Die Kulturs der Gegenwart*, giving from the pens of the best specialists of the day an account of modern thought in every department of research. Recently a second and practically new edition has appeared of the volume entitled *Allgemeine Geschichte der Philosophie*, a work of six hundred pages, in which Wilhelm Wundt depicts the beginnings of philosophy and the philosophy of the primitive nations; Hermann Oldenberg describes the philosophy of India; Ignaz Goldziher Islam and Jewish philosophy; Wilhelm Grube the philosophy of China; Tetsujiro Inouye that of Japan; Hans von Arnim the philosophy of the older European nations, i. e., Greece and Rome; Clement Baenniker, the European philosophy in the Middle Ages; and Wilhelm Windelbrand, modern philosophy.

Pebbles

MISS SMART—Have you ever been thru algebra?

"Yes, but it was in the night and I didn't see much of the place."

TIME'S CHANGES.

"Is the story you have written a historic novel?"

"No," answered the litterateur in hard luck. "It's a modern novel now. But I guess it will be historic before I get it published."—*Washington Star*.

"IN Omaha," says a New Yorker whose business keeps him on the road quite a bit, "the general breeziness of the West is shared by the waiters in the restaurants.

"A legal light of that town recently entered an eating house and was immediately approached by a waiter, who observed cheerfully:

"I have deviled kidneys, pigs' feet, and calves' brains."

"Have you?" coolly asked the lawyer. "Well, what are your troubles to me? I came here to eat."

THAT the coming winter is going to be the hardest one for the past twenty years there is an abundance of signs to show, and among them it may be mentioned that

The corn husks are a foot and half thick, and all the stalks lean to the west.

The geese, ducks and chickens are growing a coat of fur under their feathers, and are rubbing borax on their feet to harden them up.

All the one-eyed owls are leaving the country a month earlier than usual, and the bob-tailed squirrels are laying in sweet potatoes, as well as nuts, for winter provisions.

The farmer who has taken the trouble to investigate has found that all the toad stools on the old logs have wrinkles in them. The last time that this happened we had winter weather that froze the handles of plows.

Rabbits are sitting around with a humped up look to them, and field mice have wrinkles in their tails. If this means anything, it means twenty degrees below zero from November thru to May.—*Tyrone (Pa.) Herald*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street New York

A WEEKLY MAGAZINE. FOUNDED IN 1845.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Denunciation of Zelaya

THE agreements signed at Washington in 1907 by the five Central American republics, at the suggestion of the United States and Mexico, had been made necessary by the ambition of Zelaya, who sought by war and intrigue to obtain control of the entire country between Mexico and Panama. Cabrera, President of Guatemala, was regarded as a ruler of the same kind. For some time past he has been quiet, but Zelaya, as Secretary Knox says in his letter to Rodriguez, has violated the agreements repeatedly and flagrantly. He has continually sought to renew his movement for conquest. In peaceful Costa Rica he has attempted to set up a ruler of his own choice, and at the election he sent shiploads of Nicaraguans to vote for his candidate. The deplorable condition of Honduras is due to the revolution which Zelaya promoted and by means of which his man, Davila, was made President. Salvador has been menaced by his troops and the stability of its Government endangered by his agents.

It was not to be expected that such a man would exhibit in his own country any ability or desire to govern decently.

It is undoubtedly true, as Mr. Knox says, that republican institutions have ceased to exist there except in name. He is convinced that the ideals and will of a majority of the people are represented more faithfully by the revolution than by Zelaya's Government. It should not be forgotten, however, that the revolutionist leader was formerly associated with Zelaya, whom he assisted in the latter's raid upon the Presidency, and that as a reward he was made ruler of a large province. We suspect that the commander of the rebels is not much better than Zelaya. It is difficult to resist the conclusion that a majority of Nicaragua's soldier-politicians are a bad lot.

Zelaya became a nuisance, a kind of land pirate, before he killed the two Americans, Cannon and Groce. We can see no justification for the execution of these men. The circumstances, so far as they are known in this country, made Zelaya's action a violation of the rules of warfare accepted by civilized nations. The two men had enlisted in the revolutionist army, and they held commissions. They were captured with a small outpost party, and they had been laying dynamite mines in the river. According to what appear to be trustworthy reports, protest against the execution of them was made by the commander-in-chief of Zelaya's forces, by his Minister-General, and by prominent attorneys of Nicaragua, who said, as Estrada's representative in Washington also asserts, that the laws of the country provided no such punishment for foreigners engaged in a revolutionary movement. But Zelaya, having personal grudges to satisfy and probably seeking the property which the prisoners had acquired, not only insisted that they be shot, but even, it is said, directed that they be tortured and then, when sentence had been executed, had their bodies consumed by fire.

Demand for reparation is deferred, and it is not yet clear in what way our Government would have Zelaya punished. Evidently it hopes that he will soon be deprived of power by the revolutionists, who are to have the moral support of the presence of our warships.

It seems to us that the State Department took an unwise course in failing to consult the Government of Mexico or to

respond to that Government's suggestion of a plan for a settlement of the controversy. Everybody knows that Mexico was our associate in the proceedings which led to the signing of the Washington agreements. Mexico could reasonably expect to be consulted concerning action which might be taken on account of a violation of them. Not having been consulted, she ventured to make a suggestion. The Mexican Foreign Minister, Señor Mariscal, said on the 2d:

"We are still waiting for a reply to our suggestion for an amicable settlement. We made the suggestion spontaneously, because we had not been, as on several previous occasions, approached by the United States on the subject of intervention in Central America. In view of such advances in the past, we did not consider it discourteous to offer the suggestion in the interest of humanity."

To ignore Mexico was a blunder. It is not surprising that the Mexican press, probably representing official views, now attacks Secretary Knox's letter with sarcasm or direct disapproval.

South American countries, it is reported, regard our action with uneasiness and distrust. But there is in the letter no suggestion of conquest. It is not diplomatic; it is an expression of impatience, but it is a plain statement of facts. South American countries and their representatives at Washington must know that Zelaya has been a nuisance and that his misrule has in a sense been discreditable to countries further south. They should be glad to see him deprived of power and punished for his offenses.

In a Lady's Parlor

THE following is William Watson's now famous pasquinade, published with an intimation as to whom it was to be referred, and we give it by permission of the John Lane Company, which holds the copyright:

"She is not old, she is not young,
The Woman with the Serpent's Tongue,
The haggard cheek, the hungering eye,
The poisoned words that wildly fly,
The famished face, the fevered hand—
Who slights the worthiest in the land,
Sneers at the just, contemns the brave,
And blackens goodness in its grave.

"In youthful numbers be she sung,
The Woman with the Serpent's Tongue,
Concerning whom Fame hints at things

Told but in shrugs and whisperings:
Ambitious from her natal hour,
And scheming all her life for power;
With little left of seemly pride;
With venomous fangs she cannot hide;
Who half makes love to you today,
Tomorrow gives her guest away.
Burnt up within by that strange soul
She cannot slake nor yet control:
Malignant lipp'd, unkind, unsweet;
Past all example indiscreet;
Hectic, and always overstrung—
The Woman with the Serpent's Tongue.

"To think that such as she can mar
Names that among the noblest are!
That hands like hers can touch the springs
To move who knows what men and things!
That on *her* will their fates have hung!—
The Woman with the Serpent's Tongue."

Since our review on another page of Mr. Watson's volume was in type we have seen in Saturday's *New York Times*, the following card, with William Watson's autograph signature, which is an immense surprise, as we could not have believed that any sane man—but are poets sane?—could have been guilty of such a personal offense:

"STATEMENT BY MR. WATSON.

"'The Woman with the Serpent's Tongue' is a composite photograph of Mrs. Asquith and her stepdaughter Violet. The poem is a portrait of the physical characteristics of Mrs. Asquith and the mentality of Violet Asquith. The latter is the voice of the family and rules them all. Violet is the real official voice speaking with authority. She it is

'Who slights the worthiest in the land,
Sneers at the just, contemns the brave,
And blackens goodness in its grave.'

"WILLIAM WATSON"

'This most unpardonable blow at two women, the wife and the daughter of the Prime Minister of England, is an offense which is enhanced by the long and elaborate written statement which Mr. Watson prepared some months ago and which he has given the *Times* for publication. It shows that Mr. Asquith and Mrs. Asquith have been most courteous to Mr. Watson, and so far as can be seen the portrait is based on a private conversation with Miss Asquith, when he had called by invitation, and when the young woman spoke with frank indiscretion of two men of public position. What she said in private in disparagement of them he publishes to the world. It is she, then, whom he would describe as

"Malignant lipp'd, unkind, unsweet,
Past all example indiscreet."

Nevertheless the indiscretion which in a lady's private library told a trusted visitor that a secretary had written speeches for Prime Minister Campbell-Bannerman, and that archbishoprics were got by bringing pressure to bear, does not compare in indiscreetness with that which publishes to the world what she told him; and if she is one

"Who half makes love to you today,
Tomorrow gives her guest away,"

there is no evidence of it in his story, while he has shown that he as guest can give his hostess away.

He says that when asked by Mrs. Asquith (who was Margaret Tennant) to write his verses in the lady's album he wrote a reply couched in courteous terms but meant to be taken "as a most unforgivable insult to this family," that is, a veiled criticism of Mr. Asquith's politics, and that when they did not discover the insult he wrote the lines desired and received a very kind note in reply. Nothing in his story justifies or even explains the insult of his poem or the atrocious insult of his acknowledgment that he meant to describe the Asquith ladies, the physical appearance of one and the mentality of the other. The only explanation which his subsequent interviews gives is that he hated Mr. Asquith because the latter had favored the Boer War, and admired Mr. Campbell-Bannerman for having opposed it; but this is no explanation at all. That would make it an attack on Mr. Asquith under cover of attacking his family. It would seem as if there were some personal offense not then told to account for this public attack on the ladies of the family of the Prime Minister of Great Britain.

Mr. Watson comes to this country a visitor to see it and seek friends. We can imagine his reception, on his return, or his non-reception in English drawing rooms. We wonder how far American society will condone this unexampled desecration of the privacy and this treason to the confidence and courtesies of an honored English home.

Two satiric poems are included in his new volume, one lampooning these two ladies, and the other with less venom attacking King Leopold of Belgium. In his letter to Mrs. Asquith he told her of this forthcoming book, and that in it he

intended to introduce satire, after the manner of Pope. He did not tell her that she was to be the victim. But Pope in his "Dunciad" ridiculed the weakness of men as authors, which was decent except where it touched indecency. Lowell in his "Fable for Critics" gave more praise than blame, and his shafts were tipped with no venom, certainly not abuse; under the name "Miranda" he poked gentle fun at Margaret Fuller. But she was a public character, and it was her writings, not herself, that tempted his humor. For William Watson's offense there is no literary parallel. It is unique in its iniquitousness.

On Sunday the *New York Times* editorially condemned Mr. Watson's attack and completely exonerated the Asquith ladies on his own showing. On Monday morning the *World* published an interview with Mr. Watson who called at its office. He then confessed that he came to this country for the very purpose of publishing his satire here where he might escape the British law of libel. He cannot then claim courtesy as a nation's guest. He declares that the Asquiths had helped socially to ostracise him for his opposition to the Boer War, and that henceforth he would give his life and fortune to the overthrow of the Asquith family.

✽

The Strike of a Sex

THE publication of the article "Why Do Not Educated Women Marry?" was worth while if for nothing else than the letters it brought us, which are very inadequately represented by the quotations on another page. Some of these letters were cranky; some were funny, intentionally or unintentionally so, but most of them were obviously the expression of deep feeling and often of deep thought on a question that the world in general conspires to snigger at or ignore. The old maid is no longer an object of sympathy or ridicule; she is a problem. She is usually too well circumstanced to need pity and often too successful to be laughed at. We are not talking of congenital and incorrigible old maids, but of those who, in other periods of the world's history, would have been good wives and mothers, but

nowadays, for some reason, have evaded what we are old-fashioned enough to believe is their natural vocation and greatest field of usefulness to the world. It is not a question of whether they would be happier married or single. It is the question of the how the world can get along without them married.

The reluctance to entering into matrimony so often manifested by American women of the highest character and attainments is not due primarily to economic pressure. It does not result from a Princess Ida attitude of hostility to the opposite sex. It cannot be settled by discussions of the fine art of wooing, of the ethics of flirtation, and of the proper assignment of initiative and referendum. It is essentially a demand for equality. The American woman wants a husband who is her equal. Sometimes this is carried to an absurdity, the woman demanding that the man shall conform to her standards in all things, in opinions, manners and disposition; shall match her culture and adopt her tastes. Saepe Quaesita complained that the American man was deficient in culture and we agreed with her as to the fact, tho not as to its validity as a bar to matrimony.

But our correspondence shows that most women are not over-insistent upon such comparatively minor matters as culture, education, manners and dress. They are, however, vitally concerned and deeply in earnest over the fundamental matter of morality. The American woman demands that her husband shall be her equal in purity both before and after marriage. Such a demand is, indeed, unprecedented in the history of the world. It is only in a country where women are given an opportunity for education and a certain degree of economic independence that they have dared to require of men what men have always required of them. If the movement is successful it means a raising of the level of morality of half the race to a higher point than moralists have ventured to hope for; an ethical gain of incalculable value. If it fails—but we will not consider the possibility of failure.

To be frank about it, the intelligent American girl is afraid to get married. She has reason to be. The veil has been

taken from her eyes, or at least lifted a little, and she is appalled by what she sees. So long as the bride was led to the altar blindfolded, man was at liberty to live as he liked regardless of consequences to her, but that day is past on this continent. It is not likely that the women will ever again consent to have their eyes bandaged. This form of the white slave traffic is approaching its end. There are then two alternatives; either there must be a reformation of masculine morals, or else young men, innocent as well as guilty, will find the young women of enlightenment and principle turning from them with suspicion and aversion.

This is not a matter that can be satisfactorily discussed in a popular magazine. Yet in closing the discussion it was necessary to refer to it because of its fundamental importance. Of the many letters which call attention to this point we print one, headed "The Fault of Training," which expresses most clearly and delicately the attitude of the pure-minded, educated American girl of today. We believe the extent of the evil referred to is greatly exaggerated. The best estimates are vague and unreliable. The estimate of a physician, particularly a specialist, is as likely to be too high as that of a preacher is likely to be too low. But whatever may be the percentages, it is no wonder that women, learning a little of the awful facts, should come to regard marriage as a lottery in which they might do worse than draw a blank.

The same thing is at the bottom of the divorce question. Everybody knows that a large proportion, nobody knows how large a proportion, of the divorces are due to the discovery of a husband's immorality, often forced upon a wife's attention in the most repugnant of ways. The court records give no information on this point, for the reason given for a divorce is not usually its cause. The majority of divorces are asked for by women and 80 per cent. of them are not contested. The charge brought is generally the least serious and offensive that is allowed by the law; sometimes, indeed, a very trivial offense is alleged, but that must not be interpreted as meaning that there are no graver reasons behind it. The proportion of *divorcées* who

marry again is apparently not much greater than that of widows, so it would be as unfair to charge them as a class with getting divorces for the purpose of marrying again as it would to charge widows as a class with killing their husbands for the purpose of marrying again. Undoubtedly the liberality of our divorce laws is often taken advantage of by those whose affections have strayed, but the immorality resulting from this does not compare with that prevailing under a régime like that of England and some of our own States, where the wife is not permitted to free herself from an unfaithful husband.

It is because we realize that the divorce movement has as one of its chief motives this aspiration for an ideal of a higher morality of married life that we are unable to join with the many good people who are working for stringent laws on the subject or for prohibition. Both the increase in the number of divorces and the increase in the number of unmarried women of education and refinement are largely due to the determination of American women to abolish the dual standard of chastity. Such a cause is worthy of any effort and self-sacrifice. If a general strike and boycott to raise the standard of wages is justifiable, it is still more legitimate to raise the standard of morality.

Trust the Public

A SANE suggestion is made by "An Independent Journalist" who attempts in the *American Journal of Sociology* to answer the question: "Is an Honest and Sane Newspaper Press Possible?" He gives interesting and abundant facts to prove that the American press of today is by no means always sane, and that too often it is dishonest.

Its worst offenses are not those committed on its editorial page, which, as all competent newspaper men admit, has not grown in ability and influence since the days of Weed, Greeley, Raymond and Samuel Bowles. The exceptions, like the *Evening Post* under Godkin, and the *Sun* under Dana and Laffan, have only proven the rule. If all the editorial matter of all the daily newspapers of the American cities of the first class, as this

phrase is used by the Census, were to be assembled some morning and examined by any committee of five, chosen from among the editorial writers that produced it, their verdict upon three-fourths of it, "not for publication," would not be complimentary. For it is well known that newspaper writers themselves labor under no misapprehension as to the quality of the stuff that they are grinding out.

The real offenses of the newspaper are committed in its news columns. They rarely take the form of crude lying. We do not agree with "Independent Journalist" that to so great an extent as he assumes they may be classed as "faking." They are best described by a term drawn from the jargon of the painters. The fashion today in newspaper "story" writing—for in the modern newspaper office an assignment must be worked up, not as "news" but as a "story"—is to throw the picture "out of drawing." The supreme test of a good reporter is that he shall be able to write his column without putting into it any false statement, and yet, by omissions and rearrangements, and, above all, by a deft handling of "values," produce an effect startling or misleading. This is the treatment commonly applied to public speakers and to men of prominence who grant interviews. Usually it is impossible for them to deny that they said, perhaps word for word, the things reported. But the public knows that these men are not, as a rule, such freaks as they are made to appear by the impressionistic reporter.

But to come to the sane suggestion which "Independent Journalist" offers by way of remedy. It is simply that the conductors of newspapers should follow the working rule, "trust the public," instead of the working rule, "give the public what it wants."

This is sound psychology. Every mind, professional or non-professional, clever or dull, is more or less influenced by suggestion. The practical value of a working rule lies largely in its power to awaken a train of suggestions in the intellect of the worker. Unconsciously he follows them, and to such an extent that the journalist, writing for two or three papers without conscious effort, falls into the style—or the mannerisms—of the

sheet for which at the moment he is making copy.

The working rule, "give the public what it wants," subtly but effectively commits the writer to the assumption that his readers are a shallow lot who want sensation, flippancy, plenty of chaff, and more than a dash of reckless dealing with facts and reputations. The working rule, "trust the public," no less subtly and effectively commits him to the assumption that he is addressing intelligent and responsible people, who will appreciate thought, discrimination, taste, rugged courage, and a large grasp of real issues. It was this rule that the great journalists of the earlier days for the most part followed. It was this rule that made the London *Times* a power that the British nation respected and feared. This rule would give us again an American press of dignity and power.

The Liquor Trade

IF we can judge from the reports of the trade in beer and spirits made in the *Annals* of the American Academy of Political and Social Science in its November number, by the secretary of the U. S. Brewers' Association and the president of the National Wholesale Liquor Dealers' Association, the liquor trade is in a most prosperous condition, but very much frightened. In the year ending June 30, 1909, there were 56,303,496 barrels of beer sold, a slight decrease on the previous year of 4.14 per cent., following a steady annual increase for ten years.

This decrease is laid but slightly to the temperance wave, but principally to panic and loss of wages. Comfort is found in the fact that the last year's report of the Department of Commerce and Labor shows that the decrease in the sale of beer in 1908 was almost nothing (1.20 per cent. per capita), while that of wheat and flour was 21.28 per cent.; of corn, 12.11; of sugar, 8.70; of coffee, 11.62. In ten years the amount of beer sold has almost doubled. Sales are mostly in cities, and bottled beer goes to the country, particularly to dry towns, and the family consumption of beer is increasing out of all proportion to saloon consumption: so that, apart

from family trade, country business is hardly worth having. The tendency of the country, it is claimed, is toward the use of spirits.

There is now \$550,000,000 invested in beer, which makes it the sixth in rank of all the businesses of the country. There are 1,600 breweries in the United States, but the business is being concentrated, and 115 companies produced nearly half of the whole product. The development of the ice machine and the perfection of refrigerating machinery have greatly promoted the brewing industry in the South. We are told that the use of lager beer has already changed the drinking habits of the masses in the cities of the South, altho in the "wild hysteria" which has marked the recent exploitation of the temperance sentiment all beverages which contain alcohol have been classed together, except cider, which contains a half more alcohol than beer, and patent medicines. But the people of the cities, it is claimed, are so thoroly dissatisfied with the imposition of prohibition that there will be a change before long, and then there will come a great expansion in the beer business in all the progressive Southern cities.

Turning from beer to distilled liquors, we find that a minimum of production, 60,635,356 gallons, was reported by the tax sales of 1896, following the panic. For the fiscal year ending June 30, 1907, the sales were 134,931,066 gallons; but the panic reduced the sales of two years later to 114,799,465 gallons. There was a corresponding reduction of 13.4 per cent. in the use of coal in 1908, as compared with 1907.

The representative of the business argues that the "prohibition wave" of 1908 is receding, and that prohibition has very little effect on the amount of whisky sold, but does reduce the quality where the business is driven into less responsible hands. The general outlook for the business, he says, has seldom been better. Yet there is "the one menace of confiscatory and destructive legislation," conducted under the auspices of the Anti-Saloon League. As in Tennessee, it "confiscates brewery and distillery property, and without one penny of compensation." The condition, we

are told, is as if a law should forbid flour mills to grind wheat, or railroads to run trains. This is the way that the Anti-Saloon League's work is described:

"The movement appears to be an attempt at domination of civil by church authority, accomplished by seizing the power of government, thru the medium of the ballot, and exercising that power for purposes of confiscation and destruction, aimed at any and all things in the path of the 'federated churches' working as a 'skilfully organized political force.'"

Evidently the president of the Wholesale Liquor Dealers' Association is not a little alarmed, and he concludes that the future of the industry can be anticipated only by one who can discern how long the American public will allow "Church supremacy in politics to work unchecked." In order to check the domination of the Church he calls attention to the necessity of laws which will license only reputable men as liquor sellers, and see to it that saloons are made decent and are kept out of politics.

This indicates what the brewers and distillers have to say for themselves. They put their business on a par with that of millers or other manufacturers, and refuse to consider the fact that the saloon is the chief cause of poverty and crime. The Church is the foe of the business and must be. The "temperance wave" is a wave for morality, and will move forward. Alabama does not choose to put prohibition into its constitution, but it keeps it where it belongs, in its laws, and we do not regard the late defeat of the constitutional amendment in that State as any evidence that prohibitory laws will be taken from the statute book. Meanwhile local option laws are the best means of keeping the subject before the people and enforcing prohibition.

Need of Uniform Mining Laws

THE terrible accident which has so horrified the country, by which hundreds of miners lost their lives and only a score or two were saved, directs attention to the most unsatisfactory condition of our mining laws. There are some six thousand different coal mines in this country, in more than half the States, employing some 600,000 miners and producing

yearly 300,000,000 tons of coal. Under our somewhat too much belabored constitution, amended with so great difficulty, each State makes its own laws for the protection of life, and for the management of this industry, while the Federal legislation forbids agreements to lessen the competition and avoid all possible expense which would increase the price of the product while saving the lives of the workmen. The present conditions in the coal mining industry are thoroly bad, but it is very difficult to find the remedy.

The consumption of coal has enormously increased. Thirty years ago less than one ton of coal per capita was consumed by our population; now the supply is nearly six tons per capita. The enormous extent of the business, which supplies about half the total freight traffic of the country, with its wide distribution and its control under the laws of so many States, with the fierce competition not only between mines but between sections of the country, has contributed to the bad condition of the industry, under which from 8,000 to 10,000 men are killed or seriously injured every year. Also the competition has led to hasty and wasteful methods of production, so that expert authority puts the waste at 250,000,000 tons a year. The operator will mine only the coal that can be got out cheapest, while the remainder is left underground in such shape as to preclude its subsequent recovery. We are, with our coal, repeating the process which the gold miners used at the beginning; but the rejected tailings of the gold mines are later sifted and worked and the slenderer profit is recovered, a method which will be impracticable in the deserted coal mines. The waste is very nearly irrecoverable.

But it is the loss of life that is most to be considered. In Britain, in France, in Belgium, in Germany, regulations and restrictions for the use of safety appliances and the protection of the miners can be uniformly enforced, for they are in the power of the national governments; but when our Constitution was devised the burning of stone was the last thing thought of. The most we can do now is to enact Federal laws for our Territories, where there is little population

to use the coal, and freight is almost prohibitive. We can withhold coal lands from entry, or dispose of them under regulation to prevent monopoly, but can do nothing except indirectly in the great mass of our mines, and we have been able thus far to do no more than to leave the matter to the more or less enlightened judgment of our State legislatures. Meanwhile, a cutthroat competition goes on, and the miners die, and some mines are very profitable, and other operators are driven out of the business and absorbed by the stronger competitors.

We need more careful investigation as to the causes of explosions and accidents of other kinds with a view to their prevention. This needs to be done, and is being done in some degree, by the United States Geological Survey. Then there will be needed uniform State mining laws, rules and regulations based upon accurate data and experience; and then strict enforcement of these laws. Of course, this entails additional expense, and puts such States at a disadvantage in competition with States which fail to do this. Just as we are trying to secure uniform divorce legislation, so we need uniform mining laws; for we fear centralization, and our Constitution forbids us to do what they can do in Great Britain or Germany. So we must take a roundabout way to protect the men who provide the fuel for our national industries and light and heat for our homes.

Resignation of a University Trustee

It is to be regretted that one of the trustees of the University of Pennsylvania has felt obliged to resign that office, which he has held for eighteen years, because as a Catholic he cannot approve the election of an associate professor who had expressed, last year, in a meeting of the American Sociological Society, liberal views as to divorce. The professor's language on that occasion did not go beyond what the laws of most Christian nations sanction, but he did not base the marriage contract on religion, but on civil society and civil law, and this can historically be justified. He further declared that there are greater evils than divorce, and this, too, can be justified. Yet we question

whether he has fully apprehended the moral foundations on which opposition to easy divorce rests. He says:

"A free man is not bound by any artificial standard set by community or Church, but rather in conduct consistent with the demands of a growing personality."

Not so do we understand virtue. It does not rest on "the demands of a growing personality," which is crass selfishness, nor on any personal development, but much more on the absorption of one's own personality in the social community. He proceeds to say, quite in accordance with the principle he adopts: "The moral value of marriage lies in the mutual happiness of those who enter into it." This is a partial but not a complete truth. It lies not solely in their "mutual happiness," but also in that of their prospective offspring; that is, in the duty of perpetuating the race, and in the social order of the community, so that marriage cannot morally be dissolved without consideration of its effect on the social organism. The fact that this is the teaching of Christianity is no objection to it. If Trustee Smith had remained in the board of the university and devoted himself to stamping out more serious immoralities, we think he might have done better service.

We are glad to see that a **Civil Pensions** law for giving pensions to aged and disabled employ-

ees of the Government is to be pressed for enactment at this session of Congress. We have received an argument in its favor by Chief Post Office Inspector Mayer, who favors the plan, by which no burden, except at the beginning, will be put on the public treasury, but a percentage of the employee's salary will be reserved to support the pensions. It is twenty-five years since the present civil service law was enacted, taking the place of the spoils system, and not a few employees have since been in service and are retained with diminished ability to do their work. Out of 150,000 employees, about 5,000 are old, even some over eighty years of age. Given a pension law and better candidates will apply for appointment and there will be more care to do faithful service so as not to be removed for cause. Nearly all the

civilized countries in the world, and all the leading countries, except the United States, have adopted some plan of retiring superannuated civil service employees. Several of the larger cities—New York, Chicago and Washington—have made provision for retiring their police, firemen and school teachers. The fact that a number of the leading corporations in this country have made similar provision stands for the business value of the plan, so that in seeking retirement of superannuated employees of the Government we are only following the trend of the times.

Criminal Law The marked loss of public confidence in the efficiency of our criminal courts is beginning to excite alarm. The advantage that cumbrous procedure and the worship of technicalities gives the lawbreaker of means spreads the impression that "there is one law for the rich and another for the poor." The too frequent failure to punish the big malefactor defended by a battery of the cleverest lawyers is leading many to accept the logic of the overturner when he asks, "What else can you expect under the capitalistic system?" It is, then, a hopeful sign that last week one hundred and twenty Wisconsin lawyers, judges, law teachers, heads of penal institutions, social workers, alienists, sociologists and penologists, met at Madison to study how to improve the administration of criminal justice. In eight committees every part of the punitive system was subjected to close scrutiny—indictment, trial procedure, intervention from the bench, expert testimony, the unanimous verdict, the right of appeal, the importance of error, the organization of courts, the treatment of juvenile offenders, the release on probation, the parole system, the indeterminate sentence. The ensuing discussions in full conference developed in most the conviction that the causes of the inefficiency of our courts are removable. Permanent organization was formed and several committees were set to work on the harder problems. Next fall their findings will be published and thrashed out in a future conference. What survives all these sittings will be worth urging upon the Legislature. The ambition of the con-

ference is "to make Wisconsin within five years a model State with respect to the administration of criminal justice." In view of her recognized leadership in certain other lines, as, for example, the regulation of public utility corporations, railroad taxation, the legal primary, and the scientific preparation of legislation, there is a fair prospect that the laudable ambition may be realized. It is to be hoped that Wisconsin's example will spur other States to hold similar conferences. The administration of criminal justice is a State affair, and only by numerous independent movements in the commonwealths can we cure a situation that President Taft has characterized as "a disgrace to our civilization."

The Biblical Institute at Rome

We suggest to those in charge of our theological seminaries that they carefully consider the course of instruction laid out for the Biblical Institute established by the Pope at Rome, intended to give the highest instruction on all biblical topics. It will be found in the December number of the *American Theological Review*, Philadelphia, all in Latin, of course. The course covers two years as laid out, and after consideration of the methods and difficulties of the study of Scripture, the topic of inspiration and *inerrancy* is considered, and the discussion of texts and versions of either Testament. There follow special introductions of the several books, and in the first year exegesis of the Hebrew text of First and Second Kings, with selected passages of other historical books; also selected passages from the Greek Gospels and Acts. In the second year the Books of Chronicles are read in Hebrew, with passages from the didactic and prophetic books, and other passages from the New Testament. Attention is also given to Hebrew and Christian history up to Paul's imprisonment at Rome, with a conspectus of Babylonian, Assyrian and Egyptian histories. With this comes the geography of Palestine, Syria, Arabia and Mesopotamia, also of Asia Minor, Greece and Italy, to illustrate Paul's journeys. Under Archaeology will be treated the Tabernacle, Temple, synagogues, calendar, money, measures, paleography, inscriptions, papyri, etc. There will also be

offered a higher course in Hebrew, the New Testament and Septuagint. Each year there will be a beginners' course in Oriental languages, to be continued into the second year. For the first year it is expected that there will be classes in Syriac, Coptic and Assyrian. The schedule published ends with courses on the history of exegesis, as developed by the Greek and Latin Fathers and up to our own age. It is also announced that there will be published occasional "*Acta*" relating to the Institute; also "*Commentationes*," which will cover in a learned way whatever may appear of value in the biblical field; also a series of "*Scripta*," composed of discussions of biblical questions. These may be in Latin, French, German, Spanish or English, as accepted writers may choose. Exchanges with learned societies are sought. The field is broad, but so far as we can see nothing is offered that is not offered by our best American theological seminaries and universities, but the scheme is an admirable one. Its purpose, however, seems to be apologetic rather than scientific; for we observe not only that "inerrancy" is to be taught, but that public lectures are promised, among other topics, on "the vain attempts of science, falsely so called, against the truth of the Gospels."

A line in the "Bishops' Hymn-book," the new book for the use of British Catholics, has one odd printer's error. The lines read:

"Thou art true, rest, sweet and sweet,
Refreshment in the excess of heat,
And solace in our grief."

It ought to read:

"Thou art true, rest, sweet and sweet,
Refreshment in the excess of heat."

which makes better rhyme and sense. When the "Sabbath Hymn-book," compiled by Professors Park and Phelps, appeared, nearly fifty years ago, a theological student carried one hymn to Professor Park and asked him what he thought of these lines:

"Thou art, my willing soul,
Bound thy triumph on my way."

He looked astonished and burst out, "Of course it is wrong. It is made a prayer to a man's own soul instead of to God." It should have read:

"Thou art, my willing soul,
Bound thy triumph on my way."

The Christian Science Church has a Committee on Publication whose duty it is, among other things, to correct errors that appear in print about it. The following is from Jesse Pickard, of that committee. He says:

You will, I believe, be glad to give space to this protest against the statement made in your latest issue to the effect that the use of 'mental suggestion' to affect a person is considered legitimate Christian Science practice when used with the person's consent and knowledge. This is absolutely incorrect. Christian Science teaches that such practice is absolutely wrong and foreign to Christian Science, and because the Christian Science Church determines to point out this evil and eschew it, this action should not be mistaken for an indorsement of the evil or a belief in its power.

Christian Science healing is accomplished thru prayer, not thru will power. Only by insisting upon a clear distinction between the two can justice be done in either case or the public be intellectually awake to the value of either system.

At a meeting of physicians in Lakewood, N. J., the other day one writer expressed the judgment that the extermination of flies would add two years to the average of human life, by the elimination of typhoid fever and other diseases transmitted by flies. If we would first eliminate horses and their stables we should remove the chief breeding place of the house fly.

The reorganization of the Navy Department under Secretary Meyer has our hearty approval, but its defense needs more extended subsequent discussion. If we must have more battleships it is something to know that only two are asked for, and that the estimates for the navy the coming year are ten millions less than was expended last year. We trust that supplemental demands will not wipe out this curtailment.

In a book containing the letters written by Prof. John Stuart Blackie to his wife we came across the following:

"I wrote a long letter to Tyndall, in which I alluded him to study especially Ps. xxx, and the Angels' Hymn in 'Faust,' as containing more wisdom than Huxley could educe from the pretenses of his 'quodlibet'."

Insurance

What Will He Do with It?

IN 1899, when Henry B. Hyde, the organizer and builder of the Equitable Life Assurance Society, died, he and his immediate associates in the management had been in uninterrupted control of its affairs for forty years. The organization of the company as a joint-stock co-operation was compulsory under the State law which, presumably in the interests of the mutuals then in existence, required new corporations to have not less than \$100,000 capital. None the less, the Equitable was made a mutual company by forever restricting its stock interests to a bare dividend of 7 per cent. per annum on the amount of its capital stock. During the four decades the society was under the management of the elder Hyde, its mutuality was never questioned, even by its most aggressive mutual competitors. Since his death the control has rested in three separate owners—his heirs, Thomas F. Ryan and J. P. Morgan, the latter a recent purchaser.

There is a warning in these frequent changes in the brief period of ten years; and the possible results from their repetition are pregnant with importance to policyholders. For the present they are secure and will so remain while the control is retained by Mr. Morgan, whose financial ability, business integrity and public spirit are beyond question. It may be safely asserted that not since Mr. Hyde's death have the government and conduct of the society fallen into hands so capable, strong and reliable.

But the Equitable has outgrown the limits of stock domination. The interests of its hundreds of thousands of members are too important to remain subject to the life or death of one or two individuals. Its concerns are too vast, too sacred, to continue longer in subordination to the control of \$51,000 worth of stock. Mr. Morgan may never hand over the control to another private purchaser, nor is it believed he will, but he is under no legal obligation not to do

so. It is his private property, for which he has paid a heavy price, and, as matters stand, he is at liberty to dispose of it when and as he pleases. This should not be so. The government and destiny of this great institution belong naturally and rightfully to its policyholders, an opinion that is concurred in by Judge Morgan J. O'Brien, one of the trustees of the majority stock, and Hon. Wm. H. Hotchkiss, State Superintendent of Insurance.

The whole institution of life insurance is menaced when a company of world-wide reputation carrying a billion and a third of insurance on the lives of half a million people, and owning assets of half a billion dollars, can pass from proprietor to proprietor, as has the Equitable three times within the last ten years, by the mere transfer of a few thousand dollars' worth of paper representing a bare majority of its nominal, insignificant and superfluous capital. Confidence in the future of such a company must necessarily be of a quality quite inadequate to its requirements. The Equitable is one of the three largest life companies in the world; the public is not given to making nice distinctions; it is peculiarly indiscriminating, and, for a single constitutional or administrative fault in life insurance, it condemns the institution generally.

Mr. Morgan has done a splendid thing in rescuing the control of the Equitable from the domain of speculation, but as a shrewd man of business he must know his task is but half finished. He has assumed a responsibility to the policyholders which will be fully discharged only when he puts them in possession of the stock control. They can afford to pay him any reasonable sum for that service. The mutualization of the Equitable is necessary to the safety of its members; its eventual accomplishment cannot be prevented. Will Mr. Morgan add this to his other numerous public beneficences? We think he will.

The Morgan Power

THE purchase of a controlling interest in the Guaranty Trust Company by one of J. Pierpont Morgan's partners, followed by the acquisition of Thomas F. Ryan's Equitable Life shares by Mr. Morgan himself, has suggested the publication of many reports about approaching or probable mergers in the banking field. These events have also led some persons to believe that a sudden and unprecedented concentration of wealth and banking power has taken place. When one considers the existing community of interest in several of the New York trust companies, and the trust company and bank holdings of the Equitable Life, it is plain that certain mergers or consolidations can soon be made without difficulty, but we venture to predict that the most sensational of those which have been foreseen by some of the newspapers will not be made. Mr. Davison (a partner of Mr. Morgan), who, with certain associates, acquired control of the Guaranty Trust Company, says:

"There is absolutely no foundation for the rumored merging of certain banks or trust companies in consequence of the purchase by Mr. Morgan of the majority stock of the Equitable Life. About 90 per cent of the stories which have cropped out in connection with the transfer of this interest to him are pure fiction."

The death of Mr. Harriman, the gradual and voluntary retirement of Mr. Ryan, and the requirements of the new insurance laws have opened the way for possible changes affecting several banking institutions. Quite naturally, those who are largely interested in them seek to protect their interests, and incidentally to extend them.

It is true that these recent events have increased the financial power of Mr. Morgan and his associates, and that this increase has been made with the approval of another great banking group, which he and his allies now probably overshadow. His influence may be dominant in financial institutions whose resources are nearly \$2,000,000,000. He has become prominent in connection with the

transit companies of New York. But his record as a banker is admirable, and surely as a power in the traction service he should be preferred to either Mr. Mr. Ryan or the late Mr. Whitney. In the Steel Corporation his influence has been exerted for publicity and the fair treatment of competitors. We expect that his power in the Equitable Life will be used in the interest of the policyholders. Public spirited men who are familiar with his record and motives do not regard an extension of his influence with misgivings, but they do regret that the years will be few in which that influence can be directly exerted.

....The highest price on record, \$96,000, was obtained last week for a seat on the New York Stock Exchange.

....It is estimated by the Treasury Department that the new tax on corporation net earnings will yield about \$25,000,000 and that it will be paid by 122,000 corporations.

....Notice is given by the Chicago, Rock Island & Pacific Railroad Company, whose legal department is represented in New York by Robert Walker, that it will, on February 1 next, redeem all its outstanding 5 per cent. gold bonds of 1913 at par and accrued interest, with a premium of 2½ per cent., at the office of the Central Trust Company.

....In the death of Charles Stewart Smith the country has lost a public-spirited citizen of the broadest type. After a long and successful career as a banker, he devoted the closing years of his life to the pursuit of artistic and literary subjects. He had been closely in touch with charitable and philanthropic movements, and during a considerable period of the seventy-seven years of his life had held a prominent position in political circles. He at one time declined the nomination for Mayor of New York, and later was chairman of the Chamber of Commerce committee that instigated the police investigation, which resulted in the election of Mayor Strong.

The Independent

VOL. LXVII NEW YORK, THURSDAY, DECEMBER 10, 1909 No. 3185

Survey of the World

President Taft's Message

As there is no provision by statute or custom for a formal report by the Secretary of State, a record of the State Department's work makes nearly half of President Taft's first annual message to Congress. Among the subjects considered are the submission of the controversy concerning the Canadian fisheries to the Hague court, the negotiations for an international agreement for the protection of fur seals, the steps taken to determine rules of law for an International Prize Court, and the movement for reform in the Kongo State, which is now "in a more hopeful stage." With an expression of gratification because of the peaceful settlement of differences between Bolivia and Peru, the President says:

"From various quarters, directly or indirectly concerned, the intermediation of the United States was sought to assist in a solution of the controversy. Desiring at all times to abstain from any undue mingling in the affairs of sister republics and having faith in the ability of the Governments of Peru and Bolivia themselves to settle their difference in a manner satisfactory to themselves, which, viewed with magnanimity, would assuage all embitterment, this Government steadily abstained from being drawn into the controversy and was much gratified to find its confidence justified by events."

He asks that liberal appropriation be made for the coming Pan-American Conference at Buenos Ayres, his purpose being to appoint a distinguished delegation. Speaking of American capital seeking investment abroad, he says that "this Administration is lending all proper support to legitimate and beneficial American enterprises in foreign countries, the degree of such support being measured by the national advantages to be expected"; but it must consider

whether the Government of any country in question is faithful to the principles of moderation, equity and justice. He continues:

"The Pan-American policy of this Government has long been fixed in its principles and remains unchanged. With the changed circumstances of the United States and of the republics to the south of us, most of which have great natural resources, stable government, and progressive ideals, the apprehension which gave rise to the Monroe Doctrine may be said to have nearly disappeared, and neither the doctrine as it exists nor any other doctrine of American policy should be permitted to operate for the perpetuation of irresponsible government, the escape from just obligations, or the insidious allegation of dominating ambitions on the part of the United States. Besides the fundamental doctrines of our Pan-American policy there have grown up a realization of political interests, community of institutions and ideals, and a flourishing commerce. All these bonds will be greatly strengthened as time goes on and increased facilities, such as the great bank soon to be established in Latin America, supply the means for building up the colossal intercontinental commerce of the future."

A part of what he says about Nicaragua is in substance a repetition of Secretary Knox's recent letter. An extract follows:

"I need not rehearse here the patient efforts of this Government to promote peace and welfare among these republics, efforts which are fully appreciated by the majority of them who are loyal to their true interests. It would be no less unnecessary to rehearse here the sad tale of unspeakable barbarities and oppression alleged to have been committed by the ~~Latin~~ Government. Recently two Americans were put to death by order of President Zelaya himself. They were officers in the organized forces of a revolution which had continued ~~more~~ weeks and was in control of almost half of the republic, and ~~at such~~ according to the modern enlightened practice of civilized nations, they were entitled to be dealt with as prisoners of war."

Our Government, he adds, intends to

take such steps as may be found most consistent with its dignity, its duty to American interests and its moral obligations to Central America and civilization. Explaining why American participation in the Chinese railway loan was to be desired, he says that such participation "seems at last assured." Referring to the recent agreement of China and Japan (involved in the Crane incident), he says that Secretary Knox was convinced that no monopoly of mining privileges was intended. The two Governments have given assurance that the agreement had no purpose inconsistent with the policy of equality of opportunity. He asks for favorable action upon Secretary Knox's plan for reorganizing his department, and speaks of his own recent order providing for the selection of diplomatic secretaries by examination and for the promotion of them by merit. Turning to the Treasury report, he approves the proposed issue of Panama bonds to meet this fiscal year's deficit of \$73,000,000. To avoid a deficit in the coming year he directed that the estimates be made "as low as possible consistent with imperative governmental necessity." Therefore they are less than the current year's appropriations by \$42,818,000, and it is expected that in the coming fiscal year there will be (Panama Canal payments excluded) a surplus of \$35,931,000. He speaks of steps taken for an investigation, to consume two or more years, which will show how the cost of administration may be reduced and the average efficiency of employees increased. An attempt will be made to get rid of existing inequality and injustice in classification and pay. But there must be provision for the removal of old employees who have outlived their usefulness:

"It is impossible to make such provision unless there is adopted a plan of civil pensions. Most of the great industrial organizations, and many of the well-conducted railways of this country, are coming to the conclusion that a system of pensions for old employees, and the substitution therefor of younger and more energetic servants, promotes both economy and efficiency of administration. I am strongly convinced that no other practical solution of the difficulties presented by the superannuation of civil servants can be found than that of a system of civil pensions."

Because of the advancing prices of living, he adds, we cannot save by reducing

salaries. Indeed, it may be necessary to increase them. We can economize by reducing the number of employees and obtaining greater efficiency from those retained. Taking up the Sugar Trust frauds, he says that when the Trust made restitution there was an express reservation in the settlement contract that it should not prevent criminal prosecution:

"It would seem to me that an investigation of the frauds by Congress at present, pending the probing by the Treasury Department and the Department of Justice, as proposed, might by giving immunity and otherwise prove an embarrassment in securing conviction of the guilty parties."

He expresses the hope and belief that no tariff war, on account of the maximum duties of the new tariff, need be anticipated, because friendly negotiation will secure the elimination of unduly discriminatory provisions in the laws of other countries. As to the scope of his power in connection with the new board of tariff experts, he says:

"An examination of the law and an understanding of the nature of the facts which should be considered in discharging the functions imposed upon the Executive show that I have the power to direct the tariff board to make a comprehensive glossary and encyclopedia of the terms used and articles embraced in the tariff law, and to secure information as to the cost of production of such goods in this country and the cost of their production in foreign countries. I have therefore appointed a tariff board consisting of three members, and have directed them to perform all the duties above described. This work will perhaps take two or three years, and I ask from Congress a continuing annual appropriation equal to that already made for its prosecution. I believe that the work of this board will be of prime utility and importance whenever Congress shall deem it wise again to readjust the customs duties. If the facts secured by the tariff board are of such a character as to show generally that the rates of duties imposed by the present tariff law are excessive under the principles of protection as described in the platform of the successful party at the late election, I shall not hesitate to invite the attention of Congress to this fact, and to the necessity for action predicated thereon. Nothing, however, halts business and interferes with the course of prosperity so much as the threatened revision of the tariff, and until the facts are at hand, after careful and deliberate investigation, upon which such revision can properly be undertaken, it seems to me unwise to attempt it."

In the interest of economy the War Department estimates have been made \$45,000,000 less than those of last year. New projects have been cut out and military

progress has been suspended. There will probably be a special message on the need of army reorganization and of the elimination of the least efficient officers. There should be legislation for additional defenses at the mouth of Chesapeake Bay, where it is proposed that an artificial island shall be the foundation of a fort. Naval estimates are \$38,000,000 less than last year's. He asks for two first-class battleships and one repair vessel. Pointing out the deplorable delays in the administration of civil and criminal law, he seeks legislation empowering him to appoint a commission of inquiry. Quoting the Republican platform's utterance concerning injunctions, he recommends that Congress forbid the issuing of an injunction by any Federal court without notice and without giving the parties a reasonable opportunity to be heard, unless the court is convinced that delay for notice would cause irreparable injury, and unless its opinion is expressed in writing, with the reasons for the same. He says the low rate of postage on second class mail matter caused a loss of \$63,000,000 last year, as the cost of transportation was nine times the postage. This shows that the Government pays "an enormous subsidy to the newspapers, magazines and periodicals":

"I commend the whole subject to Congress, not unmindful of the spread of intelligence which a low charge for carrying newspapers and periodicals assists. I very much doubt, however, the wisdom of a policy which constitutes so large a subsidy and requires additional taxation to meet it."

The passage of a ship subsidy bill like the one which nearly became a law some time ago is earnestly recommended. He is convinced that the people want postal savings banks:

"I believe them to be necessary in order to offer a proper inducement to thrift and saving to a great many people of small means who do not now have banking facilities, and to whom such a system would offer an opportunity for the accumulation of capital. They will furnish a satisfactory substitute, based on sound principle and actual successful trial in nearly all the countries of the world, for the system of government guaranty of deposits now being adopted in several Western States, which with deference to those who advocate it seems to me to have in it the seeds of demoralization to conservative banking and certain financial disaster."

To those who think that action on this

subject should await the Monetary Commission's report he says he does "not see why the one should be tied up with the other." Conservation of national resources, the anti-Trust law and new laws for interstate corporations are to be subjects of special messages. He asks for authority to appoint a commission to consider plans for the celebration in 1913 of the fiftieth anniversary of the Emancipation Proclamation. In conclusion he says:

"The country is in a high state of prosperity. There is every reason to believe that we are on the eve of a substantial business expansion, and we have just garnered a harvest unexampled in the market value of our agricultural products. The high prices which such products bring mean great prosperity for the farming community, but on the other hand, they mean a very considerably increased burden upon those classes in the community whose yearly compensation does not expand with the improvement in business and the general prosperity. Various reasons are given for the high prices. The proportionate increase in the output of gold, which today is the chief medium of exchange and is in some respects a measure of value, furnishes a substantial explanation of at least part of the increase in prices. The increase in population and the more expensive mode of living of the people, which have not been accompanied by a proportionate increase in acreage production, may furnish a further reason. It is well to note that the increase in the cost of living is not confined to this country, but prevails the world over, and that those who would charge increases in prices to the existing protective tariff must meet the fact that the rise in prices has taken place almost wholly in those products of the factory and farm, in respect to which there has been either no increase in the tariff or in many instances a very considerable reduction."

Ice Trust Found Guilty

At the close of a trial which has consumed eight weeks, in New York, on the 10th, the American Ice Company, commonly called the Ice Trust, was found guilty of violating the Anti-Trust law of the State. The jury was out an hour and a half. Justice Wheeler, of the Supreme Court, imposed the maximum fine of \$5,000. He expressed regret afterward that a heavier fine was not permitted by the law. A civil suit is pending in which the license of the company (a New Jersey corporation) to do business in the State is involved, and on account of this verdict the license may be revoked. This is the first conviction under the statute, which resembles the

Sherman law and was enacted in 1899. District Attorney Jerome has been criticised for failing to prosecute the company or to procure an indictment. Writing to the Attorney General, he said that a thoro investigation had failed to disclose evidence of the existence of an unlawful combination. The recent prosecution was conducted by a Special Deputy Attorney General. The company is one in which Charles W. Morse, the banker recently convicted and sentenced to be imprisoned fifteen years, was concerned. It acquired ice companies in Baltimore, Washington, Maine and other places, waged successful war upon independents, and excited popular enmity by exacting high prices.

The Controversy with Zelaya

The revolutionists' army in Nicaragua has been occupying a strong position at Rama, confronted there by President Zelaya's forces. On the 8th there were reports from Managua, the capital, that Zelaya was preparing to give up his office and was urging the revolutionists to accept in his place Señor Madriz, Nicaragua's representative in the Central American Peace Court. At Rama, the Government commander, Vasquez, sought a conference with Estrada. A truce was proclaimed, and various propositions were made to the revolutionist chief. At last, Vasquez abruptly demanded surrender, and then Estrada discovered that the conference had been merely a ruse to cause delay and give time for the main body of Vasquez's army to pass around his flank and move upon Bluefields, his undefended base of supplies. Whereupon, in great alarm, he called upon the American Consul at Bluefields for help. It was reported on the 11th that Bluefields was in much danger and that American marines had been landed, with machine guns, to protect the interests of about 150 Americans residing there.—On the 10th there was telegraphed from Managua a long interview with Zelaya, who sought in this way to answer the letter of Secretary Knox. Zelaya said

"The United States unjustly condemns my administration. I prepared to submit to the investigation of a committee of his own choosing, going to surrender my rights to the Presidency if the

charges in his letter were sustained. Secretary Knox has not replied. Defenseless against the hostility of a powerful nation, I must submit, altho I have been condemned unheard.

"This coercion of the United States will not redound to the credit of that nation, whose motives are questioned in all Latin America. The shooting of Groce and Cannon is used as a pretext. Both were amenable to the law of Nicaragua, which distinctly authorizes the shooting of individuals commanding rebels. It is different if a person is captured during the course of an international war. The attempt of Secretary Knox to establish the inviolability of the persons of Americans participating in foreign revolutions will result in constant revolutions, led by immune Americans. Initiative in the shooting of Groce and Cannon was not mine. I simply refused to extend clemency to them after a properly constituted military tribunal had passed upon the case.

"While I am ready to surrender the Presidency, I cannot do it precipitately, as it would result in uprisings by several factions, each of which is eager to secure power. I am in negotiation with the revolutionists to secure their indorsement to a successor who will be acceptable to all parties and have submitted the name of José Madriz, Judge of the Cartago Court. I hope this will obviate the necessity of American intervention, which would be intensely distasteful to the whole of Latin America. I am informed that it is the intention of the United States to prevent my leaving Nicaragua. I do not believe this to be true."

The hostility of the United States, he added, was due to the machinations of President Cabrera, of Guatemala, who had pursued him with relentless enmity since 1906. In that year he had refused to join Cabrera in an offensive and defensive alliance against Mexico, and thus had thwarted Cabrera's "efforts to establish a dictatorship in Central America." —Enrique C. Creel, formerly Mexican Ambassador at Washington, is on his way to that city, where, in behalf of President Diaz, he will submit plans for a peaceful settlement of the controversy. In Congress, Senator Rayner and Representative Sulzer, both Democrats, have introduced resolutions giving President Taft full authority to use the army and navy in dealing with Zelaya. Mr. Rayner's resolution authorizes the President to cause the apprehension of Zelaya and his punishment for murder.

Cuba and Porto Rico

The resignation of Vice President Zayas as chairman of one faction of the dominant party in Cuba, accompanied by the resignation (apparently enforced) of

one of his friends, Señor Saayerio, as Chief of Public Works, is said to indicate that all plans for a fusion of the two factions have failed.—Our Government has been assured by President Gomez that it will be consulted with respect to the pending tariff treaties with Spain and Venezuela, and that the rights of the United States under the existing treaty of reciprocity will not be affected.—Feeling that they have not received their share of the offices, the negroes of Cuba have undertaken to organize a party of their own, under the leadership of Morua Delgado, president of the Senate. A meeting recently held for this purpose at Guines was broken up by the authorities. Several of those present were arrested and sent to jail for thirty days.—The organized workmen of Porto Rico have sent to Washington a petition, and it has been given to President Taft by a committee. It asks for the sanitary inspection of factories and workshops, the abolition of convict labor, better educational advantages for workmen's children, prohibition of the employment of children under fourteen in factories, and the application of eight-hour and employers' liability laws thruout the island. The petitioners assert that legislation for the benefit of labor is opposed by the Unionist party, which controls the Legislative Assembly.—Governor Colton has accepted the excuses of the Unionists, who, on the day of his arrival, raised at half mast an American flag bound with crêpe. They explained that no insult was intended, and he has recommended that prosecution of them be discontinued.

Asquith versus Balfour The campaign in England was formally opened on December 10 by the two leaders, Premier Asquith addressing an immense and enthusiastic audience of Liberals in Albert Hall, and ex-Premier Balfour publishing a manifesto to his constituents. Mr. Asquith began by pointing out that four years ago Sir Henry Campbell-Bannerman, then Premier, had outlined in that hall the reform program of the new Liberal Government. This program the party had labored faithfully to carry into effect, but the will of the people had

been nullified, and as a fitting climax the supplies which the House of Commons had voted had been stopped by the House of Lords. The electors might just as well have spared themselves the trouble of going to the polls in 1906.

"What has been done may be done again. It becomes our first duty to make its recurrence impossible. We shall, therefore, demand authority from the electorate to translate an ancient, unwritten usage into an act of Parliament and to place upon the statute book recognition explicit and complete of the settled doctrine of our Constitution that it is beyond the province of the House of Lords to meddle with any law to any degree or for any purpose with national finance."

The Government, he said, was confronted by three constitutional innovations: First, the claim of the House of Lords to control the levying of taxes; second, its claim to dissolve the popular chamber, altho it could not itself be dissolved; and third, its assertion of the power to make and unmake the executive Government of the Crown. Every one of these revolutionary pretensions they should question for all they were worth. Mr. Asquith reviewed the various bills which had been passed by the House of Commons and rejected by the Lords: The Welsh Disestablishment Bill, the Scottish Land Bill, the Education Bill, the Licensing Bill and the Irish Bill. On the last point he declared his belief that the problem could be solved in only one way, "By a policy which will explicitly safeguard the supreme inadvisable authority, and the Imperial Parliament can set up in Ireland a system of both self-government as regards purely Irish affairs. There is not and cannot be any question of separation." Old age pensions had become, he said, a permanent and indestructible part of the constitution, but old age was only one of the hazards to which the industrial population was exposed. The time had come for the State to lend them a helping hand in sickness, invalidity and accident. It was one of the objects of the budget to provide money for a long and costly social campaign. The franchise law, he said, was still encumbered with artificial distinctions and impediments for which there was no justification. The new House of Commons should pass on the question of granting the franchise to women and the Government would not

oppose it. He had not, he said, changed his well-known views upon the question of woman suffrage, notwithstanding the deplorable suicidal policy of a small section of its advocates.—Mr. Balfour's address to his constituents, the electors of the City of London, accused the Liberal Government of engaging in a conspiracy to destroy the constitution by substituting a single chamber government. The Government's claim is simply that the House of Commons—no matter how or when elected, or what its relation to the public opinion of the moment—is to be the uncontrolled master of the fortunes of every class of the community, and no appeal is to be allowed to the community even in the extremest cases. Mr. Balfour put three questions, as follows: May there not be occasions when it is necessary to appeal to the nation on financial matters? Isn't this such an occasion? Does any other machinery exist to secure an appeal except that which the House of Lords has set in motion? He went on to show how much more strongly property in the United States is safeguarded against special taxation than in Great Britain, for no such measure as the British budget could be adopted there without a two-thirds majority of both houses, or become law without national mandate from the still stronger majority of the country, while even if the House of Representatives imposed special taxation, it could be rejected by the Senate or vetoed by the President:

"I am not so immoderate as to demand such security for the British citizens, but only that, if exceptional taxation is imposed at the caprice of a Minister, he should not be deprived of the only means known to the Constitution by which appeal to his fellow-countrymen may be secured."

✱

Dr. Cook's Records As soon as Walter Lounsdale, private secretary to Dr. Frederick A. Cook, arrived at Copenhagen and had delivered the records and report of Arctic exploration to the committee of the University of Copenhagen, the *New York Times* published a statement from two men confessing that they had fabricated the Cook observations.

According to this statement, which is supported by their affidavits, George H. Dunkle, an insurance broker, had approached Dr. Cook with the offer of assistance and had introduced to him August Wedel Loose, an experienced navigator, who at Dr. Cook's request had worked out a series of alleged observations confirming his story of the discovery of the Pole, calculating backward from the date of April 21, 1908. He had stayed at the hotel with Dr. Cook and prepared such observations on the sun and stars as might have been made from the different points along the route and at the Pole. Captain Loose had also written articles for Danish papers supporting Dr. Cook's claims. The two men, according to their affidavit, were to receive \$4,000 for the data, with a bonus of \$500 if the University of Copenhagen accepted the record, but Dr. Cook only paid them \$260, so they came out against him. Dr. Cook's whereabouts is not known. He is reported to be in a sanitarium. The Copenhagen Committee which has been appointed for the examination of Dr. Cook's records is composed of the following: President, Prof. Elis Stromgren, director of the Astronomical Observatory; Dr. C. F. Pechule, astronomer attached to the observatory; Gustav Holm, explorer; Prof. A. B. Yensen, president of the School of Navigation; Dr. Royder, director of the Meteorological Office, and Dr. F. A. Engstrom, director of the Lund Observatory.

✱

The Nobel Prizes According to the will of Alfred Nobel, the dynamite manufacturer, five prizes from the income of his estate are to be awarded every year for the most important discovery in the realms of physics, chemistry and medicine, the greatest work in literature of an idealistic tendency, and the most efficient efforts for the promotion of peace. The selection is in the hands of committees of the Swedish academies of science and art, and, for the peace prize, of the Norwegian Parliament. We give below the recipients of the prizes for this year, together with those of previous years for comparison:

THE RECIPIENTS OF THE NOBEL PRIZES.

PHYSICS: 1901, Wilhelm Konrad Röntgen (German); 1902, H. A. Lorentz (Dutch); 1902, P. Zeeman (Dutch); 1903, Henry Becquerel (French); 1903, Pierre Curie (French); 1903, Madame Skłodowska Curie (Polish); 1904, Lord Rayleigh (English); 1905, Philipp von Lenard (German); 1906, Joseph J. Thomson (English); 1907, Albert A. Michelson (American); 1908, Gabriel Lippman (French); 1909, William Marconi (Italian); 1909, Ferdinand K. Braun (German).

CHEMISTRY: 1901, Jakobus H. van't Hoff (Dutch); 1902, Emil Fischer (German); 1903, Svante Arrhenius (Swedish); 1904, Sir William Ramsay (English); 1905, Adolph von Baeyer (German); 1906, Henri Moissan (French); 1907, Edward Büchner (German); 1908, Ernest Rutherford (English); 1909, Wilhelm Ostwald (German).

MEDICINE: 1901, Emil Behring (German); 1902, Ronald Ross (English); 1903, Niels R. Finsen (Danish); 1904, Ivan Petrovitch Pavlov (Russian); 1905, Robert Koch (German); 1906, Camille Golgi (Italian); 1906, Santiago Ramon y Cajal (Spanish); 1907, Charles Alphonse Laveran (French); 1908, Paul Ehrlich (German); 1908, Elie Metchnikoff (Russian); 1909, Emil Theodor Kocher (Swiss).

LITERATURE: 1901, Armand Sully-Prudhomme (French); 1902, Theodor Mommsen (German); 1903, Björnstjerne Björnson (Norwegian); 1904, Frédéric Mistral (French); 1904, José Echegaray (Spanish); 1905, Henry Sienkiewicz (Polish); 1906, Giosué Carducci (Italian); 1907, Rudyard Kipling (English); 1908, Rudolph Eucken (German); 1909, Selma Lagerlöf (Swedish).

PEACE: 1901, Henri Dunant (Swiss); 1901, Frédéric Passy (French); 1902, Elie Ducommun (Swiss); 1902, Albert Gobat (Swiss);

SELMA LAGERLÖF, OF SWEDEN.
Who receives the Nobel Prize in literature.

1903, William R. Cremer (English); 1904, Institute of International Law (International); 1905, Bertha von Suttner (Austrian); 1906, Theodore Roosevelt (American); 1907, Louis Renault (French); 1907, Ernesto T. Moneta (Italian); 1908, K. F. Arnoldson (Swedish); 1908, M. F. Baier (Danish); 1909, Paul Henri Benjamin d'Estournelles de Constant (French); 1909, Auguste Beernaert (Belgian).

WILHELM OSTWALD, OF GERMANY.
Who receives the Nobel Prize in chemistry.

WILLIAM MARCONI, OF ITALY.
Who receives half the Nobel Prize in physics.

BARON D'ESTOURNELLES DE CONSTANT, OF FRANCE.
Who receives half the Nobel Prize for the promotion of peace.

The Lords and the Budget

BY THE RIGHT HON. DAVID LLOYD-GEORGE, M. P.

CHANCELLOR OF THE EXCHEQUER

[The following article is compiled, by special permission, from the speeches, sent for that purpose, of the Chancellor of the British Exchequer. The House of Lords has since rejected the Budget, an unprecedented infraction of the Constitution. It was incumbent on Mr. Lloyd-George, from his office in the Cabinet, to devise the Budget, and it will now be his duty to defend it before the people against the Lords. The present article illustrates the ability and force which he brings to the task.—EDITOR.]

WHEN I first of all came to the Exchequer—when the Prime Minister did me the honor of inviting me to undertake that great office—I fully realized, from the moment I entered the Treasury, that the task in front of me was a difficult one, a delicate one, that it was one of great gravity. I foresaw that there would be a very considerable deficit in the revenue of the coming year, and I knew it would be no easy matter to raise funds in such a way as not to disturb or interfere with the delicate machinery of our national industry.

After all, a tax is a tax. It is not a thing which is desirable in itself. It is not a thing to be sought for. Our protectionist friends always talk as if they were ends in themselves, as if a tax could increase the commercial life of the country. A tax is necessarily an impost—a burden. It has got to come from some pocket, and the only question is whether it won't do more good in the national purse than in the pocket of the individual.

I should like to give a few illustrations by way of showing how the new budget taxes will work. I will take first

of all my own country, which is quite interesting. It is not so very long ago that the South Wales coal field was a very wild, unproductive country, most of it common land. Landlord Parliaments soon handed the property over to the great landlords when they discovered there was mineral value in it. At the present moment the South Wales coal field pays a million and a half per

annum in royalties to just a few landlords and hundreds of thousands in ground rents.

Let me give one or two figures which will show what is done there. First of all, the land is not very rich, it is rather poor agricultural land. They discover coal there. The landlord leases the property to somebody who has the necessary enterprise and capital for purposes of development. The landlord himself does not sink any capital in these properties, only in very rare exceptions. There are just a few. Somebody else works it,

somebody else faces the risk of a loss, and the landlord takes sixpence a ton in the way of royalties.

Then we come to the surface. Workmen must be employed for the purpose

DAVID LLOYD-GEORGE.

of carrying on mining operations, and the workmen must have homes. So they start building, and the landlord then says: "Yes, certainly; by all means you may build, but you have got to pay a ground rent."

There is land now leased in the valleys in South Wales for which, tho even within living memory (it may be only a few years ago in some cases) it produced only a shilling an acre, the landlord is getting 30 pounds and 40 pounds per acre per annum, simply for the permission to build a few cottages upon it. They are able to build on lease, and in about sixty years the whole of this land will fall into the landlords' hands.

The Rhondda Valley is one of the greatest coal fields in South Wales. In the year 1851 the total population of the valley was only a thousand. Today the population is 132,000. The landlords receive annually £200,000 in royalties. They receive £30,000 a year in ground rents.

The colliery proprietors there pay in rates £54,000 a year. The landlords do not pay a penny. They charge for the minerals, they charge for the surface; whenever land is wanted for water works they charge heavy prices for it; railways have to pay, and between all these charges industry is burdened, and all the landlords do not contribute a penny toward the heavy and growing rates of the district.

There was a case given to me from South Wales of a company which had sunk a good deal of money in mining operations. They sent me their balance sheet. This company paid £3,500 in rates, they made a profit of £3,000, and the landlords got £10,600—more than the profits and the rates together—and yet they never sunk a penny in the mine and do not pay one halfpenny toward the rates of the district.

When I come along and say, "Here, gentlemen, you have escaped long enough—it is your turn now; I want you to pay just 5 per cent. on the £10,000 odd."

"Five per cent.," they say to me. "You are a thief; you are worse, you are an attorney; worst of all, you are a Welshman."

That is always the crowning epithet.

Well, I do not apologize—I could not help it, and if I could, I would not. I am proud of the little land among the hills. But whenever they hurl my nationality at my head, I say to them: "You hypocrites! Pharisees! You are the people who in every peroration always talk about our being one kith and kin thruout the empire, from the old man of Hoy in the north down to Van Dieman's Land in the south." And yet if any one dares to aspire to any position who does not belong to the particular nationality which they have dignified by choosing their parents from they have no use for him. Well, they have got to stand the Welshman this time!

I have been inquiring into what is happening in England recently. Landlords have no nationality; their characteristics are cosmopolitan. A case was given me the other day from Yorkshire, of all places in the world, and as it illustrates practically every tax which I propose in my budget, I will tell this story. As I have it on the authority of the managing director—well, he is responsible.

It is the story of a district in Yorkshire which four or five years ago was purely agricultural—really agricultural, receiving half its rates as agricultural land from the general taxes. There was not within four miles of it an industry, not a factory, not a coal mine. And some very enterprising mining investors came along and said, "We think there's coal here." And they went to the landlord and said, "Will you allow us to dig for coal here?"

He replied, "For a consideration, of course. I will only charge you 6pence a ton on all the coal that comes up."

They said, "What about the surface?"

"Ah, certainly; I will sell you any surface land you want for the purpose, for a consideration."

"Well, what do you want?" they said. "You are receiving now 15s. 6d. an acre. What will you want from us?"

"Well," he said, "four pounds an acre."

Then they said to him, "We must bring workmen here, and as there are no cottages we shall have to build them, and we propose building a model village." And they built one of the most

beautiful model villages in the kingdom.

When they asked, "Will you allow us to build a few cottages?" he said, "Certainly, but I shall want a small return—£6 or £10 an acre—quite moderate."

This landlord is really a most moderate landlord. The land was at 15s. 6d. and he charges £10. Well, that is only eighteen times the value of the land. I can give cases where landlords have charged thirty, forty, even a hundred times the value of the land. This man has been most moderate—only eighteen times its value.

Then he said to them, "There is the fish pond, rather near your model village. I don't think it will be worth much afterwards, whatever it's worth now. So I think you had better take it." The mining speculators replied, "All right. It will be rather good sport to fish either for trout or tadpoles."

The landlord: "I am getting £1 for it now; I will let you have it for eighteen guineas a year, cheap."

They started. They spent half a million without knowing what would happen. It was a real speculation, a real risk. They took it on, spent half a million, discovered the coal, and the landowner is getting royalties now at the rate of nearly £20,000 per annum. He is getting, in addition to the £4 per annum for every acre of land out of the surface used by the colliery—he is getting £6 to £10 per annum per acre for all the cottages there. He charges £4 per annum for tipping rubbish, and £10 per annum for each workmen's cottage. And he is making a good thing out of it—a very good thing out of it.

Recently they were prospering and getting more and more coal and in a very short time they will be paying £400,000 per annum for this land for the royalties alone. The landlord has never spent a penny upon it. Recently they wrote him and said, "We want more ground to build cottages on."

He said, "Certainly, for £150 per acre"—the land now for agricultural purposes being worth about £20 per acre and the landlord getting half his rates paid out of the general taxation of the country in respect to the fact that it is agricultural land.

What happens? He said to them, "I

will let you have this land at £150 per acre," but he added, "No public house to be erected—without the consent of the landlord."

If consent is given an extra premium is required. I like a man who puts a high value on his principles. Here, at any rate, is a man who won't part with them without an extra premium.

Where does my Budget come in? It comes in rather late, I admit. It ought to have come in in one of the earlier chapters? Still, it comes in soon enough to give the story a happy ending. When the £40,000 royalty comes, 5 per cent. for the first time will come to the State. The land outside—the land which is nominally agricultural land, but which is now valuable building land, will pay a halfpenny in the pound. When it is sold we will get 20 per cent. on the increase. And when the landlord passes away to another sphere we shall then get the dead rent, say 20 per cent. on the increase.

More than that. We have had another little provision. We have considered his case thoroly. When these cottages fall in and his heir comes and walks in for the whole of this beautiful model village—this model landlord of a model village—the State will then, under this Budget, say, "Very well, if you really must take all the property I think we had better get a toll of 10 per cent. off it, at any rate. We shall be able to do something for the people who live in these cottages."

We have got another little provision. The 5 per cent. only applies to existing collieries. But we have got a special provision for future collieries. We shall then ask not 5 per cent. of the royalty, but 20 per cent.

Let me call attention to one provision in this lease, because it really casts a strange, almost weird, light upon the landlords' ideal of rural life in this country. There is a clause in the lease of this model village that no persons shall reside in any of these cottages if they have been convicted of an offense against the game laws. No person shall reside there if the landlord or his agent has any objection to him. And this is a free country!

Here is a poor miner who is guilty—of what? Of doing something which

the landlord spends his life in doing—and which I have done myself many a time—without a license—only in Wales. What happens? Not merely is he to be fined, but he is to be deprived, as far as this gentleman is concerned, of the opportunity for all time of earning a decent living for himself and his family. All I can say is that a provision of the sort in any lease is an outrage.

Well, these are the taxes. I have given illustrations of them. I defy any reasonable man anywhere to say that there is any injustice in taxing men under the conditions, when the State needs the money. We want money for the defense of the country; to provide the pensions of the old people who have been spending their lives in tilling the soil at a very poor pittance, in sinking those mines, risking their lives. And when they are old we do not want to starve them or humiliate them; and we say what better use can you make of wealth than to use it for the purpose of picking up the broken, healing the wounded, curing the sick, bringing a little more light, comfort and happiness to the aged? These men ought to feel honored that Providence has given them the chance to put a little into the poor-box, and since they won't do it themselves we have got to do it for them.

We are fighting in the House of Commons. We have had a prolonged fight—one of the longest fights in the history of the House. We are getting thru. It has got a very dangerous passage still before it is safe. If it does not get thru there, then it will come to the people, and there will be two questions to settle. One is the Budget, the next will be the House of Lords. They will both be on the same ballot paper. It will be the last time, probably, the question will be asked,

It is an old question, and it is time it should be answered. Who is to govern—the people or the peers? We must depend upon the people. We may be inviting opinion on these questions within the next few weeks—momentous weeks in the history of England. I don't know of any time which is so charged with matters of moment for the destiny of this great country as the present. You will probably soon have to settle these

problems. It may be within the course of the next few months the future of Britain will depend on not merely the intelligence, the clearness of vision, but the courage the people will display in the real hour of their trial.

What will the Lords do? Frankly it is a matter which concerns them far more than it concerns us. The more irresponsible and featherbrained among them want to throw it out. But what will the rest do? It will depend on the weather. There are some who are not fair-weather sailors, and they will go on. But poor Lord Lansdowne—with his creaking old ship and his mutinous crew—there he is; he has got to sail thru the narrows with one eye on the weather glass and the other on the forecastle.

But it does not depend on him. It will depend, in the first place, probably on the reports from the country. The most important gentleman in the business is not Lord Lansdowne, with his adroit management of the House of Lords. The real sailing master is Sir Alexander Acland-Hood, the chief whip of the Tory party; and the Ancient Mariner is engaged at the present moment in trying to decide whether it is safe to shoot the albatross. He will probably not decide until too late. But still this is the great constitutional party, and if there is one thing more than another better established about the British Constitution it is this, that the Commons, and the Commons alone, have the complete control of supply and ways and means; and what our fathers established thru centuries of struggle and of strife—even bloodshed—we are not going to be traitors to.

As long as the Constitution gave rank and possession and power to the Lords it was not to be interfered with. As long as it secured even their sports from intrusion and made interference with them a crime; as long as the Constitution enforced royalties and ground rents and fees and premiums and fines, and all the black retinue of exaction; as long as it showered writs and summonses and injunctions and distresses and warrants to enforce them, then the Constitution was inviolate. It was sacred. It was something that was put in the same category with religion, that no man should

with rude hands touch, something that the chivalry of the nation ought to range itself in defense of. But the moment the Constitution looks round; the moment the Constitution begins to discover that there are millions of people outside park gates who need attention—then the Constitution is to be torn to pieces.

Let them realize what they are doing. They are forcing a revolution. The Lords may decree a revolution, but the people will direct it. If they begin, issues will be raised that they little dream of. Questions will be asked which are now whispered in humble voices, and answers will be demanded then with authority. The question will be asked whether five hundred men—ordinary men, chosen accidentally from among the unemployed—should override the judgment, the deliberate judgment, of millions of people who are engaged in the industry which makes the wealth of the country.

That is one question. Another will be, Who ordained that a few should have the land of Britain as a perquisite? Who made ten thousand people owners of the

soil, and the rest of us transgressors in the land of our birth?

Who is it who is responsible for the scheme of things whereby one man is engaged thru life in grinding labor to win a bare and precarious subsistence for himself, and when, at the end of his days, he claims at the hands of the community he served a poor pension of eightpence a day, he can only get it thru a revolution, and another man who does not toil receives every hour of the day, every hour of the night, while he slumbers, more than his poor neighbor receives in a whole year of toil?

Where did the table of that law come from?

Whose fingers inscribed it?

These are the questions that will be asked. The answers are charged with peril for the order of things the peers represent; but they are fraught with rare and refreshing fruit for the parched lips of the multitude which have been treading the dusty road along which the people have marched thru the dark ages which are now merging into light.

LONDON, ENGLAND

On an Embroidered Binding

(King Charles the First's Copy of the Cambridge Bible)

BY FREDERIC FAIRCHILD SHERMAN

CLOTHED in the crimson of an English king,
And blazoned with rare broderies of gold,
Of silver and of colors that still hold
The glory of a Past that poets sing—
The holy book Charles read—this precious thing—
Remains to show how in the days of old
God's word was treasured by the brave and bold,
With whose renown earth's farthest corners ring.

The humblest soul to common labor bred,
Comfort can find in every precious page
Of this great book magnificently bound,
And, reading here where once a monarch read
His words who reigns forever, age to age,
The peace that passeth knowledge may be found.

KING'S HEAD TAVERN.

Illustration from "Inns and Taverns of Old London," by Henry C. Shelley.

Published by L. C. Page & Company.

Thru the doors of the White Hart, Boar's Head, the "Devil Tavern," and many another old landmark, passes again that stream of fashionable, literary and professional folk who gambled and gossiped and vitalized the time and place without knowing that they had started the first impulse toward present day club life.

ANNE OF AVONLEA.

From "Anne of Avonlea" by L. M. Montgomery.

ANNE OF AVONLEA, by L. M. Montgomery, published by L. C. Page & Company, is a sequel to "Anne of Green Gables," of whose heroine Mr. Clemens (Mark Twain) wrote, "The most delightful child since the immortal Alice." In "Anne of Avonlea" the old, familiar characters are again seen, and some new, equally interesting ones are introduced.

A SELECTION FROM THE YEAR'S HOLIDAY BOOKS

BY

W. C. BOWDOIN

The Arabian Nights. Their Best Known Tales. Edited by Kate Douglas Wiggin and Nora A. Smith. Illustrated by Maxfield Parrish. 12 color plates. Decorated cover. Gilt top. Pictorial end papers. Scribner's. \$2.50.

Legends of the Alhambra. By Washington Irving. With illustrations and decorations by George Hood, and an introduction by Hamilton Wright Mabie. Rubricated title page. Six color plates and frontispiece, also in color. Gilt top and fancy end papers. Philadelphia: Lippincott. \$2.50.

The Peter Newell Calendar for 1910. With drawings by Peter Newell. Colored cover and various months in tint. In a box. Harper's. \$1.

The Courtin'. By James Russell Lowell. Set to pictures by Arthur I. Keller. Engraved and triple-tinted frontispiece. Tinted title page. Facsimile of the original manuscript of the poem included. Pictorial end papers. Houghton, Mifflin. \$1.50.

Jane Jones and Some Others. By Ben King. Illustrations in color by John A. Williams. Title page and borders tinted in vert. Chicago: Forbes & Co. In a box. \$2.

Retrospections of an Active Life. By John Bigelow. Illustrated with 48 portraits in half-tone. Three volumes in a box. Baker & Taylor. \$12.

The American Girl. By Harrison Fisher. With a foreword by James Carrington. 12 plates in full color and a portrait of Mr. Fisher. Engraved and tinted title page. In a box. Scribner's. \$3.50.

Girls of Today. With 23 engravings in color and 72 in black and white. By Clarence F. Underwood. With poems by various authors. Tinted and decorated title page. Fancy end papers. F. A. Stokes. \$3.

City People. By James Montgomery Flagg. With numerous drawings and cartoons by the author. Scribner's. \$3.50.

Modes and Manners of the Nineteenth Century as Represented in the Pictures and Engravings of the Time. Translated by M. Edwards. With an introduction by Grace Ryan. 1900-1888. Numerous color and other plates. Tinted title page. Gilt top. 3 vols. in a box. Dutton. \$7.

Hogarth's London. Pictures of the Manners of the Eighteenth Century. By Henry B. Wheatley, F.S.A. Illustrated. Frontispiece in photogravure. Rubricated title page. Gilt top. Dutton. \$4.80.

Inns and Taverns of Old London. Setting Forth the Historical and Literary Associations of Those Ancient Hostleries, Together with an Account of the Most Notable Coffee Houses, Clubs and Pleasure Gardens of the British Metropolis. By Henry C. Shelley. Rubricated title page. Colored frontispiece reproduced in this issue and other illustrations from photographs and rare old prints. Gilt top. Boston: F. C. Page. \$2.

The Prince of Egypt. A Tale of an Elizabethan Street. Set to pictures by George Crowell. Frontispiece in color by Henry B. Matthews. Gilt top and decorative end papers. B. W. Dodge. \$2.75.

Prince Henry. By Henry James. With illustrations in color by Louis Boardell. 32 color plates. Rubricated title page. Gilt top. Decorative cover. Houghton, Mifflin. \$7.50.

Dutch New York. By Esther Singleton. With numerous illustrations. Frontispiece in photogravure. Decorated and tinted title page. Decorative head pieces. Gilt top. Dodd, Mead. \$3.50.

The Maine Woods. By Henry D. Thoreau. Illustrated by Clifton Johnson. Frontispiece in photogravure. Rubricated title page introducing portrait of Thoreau. Gilt top. Crowell. \$2.

One Hundred Country Houses. Modern American Examples. By Aymar Embury II. Copiously illustrated. Decorated cover. Century. \$3.

The Garden in the Wilderness. By a Hermit. Illustrated by the author and Bentley. Title page in Malachite tint. Gilt top. Baker & Taylor Co. \$1.50.

The American Flower Garden. By Neltje Blanchan. Planting lists by Leonard Barron. Illustrated with 92 full-page photographs. Rubricated title page. Colored frontispiece. Gilt Top. Double-day, Page. \$5.

Beautiful Children, Immortalized by the Masters. By C. Haldane McFall. With 50 reproductions in color of famous paintings. Edited by T. Leman Hare. Pictorial title page in tint. Gilt top. Dodd, Mead. \$5.

The House of Happiness. Made by Eliza M. Heath and Beatrice Stevens. 20 illustrations. Engraved and colored. Decorated cover. \$1.00. Ward, 500 Broadway, New York.

The Works of James. Based on the Bible Narrative of His Life as Healed and Guided by Christ. By Charles James. Edited by the Supreme Council, Master as His Own Summary of His Own Life. Arranged by John S. Lewis. Frontispiece with illustration of Jesus. In a box. San Francisco: The Elderly & Co. \$2.00.

How to Live in the World. Translated by A. J. S. Smith, M.D. Frontispiece in color. Rubricated title page. Frontispiece in color in full-tone. F. A. Stokes. \$1.00.

Illustrations to the Bible. By J. R. Smith, D.D. The Bible of Jesus Christ illustrated by modern painters. Rubricated title page. Crowell. \$1.50.

The Book of Christmas. With an introduction by Hamilton W. Brown and an account of the Christmas of George Washington. With 24 plates after and with text in color. Decorative title page. Gilt top. Washington: \$1.25.

Christmas in Art. The Nativity as Depicted by Artists of the Fifteenth and Sixteenth Centuries. By Frederick Keppel. With numerous illustrations, chiefly reproductions of rare prints in the British Museum and the Bibliotheque Nationale. Rubricated title page. Duffield. \$2.50.

Where the Laborers Are Few. By Margaret Deland. Illustrated by Alice Barber Stephens. Title page and Marginalia in green tint. Gilt top. Harper's. \$1.50.

Beasley's Christmas Party. By Booth Tarkington. Illustrated by Ruth Sypherd Clements. Double tinted title page. Frontispiece and other illustrations in color. Harper's. \$1.25.

Carlotta's Intended. By Ruth McEnery Stuart. Forget-me-not Edition. Frontispiece in tint. Decorative title page in 3 colors. Gilt top. Harper's. \$1.25.

The Lilac Girl. By Ralph Henry Barbour. With illustrations in color by Clarence F. Underwood. Decorations by Edward Stratton Holloway. Title page in tint. Marginalia in black and white. In a box. Philadelphia: Lippincott. \$2.

What Does Christmas Really Mean? A sermon begun by John T. McCutcheon, continued by Jenkin Lloyd Jones, and published by Forbes & Co., Chicago. Rubricated and green tinted title page. Malachite borders. 50 cents.

You and Some Others. Being Poems for Occasions. By Agnes Greene Foster. The decorations by Will Jenkins. Frontispiece by S. Young Hunter after his painting in the Tate Gallery, London. Decorative title page. San Francisco: Paul Elder & Co. Boxed. \$1.25.

Anna of Avonlea. By L. M. Montgomery. With frontispiece and cover in color by George Gibbs. Frontispiece reproduced in this issue. Boston: L. C. Page. \$1.50.

Their Heart's Desire. By Frances Foster Perry. With illustrations by Harrison Fisher and decorations by Theodore B. Haggood. Six color plates. Title page and marginalia in purple and gold. In a box. Dodd, Mead. \$2.

... of the Middle Ages. Compiled by Eveline Warner Brainerd. Thumb Nail Series. Frontispiece in tint. Title page in red and blue. The Century Co. \$1.

Lead Kindly Light. Intimations from Cardinal Newman's hymn. By John Sheridan Zelic. Dodd, Mead. 75 cents.

My Country. An illustrated and illuminated version of the American national anthem. By Walter Little. Illuminated title page. The Tandy-Thomas Co. \$1.

Thanatopsis. By William Cullen Bryant. With illustrations and text etched from sketches by Walworth Stilson. Rough edges. The Tandy-Thomas Co. \$10.

The Rubáiyat of Omar Khayyam. By Edward Fitzgerald. With an introduction by Wallace Rice. Rubricated title page. Headpieces and head bands. Chicago: McClurg. 50 cents.

Rubáiyat of Omar Khayyam. By Edward Fitzgerald. (Author's final revision.) With the Literal Omar. Being a Version of Those Quotations of the Original upon which Fitzgerald's Poem was Based. Edited by Arthur Guiterman. With 8 illustrations by Gilbert James. Rubricated and decorated title page. Rubricated colophon. In a box. Paul Elder & Co. \$1.50.

Rubáiyat of Omar Khayyam. Translated by Edward Fitzgerald. Edited with introduction and notes by Reynold Alleyne Nicholson, Litt. D., Lecturer on Persian in the University of Cambridge. 16 illustrations in color by Gilbert James. Engraved title page. Persian borders and decorations. Macmillan. \$2.50.

Pewter and the Amateur Collector. By Edwards J. Gale. With 43 plates illustrating the subject. Uncut edges. Gilt top. Scribner's. \$2.50.

Any of the books reviewed or advertised in this number will be sent by THE INDEPENDENT on receipt of price.

THE chief charm of *The Arabian Nights*, as edited by Kate Douglas Wiggin and Nora A. Smith, lies in the illustrations by Maxfield Parrish. As usual, Mr. Parrish sees things just a trifle differently than do other illustrators and he has worked his pictures out according to his own ideas. He seems to have been particularly happy in his illustration of "The Fisherman and the Genie." The black and white reproduction gives but a hint of the original with its delicately modulated gradation of color and its cunning contrasts. This edition of *The Arabian Nights* will not be relegated to the realm of children's books but will be treasured by their elders.

The Legends of the Alhambra abound in the marvels with which the "Arabian Nights" familiarized the Western World, but as told by Irving give us something of high ideals of chivalry, the active valor of patriotism, the poetry of a love which is Oriental in its abandon, its glowing

speech, and its luxury of setting, and strikes the note of sentiment quite as distinctly as the older stories struck the note of passion. George Hood had a noble theme for his illustrative task, which he has delightfully accomplished.

The Peter Newell Calendar for 1910 contains thirteen leaves in brilliant tints. There is one for each month and a cover showing a girl all dressed in blue feeding the New Year with a spoon. As personified the young year looks its age. The calendar lacks the uniqueness of Newell's "Hole Book" of last year, but, nevertheless, the artist's conception of the symbolism of the months differs essentially from the conventional.

Lowell's ever popular poem, *The Courtin'*, with its homely sentimental appeal, comes to us again this year with a new dressing, in which the pictures, in color, are by Arthur I. Keller. Lowell has said of this poem that it was the result almost of pure accident. A few

DRAWING BY HARRISON FISHER
From Fisher's "The American Girl" (Charles Scribner's Sons)

more accidents like the one that gave us *The Courtin'* could easily be endured for the sake of their enrichment of literature. It was a happy idea to include in the book a facsimile of the original manuscript.

In 1898 Forbes & Co., of Boston and Chicago, issued a volume of *Ben King's Verse*. This year the same firm are is-

suing *Jane Jones and Some Others*, by the same Ben King, in an *édition de luxe*. The quaint conceits of King have been illustrated by John A. Williams in such a manner as to illuminate the text and to accent their humor. Ben King was essentially a light-hearted singer of songs, appealing because of their spontaneity, but the world lost him at an age

when his work seemed to have but just begun.

The *Retrospections of an Active Life*

She appears in happy moods, in society, in sport, in a dozen ways as only Mr. Fisher could possibly present her. The

THE NATIVITY

By Albert Dürer. (ARTIST'S). Original in the collection of the University of Bonn. From the collection of the University of Bonn.

by John Bigelow is an important contribution to contemporary history that deserves more consideration than can here be given to the book, so must be reserved for review later. The portrait of Mr. Bigelow appears in this issue as an insert.

Some new and some older conceptions of femininity by Harrison Fisher are given a place in *The American Girl*

frontispiece of the volume is reproduced herewith in black and white.

Girls of Today contains a collection of the drawings of Clarence F. Underwood, some of which are in full color. The book is still further embellished with appropriate bits of verse, one of which is herewith reproduced. The book includes some of the best of Mr. Underwood's recent work.

The charm of the country finds many eulogists, but James Montgomery Flagg has recognized something of the charm that belongs to the dwellers in the cities and he has filled a portfolio with drawings of *City People*. Every picture in

this book, from the girl who holds out her hands to you on the first page to the very end, has a story to tell that is worth the telling. The artist has his own ideas about the things he pictures and he expresses those ideas in his own way. The

A WATER GARDEN

A brook, falling down the sward between trees and bushes and among growths, may be turned back to overflow a bit of low lying meadow and become the principal factor in a water garden. From Blanchan's "The American Flower Garden." (Doubleday, Page & Co.)

hinges upon the substitution of a girl for her brother, who was fever-stricken, and what happened in consequence.

The combination of Henry James and Joseph Pennell in *Italian Hours* was exceedingly happy. The two masters working in their own fields have produced a charming holiday book. The notes by Henry James on various visits to Italy are, in this volume, collected for the first time. They refer in the main to visits made some years ago. The various papers, however, have dates affixed so that it is easily possible to identify the period of Mr. James's visit. The illustrations are in low tones but are well executed, as Pennell always executes.

Dutch New York, to which we made some reference in our issue of September 30, is perhaps the most important book thus far issued that bears the name of Esther Singleton as author. Her earlier work consisted for the most part of compilations, but in *Dutch New York* she attempts to draw a picture of the daily life of the worthy burghers, their wives and children, their orchards and gardens, their dwelling places, furniture, silver, glass, curios, and ornaments, their housekeeping, servants and slaves, their provisions for the education of their children, their business, recreations, and, in point of fact, to give a comprehensive view of *Dutch New York*, in which she has done a very conscientious and painstaking piece of work.

The Maine Woods, by Henry D. Thoreau, in new edition, is one of the

holiday books of the present year. The first of the included papers, entitled "Ktaadn," was originally published in the *Union Magazine* (New York) in 1848; the second, "Chesuncook," came

out in the *Atlantic Monthly* in 1858; while the third paper, on "The Allegash and East Branch," was included in a volume published by Ticknor and Fields in 1864. *The Maine Woods* is a companion to *Cape Cod*, to which we made reference last year. Clifton Johnson has, in the cases of both books, followed in Thoreau's footsteps, seeing, as far as may be, with the great naturalist's eyes and confirming the sight with a camera. In the case of *The Maine Woods* few if any changes have taken place since Thoreau wrote of them half a century or more ago.

One Hundred Country Houses contains a collection of modern American examples of country homes gathered from here and there all over the United States. Out of the array of New England Colonial, Southern Colonial, Classic Revival, Dutch Colonial, Spanish or Mission, American Farm-house, Elizabethan, Modern English, Italian, Art Nouveau, and Japanese that the author has included in his book, he is, indeed, fastidious who cannot find something that suits him as a design for a country house. The reproduction here given shows one of the included houses in the Italian style

as designed by Howard Shaw.

The Garden in the Wilderness is a sympathetic account of the experience of

York," (Doubt, Macmillan & Co.)

JOHN BIGELOW AT NINETY-TWO

This portrait gives a suggestion of the energy and intellectual acumen which mark every page of the author's "Retrospections of an Active Life," one of the classic biographies, three volumes full of letters, anecdotes, personalia and glimpses of great persons and great events

(Reproduced by permission of The Baker & Taylor Co.)

an artist and his wife in garden-making. The pages of the book teem with bright, sparkling descriptive matter. The garden of its pages is a real garden, filled not only with flowers but with the problems that must of necessity go with the successful growing of both vegetables and flowers. Garden-making, it seems, is full of sentiment and a process adapted for drawing people together. The book gives a new and vital significance to the old lines:

"When tired of life and all its busy scenes,
Go out into the garden and hide behind the
beans."

The book is really a most delightful one, and a garden hater who started to read it could not escape conversion into a garden lover. *The American Flower Garden*, while it does not touch upon the sentimental side at all, is notwithstanding full of practical hints as to the making of a flower garden. It is a pity that the limitations of space of necessity curtail the notice this book deserves. The cultivation of flowers is so fascinating that a good book about gardens always has a market. One of the illustrations from this book, a fair sample of the rest, is herewith reproduced.

The author of *Beautiful Children* has drawn upon the Continental galleries for the numerous illustrations of the book which are derived from some of the greatest masters. A decided contrast exists between the children as pictured by the several masters. In some cases the adult overshadows the juvenile, but the pictures are exceedingly interesting. The colored plates delightfully carry out the color schemes in the originals from which they were derived.

In our annual contests for vacation and children pictures, we have sometimes found, on turning over the photographs to look at the names on the back, that we had picked out several photographs by Miss Ella M. Boulton. We have then, in order to avoid the appearance of partiality, been obliged to be really partial and to throw out arbitrarily some of her photographs that others might have a chance. But our readers, who, to judge from their letters, love the Boulton children as well as we, will be glad to know that she has published a volume entitled *The Book of Happy Days*. Among the

illustrations "The Bath" and "Supper-Time," which we published in our Vacation Number, June 3, 1909, appear here in larger half-tones. Appropriate verses selected or written by Miss Boulton and Miss Stevens are printed opposite the pictures in typewritten text.

A collation from Scriptural narrative has been made by Edna S. Little under the title of *The Works of Jesus*. In this volume the author has included as nearly as possible a chronological record of the deeds of Christ, and has appended The Sermon on the Mount as the accepted summary of the doctrines of the Great Teacher.

With Christ in Palestine is made up of four addresses by A. T. Schofield, M. D. These four addresses were given in the autumn of 1905 by request of a London Club, and were based upon a visit to the Holy Land during the preceding year. The subjects of the addresses were: Bethlehem, or the Birth of Christ; Nazareth, or the Life of Christ; Capernaum, or the Work of Christ, and Jerusalem, or the Death of Christ. The frontispiece of this book is reproduced herewith in color.

The distinctive feature in *Bethlehem to Olivet* is the inclusion of exclusively modern paintings to illustrate the life of Jesus Christ. Thirty full-page plates have been included in the book derived largely from the English, French and German schools. A brief chapter has been supplied by Dr. Miller to accompany each of the plates. These have been arranged chronologically, and the most important points in Christ's life are thus both pictured and described.

It was an excellent idea to gather together old and new thoughts upon Christmas and mass them together in a book called *The Book of Christmas*. At the end of nearly two thousand years Christmas shows no signs of decrepitude or weariness else there would be lacking inspiration to write about it so constantly. As Mr. Mabie happily says in his introduction, *The Book of Christmas* is "a book of joy in the sadness of the world, a book of play in the work of the world, a book of consolation in the sorrow of the world."

It is most interesting to understand what conceptions artists have of the first Christmas. For the purpose of enlight-

ening us on this point Frederick Keppel has collected much data regarding the Nativity as depicted by artists of the fifteenth and sixteenth centuries under the general title of *Christmas in Art*. The illustrative features of the book include the reproduction of rare prints in the British Museum and the Bibliothèque Nationale as executed by Giotto, Albert Dürer, Peter Paul Rubens, Murillo and some others. One of Dürer's line engravings has been reproduced in connection with this text.

Margaret Deland preaches a powerful Christmas sermon in her little story called *Where the Laborers are Few*. A one-legged acrobat, by means of a bad fall that wrenches his knee and lays him up for several days, does a clergyman's work, and in the story is shown the way to do the missionary work he was anxious to do. The illustrations are by Alice Barber Stephens and the text pages are rendered attractive by means of green marginalia.

Booth Tarkington has written a very pleasing little Christmas story under the title of *Beasley's Christmas Party*. It has a dash of journalism in it as well as of politics, business, gossip and other incidentals, but the best feature of the book is the romance it contains. The silent figure of the lawyer sacrificing himself for the crippled

child stands out as a background against which is thrown as a spotlight the love of a man for a woman, or, perhaps, it would be more in accordance with the realism of the story, to say the love of a woman for a man.

Ruth McEnery Stuart has also written a Christmas story entitled *Carlotta's Intended*. It is full of pathos in its commingling of Irish and Italian types. A mother's and a father's ambition for their daughter, the unfolding of the love of a young Italian girl, and the self-sacrifice of a poor, crippled Irishman are the incidents that Mrs. Stuart has skillfully combined into a story that makes a strong appeal to any one with the least sentiment in his makeup.

Ralph Henry Barbour's contribution to this year's fiction is under the title of *The Lilac Girl*. It is not so good as *My Lady of the Fog* of last year. The mystery of love has again inspired Mr. Barbour and he brings the man and the woman together at last in spite of blundering on the part of the man and uncertainty on the part of the woman. So long as romance is brought to fruition

the reader ought to be satisfied with it. *The Lilac Girl* ends as did all the old time fairy tales with "and so they were married and lived happy ever afterward."

ADVICE TO A GIRL.

Never love unless you can
Bear with all the faults of man!
Men sometimes will jealous be
Though but little cause they see,
And hang the head as discontent,
And speak what straight they will repent.

From Clarence F. Underwood's "Girls of Today." (F. A. Stokes Co.)

Men, that but one saint adore,
Make a show of love to more;
Beauty must be scorned in none,
Though but truly served in one:
For what is courtship but disguise?
True hearts may have dissembling eyes.

Men, when their affairs require,
Must awhile themselves retire;
Sometimes hunt, and sometimes hawk,
And not ever sit and talk:—
If these and such-like you can bear,
Then like, and love, and never fear!

— Thomas Campion.

John T. McCutcheon, the cartoonist, drew a picture that was published in the *Chicago Tribune* that forms the basis of the book *What Does Christmas Really Mean?* Mr. McCutcheon left his own query unanswered but Jenkin Lloyd Jones has taken up the unfinished thread of the picture story, and in the conversation given between the boy and his mother, the true story of the significance of Christmas as taught in the Scriptures is set forth in narrative form. The simple but eloquent story of Christ is retold, together with some of his parables applied to present-day problems. The lesson of the book cannot fail of being useful in this day and generation when Christmas loses so much of its true significance in the worldly side of the festival that is so much accented.

Some Christmas thoughts are included in *You and Some Others* as written by Agnes Greene Foster. One of the quartrains reads as follows:

A Christmas might be Christmas
Without a thing to cook;
But, oh, the joyless Christmas
Without, at least, one book.

In *Anne of Avonlea* we have a contribution to the holiday fiction. It is by no means a great work but is rather a somewhat commonplace story of a school teacher of some imagination, a type of thousands of other teachers all over the land who are doing conscientious work in and out of school and who draw old and young to them by means of pleasing personality. The character drawing is sketchy and in no instance does it rise into the realm of a masterpiece. Anne of Avonlea is the same as "Anne of Green Gables." "She's not like other girls," as the author says, and those who found her popular in the earlier book will be glad to hear more of her in the present story into which the author has introduced several new char-

acters. Anne of Avonlea has the remarkable distinction of figuring among the best selling books of both the adult and juvenile class at the same time. The cover decoration by George Gibbs appears in this issue in color.

A very charming little romance is that which makes up *Their Heart's Desire*. A boy of seven is cleverly used as the moving cause but the real romance is between

BLASHFIELD'S "THE BELLS"

From Edwards's "The Book of Christmas" (Macmillan)

a man and a woman. They are drawn together and marry on very short notice so that the bride may become the Christmas mother about whom the boy wrote to Santa Claus. The book is elaborately decorated in purple and gold but the important feature of it lies in the Harrison

with childlike simplicity of imagination which is repeatedly exemplified in this interesting collection. *Lead, Kindly Light* is concerned with Cardinal Newman's famous hymn and gives certain intimations of its significance which will be helpful to those who love it, and find more meanings in it, perhaps, than the good cardinal himself suspected, but every commentator has that right. *My Country*, the national anthem, has furnished Walter Little with a noble theme for illumination and decoration. In this book he has given us some gorgeous color work and America has been decked out befittingly. The full text and musical score appears on one of the fly-leaves. A portrait of Samuel Francis Smith is included together with a stanza of the hymn in the author's manuscript. Another very beautiful volume is that reproducing Bryant's *Thanatopsis* without the use of type. It is all printed from sketches made for the purpose by Walworth Stilson. The text of the poem is etched, and appropriate illustrative etchings are placed facing the text. This is a beautiful and unusual holiday book and will make a delightful gift volume.

Vice Chancellor Howell, of New Jersey, who recently exhibited some five hundred different editions of Omar at the Newark Public Library will have to buy at least three new ones as issued this year if his present collection is to be complete. The first of these is issued thru McClurg, of Chicago. It is a neat edition containing the Fitzgerald text of the great Persian poem to which Wallace Rice has written an introduction. The second copy, issued by Paul Elder, of San Francisco, is far more ambitious. It is edited by Arthur Guiterman, the versatile author of fugitive verse and rimed book reviews. Mr. Guiterman has written a new preface for the book. He has done the Qita into English verse for the first time and he has written new notes to accompany his text which is based upon the fourth or final Fitzgerald version. The volume is illustrated with sepia reproductions of the work of Gil-

bert James. Selected quatrains of the original "Rubaiyat" upon which the great version of Edward Fitzgerald was mainly based and termed "The Literal Omar," is likewise included in the book for purposes of comparison with the verses. The third volume is one of the Adam and Charles Black publications, as published in this country thru the Macmillan Company. It is edited by Reynold Alleyne Nicholson, Lecturer in Persian in the University of Cambridge, who has also written a very elaborate introduction and copious notes. The volume contains sixteen illustrations in full color by Gilbert James, of London. This edition of Omar is the largest of these three, and is edited with a greater scholarship than the others, but every one must choose between them according to his own taste and needs.

There was a time when pewter was held in about the same estimation that silver now is. Even churches used pewter for their communion services. It still has a high place as a collecting object. Many persons having pewter in their possession as an heirloom will welcome the book *Pewter and the Amateur Collector*, containing as it does chapters on both English and American ware. The chapter on polishing will be found interesting by the amateur.

Hodder & Stoughton are issuing a very attractive series of booklets bound in white paper with colored illustrations and rubrications thruout the books. Some of the titles are: *My Hope Is in Thee*, *Stand Fast in the Faith*, *O Love Divine*, *Tidings of Great Joy*, *As Thy Days so Shall Thy Strength Be*, and *O Rest in the Lord*. These were printed at The Edinburgh Press, London. Duffield & Company also issue a series of booklets with board covers but without illustrations. Among the titles in the Duffield series are *Sonnets from the Portuguese*, by Elizabeth Barrett Browning; *Nature*, by Ralph Waldo Emerson; *Pippa Passes*, by Robert Browning, and *A Christmas Carol in Prose*, by Charles Dickens.

NEW YORK 1900

[Books of special interest or importance are marked *.]

EACH year the output of children's literature becomes greater, and the problem of classification, while it is no different, demands some more exacting method of exclusion. Juvenile books germinate quickly because the "series" class is given to self-reproduction. In addition, styles run in "ruts," and by the numerous prefatory promises, one is safe in predicting the character of next season's book-shelf.

Robinson Crusoe and *Swiss Family Robinson* are companion volumes in the minds of most readers. Mr. Smith's illustrations for the former are a little too pale to suit the full-blooded adventures by DeFoe, while Mr. Rhead's line work for the latter is too decorative in detail to be wholly satisfactory. But time cannot stale the stories; the editor of *Robinson Crusoe* finds the same boyish thrill in his fingers' ends. And Mr. Howells, reading *The Swiss Family Robinson* for the first time, is enchanted by the variety of its incidents.

Arthur Rackham has illustrated many volumes for this Yule-tide. He has done some excellent drawing for the Lambs' *Tales from Shakespeare*, and in his edition of *Gulliver's Travels* his imagination has run riot in giant lines rather than in delicate fairy tracteries. These are the types of books every library should have. They may be over-

gorgeous in color, like Mrs. Wiggin's *The Arabian Nights*, and not for general circulation, but the very glimpse of such plates as Rackham and Maxfield Parrish conceive is an art education and a healthy tonic for taste.

George Macdonald's *At the Back of the North Wind* contains much that only older folks will appreciate, but, as a whole, the tale is full of the poetry that children feel without having to understand; the main plot is easily followed, however. The same is true of "Ouida's" *A Dog of Flanders*, whose pathos, while wofully sad, is not mawkishly sentimental.

The new edition of Thackeray's *Rose and the Ring* is delightfully pictured by Gordon Browne, and the "feel" of the book is dainty. In the same vein, it might be claimed that the "look" of the blue and white cover for Mrs. Ewing's *A Flat Iron for a Farthing* would tempt any one who did not already know how charming the tone of this "old-time" juvenile has proven itself to be. The pale tints of these two books are in direct contrast with the deep color running thru a new issue of Miss Mulock's *The Little Lane Prince*, which, tho gaudy in one respect, attracts attention and satisfies the imagination.

In our memory, the colored illustrations for the Christmas English annuals are always satisfying. In accord with that style, Mr. Aldin's drawings, which grace Irving's essays, contain the rich flavor of plum pudding and the manners of portly squires.

Despite the formal brilliancy of glazed paper, we welcome the Nister volume of Laboulaye's *Fairy Tales*, which is too worthy to be supplanted by folklore more suited to grey- than to golden-haired readers. The French scholar showed discrimination in his polyglot selection.

These few titles are indicative of a tendency to let commendable feeling decorate the reprints for children. We are tempted to say that this enthusiasm may be easily overdone, and while, at first glance, Warwick Goble's sumptuous designs for the immortal *Water Babies* are distinctive, on second examination they are over-delicate, over-fantastic, and often over-nude.

Educational

Boy's Own Book of Things for Children. By George W. Arnold. N. C. Aldine & Co. N. Y. 1900. 128 pp. Illustrated by Charles White. Dutton, Philadelphia, Pa. \$1.00.

Boy's Own Book of Things for Children. By George W. Arnold. N. C. Aldine & Co. N. Y. 1900. 128 pp. Illustrated by Charles White. Dutton, Philadelphia, Pa. \$1.00.

Boy Life: Stories and Readings from the Works of Famous Authors for Elementary Schools. By Percival Chubb. Harper & Bros. N. Y. 1900.

The Romance of Modern Chemistry. By James C. Watson. J. B. Lippincott Co. Phila. 1900.

With the extension of children's work in the public libraries, guidance in the selection of juvenile literature is accessible to the public at large. Miss Arnold, in her *Mother's List*, has accomplished a task which will commend itself to all those interested in the subject. It cannot be expected that her book will be infallible, but her advice is essentially safe, and that is much to say. Mr. Charles Welsh is also an expert in children's literature, and his volume has been compiled after seeking advice from many quarters. The one mistake lay in over-ambition to include the simplest with the more complex style; any effort to grade material conscientiously within the limits of one volume will inevitably result in an inequality, which is mystifying to the youngest reader and incongruous to the oldest. What would a five-year-old youngster, intent on "A Apple Pie," think of Hawthorne's "The Great Stone Face"?

This is the constitutional fault which mars the whole of the Kipling book; here the two editors have trampled on worthy material and have pieced it together in most artificial fashion. Not only is some of the fine type absurdly small, but the attempt to grade Kipling in this fashion should be resented. The descriptions of the sketches of the *Just-So Stories* are most amusing from their child-like style.

An entirely different spirit actuates Mr. Percival Chubb in his desire to awaken teachers of English in elementary schools to the value of contemporaneous literature. As a rule, children do not instinctively turn to books aiming to be supplementary readers, but the editor and the publishers have done much to soften the educational character of the volume and *Boy Life* in truth contains some of the best of Mr. Howells's writing for young people.

BETHLEHEM

Illustration from "With Christ in Palestine" by A. T. Schofield, M.D.
Reproduced by permission of R. F. Fenno & Company for the
Holiday Book Number of The Independent.

volumes, not strictly juvenile, deal poetically with child-life. Millicent Sowerby's *Yesterday's Children* are fancy-dress masquerades, beneath the bright color of which glows eternal youth. Miss Smith's pictures are progressive in their subjects, and are well described by Miss Wells, who strikes a most appealing note in verses which must have been written after the drawings were made. On the whole, the picture books are refined in tone. Maybe the publishers think twice before sending us the "Foxy Grandpa" monstrosities, tho we regret to say they continue to sell them despite the reviewers' cry against them.

Stories for Tiny Tots

Little Tots' Library. Containing Six Books: Jack and the Bean Stalk, Puss in Boots, etc. (Nister Edition). E. P. Dutton & Co. \$1. (See also under "Large Books.")

When Reggie and Reggie Were Five. By Gertrude Smith. Harper & Bros. \$1.30 net.

Can You Believe Me Stories. By Alicia Aspinwall. E. P. Dutton & Co. \$1.50.

In the previous group are to be found many publications suitable for tiny tots; we do not believe in over-simplification; all one desires is to find the detail sufficiently evident to keep the child from confusion; it is not necessary to be slavishly literal, for the mind should be made to stretch. While Gertrude Smith's books are within the easy comprehension of the youngest, they are inclined to be a little too wooden and stereotyped for more than casual interest. Because of the fact that *When Reggie and Reggie Were Five* they went to Washington this new volume, in a series, is sent forth dedicated to ex-President Roosevelt!

Different in tone and charming in execution is Alicia Aspinwall's *Can You Believe Me Stories*; these tales are told in a serious vein of reality, which makes the nonsense all the more effective; they offer splendid opportunities for bedtime story-telling. We would welcome more books of this character, for good easy reading to suit tiny tots is very difficult to procure.

Classic Legend

Stories of Norse Heroes. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.
Stories from the Iliad. By E. V. Rieu. T. Y. Crowell & Co. \$1.50.
Stories from the Odyssey. By E. V. Rieu. T. Y. Crowell & Co. \$1.50.

Stories of Greek and Roman Heroes. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories of Celtic Heroes. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories of the Arthur Cycle. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories from the Arabian Nights. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories of the Bible. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories of the Middle Ages. By E. M. Wilmot-Buxton. T. Y. Crowell & Co. \$1.50.

Stories of Royal Children. (Retold from St. Nicholas.) Century Co. 65 cents net.

**Stories from the Faerie Queene.* By Lawrence H. Dawson. Illustrated by Gertrude D. Hammond. T. Y. Crowell & Co. \$1.50.

The Faery Queen and Her Knights. By Rev. Alfred J. Church. Macmillan & Co. \$1.50.

**The Story of Rustem and Other Persian Hero Tales.* By E. M. Wilmot-Buxton. Illustrated by E. V. Rieu. T. Y. Crowell & Co. \$1.50.

The Story of Herod. By E. M. Wilmot-Buxton. Illustrated by Gertrude D. Hammond. T. Y. Crowell & Co. \$1.50 net.

The Story of King Arthur. By Mary Macleod. Dodge Publishing Co. 60 cents.

An excellent edition of *Stories of Norse Heroes*, by E. M. Wilmot-Buxton, deserves some attention because of the saga spirit which is successfully retained; the foreward also is adequate in describing something of the skald attitude. The same earnest intention prompted Havell's *Stories from the Iliad*, which has an introduction with a critical vein running thru. The text is compact and its literalness deprives it of an epic swing; the illustrations are from famous statues and paintings and lend value to the book.

Six volumes from the series known as "Retold from St. Nicholas" deal largely with the heroic and the legendary. The selections are well grouped and well illustrated, while the variety affords opportunity for all tastes. The editors, by their choice, indicate clearly that they realize the attractive power of the frontispiece.

Care and thought mark Kate Stephens's work in *Stories from the Old Chronicles*, compiled with good intentions and each selection introduced by an explanatory note containing sufficient

VIMAR'S SKETCH OF HOUSE MAIDS ON BOARD THE ARK.
 From "The Animals in the Ark"
 (Duffield & Co.)

historical data. As an incentive to further reading of books which constitute the source for historical romance, this volume will serve as a commendable preparatory guide.

It is a question how far the numberless products of the "retold" class serve to drive readers to the original; it is also to be doubted whether many of our high school graduates, who know some of the stories culled from the "Faerie Queene," have ever read so much as a stanza from Spenser. Rev. A. J. Church has retold some of these efflorescent tales, but not nearly as successfully as Lawrence H. Dawson, who, in a spirit distinguishing a large number of English writers for children, goes about transforming his material with some realization of its intrinsic worth, and with some intention of retaining part of the essential atmosphere, without which it is as so much dead matter.

We are interested in noticing the attempt to be scholarly in the preparation of books based on national epics. Elizabeth D. Renninger is an example of this tendency, and in addition she is prompted by zeal born of actual experience in library work. Her *The Story of Rustem and Other Persian Tales*, taken from Firdusi, is an excellent book effectively told and illustrated; the material is handled with dignity and feeling.

Douglas C. Stedman's *The Story of Hereward* is an importation; tho partly suggested by many points in Kingsley's famous story, the author bases his narrative on original research and personal conclusions; hence his book is, in a way, a contribution as well as an entertainment.

The Child's Hänsel and Gretel. From the Opera Libretto. Illustrated by Maria L. Kirk. Fred. ...

In her preface to *Tales of Wonder* Mrs. Wiggin informs her readers that this is to be the last volume in her fairy series. During the course of her editorship she has practised the art of writing very charming introductory remarks; we relish her ideas in "The Arabian Nights," and here, in a most narrative fashion, she establishes the right to call her new book *Tales of Wonder*. The former policy of including folklore from all nations is adhered to.

A little more prescribed in its territory is Mr. McSpadden's *The Land of Nod*, and in style it is essentially of the English school of "Lewis Carroll." The format of the book is striking, and Mr. Chase, a comparatively unknown artist, has ably seconded the author. Of all the characters, the Welsh Rabbit is the most original, while many of the situations are entertainingly spectacular. No writer for a long while has so successfully pointed a moral and adorned a tale as Miss Brown in *John of the Woods*, which is genially told in a very excellent text; this author understands the art of writing for children; she has not yet forsaken good, plain English for new-fangled amenities, and there is in her nature a large streak of Peter Pan. If Miss Brown would only aim for more characterization her originality and excellencies would become more fully developed.

Barty Censor is a young hero who, knowing much about DeFoe, gets lost "in his mind's eye" with Mrs. Burnett's "Good Wolf" of last year; together they experience numberless surprising adventures, during the course of which they have an interesting time with a band of Perfectly Polite Pirates. The author makes it very evident, much to the intense relief of the reader, that Barty is finally restored to his mother.

Mrs. Andrews's inventiveness was very much overstretched in *The Enchanted Forest*; she has approached

her subject in holiday humor, and has breathed into her text the joy which should go in the telling of stories to children, but there is an artificial imitation in her incidents that betokens effort rather than freedom.

Miss Brown, Mr. Roberts, and Dr. Eastman have all three made available some Indian folklore, the first two authors having confined themselves to the red men of the Far North. Dr. Eastman is to the manner born, and his coloring is therefore apt to be more effective, especially as it is reinforced by the Indian artist, E. W. Deming. Mr. Roberts, a Canadian by birth and a poet by nature, has been inspired largely by the atmosphere which has become a part of his imagination. Miss Brown, with her co-worker, Mr. Bell, has enjoyed her task merely as a story-teller, and wisely she has insisted on the simple narrative.

M. L. Kirk's paintings for *The Child's Hänsel and Gretel* will attract many young readers to their first hearing of this fairy opera; the publishers announce that the rendering is the only one thus far made from the libretto to Humperdinck's score.

Verse

**The Magic Casement: An Anthology of Fairy Poetry.* Edited with an Introduction by Alfred Noyes. E. P. Dutton & Co. \$2 net.

The Golden Staircase. Poems for Children Chosen by Louey Chisholm. Pictures by M. Dibdin Spooner. G. P. Putnam's Sons. \$1.75 net. Popular edition.

A Child's Garden of Verses. By Robert Louis Stevenson. Illustrated by Florence E. Storer. Charles Scribner's Sons. \$1.50. Age, 8 and for grown-ups.

Except for the jingles in the picture books, there are very few volumes of poems this season. What there are appeal generally to older understanding, tho it is of interest to note that children find pleasure in much more difficult verse, relatively speaking, than prose. For this reason Mr. Noyes's excellent anthology, *The Magic Casement*, will be a splendid addition to the bookshelves of any children's room. It is full of imaginative doings, of delicate fancy, and of the very best English poetry. Do we believe in fairies? As long as life contains mystery, we do; and Mr. Noyes's introduction confirms us in our belief.

So successfully has Louey Chisholm guided children along the paths of po-

etry in *The Golden Staircase* that a popular edition has been prepared for this Yuletide. Looking casually thru its pages there is a strange assortment of selections, hardly based on rigorous standards, and mixing indiscriminately the historical with the artistic. There is only one definite group arrangement, that toward the end of the volume, entitled "Carols, Hymns and Sacred Verse." The compilation is an earnest effort.

Biography

The Boys' Life of Ulysses S. Grant. By Helen Nicolay. Century Co. \$1.00.

Sir Walter Raleigh. By Frederick A. Ober. Harper & Bros. \$1 net.

Fortunate Nightingale. By Laura E. Richards. D. Appleton & Co. \$1.25 net.

The Red Book of Heroes. By Mrs. Farr. Edited by Andrew Lang. Longmans, Green & Co. \$1.00 net.

Louisa May Alcott. By Belle Moses. D. Appleton & Co. \$1.25 net.

The Boys' Edition: My Life Among the Indians. Edited with Biographical Sketch by Mary Gay Humphreys. Charles Scribner's Sons. \$1.50 net.

The Boys and Girls of the White House. By Agnes Carr Sage. Frederick A. Stokes Co. \$1.00 net.

Story-Lives of Great Authors. By Francis James Rowbotham. Frederick A. Stokes Co. \$1.50 net.

The publishers are now largely concerned with the problem of supplying biography suitable for young readers. Librarians are repeatedly calling attention to the fact that in this special department they are woefully lacking, but in the effort to counteract this want, both authors and publishers are endeavoring to make a division between biography for girls and biography for boys. This is a false grouping, for the aim should be purely to keep the life-story within the comprehension of children, and to let the subject draw its own audience. We know of some biographers who would oversentimentalize their style because they were writing particularly for girls.

Helen Nicolay's *The Boys' Life of U. S. Grant* has the same scope as her volume on Lincoln; it is very appreciative and is told in direct manner, from the usual sources. Miss Nicolay adequately supplements history.

Mr. Ober has prepared so many volumes in the Harper series known as "Heroes of American History" that it is difficult to differentiate them, one from the other, by any special brilliancy; in all his biographical work, and *Sir Walter Raleigh* is no exception, he is graphic,

and there is every effort to be accurate. Mrs. Laura E. Richards has expanded the story of *Florence Nightingale* into a fair-sized book, in which she has set forth attractively the career of this marvelous nurse, whose deeds are not easy to describe for children. Except for a few blemishes which are the result of a patronizing juvenile tone, Mrs. Richards has written an interesting record.

Mrs. Andrew Lang has included Florence Nightingale in her *Red Book of Heroes*, but she has compressed the material within the limits of a few pages. Readers will be surprised (some even may be disappointed) to find the rainbow idea of the Langs applied to other than fairy lore. The editor is now prompted to exploit the heroic in actual

Life Among the Indians. This is such a human document as one cannot often lay hands on; the editor has shown unerring judgment in her selections, and the right appreciation and emphasis in her biographical note.

The title of *The Boys and Girls of the White House* is self-explanatory; Miss Sage has garnered between covers a most attractive series of anecdotes descriptive of the family life of most of our Presidents—at least of those Executive households in which the child influence is as important as diplomatic entanglement. We are given many satisfactory personal touches.

Rowbotham's *Story-Lives of Great Authors* adopts a narrative manner of detailing the facts of literature. The

AN END PAPER.

"Every Child Should Know." (Doubleday, Page & Co.)

history, and this first attempt is very inviting. The cover design and general format of the book are of the familiar richness of former years.

Very wisely, Miss Belle Moses has allowed her subject, *Louisa May Alcott*, to guide her in the telling of this biographical narrative. Naturally, there would be much in such a life to appeal directly to girls, but Miss Alcott was part of a movement, and achievement is not limited by sex interest. Miss Moses has made a well-balanced biography, which should attract all readers of Miss Alcott, too young to turn to the larger "Life, Letters and Journals."

Miss Mary Gay Humphreys should be thanked for her excellent endeavors to make Catlin accessible to boys and girls—I insist on both, even tho' the book bears the title *The Boy's Catlin: My*

text is as picturesque as the line illustrations. The volume is an importation.

History

When America Won Liberty: Patriots and Revolution. By Tudor Jenks. F. A. Green & Co. \$1.75.
Washington, George, My Friend. Edited by Alice Hitchcock. Harper & Bros. \$1.00.
England's Story: A Simple History of England for Children. By E. B. Williams. Frederick A. Stokes Co. \$1.00.
John: A Romance of History Series. Edited by John Lang. By Marie Guérin. Illustrated by A. D. McCann. Frederick A. Stokes Co. \$2.00.
Mary: A Romance of History Series. Edited by John Lang. By Margaret Cavendish. Illustrated by T. H. Robinson. Frederick A. Stokes Co. \$2 net.

Once more in entering the field of history we are reminded of that half-true description: it is very largely tho' not wholly made up of the lives of great men. But Mr. Tudor Jenks is interpreting the other side of history study in a series of which *When America Won*

Liberty is the second volume; he is presenting to young readers those currents of life which went toward making the American nation; he is picturing the general existence of those who colonized this country, of those who fought for independence, of those who framed the laws of a nation. He is presenting the motive for action. This is a worthy departure from the stereotyped school history.

Mr. Ripley Hitchcock has accomplished a worthy task in his *Decisive Battles of America*. Each chapter, prepared by some historical expert, is accompanied by a serviceable synopsis of events. In his introduction the editor clearly indicates his intention of making this a companion volume to Creasy's "Decisive Battles of the World," and his method of selecting battles has been that of the English historian, who chose conflicts of significant effect, rather than of large numbers. Lovers of history will find much of interest in the plan here followed.

England's Story is pleasantly told by E. Baumer Williams, in an intimate manner which some children like. There is one advantage in such informality of style; it allows constant departure from fact to romance.

This latter quality predominates throughout the series of quasi-histories edited by John Lang, and increased this year by two sumptuous volumes on *India* and *Mexico*, both of them full of action and of melodramatic incident. It were best to describe them as historical romances rather than as straight histories.

Historical Fiction

Boys and Girls of Seventy-seven. By Mary P. Wells Smith. Little, Brown & Co. \$1.25. (The Old Deerfield Series.)

The Minute Boys of New York. By James Otis. Dana Estes & Co. \$1.25. (The Minute Boys Series.)

The Musketeer Boys of Old Boston. By George A. Warren. Cupples & Leon Co. \$1. (Revolutionary Series.)

American Patty: A Story of 1865. By Adele E. Thompson. Lothrop, Lee & Shepard Co. \$1.25. (Brave Heart Series.)

For the Stars and Stripes. By Everett T. Tomlinson. Lothrop, Lee & Shepard Co. \$1.50. (War for the Union Series.)

With Kit Carson in the Rockies: A Tale of the Beaver Country. By Everett McNeil. E. P. Dutton & Co. \$1.50.

On the Old Kearsarge: A Story of the Civil War. By Cyrus Townsend Brady. Charles Scribner's Sons. \$1.35 net. (Boys of the Service Series.)

The transition is thus easily made to

the realm of fiction. Here we have grouped some stories which, apart from being members of the "series" class, fulfil a certain mechanical formula; they resort to fiction simply as a vehicle for fact. Three periods in American history, marked by the Revolutionary War, the War of 1812, and the Civil War, are represented, and the remarkable characteristic about them all is the graphic detail made use of. A story like Tomlinson's *For the Stars and Stripes* stretches a single incident thru many pages, and finally, in a concluding chapter, gives a condensed account of the termination of the war. Mary P. Wells Smith, in her *Boys and Girls of Seventy-seven*, not only vouches for the truth of her story in a preface, but continues to furnish evidence in her appendices. Writers like James Otis, skilled in the narrative which holds interest, attempt at the same time to instruct. In fact, it is the desire to be historically true that tones these romances down, tempering the melodrama of outward action. Dr. Brady, for example, brings reading and wide experience to bear on his narrative, *On the Old Kearsarge*; but the unfortunate conventionality of his story will not accentuate the good merits of its detail. The whole weakness is found in the utter disregard for character portrayal; the persons in the average "fiction" are mere puppets. Adele E. Thompson's *American Patty* in this respect is somewhat distinctive. Everett McNeil, in his pioneer tales, has always been more or less rough in style and full-blooded in adventure; not quite as violent as a "penny dreadful," but, in a sense, just as exciting. The very title of his latest, *With Kit Carson in the Rockies*, sounds daring.

Fiction for the Betwixt and Between Age

Forty-four Cousins. By Winifred Mitchell. Illustrated by H. R. Smith. G. P. Putnam's Sons. \$1.25.

From Sea to Sea: A Story from Captain Jack. By Marion K. Hurd and Jean B. Wilson. Houghton, Mifflin. \$1.15 net.

The Secret of the Island. By N. C. Brown. Illustrated by E. J. Flanagan. Scribner's Sons. \$1.25.

It is a pleasure to meet with three stories of such excellent caliber as these we now approach. Librarians and mothers should welcome such a charming,

straightforward romance as Winifred Kirkland's *Introducing Corinna*. For several years we have met with no story so fresh, so frank, so picturesque, and so holding in its sympathetic, distinctive portrayal. The heroine is the twenty-three-year-old head of a girl's school. Readers should not judge Corinna by the pictures in the book; she deserved better treatment.

College stories may not always be described as sensible, and in a way *When She Came Home from College* is an "after-effect" record. Those who follow the tribulations of the heroine of this book will have some fundamental philosophy to think about, and the cleverness of Marian K. Hurd and Jean B. Wilson in handling their "moral" is altogether commendable.

We are glad Norman Duncan has taken such a story as *The Suitable Child* in which to urge his plea for the rehabilitation of the Christmas season. Apart from the incident centering around an orphan boy who finds happiness aboard an express train, his "Stop Thief!" is a good sermon for the Yuletide: "They who, being able in any proper way to provide those pleasures of Christmas which are meet and due according to the established custom, but still withhold them from children, do thief jewels from the helpless. . . ." We join in Mr. Duncan's special pleading.

Distinctive Fiction

- Robbery-Monster*. By Arthur F. McFarlane. (A Story of the Big Show and the Cheerful Spirit.) Little, Brown & Co. \$1.50.
A Boy's Ride. By Gulielma Zollinger. A. C. McClurg & Co. \$1.50.
Six Girls and the Seventh One. By Marion Ames Taggart. W. A. Wilde Co. \$1.50.
Captain Chubb. By Ralph Henry Barbour. Illustrated by C. M. Relyea. Century Co. \$1.50.
We Four and Two More. By Imogen Clark. T. Y. Crowell & Co. \$1.25.
The Girls of Fairmount. By Etta Anthony Baker. Little, Brown & Co. \$1.50.
A Son of the Desert. By Bradley Gilman. Illustrations by Thornton Oakley. Century Co. \$1.50. (A story of love, devoted to Thomas Russell.)

"Chet." By Katherine M. Yates. A. C. McClurg & Co. \$1.50. (There is a Christian Science tone to the book which in many respects is entertaining, but which overemphasizes the "moral.")
A Pair of Madcaps. By J. T. Trowbridge. Lothrop, Lee & Shepard Co. \$1.50. (Many readers of this veteran story-teller will welcome his latest.)

As a character sketch *Redney McGaw* is a most fascinating street product, whose adventures with a circus are frankly entertaining, and whose philosophy under trying circumstances is healthy for young readers.

The quiet tone of Gulielma Zollinger's *A Boy's Ride* might not attract if it were not emphasized that this story of 1209, in the time of King John, is vigorously written, in a style exceptional among juveniles. The story is not over-stirring, but it is not commonplace.

Six Girls and the Seventh One is another of Miss Taggart's wholesome books dealing with home life and "homey" characters. Here one is given a galaxy of roses in the bud, and some manly "shoots" waiting until the roses bloom. This atmosphere of romance will be welcomed by those readers who, in previous volumes, have followed the

heroes and heroines thru varied trials and enjoyments.

Ralph Henry Barbour is a constant surprise to us, so facile his pen and so even his narrative; he has an easy-going way of inventing mild incident, and tho, during the course of his stories, his characters do not seem to develop, yet while you are with them they are very cheerful companions.

Of Imogen Clark's *We Four and Two More* we are able to say that there is much fun and originality in store for the reader. In fact, the general motive of the book is the prevention of dullness, and a society is formed for that purpose.

Among the many writers aiming to follow in the footsteps of Miss Alcott there are a few who, while not supplanting her, at least approach her in her unaffected manner of telling a story. Etta

ILLUS. BY F. BOYD SMITH
 From "Robinson Crusoe."
 (Houghton, Mifflin.)

Anthony Baker enjoyed preparing *The Girls of Fairmount*; her text thruout bears evidence of this fact. The story is not artificial and the girls have real live manners; they are not made to order.

It was to be expected that Mr. Matthews would follow his excellent volume of last year, "With the Battle Fleet," by a book of similar character, tracing the fleet *Back to Hampton Roads*. The new

AT EVENING THEY CAME UNTO A VAST WOOD, REACHING MANY LEAGUES.
From "The Story of Rustem and Other Persian Hero Tales" (Scribner)

Nautical Notions

- *Back to Hampton Roads—Course of the Atlantic Fleet, July 7, 1908 February 22, 1909.* By Franklin Matthews. B. W. Hubsch. \$1.50.
Around the World with the Battleships. By Roman J. Miller. Introductory Note by James B. Connolly. A. C. McClurg & Co. \$1.25.
Ralph Osborn—Midshipman at Annapolis. By Lieut. Com. Edward L. Beach. W. A. Wilde Co. \$1.50.
An Annapolis Second Classman. By Lieut. Com. Edward L. Beach. Penn Publishing Co. \$1.25.

account has much more of the guide-book tone, and for that reason is not so vivid in its navy coloring, but Mr. Matthews is a newspaper reporter of exceptional merit, and his descriptions are well written. Roman J. Miller's *Around the World with the Battleships* contains many good qualities, and its author was

chief turret captain of the "Vermont." The publishers were unwise in reproducing the pictures in such inartistic manner.

The general tendency seems to be for lieutenant-commanders to enter the tempting field of authorship, and among them none is so prolific as Edward L. Beach, who is endeavoring to reproduce the atmosphere of Annapolis. Only when there is an attempt to go outside of the Academy routine does he show a complete lack of understanding as to the ways and manners of real heroes and heroines.

Books in Series

FOR BOYS

- The New School Boy.* By James St. John. Houghton, Mifflin & Co. \$1.50. (Second in a series.) A typical college story founded upon real incidents of a real institution.
- For the Norton Name.* By Hollis Godfrey. Illustrated by Thomas Fogarty. Little, Brown & Co. \$1.25. (First in a series: "Young Captains of Industry.") The hero is a successful business man in the making.
- The Young Trainmaster.* By Burton E. Stevenson. L. C. Page & Co. \$1.50. (Third in a Railroad Series.) A mixture of melodrama and a great deal of railroad information. (Author of "Child's Guide to American Biography." Baker.)
- The Football Boys of Lakeport.* By Edward Stratemeyer. Lothrop, Lee & Shepard Co. \$1.25. (Fourth in the Lakeport Series.) The story follows closely the limitations of its title.
- A U. S. Midshipman in China.* By Lieut.-Com. Yates Stirling. Penn Publishing Co. \$1.25. (Second in a series of which more are promised.) Crafty yellow men and American swords and pistols lend atmosphere to a naval story.
- The School Four.* By A. T. Dudley. Lothrop, Lee & Shepard Co. \$1.25. (First in "Stories of the Triangular League.") This is a typical all-round athletic story. Physical competition predominates.
- Five Chums in the Saddle.* By Norman Baker. Lothrop, Lee & Shepard Co. \$1.25. (First of "Five Chums Series.") With a military school as the background, the hero wins honor thru difficulties.
- With Pikepole and Peavey.* By C. B. Burleigh. Lothrop, Lee & Shepard Co. \$1.50. (Second of "Norman Carver Series.") A lumber tale, illustrated with real photographs.
- The Boy with the U. S. Survey.* By Francis Roll-Wheeler. Lothrop, Lee & Shepard Co. \$1.50. (First of "U. S. Service Series.") This book, so it is claimed, was submitted to the chiefs of the various bureaus in Washington before publication.
- Ward Hill—Teacher.* By Everett T. Tomlinson. Griffith & Rowland Press. \$1.25. (Fourth in "Ward Hill Series.") The trials of a young man, not as distinctively portrayed as the tribulations of Corinna, noticed elsewhere.
- The Cave of the Bottomless Pool.* By Henry Gardner Hunting. Henry Holt & Co. \$1.50. (Sequel to "Witter Whitehead's Own Story.") A mystery story of camp life, told in the first person singular.
- Dave Porter and His Classmates.* By Edward Stratemeyer. Lothrop, Lee & Shepard Co. \$1.25. (Fifth volume of the "Dave Porter Series.") Athletics and the reformation of a bully—the usual moral outlet—are the chief elements in this narrative.

FOR GIRLS

- A Little Girl in Old Pittsburg.* By Amanda M. Douglas. Dodd, Mead & Co. \$1.50. (Fourteenth volume in the "Little Girl Series.") Young Pittsburgers will be able to follow the topographical features of this story.
- Marjorie's New Friend.* By Carolyn Wells. Dodd, Mead & Co. \$1.25. (Second in a series by the author of the "Patty" books.) Miss Wells in her stories strives to give the heroines a good time. The adventures are usually commonplace.
- Patty's Pleasure Trip.* Carolyn Wells. Dodd, Mead & Co. \$1.25. (Seventh in the "Patty Series.") The title is sufficiently descriptive.
- Dick and Dolly.* By Carolyn Wells. Dodd, Mead & Co. \$1.25. (First in a new series.) A modern imitation of "Helen's Babies," tho Dick and Dolly are old enough to know better.
- Janet at Odds.* By Anna Chapin Ray. Little, Brown & Co. \$1.50. (Fifth volume in the "Sidney Series.") Miss Ray is one of the popular writers who just escapes being excellent. There is some good spirit in this story.
- Helen Grant—Teacher.* By Amanda M. Douglas. Lothrop, Lee & Shepard Co. \$1.25. (Seventh volume in the "Helen Grant Series.") The story is doubtful. We would like to know why Amy Brooks continues to illustrate; she should strive with all her energy to make her own stories better!
- Betty Baird's Golden Year.* By Anna Hamlin Weikel. Little, Brown & Co. \$1.50. (Third in the "Betty Baird Series.") A mixture of individual struggle and romance. Miss Richards is improving as an illustrator.
- Cock-a-Doodle Hill.* By Alice C. Haines. Henry Holt & Co. \$1.50. (Sequel to "The Luck of the Dudley Grahams.") A story of country life in which the heroine finally is bequeathed a legacy.
- Betty Wales & Co.* By Margaret Warde. Penn Publishing Co. \$1.25. (Sixth in a series.) A tea-room helps Betty earn a living.
- The Wide-awake Girls in Winstead.* By Katharine Ruth Ellis. Little, Brown & Co. \$1.50. (Second in a series.)
- The Little Heroine at School.* By Alice Turner Curtis. Lothrop, Lee & Shepard Co. \$1.25. (Second in a series.)
- The Coming of Hester.* By Jean K. Baird. Lothrop, Lee & Shepard Co. \$1.25. (First in a series.)

A paragraph will suffice to express our general opinion concerning "series," where the author usually follows the line of least resistance, and makes use of a realism devoid of much positive worth. It is very rarely that the freshness of a story may be carried over to a sequel, but the fashion nowadays is to stretch incident thru many years and thereby establish a commercial "trademark."

Practical Books

- Happy's Grammar Book for Boys.* By Joseph H. Harper. Harper & Row. \$1.00.
- A Child's Guide to Music.* Daniel Gregory Mason. G. Schirmer & Co. \$1.00.

The Kindergarten in the Home. By Emma S. Newman. L. C. Page & Co. (The "gifts" discussed narratively.)
Science at Home. By T. Bacon Russell. R. F. Tennyson & Co. 75 cents. (Easy suggestions with home-made implements.)

Each year practical books seem to repeat themselves, to cover the same ground in a different manner. By its very nature a "guide" cannot be permanent, but it lasts just as long as its contents is useful to the owner. Joseph H. Adams's *Machinery Book for Boys* is

full of information regarding the appliances of modern mechanics, and it contains a complete discussion of power and its various applications.

A Child's Guide to Music is a welcome volume, in which Dr. Mason discusses the theory of music, and resorts to a method of analysis both simple and entertaining. The book is strongly recommended.

Young readers interested in pictures

GULLIVER'S CONFEAT WITH THE WASPS.
 From the Rackham Edition of "Gulliver's Travels." (Continued.)

will find A. E. and W. Martin Conway's *The Children's Book of Art* a suggestive handbook. The color plates are very satisfactory. Mrs. A. Sidgwick's and Mrs. Paynter's *The Children's Book of Gardening* will bring much satisfaction to English young people, while Frances

Boone and other American backwoodsmen. In his generous volume Mr. Beard gives full accounts how one may be turned into a Knight of the Buckskin, even in ultra-modern times.

Perhaps the reader of this article who has had the patience to go thus far will

Duncan's *When Mother Lets Us Garden* is a sound little guide for American would-be planters.

The latter book belongs to a series in which is to be found Elsie Duncan Yale's *When Mother Lets Us Give a Party*; here one may read easy and practical suggestions for many occasions.

Finally we recommend Mr. Beard's *The Boy Pioneers* to all admirers of Daniel

Boone and other American backwoodsmen. In his generous volume Mr. Beard gives full accounts how one may be turned into a Knight of the Buckskin, even in ultra-modern times. Perhaps the reader of this article who has had the patience to go thus far will smile when I confess that I have just begun; that on the shelves in the office of THE INDEPENDENT stands an equal number of juvenile books which would require individual treatment were they not in character much the same as some of those we have selected for mention. Nowadays, with the excellent manufacture to disguise the average quality, it is not an easy matter to buy books for children!

PENDENT on receipt of price

The Charm of the Print

BY FRANK WEITENKAMPF

[The illustrations accompanying this article are derived from Mr. Weitenkamp's book "How to Appreciate Prints," thru the courtesy of the publisher. They were copyrighted in 1908 by Moffat, Yard & Co.—Editor.]

"PRINTS" covers a wide range of products of reproductive art, from the cheapest chromo to the most expensive etching. And within these extended limits the charm of the print is manifested in many ways. Primarily this appears from the esthetic

standpoint. But that is not the only basis of enjoyment, for the interest of subject plays a prominent part. In fact, one can hardly get away from it altogether. Views, for instance, answer the interest in locality, historical scenes that in nationality, portraits that in personality.

THE ENGRAVER

Dry-point by Whistler. The print shows Rioult, a wood engraver, at work. The wood block on which he is engraving rests on a pad before him, on the table he stands upon.
(Courtesy of the New York Public Library Print Dept.)

And there are numerous other possibilities of the illustration of human activity in various forms which offer so many reasons for appreciating and collecting prints in the broadest sense of the term.

Considered as an art product, the print comes into question mainly in its finer manifestations. Because, whatever other considerations may play their part in influencing taste, it is primarily certain fundamental laws of art—often, no doubt, instinctively felt rather than definitely formulated in the mind—which determine judgment of the print. The majority of prints which exemplify the best types of etching, engraving and lithography are in black-and-white. They lack the appeal of color in the painting, as well as its completer effect, powerful

aids to the imagination. They respond to a specialized taste.

Whistler's etchings form characteristic illustrations of this. The line, a convention used in drawing and engraving to depict what has no lines but only form and color, is employed by Whistler and other etchers in a most summary manner, for succinct statement of essential fact. The unsaid, as well as the said, plays its part in this art of elimination of unnecessary detail. The tact of omission, as Pater calls it, comes into play. Of course, the products are not sketches or studies any more than the short story in literature. They are statements of essential facts to produce a certain artistic result. Often a labor of love, perhaps the spontaneous outcome of a passing

mood, they form direct personal impressions, in absolute fac-simile of the artist's own lines, and very often printed by him. (The last is a very important point in the production of etchings.) At their best, then, they are intimate expressions of individuality, things to live with as with an old friend. They form an art of the small cabinet rather than of the large gallery—one might perhaps say, analogous to chamber music. This intimacy the beholder may share to the extent to which he responds to the personality behind the picture. The pleasure of this mental contact is his if he will meet the artist with responsive sympathy. If he will feel the big humanity that pulsates in the portraits and other etchings by Rembrandt, the strong expression of German mind and life which is felt in the engravings of Durer, the sensitive receptiveness of a Whistler. The field

is very large, for many lesser personalities have their say and are worth hearing. And there are prophets in our own country!

The readiness to appreciate the individual should be paired with the will to understand racial and national characteristics and the impulse of the period to which a work of art belongs. For the formative influences affecting the artist and his work are many and include those of his time and surroundings as well as those of preceding generation and other lands. But in art that is worth while, these influences are assimilated by the dominating personality of the producer.

And yet this personality must find its expression in technique, in the manner in which the medium is handled, the resources and the limits of each tool or process must be understood and respected by the artist, making the result a visible outcome of the means employed. A review of the records of the graphic arts shows that this is entirely compatible with the unfolding of the individuality. It is, in fact, an absolute necessity. It is only in the decadence of an art that the joy of craftsmanship is directed to the mere exercise of technical ability *per se*. Technique, then, is an essential element in the fascination of the print. So each medium has its own strong and characteristic attraction and even a hasty glance at what has been accomplished in each will recall many notable individual examples of this quality.

JOHN PHILIPOT CURRAN

Mezzotint by John Raphael Smith. After Sir Thomas Lawrence.

The painter etching is the most familiar example of an autographic art, one, that is, which gives the exact facsimile of the artist's own work. Painter-lithography, less in vogue, offers plentiful possibilities of pleasure. With its potentialities, its responsive resources, it fairly meets the artist half way. In numerous individual cases, difference in temperament and resultant difference in style, in handling of the medium, emphasize the adaptability of the stone to most diverse purposes and moods. The record of achievement ranges from the earliest efforts, pale, somber, and but halting and amateurish, to the most modern instances of its application to artistic needs and idiosyncrasies. The rich black tones of the younger Isabe, the big vigor of

Daubier, the *carte* of Gavarni, the virtuosity of Menzel, Whistler's light impressions in joyous utilization of the pale gray line, the silver-point delicacy of Legros, Pennell's ready grasp of architectural characteristics, the vapory imaginings of Fantin-Latour, the color work of contemporary Frenchmen, unctuously

painting by another—nor from the high degree of ability and adaptativeness by which such artists as Unger, Waltner, Flaneng, Rajon, Chauvel, and others have distinguished themselves in this specialty.

In engraving on copper and later on steel there was some original work in earlier days, in the time of Dürer, Leyden, the Little Masters and Mantegna. But line engraving inevitably became a reproductive art. The brilliant performances of the French school (Nanteuil, Edelinck, the Drevets), and the translations into black-and-white, by Morghen, Longhi and other Italians, of paintings by Raphael and others of their countrymen, come to mind. Here, too, the variety in subjects, treatment, and the manner of interpreting the original, is very great. Such striking differences may be noted as Marc Antonio's plates after Raphael executed in lines of a classic serenity, with attention to form primarily, and the delicate engravings in which certain Englishmen of the middle of the nineteenth century copied the paintings and drawings of Turner, with lines of a fineness lost in tones. Nearly

five centuries of rich and varied productiveness have left their treasures for our enjoyment.

Mezzotint, an art not of lines but of tones, has also been employed almost entirely as a reproductive art, particularly identified with English painting of the eighteenth century. The canvases of Reynolds and other painters of the day, and the life which they portrayed with distinction and grace, are reflected with suavity and force in this art of rich and velvety blacks by Macardell, the Wat-

THE HONORABLE MISS BINGHAM

Supr. engraving by F. Bartolozzi (1781). After a painting by Sir Joshua Reynolds.

rich in the case of Lunois, somewhat shrill in that of Ibels; these are but a few instances of the rich variety of effect to be drawn from the stone.

In etching and lithography, it is the original work, the painter—etching or lithograph, the direct expression of the artist without intervention of another, that on the whole takes the highest rank. That fact does not detract from the great usefulness and value of the reproductive etching or lithograph—in which the etcher or lithographer reproduces a

sons, James and William Ward, Valentine Green and J. R. Smith among others.

The delicate art of stipple engravings, practiced by such artists as Bartolozzi and Caroline Watson, and the entirely different aquatint with its simulation of wash drawings, again have each its peculiar attraction.

Engraving on wood has been intimately connected with the development of the plain people. For about four centuries the history of wood engraving was al-

earliest crude block-book printing to the modern American triumphs, by French, Kingsley, Cole, Wolf and others, in the rendering of tones and color values, or the yet more recent interesting efforts, in various countries, to use the wood-block as a medium of original expression. Artists such as Orlik, William Nicholson and Rivière, or Dow, Nordfeldt and Hyde in our own land, have used wood engraving in its simpler form, with few lines, and with flat tints of color. In much of this work there is

PORTRAIT OF TENNYSON

Lithograph by Alphonse Legros. This print approaches a soft, even, pleasing, delicacy. It shows the possibilities derivable from the lithographic stone.

most synonymous with the history of book-illustration. It takes us from the

evident, more or less, the influence of the Japanese color print, which latter, again,

forms a study in itself. These Oriental products lose some of their exotic appearance to the uninitiated if he tries to forget peculiarities of style and regards them simply as records of the every-day life of the Japanese. They will then disclose human traits familiar the world over, and the beholder will at the same time come to see more of their particular charm, their sensitive summariness, their decorative color harmony.

Color printing is about as old as the art of printing itself, and has been applied to every form of printing pictures—engraving on wood and copper, mezzotint, stipple, aquatint, etching, lithography, and the modern photomechanical processes. This application of color has varied from the completeness of effect in the aquatints of Debucourt to the slight suggestions of color which Whistler has thrown into some of his lithographs.

But beside all these varied esthetic attractions that have been barely hinted at, there is also the subject interest, which plays a large part in the valuation of prints. Those who collect prints for other than purely esthetic reasons are many. Some aim at as complete a collection as possible of portraits of Washington or Franklin or Napoleon; theatrical portraits are the quest of another; this one is after New York City views; methods of transportation is the subject chosen by yet another, or specialized in the search for illustrations of steam navigation or carriages. The purposes of such collectors may be served by prints of high artistic excellence as well as by such as are far from deserving that characterization. The interest of this branch

of collecting has been accentuated in exhibitions such as the one of New York City views in the New York Public Library some years ago, or that of Milton portraits at the Groller Club last year. The one specialty of bookplates alone covers a wide ground, appeals to various interests thru subject, exemplifies the possibilities of various graphic processes and illustrates many individual manners in art.

This characterization of the bookplate can equally well be applied to prints as a whole. To show this is the object

A CUT FROM HOLBEIN'S "DANCE OF DEATH"

of the foregoing summary notes, which are not to be regarded as a tabloid of compressed information, but simply as an attempt to give a slight impression of the varied possibilities of pleasure inherent in prints. And they may point the way to the voluminous literature of the subject, which can answer in detail questions as to process, or general history, of the special art, or individual artist.

But, at the best, no writing can produce taste fullfledged, any more than the preacher can absolutely save souls. The guide post can be set up, but those who follow its directions must themselves travel the road. Which, in this case, means to take advantage of the many opportunities offered in museums and print-rooms and print-shops, and see all that is displayed there so freely. To see with eye and mind and heart, for thought and sympathy are necessary to insure full appreciation; and, finally, to see with the good will to learn to understand and to retain an unprejudiced mind—only on such a basis can intelligent selection be made and taste formed.

Books and Booksellers of Russia

BY IVAN NARODNY

[Mr. Narodny is a prominent Russian bookseller, who has written many of his works, which are well known in Russia.]

THE difference between the Russian and American books and the methods of their distribution are so pronounced that they deserve careful attention, for bookselling is one of the most important of present day trades. Having been engaged in business as a bookseller and publisher in Russia for more than three years I feel quite competent to express my views in this respect, more especially as I have also observed the methods of bookselling in this country.

A bookseller in Russia is not an ordinary merchant, like a dealer in dry goods, a grocer or a department store clerk, but he is a highly respected personage in the

town where his place of business is located. Doctors, clergymen, lawyers, teachers or various officials as a rule stand below the social level of a bookseller. The word of a bookseller on any art or literary question is law and gospel and he is considered the final intellectual authority to whom all others appeal such questions. Not only the success of a book, but also that of a composition, art production, song recital, concert, lecture or theatrical entertainment, to a great extent, lies in the hands of a bookseller. He practically dominates not only his customers, but a large number of the intellectual people of his district. He is the man who leads in the spiritual life of

Copyright, 1909, by Underwood & Underwood, New York.

A STREET SCENE IN KIEL, SHOWING TYPICAL RUSSIAN SHOPS

his place. The reason of this lies in the fact that a Russian bookseller is not merely a commercial man, whose only aim is to make money out of bookselling, but he likewise performs certain collateral social functions in his process of making a decent living. He is, generally speaking, an expert, not only in Russian literature and art, but his knowledge of the literature, art and music of the world is above the average. He speaks at least two and sometimes three languages and is a man of high education.

In a Russian bookshop music and various products of art are sold besides books. The shop generally contains the leading works of the best native and foreign authors, composers and painters. Sometimes stationery and objects of handicraft are also sold, even if books are the chief concern. It is rare that one could not find in a provincial bookshop something by Goethe, Shakespeare, Schopenhauer, Hugo, Ibsen, Poe or Emerson. The reproductions of Rembrandt, Millet, Whistler, Boecklin, Repin, Vereshchagin and others are also commonly kept on sale. One always finds the best Russian authors and various editions of the classics.

The reason for such respectable social standing of a Russian bookseller is to be looked for in a certain tradition. Most of the works of the first Russian writers were published in the beginning of the nineteenth century by their wealthy admirers, who, having paid a good honorarium for the authors, did not contemplate the making of any money from selling the books. The object sought after was rather to spread abroad knowledge of their works. They as dealers often sold the books from their own houses, or they hired young students or literary men to sell them for the mere cost of paper and printing. The bookselling trade has gradually developed until it reached its present high social standing. The Russian bookseller is usually a man who has been in the university or college and who halted before he became a professional as he may have at first intended. Many of the theological students, on completing their courses, dislike to become priests. They often become booksellers and for the time continue the study of literature, art and music.

My personal experience will illustrate this. I became a bookseller in a small town of five thousand inhabitants after I had been a writer of short stories, literary critic and essayist. My bookshop contained over five thousand books of various sorts, some six hundred piano pieces and songs, and about two hundred reproductions of the work of great Russian and European painters, many etchings and small drawings by local artists. My annual sales were from ten to twelve thousand rubles, two-thirds of which came from the books. I also managed all the song recitals, concerts and other public entertainments of the town, which I considered as honorable perquisites, but for which I made no charge. This is customary in towns of this size. It is not so, however, in the larger cities like Kieff, Warsaw, Moscow and St. Petersburg.

Tho the greatest number of my customers were peasants, petty officials and teachers, yet I disposed of books of high literary merit only. I sold most short stories, biographies, dramas, essays and high class novels, but I doubt if I disposed of as many as twenty sensational love stories or other boulevard fiction in the course of a year. None of my customers bought a sensational book merely as such or because of its decorative external appearance. The best liked Russian books during the time I was in trade were the short stories by Tchekhoff, the novels by Dostoyevsky and Korolenko, the essays by Tolstoi, the stories by Turgeneff and Shtchedrin, the poems by Lermontoff and Pushkin, the dramas by Gogol, Tchekhoff and some others. The most appreciated foreign playwrights I sold were Ibsen, Lessing, Hauptman, and Maeterlinck. The biographies of Benjamin Franklin and Abraham Lincoln were the best sellers among the American books. Other very popular American authors among my customers were Cooper, Poe, Longfellow, Mark Twain and Emerson. Some of the living American authors well known in Russia are Jack London, Mark Twain, Upton Sinclair and Edwin Markham.

Certain of the Russian publishers have tried the publication of the most popular American novels, but they have entirely failed, because the Russian readers feel

the lack of such psychological profoundness or ethical tendency as they have been educated to expect from their own novelists. One publisher brought out some of Edgar Allan Poe's best stories and his "Raven" in an *edition de luxe*, and soon after wrote me that he did not

On such occasions I was accustomed to recommend an *edition de luxe*. I was compelled to judge of the taste and to approximate the mind of the one for whom it was meant, and I rarely made a mistake.

Russian books look somehow different

BOOK AGENT READING A BOOK LIST IN A SIBERIAN VILLAGE

think he would ever get his money back. He was surprised in course of that winter when three editions of these books were sold.

The English classics that sold best among my customers were Shakespeare, Milton, Emerson, Darwin, Dickens, Spencer and Byron. The Russian readers like English poetry and admire the English philosophy, but they dislike the English fiction. The French, Hungarian or Italian fiction appeals to a Russian reader far more than the English. As a rule, before anybody bought a new book by an unknown writer he asked me to give him a short scenario and my personal opinion of it. Often a customer entering my shop asked:

"I want a good fiction, drama or book or poetry for a present for my friend. Which is the best? He already has such and such books."

from the American, particularly as regards their binding. Most of the Russian books, as is the case in English, German and other Continental cities, are issued in paper covers and look like some big American magazines or catalogs. The Russian readers dislike conventionally bound books, because they think these are meant for young people, students, or for undeveloped minds. Everybody in Russia likes to bind his books according to his individual taste. To my customers I could sell classics or works of famous authors in edition bindings, but never a new book by an unknown author. One publisher who issued Mark Twain's works desired to make them more attractive by imitating the original American edition. He sold three editions of the regular paper covers, whereas the bound edition found no buyers.

Russian fiction has not a standard

price corresponding to \$1.50 in this country. The price there varies according to the edition or size from five kopeks to fifteen rubles. Another distinctive feature in Russian books lies in the matter of illustrations. It is a tradition in the Russian Empire that illustrations for any piece of fiction tend to belittle the work in the eyes of Russian readers, who think a book carrying illustrations is intended for a mind void of imagination. Occasionally, it is true, the photograph of an author is printed as a frontispiece, but even this is generally limited to reference books or books of poetry by authors of great reputation. Juvenile books, books of travel and technical works, of course, have the necessary illustrations and drawings. Illustrations in the *edition de luxe* are drawn by the best artists of the country and are usually reproduced in photogravure. The regular size of such editions is the quarto.

Rarely does a Russian publisher advertise his books in periodicals or sell them from dummies as is customarily done in American cities. Not long ago a book agent called upon me in my apartment in New York and attempted to interest me in a long list of books which he said he was selling. When I asked him to show me copies of them he said he had only their backs, and tried to convince me how nicely they would furnish my apartment. I pitied the poor agent and therefore explained to him that I was not interested in furniture but in books. A Russian publisher would never be able to use such methods. After he has published a new book he immediately mails copies to all the retailers and the success of it rests thereafter with them.

The retailer issues a catalog of all his books each year and distributes it in his district, which is his only method of direct advertising. Indirectly, of course, the reviews in the periodicals and discus-

sions in society give the first hints of the literary merits and the profundity of the newly published book, and stimulate interest in it. As a prime requisite a Russian fiction or drama must have a strong element of ethical nature and certain psychologic depths, otherwise it is considered as trash. A Russian never pays so much attention to the beauty of style as to the ethical tendency and to psychological truth. For that reason the works of Turgeneff are not so impressive and fascinating as those by Dostoyevsky, Gogol and others.

It does not make so much difference, however, in Russia, if a book is an original or translation as it does in this country. I suppose I have sold as many copies of Ibsen's dramas as I have sold of those by Tchekhoff. I have sold more essays by Emerson than those by any Russian author. I recently happened to ask in a first class New York department store for some books by Dostoyevsky and Gogol in English, but the salesman in the book department replied that he never had even heard the names of such authors. Further conversation with him showed him to be as little acquainted with general literature as a clerk in any other department of that store. He knew even less about English literature than I, a foreigner.

As I have already pointed out, a Russian bookseller is a highly educated literary man and it rests with him whether he sells a book or ignores it. Advertisements, hostile criticism and other commercial tricks current in this country would fail to make a book succeed if the retailer should think it had no literary merit. Russian booksellers are often the invisible fingers of the Russian underground movements, and their shops are the spiritual windows thru which the oppressed Russians get a glimpse of that freedom and civilization which has so far remained a dream for them.

NEW YORK CITY

MARCHESA ELENA GRIMALDI, WIFE OF MARCHESI NICOLA CATTANEO, OF GENOVA.

This is a full length portrait, showing the lady standing on a terrace with face turned toward the landscape. This portrait was painted about 1623, and is from the Cattaneo Palace, Genoa. It is in the collection of P. A. B. Widener.

MARCHESI FILIPPO CATTANEO, SON OF MARCHESA ELENA GRIMALDI.

He was wearing a tunic with interwoven with gold. In his right hand he holds the leash of the young dog beside him. He is shown at about six years of age. The picture was painted in 1623, and is in the collection of P. A. B. Widener.

MARCHESA CLELIA CATTANEO, DAUGHTER OF MARCHESA ELENA GRIMALDI

The girl is dressed in white and holds an apple in her hand. A red cushion is shown behind her. The picture was painted in 1623, and is in the collection of P. A. B. W.

The Reorganization of the Navy Department

BY PARK BENJAMIN

THE Navy is the fleet. The fleet never relaxes and never sleeps. It is always on a war footing, always ready to act instantly and wherever there is water enough to float it. The Navy Department exists for the sole purpose of keeping the fleet at every moment, day and night, keyed to the top limit of war efficiency.

It has not fulfilled that purpose for many years. Its inadequacy has steadily been growing more apparent. It is senseless to pay a hundred and thirty million dollars yearly for the Navy if we cannot get what we pay for. This is why the Navy Department has at last been reorganized.

The Navy Department's work is very complex. It involves the designing, building, repair, and up-keep of the ships, their machinery and their guns, and therefore all the varied conditions of a great industrial establishment. It includes the education of officers and men and the maintenance of a college of the first rank, besides many training schools. It provides for rigid discipline, and the supply, organization and distribution of the enlisted force. It purchases enormous quantities of supplies, keeps many accounts, prevents and cures disease and injuries and directs the operations of the fleet when the crisis arrives for which all else is preparation.

Twenty-six years ago, when we started the present steel navy with the once famous, but now inconsiderable, "white squadron," we were expending fifteen million dollars per year—to disburse wisely nearly nine times that amount is a much more intricate and difficult task—but the public safety requires it to be done with undiminished skill.

The work of the Department is divided by law between eight bureaus, and is distributed among them as the Secretary of the Navy may direct. No initial authority exists anywhere but in the Secretary, as the authorized agent of the President. Five of the bureaus came into existence in 1842, and in 1862 the remaining three were added. Under the stress of the

Civil War it was quickly shown that while the bureaus could attend sufficiently well to supplying the material, they could not manage the fleet, nor did Mr. Gideon Welles, with all his remarkable ability, possess the requisite military knowledge to do so. Good fortune raised up Mr. Gustavus V. Fox—a former midshipman—who, as Assistant Secretary, strained laws to fit emergencies, rode down commodores and captains "like the main tack," settled perilous questions after his own fashion, almost under fire, and rendered the country such distinguished service that among the statues of the people whom he kept straight and bullied and cajoled and ordered, and so made reputations for them, not a single effigy of him can be found.

The years went on, and the more complicated the ships and guns and machinery became, the less the old mariners knew about them—having mainly been trained to sails and smooth bores—and the more embarrassing the position of the necessarily civilian Secretary, who had neither adequate military knowledge himself nor could get it from them. But the holding of a commission, the wearing of a uniform, always implies *ex-officio* knowledge, whether one has it or not. So a "General Board" was established of elderly and well-meaning officers, which was supposed to concern itself with the general preparation of war plans—(portfolios *à la* Von Moltke—take down No. 2 and crush the invader by plans all cut and dried and neatly printed in typewriter)—and the everyday employment of the fleet. It has been about as useful as one might expect of a body composed of three uncoördinated parts—War College, Naval Intelligence Office and Bureau of Navigation—and what it has not done is best exemplified by the fact that battle tactics still remain unpractised by the fleet. It has no authority over the bureaus, and successive secretaries have heeded or ignored its advice, or acted without its advice at all, each as he individually saw fit.

When the Spanish War broke out the need for military help to the amiable poet who then headed the Navy Department admitted of no delay. Then evolved the wondrous "Strategy Board," with its "anxieties" and muddled memoranda, and conflicting orders, which made us marvel why an inscrutable Providence permitted such things to be. But in the end it was justified. It left behind it memories which acted as spurs toward a keener appreciation of the risks we were running.

Then some genius contrived a plan for making the bureaus, which were in a constant state of wrangle and of mutual incursions into one another's preserves, settle their own quarrels among themselves. That resulted in the "Construction Board"—a debating society which wrangled violently and in lots of cases left the decision to the unfortunate Secretary—who now found himself, by the flat contradictions of his official exports, driven still deeper into the mire than even his own ignorance could lead him.

Finally, about five years ago, that brilliant and able officer, the late Rear-Admiral Henry C. Taylor, Chief of the Bureau of Navigation, began a vigorous crusade for a "Naval General Staff"—a body of experienced officers to be organized by law—not by a scratch of the Secretary's pen, and hence easily obliterated at any moment by another scratch—which should be the responsible military adviser of the Secretary and also co-ordinate the work of the bureaus—something corresponding to the architect who designs the house and stands between the owner and the builders. It was all fully discussed in these columns at the time.

The movement was useful, for it cleared minds and established a trend for the general advance, but otherwise its only results were long and fruitless hearings by Congressional committees, the bitter opposition of the staff—paymasters, surgeons, naval constructors, etc.—who saw in the scheme possible limitations upon their careers, and the argument, not wholly without color, that the plan essentially involved the placing of the military above the civil power.

Whereupon Congress did nothing. The agitation reduced itself to the devising of schemes which could be

brought into effect solely by executive order and without recourse to the law-makers. The last of them copied everything down to a single individual, in whom was concentrated all the real—altho nominally only the advisory—military power, and that, a year or so ago, seemed quite likely to become effective.

Meanwhile the bureaus pursued the far from noiseless tenor of their way. Each having the power to issue its own orders (representing the Secretary), the consequent and oft-recurring muddles would have been funny had they not been exasperating, expensive and ominous for the future. If one bureau ordered a ship to sea, another might, at the same time, direct the removal of her boilers; and the much bedeviled captains, confronted with contradictory commands, wrote endless remonstrances and explanations, and grimly awaited whatever the fates might bring forth in the way of courts-martial.

In the navy yards chaos reigned supreme, except in so far as young naval constructors occasionally projected dazzling thought-rays thru the murk, and set to rights ancient officers who had sailed many seas and even fought and bled before they were born. Every bureau reveled in the possession in every yard of its own carpenter shop, paint shop, plumbers' shop, and every other kind of shop, and the shops all worked each after its own fashion, and the expense, and especially the red tape expense, was appalling.

"Six hundred times a day"—this is the voice of an admiral, commandant of a great yard, feebly filtering thru many thicknesses of returns and reports—"Six hundred times a day, sir, do I have to sign my name to papers concerning doings I don't know anything about and couldn't know anything about unless I had the united capacities of fifty men. Have I served this country for forty odd years, sir, now to become a blank blank telephone?"

That was the state of affairs as the Roosevelt Administration neared its end. Then, at the eleventh hour, great discoveries were made in Washington, and things started in to be fixed "right here and now." But somehow the effort proved difficult. A fine array of ancient mariners, who could tell you to a nicety

how to "haul of all" or "reef tops'ls in stays," and other old and far-off nautical things, arrived at the capital, came to anchor, thought, unmoored, cleared out and went home—nor left "a rack behind." After them came another board, which evolved the strikingly original idea of a selected super-admiral, to be chosen from anywhere on the navy list, who should not only be an adviser, but, in time of peace, an organizer of victory, which victory, immediately on the outbreak of war, he personally and at once was to go forth and get. Beyond being enthusiastically approved by the "highest strategic authority," this intelligent scheme remains "unwept, unhonored and unsung."

But Secretary Newberry did improve matters in the navy yards, for any lifting of them out of the antiquated ruts was a betterment, no matter how much possible improvement any particular scheme might need. The commandant's daily signatures came down from six hundred to forty-five. The numerous shops of the same sort were consolidated, and the yards took on the aspect of manufacturing establishments. But consolidations ran rather to extremes. The Construction Bureau tried to swallow the Bureau of Engineering and actually did disburse the appropriations of its victim for a time. And other appropriations were jauntily lifted from one bureau to another, and some six million dollars was thus irregularly disbursed, until the Attorney-General brought the exercises to a sudden stop.

The foregoing, tho somewhat roughly, shows about how matters stood when President Taft took office.

Two boards were promptly directed to discover how what had been done by Secretary Newberry could best be undone by Secretary Meyer. That took about four months, and then another board was told to consider all the reports and opinions issued by anybody, investigate how other nations run their navies, and, in brief, solve the problem of how to reorganize the Navy Department, not only without the aid of legislation, but in such a fashion that Congress would permit the scheme, once started, to work itself out without let or hindrance. That is the traditional Navy way of getting

reforms. Do the thing, let it show itself good, then talk Congress into keeping it going! That was the only way in which the Naval Academy could be got—fifty years after West Point.

The plan went into effect on December first last. It divides the Navy Department duties into four groups: Material, Personnel, Operation and Management of the Fleet, and Inspection.

"Material" brings together the manufacturing and supply bureaus and navy yards, and concerns itself with the construction, equipment and maintenance of the fleet.

"Personnel" looks to officers and men, their education, supply, transfer and discipline.

"Inspection" watches and tests the condition of the fleet, independently examines the work of the bureaus, and, in general, keeps the Secretary posted as to the preparedness and efficiency of the whole Navy.

"Operations" co-ordinates the War College, General Board and the Office of Naval Intelligence, and is the real military adviser, for in this division are formulated plans for the employment and organization of the fleet in both peace and war, the movements of vessels, and all strategical and tactical maneuvers. Here are prescribed the military features of new ships, the location of coal depots and naval stations, and the number, type, etc., of dry docks.

Each of these groups is headed by an aid; a rear admiral selected for his special ability and knowledge of the matters entrusted to him, and he is given sufficient assistants. The four aids, in brief, are supposed to know everything, digest everything, pertaining to the fleet, and be able to place before the civilian Secretary, in assimilable form, the matters which he ultimately must decide.

The grouping of the bureaus into two divisions of Material and Personnel, according to the nature of their duties, is in accordance with the systems of other navies. The comprehensive and independent Inspection division is the only logical way of securing impartial tests and strict accountability. The change effected in the navy yards, which makes of them repair shops, which they are—and not manufacturing establishments,

and the separation of their work into the two natural divisions of naval construction and engineering, hull and machinery, is a logical betterment. And so is the modern system of cost accounting which supplants the former complicated methods, and enables work done at the yards to be fairly compared with that done by outside firms.

Nobody claims the present plan to be otherwise than tentative. It would be foolish to do so, for the problems are too many and too varied, and the necessity of building on the old foundation, with all its defects, imposes limits. The resulting situations can be dealt with only as they arise. Hence the whole scheme is kept on broad lines and establishes a general policy more than it does particular methods for carrying the same into effect.

The officers upon whom the responsible duties of aids have been imposed are all well known. Two of the selections—Rear-Admiral Potter as Aid for Personnel and Captain Aaron Ward as Aid for Inspection—are unexceptionable. Admiral Swift retires from active service for age in March next, so that his appointment is little more than an official acknowledgment of his excellent work as president of the board which devised the scheme. That Rear-Admiral Wainwright, who has been assigned to the most important of all the divisions—Operations—is the best possible selection is not clear. His age—he retires in two years—prevents his holding it long enough to develop it, nor has he the service record which entitles him to it in preference to some of the younger officers. The position is not one for an admiral at the end of a career which he himself appears to have been willing at one time to specialize into a law office, and whose chief administrative effort—the superintendency of the Naval Academy—did not advance his professional reputation; but for a bright, energetic, up-to-date captain in the early fifties, whom we know, on the coming of a war, would be kept in the place and not immediately relieved from it. Admiral Wainwright, as every one knows, won well-merited distinction at the battle of Santiago, in command of the converted yacht "Gloucester"; but courage in action is far from being the only qualifica-

tion for a post of such grave and extensive responsibility.

The line officers of the Navy are mainly in favor of the new order. What the staff officers will do—especially the Construction Corps, which hitherto has been in the saddle riding roughshod over the entire service—remains to be seen. Within the Department, the worst menace is the doubtful relation of the aids to the bureaus. There is no trouble about the aids acting as advisers upward—that is, to the Secretary—but if in effect they are to do so downward—that is, to the bureaus—or, in other words, are to become practically super-bureau chiefs, then there are rocks ahead. The bureau chiefs are creations of law and they deal with the 130 millions. They estimate for it, disburse it, and are made responsible by law for it. You cannot make them accept any control, advisory or otherwise, from irresponsible super-chiefs; and just to the extent they think that is attempted difficulties will follow.

Outside the Department Congress is, of course, to be reckoned with. If it sees that the personnel of the Navy is mainly favorable to the plan, and not only that, but is heartily working to make it successful, there is probably little danger of a fair field for trial not being accorded. But if there is to be a revamping of the old line and staff dissensions, if the Naval Construction Corps or any other respectable body of officers fill the air with complaints and criticisms—President Taft's order stops all lobbying—then anything is possible.

This much is certain. No Secretary has ever shown so much courage and discernment in grappling with these ancient troubles, nor has dealt with them so quickly, as has Mr. Secretary Meyer. No scheme not involving a complete uprooting of the existing organization, or at least pretty far-reaching legislation, has ever combined so many good and so few objectionable features as this one.

It deserves full, complete and patient trial. It is to the interest of the public that this be done; and the best way in which the public can help to this end is by inviting individual Senators and Congressmen for the time being at least, to let the thing alone.

NEW YORK CITY.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Taft's Message

SEVERAL questions of much importance, involving the Roosevelt policies, are not considered in President Taft's first annual message. These are the conservation of national resources, public interest in which has been freshly excited by what is called the Ballinger-Pinchot controversy; the proposed grant of additional power to the Interstate Commerce Commission, with supervision of railway stock and bond issues, and other restrictions affecting corporations engaged in interstate business; and the suggested changes in the Sherman Anti-Trust law. There are to be special messages on these topics. If Mr. Taft's views and recommendations concerning them had been added to the message of last week it would have been very much longer; also less peaceful and conciliatory.

This message is partly a kind of annual record, quite properly including mention of a considerable number of things of which the general public knows little and cares less. A majority of those who read the long report of the State Department's work will not give much thought to the important evidence

of progress in international arbitration, but will turn to what is said of South America, Central America and China. An interesting sequel to the Crane incident is that the Manchurian agreement, against which it was predicted that our Government would protest, was found by the State Department to be unobjectionable. Mr. Taft's remarks about Nicaragua are virtually those which were read in Secretary Knox's letter. In the references to South American countries and affairs there is an evident desire to remove any unfavorable impression due to the denunciation of Zelaya. It appears that there was no foundation in fact for the repeatedly published assertion that our diplomatic influence was exerted to procure a settlement of the quarrel between Bolivia and Peru. Mr. Taft's remark that the Monroe Doctrine should not be "permitted to operate for the escape of just obligations" may indicate that he is not wholly in sympathy with some of his predecessors as to the proper application of the Doctrine.

Economy is the keynote of that part of the message which relates to the Treasury, and it is repeatedly suggested in what is said of the departments whose expenditures are large. Under the President's direction the estimates have been rigidly pared down. But the reductions are regarded as temporary, unless the investigations which experts are now making shall yield plans for a permanent lower cost of administration. The inference is suggested that the old rate of expenditure should be restored, under wise supervision, whenever the revenues will permit.

There will be in Congress a movement for an investigation of the Sugar Trust frauds, but it is now reported that the President's objections will prevent any inquiry at present. Of course, investigation should not be allowed to give immunity to guilty men, be they importers or Government officers, or to embarrass the Department of Justice, but it seems to us that Congress could serve the public interest by making an investigation that would avoid such danger. There are men under suspicion whom neither Collector Loeb nor the Department of Justice can reach. Neither detective work in the New York Custom House

nor prosecutions in the courts at New York will show whether responsible officers of the Government at Washington were involved in the network of fraud. Nor can prosecutions affect those whom the statute of limitations protects. But there is no such statute to restrict a Congressional committee's inquiry.

Mr. Taft not only rejects the advice of Senator Aldrich that action for the establishment of postal banks be deferred until the Monetary Commission shall have reported, a year hence, but he also insists, despite Senator Hale's assertion to the contrary, that the law authorizing the appointment of his tariff board permits him to procure, by means of that board, all needed information about the cost of production at home and abroad. It is an important part of the message, this announcement of his purpose and determination to obtain this information and to ask Congress to consider it if it shall show that the duties of the new tariff, when measured by the rule of the Republican national platform, are excessive. He may find it necessary, before the end of his term, to suggest another revision. His message indicates that he approaches the work of the board with an open mind. If the board shall ascertain that tariff rates in many instances not only exceed the difference in production costs, but are more than the entire cost of production in competing countries, further revision cannot be prevented.

The Short Ballot

HERBERT SPENCER'S aphorism that mankind goes right after trying all the possible ways of going wrong has been confirmed by the political experience of each generation of Americans since the Mayflower compact. It is again being demonstrated by the latest aspects of "reform."

After theorizing and experimenting upon unnumbered suggestions for breaking the grip of the party boss, and thereby relieving the citizens from fighting corrupt political influences when he should concentrate his activity upon real issues of public policy, we may now discern here and there cheering evidences that the one practicable way to achieve

substantial results is beginning to receive attention.

There is no phrase that the average American more dearly loves to roll under his tongue than the words: "All right in theory, but impracticable"; and there is no man in the civilized parts of the world who so inveterately bases his conduct upon some abstract theory hardened into dogma, in behalf of which no concrete supporting evidence can be alleged, and which all experience controverts.

Among theoretical dogmas of this kind none is more devoutly cherished, and none has worked more waste and mischief than the proposition that the only way to secure democratic government is to fill all offices from the presidency to the smallest clerkship by popular election. Appointment by the Executive is held to savor of monarchy. Public officers must feel that they are responsible to the people, and, acting upon these purely academic notions, we have multiplied the names upon our ballots, and multiplied elections until now every voter in each of our large centers of population is supposed to pass judgment annually upon three hundred to five hundred of his fellow citizens as candidates for district, municipal, State and national officers.

How completely the plan has broken down, any reader who cares to know the facts may learn by turning the pages of Professor Charles A. Beard's illuminating article on "The Burden of the Ballot," in the December number of *The Political Science Quarterly*. Not only have we arrived at the absurdity of ballots, two feet by three, with intimations that we shall soon be trying to handle sheets five feet by ten, but we have also defeated the purpose which popular elections were intended to subserve.

By making the voter's task impossible, we have thrown practically all of the work of choosing our officials into the hands of those self-constituted experts, the professional politicians whose organization, as a well-knit hierarchy from district leader to State boss, constitutes a political machine which is the *de facto* government in every city and commonwealth of the United States today. This machine makes up the slate, and, of course, bargains with every candidate whose name is written on it. Direct

nominations, whatever merit they might have, if we were voting for not more than half a dozen candidates at one time, could have no other certain effect under existing conditions than to make the present confusion doubly and trebly confounded.

The only remedy that by any possibility can work lies thru the abandonment of this whole absurd plan of popular election of minor administrative officials. The people must vote for a few executive officers and for legislators. The executive officers must be made to assume the duty and the responsibility of appointing freely all their subordinates. The people then will know what they are voting for and why. They can know their candidates, keep track of the relation between promise and performance, and hold men to account when performance disappoints.

It is a curious revelation of "the mind of the many" that this happy euphemism, "the short ballot," has taken the fancy of the public. In all probability the thing which is aimed at can, by means of this shibboleth, be achieved; whereas, if the proposed change were described only in more strictly accurate language, as a substitution of appointment for election, it would undoubtedly be met by storms of protest, and might be defeated altogether.

The Nobel Prize Winners

THE five committees at Stockholm and Christiania upon whom devolves the duty of deciding every year who have contributed most to the progress of the world have an easier task in the sciences than in literature. Scientific achievements are usually objective and indisputable, and receive tolerably just appraisal even from rivals and foreigners. But the valuation of a literary work is dependent upon personal taste and so intimately connected with the language and environment in which it is produced that few critics are able to appreciate and compare the contemporary productions of different nations. Science has become international. Literature is still provincial. Any senior in science called upon to give the foremost authorities in his field would have named, without hesi-

tation, about four-fifths of the Nobel prize men, but a senior in literature would be very unlikely to hit upon so large a proportion of the authors. Even the average educated reader, altho he takes little interest in science, knows more about Marconi and Ostwald and d'Estournelles de Constant than about Selma Lagerlöf.

The committee has given a liberal construction to the phraseology of the Nobel will, that the awards shall be made for literature of an idealistic tendency. Their range extends from Mommsen, the German antiquarian, to Kipling, the British writer of up-to-date short stories; from Echegaray, the Spanish playwright, to Eucken, the German metaphysician; from Carducci, the Italian author of the "Hymn to Satan," to Lagerlöf, the Swedish author of "The Miracles of Anti-Christ."

Selma Lagerlöf belongs in the class of idealistic writers, whatever may be said of some of the rest. She is the literary descendant of Hans Christian Andersen, who need not have been ashamed to own "The Wonderful Adventures of Nils." This is the story of a little boy who was carried away on the back of a wild goose and learned a great deal about geography and the ways and thoughts of animals and birds in his travels. It was written at the request of the National Teachers' Association and has become as popular in the Swedish schools as our own writers of stories of humanized animal life, Kipling, Long, London and Seton. But in her adult diction she belongs to the school of mystics and symbolists, which is today a dominant influence in almost all literatures except American. Selma Lagerlöf is the third woman to receive a Nobel prize, the others being Madame Curie, for the discovery of radium, and Baroness von Suttner, for her peace novel, "Lay Down Your Arms." Three out of the fifty-five names on this world's roll of honor, tho not a large number, is a greater proportion than the anti-feminists would like to see.

The chemistry prize goes worthily to Wilhelm Ostwald, of Leipzig University. As a delegate to the International Congress of Arts and Science at St. Louis and as exchange professor at Harvard

and Columbia in 1905, his broad shoulders, his bushy red beard and his genial smile have become well known in this country, and his "General Chemistry," in four fat volumes, with more to follow, is in every chemical library. He has been a leader in the most important field of recent research, the borderland between physics and chemistry. He not only adopted and developed the electrolytic theory of solutions, but, having the courage of his convictions, he wrote laboratory manuals applying the new principles to analytical work. In developing his chemical philosophy he has taken the extreme pragmatic position. Matter is to him simply one of the factors of energy, like velocity. Formerly he tried to dispense with the atomic theory, but now that anybody with a fifty-cent spinthariscopes can watch and count the individual atoms, he has come to admit their objective reality, as well as their undeniable convenience.

The prize in physics was divided, because it was awarded not so much to an individual as to a discovery, the discovery of wireless telegraphy. In the same way the physics prize in 1902, being given for the investigations of the internal structure of the atom, had to be divided between Lorentz and Zeeman, and in 1903, being given for researches in radio-activity, was awarded half to M. Becquerel and half to M. and Madame Curie. Wireless telegraphy has been the work of many, and because of its commercial and military importance, personal rivalry and international jealousy are more conspicuous here than in pure science. It was the mathematical theories of an Englishman, Clerk Maxwell, which directed attention to the aerial electric waves, and a German, Hertz, who demonstrated them. Lodge, in England, invented an instrument for detecting the waves, and Righi, in Italy, invented an instrument for producing them. Then came young Marconi, son of an Italian father and an Irish mother, and put together the Lodge coherer and the Righi exciter, and at once the laboratory toy became a revolutionizing factor in the commercial and political world.

But to have given the prize to Marconi alone would have been an insult to Germany, which claims superiority for the

system devised by Professor Braun, of Strassburg, and boasts that their stations on the North Sea coast can easily intercept all the marconigrams of the British navy on the Atlantic, but overpower them at will by interference waves. The Braun system has the further advantage of portability. A cylinder takes the place of the ground contact, and the whole apparatus can be carried on a light military wagon. The commander of the army corps can send simultaneous messages to his officers wherever they may be, three or four days' march ahead, on moving trains or in airships, and the messages are recorded at all these points.

We do not know that our own army officers have yet become as proficient in the use of wireless telegraphy on such a scale in field maneuvers as the German officers have been for the last ten years. And we fear that an Italian twenty-two years old appearing in the Post Office Department at Washington with an incredible invention would not meet with as kind a reception as Marconi did at London in 1896. Sir William Preece, of the engineering branch of the British post office, gave him freely all the assistance he needed for laboratory and field tests, and stood by him in the failures and discouragements of the early experiments. But in spite of the indifference of the Government and the public service corporations, individuals in America have taken a creditable part in the development of wireless telegraphy and telephony. We might put forward as claimants Dr. Lee de Forest and Professor Fessenden, of Allegheny College, as well as Professor Pupin, of Columbia, and Nikola Tesla.

The prize given for those who have done most for the promotion of peace is also divided, and apparently for similar reasons. Baron d'Estournelles de Constant, of France, and M. Beernaert, Premier of Belgium and president of the Chamber of Deputies, were both members of The Hague Conferences of 1890 and 1907, but they generally stand on opposite sides, the former favoring the extension of the powers of The Hague and a general disarmament, and the latter taking a conservative attitude and opposing ambitious projects. But the readers of THE INDEPENDENT are familiar

with the peace movement and need no introduction to Baron d'Estournelles de Constant, who is one of our contributors.

[See THE INDEPENDENT, July 27, 1905; February 22, 1906; November 21, 1907.]

In selecting Prof. Emil Theodor Kocher, of Berne, for the Nobel Prize in medicine and surgery for the present year, the Committee are honoring a very modest, extremely practical surgeon who has devoted himself for many years to the development of modern surgery with marvelous success, and to whose clinic at the University of Berne nearly every surgeon from abroad who visits the Continent has made it a point to go because of the precious lessons that can be learned there in every-day surgery. His most interesting work for the world has been accomplished in connection with the surgery of the thyroid gland. He owes his opportunity to do that to the environment in which he lives. There are certain portions of Switzerland in which for some as yet quite unexplained reason the thyroid gland, that is, the glandular structure occupying the anterior portion of the neck in front of and on both sides of the larynx, becomes very much enlarged. This affection, known familiarly as goitre, is indeed so common in some of the villages of Switzerland that it is said that the children run after and mock people who have not some swelling in this portion of the neck. Professor Kocher has operated on these in a great many cases and has taught us much of the surgery and also of the physiology of the thyroid. This used to be classed as one of the useless organs in the days when all useless organs were supposed to be vestigial remains of previous stages of evolution. Kocher's work dispelled that illusion and made it very clear that it is one of the most important organs in the body.

In recent years Professor Kocher has been engaged with the problems of prophylactic surgery. His studies in the growth of various micro-organisms that recur constantly in our crowded cities and which are the causes of many of the forms of suppuration, external and internal, have attracted wide attention. Sepsis and antisepsis have been under his consideration constantly, and his own operating work has been a model of what can be accomplished for patients without

permitting septic conditions to develop as the result of surgical intervention. He has come to occupy the place in European surgery that his great teacher Billroth held twenty-five years ago. Though nearly seventy years of age, he was born in 1841, he is still active and thoro in practice and teaching. The selection then of the committee is excellent, though of course it comes as a reward for work done and can scarcely be looked upon as a stimulus for work to be accomplished, since Professor Kocher is at the end of a great career.

The Civil Service

STEP by step, stage by stage, the spoils system inaugurated by President Jackson, for this one thing of evil memory, has been driven back, and we have in no little measure returned to the better way of the fathers, or advanced to an even better way than theirs, and yet there are still a hundred thousand of the civil servants of the country who are not embraced in the civil service reform—one hundred thousand appointed by favoritism and not by free and democratic competitive examination; one hundred thousand whose position is not secure, but who can be dropped at any time on the whim of a Congressman or other official.

And yet almost every year shows an extension of the reform. The last is one of great importance. It is that made by order of President Taft, who has extended civil reform methods in the diplomatic service, all secretaries to be appointed on strict examination, and promoted even to the grade of Minister for efficient and distinguished service. Already that plan had been adopted for consular agents, and is working finely. Our consular service had been a disgrace to the nation, and often our diplomatic service. Already, as the published daily of consular reports shows, our foreign service is greatly improved and is doing much to aid our commercial interests.

A very curious fact is dwelt upon by President Eliot in his address as president of the Civil Service Reform League, that the executive department of our Government, that department of which the framers of the Constitution had the most fear, has done much more than the

legislative to raise the standard of the civil service. He tells us that the wishes of the American people in regard to the introduction of the merit system thruout the national civil service has been of late years better understood and more effectively furthered by the national Executive than by Congress. It is the Presidents and the members of their Cabinets that have made the extensions, and in several cases it has been the urgency of the Executive which has brought about additional good legislation. Thus the President, elected by the whole people, turns out to be a better interpreter of the wishes of the people, of their purposes in what is an ethical and economic reform than are the members of the two Houses of Congress elected by more limited constituencies.

President Eliot also would have quite a number of officers now elected appointed under civil service rules. He was disgusted at the last Massachusetts election at having to select the names out of a list of candidates for various offices running over several feet of a ballot, when he, supposably an intelligent man, did not know more than five of the men to be voted for, and he had to follow the party designations. He favors the "short ballot," a sort of government by commission, and he sees no use in asking ten thousand men to vote on the qualifications of an engineer to build a bridge or officers to be in charge of charitable institutions.

We also notice that as president of the Civil Service Reform League Mr. Eliot favors strongly a civil service pension, also recommended by President Taft. It really looks as if the time were near when this reform also will be secured.

Social and Political Fusion

BEFORE the Canadian Club in New York a speaker said, with applause, that there is but one man in Canada who desires annexation to the United States. He evidently meant Prof. Goldwin Smith. Now Goldwin Smith replies that he does not wish annexation, and has studiously avoided the word. That word implies subordination and humiliation. What he thinks and speaks of is union,

not annexation, and union he thinks wise and inevitable. Already, he says, social fusion seems to be pretty nearly complete.

Goldwin Smith is right. Social fusion is pretty nearly complete. We meet as if we were one people. We do not feel separated. On both sides we move across the border, and still feel at home. Just one thing separates us, not forts, nor soldiers, nor vessels of war on the lakes ready to spring one on the other—there is nothing of all that, nothing but the unfortunate tariff wall, which ought to be shaved down as low as possible. Fortunately, as President Taft tells us in his message, every diplomatic question which has arisen between the two nations is in process of settlement by arbitration or other agreement.

Annexation we never ought to think or speak of; and it is not of any present use to talk of union, for just now there is a drift of feeling in Canada toward emphasizing the sentimental bonds that unite the Dominion with the mother country. To be sure Canadians do not care to do too much for Great Britain. They may build a battleship or two, but they desire to keep them in their own waters, and under their own orders, ready to give what defensive help they can in case of war. They want to be allowed to run their own tariff—even against the mother country, but giving it some preferential advantage, treating it a little better than the United States, but yet making imposts on British goods help fill the Canadian exchequer. In return Canada is willing to build a little fleet to protect itself with, instead of asking the two tight little islands to protect them in case of war. We wonder what it would not be well for the United States to stretch its Monroe Doctrine so far as to agree to guard Canada against assault in case Great Britain should be engaged in war.

But we ought to keep it in mind that political fusion as well as social fusion, that is, the union of the two English-speaking nations on this continent, is greatly to be desired. When that shall come—for come it will—it should be by a process very different from annexation of one nation to the other. Annexation would mean that Canada should give up

her political institutions and take ours; or, if we were to be annexed to Canada, that we should give up ours and take hers. Neither of these things is to be thought of. It is by no means clear that our method of government is better than Canada's. Ours is probably not perfect. When Australia and South Africa lately formed new constitutions they did not copy ours. They did not regard ours as perfect. Our Constitution was wonderfully fine for its day, but it needs loosening, and just now we have an amendment presented to the States. Amendments are almost impossible to secure, and we have had to depend not on formal amendments, but on interpretations by the Supreme Court which would have surprised the fathers.

When Canada and the United States are ready to consider union the means to accomplish it will have to be by a Constitutional Convention, like that which formulated our present Constitution, a convention representing both countries, and in which the delegates of the two countries shall be required to present for approval a new Constitution, or an organic law, Canadians and Americans meeting on equal terms, neither subordinate, neither humiliated, both seeking by equal authority the same end. That would be equally honorable to both, and we are by no means convinced that the conclusion would be more like our present plan than theirs.

What a nation that would be! From the Arctic to the Gulf, from the Atlantic to the Pacific one nation, speaking one language, a social and a political fusion, the mightiest nation on the face of the globe, until Northern Eurasia, Russia and Siberia shall fill its wastes with a mighty population! May our children see the day!

Margaret Versus Bridget

MRS. MARGARET DELAND, in an address last week before the National League for the Civic Education of Women, is reported as saying:

"We have suffered many things at the hands of Patrick; the new woman would add Bridget also, and graver dangers—to the vote of that fierce, silly, amiable creature, the irresponsible, uneducated negro she would add the vote of his sillier, baser female."

In the same address the speaker assumed that "happiness instead of duty as the ideal in marriage feeds the divorce mill." The fear of democracy seems to be gaining ground among those who shrink from all things as they are, and we hear from other fearful souls the same cry that what we need most is restriction rather than extension of the power of the people. We do not think the contention just. No doubt it has been the conservative argument from the days of the tyrant Dionysius down to Margaret Deland; but we have more faith in our citizenry, and still believe that the cure for the errors of liberty is more liberty.

The assumption of the anti-suffragist is, as always, that Bridget will invariably vote as Patrick does, and that she will copy whatever civic vices he has been evolving without her help! She will not. But if she does? Are there not enough honest, conscientious women in any American city, even the worst, to turn the scale in favor of righteousness? Are there not high-minded men enough to do it if they will?

But let us show a little more faith in Bridget as well as Patrick, and honor ourselves in honoring her. It has been her mission to clean up most of the dirt in our houses, and if we should put the streets under her supervision we fancy she might take a housewifely pride in keeping them clean. Surely there is more of good in the world than there is of evil; there are more true women than false ones; more women who would look upon political life as Mrs. Deland bids us look upon married life, as "a sphere for duty rather than happiness," and even counting out the Anti-Suffrage League, who decline the duty, there would be left in New York, and assuredly in the country at large, enough incorruptible women to save us from direr straits. And let us not fear Bridget! Trust her to be eager for the interests of her children, to know more intimately than most the results of the saloon, and to respond to moral enthusiasm rather than to corruption. It has proved so in many Western communities where the experiment has been tried. Colorado City used to be governed by saloonkeepers; not one is on the council now, and we are assured by more than

one resident that the change was effected largely thru the votes of working women. There is a political pessimism that is more dangerous than democracy. That nation is in evil case that distrusts its own people. There are two plays running in our city that are deservedly popular. One is "The Passing of the Third Floor Back," by Jerome K. Jerome, and the other "The Awakening of Helena Ritchie," by Margaret Deland. The noble lesson of them both is the regenerating power of a generous faith in the higher nature of faulty men and women. We recommend these plays to Mrs. Deland.

The Message and the Negro

THE INDEPENDENT has never ceased, during the sixty-one years of its history, to feel and always express a sympathy for the most suffering and most ill-treated body of our people, the negroes. We observe that the negro journals which have come to our notice since the President's message appeared show a willingness to see in it a good sign of his consideration of them. He gives a fair share to the Liberian Commission, among other foreign relations, tells us that its report is under consideration, and thinks it likely that it may call for a further communication to Congress in some plan to aid the lone African republic. There is a reference to the prevalence of lynching, under the discussion of the evil of the delay of justice, which is one provoking cause of this prevalent infamy. No mention is made of the overwhelming number of negroes who thus suffer, nor is any section of the country specified as particularly discredited, where so many sections are more or less guilty. On two points the negroes of our own country are particularly considered. One is that which asks for the appointment of an unpaid commission to consider and provide a plan for a celebration of the fiftieth anniversary of the Emancipation Proclamation; the other is the recommendation that an appropriation be made to pay the unassigned claims of depositors who lost by the failure of the Freedmen's Saving and Trust Company, organized by the Freedmen's Bureau. The Government was in a real measure responsible for this company, and it is

only delayed justice that the claims be settled. The message shows sympathy, and we are not of those who would make us believe that President Taft means to neglect those who are peculiarly the wards of the nation.

The New Republican Policy

We are not surprised that there are those whose rock-ribbed stand-patism is offended by Secretary MacVeagh's speech, in which he told his Boston hearers that the reductions of the Payne tariff law have not reached the final limit, and that while we now rest a while we have not gone to sleep. He thus puts the case:

"There is one great fact that makes a new tariff epoch. That fact is that the Republican party has changed its front. Whereas it has been marching toward higher and higher tariff, it has now faced about and is marching, no matter how slow any one may think its present pace is, toward lower tariffs. It has recognized changed conditions. This is a wonderful, radical and fundamental change, the importance of which has not been sufficiently recognized.

"It is true that the Payne bill does not contain as much downward revision as the great majority of members of the Republican party had wished. It is perfectly well known that it did not contain as much of that revision as the President wished. But the Payne bill as it passed the House was an intentional and avowed revision downward, and, though it was modified before it was finally enacted, it would be impossible to deny successfully that as it stands it is a practical confirmation of the new policy of the Republican party."

It may be said that Mr. MacVeagh has been a Democrat, and that his statement is personal, but there is this change in the Republican drift, and many will be glad to see the party, which was compelled after the Civil War to turn to protection, ready to consider the consumers as well as the manufacturers.

American Immortals

The French Academy has forty Immortals, but exactly how many of them will achieve more than the current immortality of a generation we do not know. The United States is a much bigger country than is France, and it seemed ungenerous in organizing an American Academy of Arts and Letters to limit the number of our Immortals so narrowly, and so they have allowed themselves fifty mem-

bers. Why not make it one or two hundred? A hundred would not be a bad proportion as compared with France, for we are growing. They meet this month in Washington and will fill the vacancies in their members, for they have organized with only thirty-one members at present, among whom are William D. Howells as president, Robert Underwood Johnson as secretary, and of other members Prof. William M. Sloane, S. L. Clemens, T. W. Higginson, Prof. T. R. Lounsbury, Prof. Brander Matthews, Theodore Roosevelt, Andrew D. White, John Burroughs and G. W. Cable. That such men as these have consented to be charter members is some evidence that it is a good thing, even if the advantage to letters is not quite transparent. We shall need to see what they can do, besides setting themselves up, or being set up, as the *crème de la crème* of American representatives of literature. There will be departments of poetry, drama, fiction, history and criticism. We suppose they can meet and read poems, plays, short stories, bits of history, and present criticisms, not of each other, but of their deceased predecessors. The French Academy has a gala day when a newly admitted member reads a very fine eulogy on the deceased member whose place he takes; that practice can be imported here. There is no dictionary to be made; other societies cover all the branches of learning, and there does not seem to be much left to do except to meet and praise the dead. We do not want them to attempt to standardize literature, for language wants liberty, and the new better is always a rebel against the tyranny of the good old. Possibly they may, when they get recognition and courage, sanction reform, for example in spelling, as the French Academy has done. We observe that a number of the most prominent members are prominent supporters of more simplified spelling.

Under the Andes We fear our people do not apprehend what is the progress of some of the Southern republics. Do they know that Argentina now exports more wheat than does the United States? In every form of enterprise Argentina equals our own country, and it is not Anglo-Saxon; it is Latin.

The other day Portugal refused to consent to a certain commercial request from our Government, because Argentina's commerce was more valuable to her than that of the United States. Nearly as many Italians now go to Argentina as come to this country, and the proportion is increasing. Just now Argentina and Chile have pierced a tunnel thru, or under, the Andes Mountains, and next March passengers will be carried direct across the continent from one ocean to the other. This is made possible not only by enterprise, but by the ideal treaty of peace and arbitration between the two most forward nations in South America, which together hold the entire Southern temperate zone to Cape Horn. Politically as well as commercially and as a feat of engineering, this is a great event; and it is an example to Great Britain and France. They are afraid to make a tunnel between their coasts, because they do not sufficiently trust each other in case of war; but Argentina and Chile, not many years ago at war, prefer to be drawn nearer, no longer separated by impassable mountains, but connecting their two lands by iron bands.

Kissing the Book is no longer any part of the legal oath in Great Britain. It has been abolished by law as the usual form, and ought to be abolished here. What many people most object to in appearing as witness in a court is the requirement to put their lips to the dirty, germ-infected cover of a book. In place of it the formula now to be repeated in England is made more full, and calls attention to the penalty for perjury. That it will put an end to perjury, or much diminish the evil practice, we cannot believe, but it may do something, particularly if the courts will be a little more careful to call attention to cases in which perjury is punished. We are told that in English courts the offense is very common, and occurs in almost every defended case for divorce, and there are moralists who approve it, and who quote the saying, "He perjured himself like a gentleman." In other cases things are not much better, and a witness in his own defense is always under suspicion here as well as there. Since people have

ceased to fear an immediate stroke from Heaven when taking the name of God in vain, a multitude of people are no more concerned about perjury than about any other falsehood, and even policemen are not infrequently guilty of it. We need more punishment by the courts instead of mere reprimand.

A Search for Celery Plants

A notable comment on the negro question comes from one of the most prominent of the Southern papers, *The Southern Ruralist*. The writer tells us that he desired a few hundred plants of celery, for August planting:

"Greatly to our surprise not a commercial trucker, gardener or seedsman had a plant for sale; and the only place where we could find them was at the horticultural department of Spellman Seminary,"

an industrial school for colored people, in Atlanta. The editor adds that the plants were of the "very best quality," and very manfully acknowledges his indebtedness to the negro race. The only party "who had the skill or the business instinct" to meet a general demand was a negro, at a school teaching negroes practical industries. He adds that the best farmers' institutes he had ever seen anywhere in the South were held for and by negroes. The only summer school for farmers held during 1909, in Georgia, was at Clark University, another negro school for negro farmers. He says:

"Several agricultural and technical institutions for negroes are better equipped for their work than the corresponding institutions for white boys in the same States. We begrudge the negro none of these advantages; his industrial progress; his development into a citizen able to do things, and to create values is a public advantage."

This generous acknowledgment closes as follows:

"Meanwhile, however, what of the superior race? What of your children and mine?"

This is all good, as it is honest and just. We have not the least desire to add a comment.

The papers have made considerable to-do about Professor Jonnesco's method of anesthesia by the injection of stovaine into the spinal canal. Some ten years ago there was a wave of similar sensational interest over the use of cocaine

solution for the same purpose administered in the same way. That method was given up not because cocaine was not effective as an anesthetic, but because injections into the spinal canal may be justified for very serious reasons when there is no other way of treating a dangerous disease, but they are too dangerous as a routine mode of employing anesthetics. It is obvious then that Professor Jonnesco's work will have to be tested very carefully before it can be welcomed as a serious addition to medicine. It is not novel and it seems probably destined to go the way of cocaine spinal anesthesia which attracted a similar sensational interest a decade ago.

When *THE INDEPENDENT* went to press on Tuesday morning of last week we had on our desk the confidential copy of the President's message, but we did not think it was right to make use of it for the reason that we could not then be sure that it would be presented to Congress on that day. It is to the great credit of the newspaper press of the country that confidential documents are so seldom published before they are released. Hundreds of copies of the message were distributed, but not one journal broke faith. There is honor among journals. Of course, we could have put off printing for a day, but that would have made the magazine late for our more distant subscribers, and we owe a duty to them.

Once more in this State, thru a case of complaint in Freeport, the question arises of reading the Bible, or other religious service, in the public schools. When will our people learn that religion is the business of the Church, and that the Church, not the State, is responsible for religious instruction? If the Church fails, so much the worse for the Church.

Everybody knows, or says, that the yellow race is inferior, and yet it is a strange fact that last week a Chinese student at Yale took the Ten Eyck prize at the Junior exhibition, one of the most valued honors in college. Why cannot we at least keep the scholastic honors for home consumption?

THE OLD CUSTOM HOUSE.

The New York Customs Service

It was fitting that the transfer of the headquarters of the customs service of the great port of New York to an imposing and beautiful new building, a picture of which we publish today, should be followed by a notable effort to purify that service and make it worthy of its new home. Much credit is due to Collector Loeb for the house-cleaning work in which he has been engaged. Before his appointment to the office, and while he was Secretary to President Roosevelt, he acquired some knowledge of the great frauds as to which he has since obtained evidence for use in court, and on account of which he has dismissed more than 100 of the custom house employees. Richard Parr, whose investigations in the weighing department have been so fruitful in indictments and in the recovery of dues

withheld by fraud, was a man whom Secretary Loeb knew and trusted, and he was employed at the Secretary's suggestion. Knowing how much was to be done in the New York custom house, Mr. Loeb desired to take up the task. Results thus far show that the office was given to the right man.

In his annual report, published last week, the Secretary of the Treasury, after speaking of the "diseased condition" disclosed by the Sugar Trust frauds, said:

"Difficult as it always is to sufficiently bring to light the facts of such a condition to afford a basis for rehabilitation, this has been already largely accomplished. Much has been discovered to afford an understanding of the situation, with the result of numerous seizures, of numerous prosecutions made or projected, and of important and successful beginnings of a complete rehabilitation. While the recovery of evaded duties and the prosecution of individuals have been of large significance, the greatest

asset to the Government is the knowledge and the light which guarantee in time a wholesome reorganization.

"The study of the causes of the demoralization which has been revealed is still incomplete, but the main causes are evident. It is clear, for instance, that the influence of local politics and politicians upon the customs service has been most deleterious, and has promoted that laxity and low tone which prepare and furnish an inviting soil for dishonesty and fraud. Unless the customs service can be released from the payment of political debts and exactions, and from meeting the supposed exigencies of political organizations, big and little, it will be impossible to have an honest service for any length of time.

"Any considerable share of the present cost of this demoralization to the public revenues, to the efficiency of the service, and to the public and private morality is a tremendous amount to pay in mere liquidation of the small debts of political leaders."

The work of detection, prosecution and reorganization, he adds, has occupied but a few months and, of course, is not complete. But it will lead in the end, he predicts, "to the establishment of an administration of the customs service that will be fit for the government of a great nation."

....On the 10th, the Government published its estimate of the cotton crop, which was unexpectedly low, being only 10,088,000 bales, against 12,920,000 last year, 11,628,000 in 1907, and 12,546,000 in 1906. Prices rose at once on the Cotton Exchanges, and in only one year during the last three decades have they been higher. A further curtailment of production at the mills in this country and in England is expected.

....J. P. Morgan & Co. have announced that after January 1, 1910, the London house of J. S. Morgan & Co. will become Morgan, Grenfell & Co. The partners of the New York firm and of the Philadelphia house of Drexel & Co. will participate in the same manner as in the Paris house of Morgan, Harjes & Co. This makes the partnership in the four financial houses in New York, London, Paris and Philadelphia identical. Heretofore the only partners representing the New York firm in the London house were J. P. Morgan and J. P. Morgan, Jr.

THE NEW CUSTOM HOUSE

INSURANCE

The Phenix Insurance Company and the American Credit Indemnity Company

THE recent revelations in the insurance world were indirectly a tribute to Governor Hughes in that his appointee is doing things and finding out things that ought to have been known long ago, but which remained dormant under former insurance superintendents, including the immediate predecessor of Superintendent Hotchkiss. Because of the activity and ability of William H. Hotchkiss it became known last week that certain irregularities had been permitted to creep into the affairs of the Phenix Insurance Company of Brooklyn. As a result of a partial examination of the Phenix, Superintendent Hotchkiss charges that George P. Sheldon, the company's president for the past twenty-two years, has been speculating with its funds, one result of which has been a considerable loss to Mr. Sheldon's company. The president's speculation has not, it appears from information given out by the Insurance Department, impaired the company's capital of \$1,500,000, and there remains a surplus of not less than \$500,000. The company is consequently entirely solvent and its ability to meet all its obligations is admitted. Mr. Sheldon has, however, been retired by the board of directors, at the instance of Superintendent Hotchkiss, and E. W. T. Gray, auditor of the Continental Insurance Company, has been elected to the vacancy thus caused. Other changes in the board of officers of the Phenix are as follows: Henry E. Hess, manager of the New York Fire Insurance Exchange, succeeds George H. Ingraham as vice-president; David Rumsey succeeds Secretary Charles F. Koster and has also been made a vice-president. Henry Evans, president of the Continental Insurance Company, has also been elected chairman of the board of directors of the Phenix and has assumed the direction of the company's affairs in the interim. Mr. Sheldon, the deposed president, has been very ill for some weeks at Greenwich, Conn., where he resides. But little hope of his recov-

ery remains. In addition to the charges of converting to his own use funds belonging to the Phenix Insurance Company, Mr. Sheldon is also charged with authorizing loans to various officials connected with the Insurance Department, and that by this and other means the Phenix Insurance Company escaped examination for the full term of twenty-two years during which Mr. Sheldon held office as president. It is charged by Superintendent Hotchkiss that loans were made to James F. Pierce, then Superintendent of Insurance, \$39,500; to Chief Examiner Isaac Vanderpoel, of the Department, \$100,000; to Deputy Superintendent Robert H. Hunter, \$60,000, and Third Deputy Superintendent William H. Buckley, \$61,000. The reports made during the past ten years to the Department by the Phenix Company are alleged to have been false in more than one particular. The company is charged with having made "wash sales," whereby assets of more desirable character were substituted for those of lesser value on December 31, and the substitution withdrawn on January 1st following. It is also charged that President Sheldon maintained for the company a speculative account with at least one brokerage house; that drafts on this account drawn by him as president were converted to his personal use without color of authority; that the insurance law of 1906 was violated, in that loans were made not only to President Sheldon, but likewise to Secretary Koster; that President Sheldon had persistently overdrawn his salary account, which is now paid to October 1, 1910.

The Insurance Department of this State, in connection with the Insurance Department of the State of Massachusetts, made a joint examination of the American Credit Indemnity Company—the first since 1904—and in which it was found that improper methods were used by the company. The capital is shown to have been impaired. The annual reports have been misleading, if not deceptive. The dividends have been excessive. In view of which the company is required to bring about a change in management as one condition of continuing in business.

The Independent

VOL. LXVII NEW YORK, THURSDAY, DECEMBER 23, 1909 No. 3186

Survey of the World

Zelaya's Resignation The important news of the week is that of the resignation of President Zelaya, of Nicaragua. There had been considerable disturbance in Managua, the capital, the previous day by way of a demonstration against Zelaya, with cheers for American intervention. In his letter of resignation Zelaya represents that it was forced by the unfriendly attitude of the United States. He says:

"The painful circumstances in which the country is plunged call for abnegation and patriotism on the part of all good citizens who have witnessed the oppression of the republic by the hand of fate. The country staggers under a shameless revolution which threatens the sovereignty of the nation, and a foreign nation has unjustly intervened in our affairs, providing the rebels with arms, which, however, has only resulted in their being defeated by the heroism of the loyal troops.

"To avoid further bloodshed, and as the rebels have declared that they would lay down their arms in the event of my abandoning executive power, I hereby place in the hands of the National Assembly my resignation for the remainder of my term of office, which is to be filled by a successor of their choosing, with the hope that my retirement will result in good to the country, the re-establishment of peace and the suspension of the hostility of the United States, to which I do not desire to give any pretext for intervention."

At the last accounts Dr. Madriz, as representing the Zelayists, and General Estrada, head of the revolution, were each seeking to succeed Zelaya as President, with no evidence as to which would succeed. As head of a revolution Estrada would claim the office, while Dr. Madriz, who has reached Managua amid acclamations, will have the support of the Zelayist legislature. It does not appear that the American Government will interfere actively, altho its sympathy will

be with Estrada. It is pleasant to hear an official statement from Señor Creel, who is representing the Mexican Government at Washington, that the reports of friction between the United States and Mexico over the Nicaraguan affairs are without any truth. He says that Mexico has not asked this country to support Zelaya, and that the relations of the two republics were never more cordial.—The American Acting Consul at Managua has sent to Washington an alarming message as to the danger to Americans owing to Zelaya's criticism of the American Government in announcing his resignation, and our Government has ordered the "Buffalo," now in Panama, with 700 marines on board, to proceed at once to Corinto. That will give us a thousand men, who could easily march the 40 miles to the capital. The State Department received December 17 the following cable message from President Zelaya:

"December 4 I sent the following cablegram to Gonzales, Washington: 'Inform Secretary Knox I believe his sources of information are prejudiced. I request that United States send a disinterested commission to investigate, and if findings show that my administration is detrimental to Central America I will resign. Have received no reply. In order to avoid harm to my country and desiring to place it in position to renew friendly relations with United States I have today sent my resignation to Congress. As my opponents might consider my presence a disturbing factor I propose to show my good faith by leaving Nicaragua and stand ready to account for my acts.'"

The State Department says that no such message was received from Zelaya. Exactly what is meant by the use of the words "no such" in diplomatic parlance is problematical, but reports have been common in Washington that Zelaya had

made such a tender, like in exactly what terms he had offered his resignation was not known.—The *Lokal-Anzeiger*, the leading daily of Berlin, and one which often is inspired by the Foreign Office, has published a savage attack on President Taft and Secretary Knox for having engineered the revolution in Nicaragua, as President Roosevelt and Secretary Root engineered that in Panama, and with a similar purpose, namely, to reduce Nicaragua to the position of a vassal of the United States. It declares that Mexico's offer of mediation between the United States and Nicaragua was due to an ardent desire on the part of Mexico to prevent the United States from setting foot on Nicaraguan soil, and thus penning Mexico up between United States territory both north and south. The Berlin journal intimates that the result of the policy of the United States would be to endanger Mexican independence. It says that President Diaz has always advocated the union of the five Central American republics under Mexican hegemony, and is thus the opponent of a corresponding desire in Washington for a hegemony under the United States.—Mexico has sent a gunboat to Corinto to look out for her interests. The American Consuls at Managua, the Nicaraguan capital, and Corinto, the seaport, have established a courier service between the two cities, to keep the officers of the American warships in touch with the situation. Dr. Barrett, director of the Bureau of American Republics, said in a late interview:

"Mexico's part in the present situation is due, I believe, to a wish to see the Central Americans work out their own governmental problems, without interference from the United States. Mexico's relations with Central America are as close as ours with Canada.

"The present difficulties in Nicaragua have started afresh the discussion in favor of the eventual organization of the five Central American republics of Guatemala, Salvador, Honduras, Nicaragua, and Costa Rica, into one government. When the Central American Peace Conference convened at Washington in December, 1907, Elihu Root, then Secretary of State, spoke hopefully of such a realization. He held that the formation of the Central American Court of Justice was a long step in that direction.

"One nation formed from these five republics would have an area of 170,000 square miles, or more than the combined area of the United Kingdom, Ireland, France, Germany, Italy, and the United States, with New York, New Jersey,

and Pennsylvania added; an eastern, or Atlantic, coast line of 900 miles, equal to the reach from Boston to Savannah, and a western, or Pacific, shore of 1,100 miles, equal to the distance from San Diego to Seattle; an annual foreign trade valued at \$50,000,000, of which nearly half would be with the United States, and a population exceeding 3,000,000."

✻

More Sugar Frauds

The trial of six employees of the American Sugar Refining Company for frauds on the customs was concluded last Friday by the conviction of four checkers and of the dock superintendent; but the jury did not agree as to the guilt of James F. Bendoragel, who was cashier of the Williamsburg refinery. The jury were out ten hours, discussing the case of Bendoragel, who offered a surprising number of witnesses to his good character. In the trial the Government's special counsel, Mr. Stimson, defended his policy in first seeking to convict the actual physical participants in the crime, thus laying a foundation for bringing charges against those higher up; for if these were not first proved to have been guilty it would be impossible to show that any crime was committed by those higher up. We now begin to have information how those guilty of the actual frauds were paid by those higher up. It is said that Henry O. Havemeyer had the system of offering bonuses of \$35,000 to the superintendents of the refineries, whereby those whose refineries showed substantial profits in competition with other plants would be liberally rewarded. It was thus to the interest of the superintendent to bring down cost as low as possible, and among the items of cost was the tariff dues. The big Williamsburg refinery regularly got the bonuses, as Mr. Havemeyer would not allow other superintendents to examine the accounts to see how it made such profits. It was there that the frauds took place. The superintendent for many years was Ernest W. Gerbracht, who has been indicted and is on bail of \$10,000. Sentence on the five men convicted of the sugar frauds will not be passed until January 8, so as to give them time to decide whether they will give evidence as to the men higher up under whose orders they were guilty of these frauds. Meanwhile it has become known that two other independent sugar companies, rivals of the

Havemeyer trust, have made settlements with the Government for undervaluations. One of these is the Arbuckle Brothers Company, which has paid \$995,573, which was found due by comparing the weights of sugar paid for in the Arbuckle books with the weights given by the Government weighers. The Arbuckles claim that they had no knowledge of the frauds, or discrepancies, and that they voluntarily offered their books for examination by the counsel for the Government. Also the National Sugar Refining Company has been overhauled and about \$700,000 is the amount of loss it will have to pay to the Government. It is once more claimed that the company had no knowledge of any frauds in weighing. It is suggested by way of defense that the Government weighers were in the habit of reckoning by "a rising beam," instead of "a falling beam," to the slight advantage of the importer. Much interest is expressed in the matter of the claims to be made by those who made the discoveries. If Mr. Parr, who discovered the device by which the Havemeyer Company defrauded the Government, should succeed in his claim as now seems likely, he would receive over a million dollars.

Congress During the period between the opening of the session of Congress on the first Monday in December and the holidays, no special business is concluded, but many bills are introduced and referred to committees for consideration. A very severe attack was made last week by Representative Hitchcock, of Nebraska, on Secretary Ballinger. He charged a multitude of land frauds. He declared that Glavis was removed because he had tried to protect the Government against fraud, and he demanded an investigation.—The President has nominated Judge Lurton for the Supreme Court, and he is likely to be confirmed this week. He has also nominated Robert Bacon to be Ambassador to France, succeeding Henry White, who retires; R. C. Kerens, of St. Louis, to be Ambassador to Austria-Hungary, succeeding Charles S. Francis, of Troy, N. Y., who retires; Henry Lane Wilson, of Washington, now Minister to Belgium, to be Ambassador to Mexico, succeeding

David E. Thompson, of Nebraska, who retires; William J. Calhoun, of Chicago, to be Minister to China, the post being now vacant; Charles Page Bryan, of Chicago, now Minister to Portugal, to be Minister to Belgium, succeeding Mr. Wilson; and John B. Jackson, of New-ark. N. J., now Minister to Persia, to be Minister to Cuba, succeeding Edwin V. Morgan, of New York, who retires. It is understood that Whitelaw Reid will remain for a year or two at the London Legation, and it is intimated that about the same time Ambassador Hill, at Berlin; Straus, at Constantinople, and Rockhill, at St. Petersburg, will desire to retire.—Major-General Leonard Wood has been gazetted to succeed Major-General J. Franklin Bell on April 6 next, as chief of staff, and head of the Army. He entered the service not thru West Point, but as an assistant surgeon, in 1886, was made Colonel of Volunteer Cavalry in May, 1898, and in December of the same year was a Major General. In 1901 he was made Brigadier General in the Regular Army, and Major General in 1903. He has suffered much opposition as outside of the regular line of succession, but has always filled his position with credit and has had the favor of successive Presidents.

Labor Troubles There is as yet no settlement of the shirt-waist girls' strike. There has been some throwing of bad eggs, and several of the strikers have been sent to jail for such assaults. Over two hundred of the manufacturers have settled with the union since the strike, and one considerable firm has been obliged to go into bankruptcy, but most of the employers are still fighting the union and declare that they cannot carry on business except with an open shop. In Philadelphia 8,000 girls in shirtwaist factories have struck for shorter hours, better conditions and recognition of their union.—The traction war in Cleveland begun eight years ago by Mayor Tom L. Johnson, has come to an end by the decision as arbitrator of Federal Judge R. W. Taylor, to whom the case was referred by the city and the traction company. He fixes the fare at 3 cents, with a cent extra for transfers, until it can

be found if this will produce 6 per cent. profit on the stock at a valuation of nearly \$23,000,000. If this will not earn the 6 per cent., the fare will be increased 1 cent.—The railroad engineers thru the country have a strong union, but have been very conservative as to strikes. Some time ago the engineers of the Pennsylvania Railroad made a request for relief as to fifty-one points covered in a communication to the general manager. Of these twenty-nine have been settled and the others are in the process of settlement. The questions involve but slight advances in wages, but have to do more with adjustments in various directions to equalize conditions as to which they complained. It is believed that this settlement will have a quieting effect on other roads.

Hearst and Cook The New York *American* is publishing almost daily a batch of private letters sent to Mr. Murphy, the head of Tammany, by Tammany men in New York, and all about patronage. They throw much light on the sordid way in which Tammany has ruled the city. Judge Gaynor's name appears in them, and he is said to be very indignant about them. It is charged that these letters were stolen from Charles F. Murphy's waste basket when he was resting at Mount Clemens, Mich., and the torn pieces fitted together. Mr. Murphy thus presents his compliments to Mr. Hearst:

"It is pretty low down for a man who has run once for the nomination for President of the United States, once for Mayor of New York and once for Governor to hire an agent to enter a man's room and steal his correspondence. However, there is nothing in my correspondence to incite a man to assassinate the President of the United States."

One of the letters published Mr. Murphy denounces as a fabrication and declares he never received it. Mayor-elect Gaynor's country place at St. James, L. I., has been broken open and his desk robbed of papers. He is inclined to connect the robbery with the stealing of Mr. Murphy's correspondence, and when asked if he had any suspicions of the thief he said, "What is the use? Everybody knows. It seems that no one's private papers, scrap basket or desk are safe now. I can think of no more despicable thing."—The University of

Copenhagen is diligently examining Dr. Cook's documents, but will make no report before reaching a conclusion, probably before January. A preliminary report was presented to the faculty of the university, but after four hours of discussion it was decided not to publish it as yet. The general belief in Copenhagen is that Dr. Cook's papers do not offer any basis for a well-considered judgment.

Our Islands in the Pacific

At Davao, on the island of Mindanao, in June last, twenty-three privates in the native constabulary mutinied. Two or three days later eight of them were killed while resisting arrest. One of their associates became a witness for the Government, and now the remaining fourteen have been convicted of murder and sentenced to suffer death in the Davao Plaza. They were tried for killing a planter named Libby, who lost his life while defending a convent in which the American residents had taken refuge.—In a recent engagement between the constabulary and a large band of Moro fanatics, on the same island, eleven soldiers of the constabulary were killed. The Moros left twenty of their dead upon the field.—Notice has been given by the owners of the cotton mills in Manila that work will soon be stopped owing to the high price of cotton.—The San José friar estate of 55,000 acres, on the island of Mindoro, has been bought from the Government, for \$367,000, by persons said to represent the Havemeyer interests in the American Sugar Refining Company, or Sugar Trust.—At the recent annual meeting of the Anti-Imperialist League, in Boston, it was asserted by the chief officers that American rule had failed to make the people of the Philippines and Porto Rico either prosperous or contented, and that they were constantly becoming more bitter against the United States. The Filipinos, President Storey said, should be urged to persist in demanding independence, and to prove their fitness for it by preserving order and using wisely such power as they now have.—Liliuokalani, formerly Queen of Hawaii, now seventy-one years old, has executed a deed of trust, providing that after her death a considerable part of her fortune

shall be used for the endowment of orphan asylums. One of the three trustees named by her, W. O. Smith, was prominent in the movement which deprived her of the throne.—The commercial organizations of Hawaii are to send to Washington resolutions asking Congress to suspend the coastwise navigation regulations, which impose a fine of \$200 upon any American who takes passage between the islands and the States on a foreign ship. They assert that the American ships in use are not sufficient for the traffic.

The Campaign in England

No election in recent years has created such excitement and animosity as the present. The English have often pointed with pride to the friendly relations which have been maintained between the leaders of the opposing parties, but in the stress of the present campaign these relations have been strained and in many cases broken. Public meetings in England have always seemed intolerably disorderly to Americans, but this year they are worse than ever. Heckling and jeering have increased so that it is found necessary to limit admission to mass meetings very strictly by tickets, and in some cases even these are forged and the meetings broken up by the opposing party. Austin Chamberlain, former Chancellor of the Exchequer, was not able to address his own constituents in the precinct of Bromsgrove. The disorder was so great on both occasions that he could not finish his speech. Placards and posters of unusual pungency and bitterness are being extensively used by both sides. A popular emblem used by the Liberals in their street demonstrations is a turnip on a pole surmounted by a coronet and labeled "The First Born." Robert Blatchford, a remarkable series of articles in the *Daily Mail* on "The German Peril," demands an immediate vote of \$250,000,000 for the navy, compulsory military service and universal military training for school boys. The fact that the Germans view with apprehension the possible adoption of a protective tariff by England is used by the Unionists just as in the United States the assumption that Great Britain favored a certain political party in this

country has been a point against it. A newspaper article by the Prussian statesman and diplomatist, Hermann von Rath, is the most outspoken statement of the German position that has appeared. He says:

"At the beginning the tariff would not affect us so seriously because there are numerous articles which Britain cannot purchase elsewhere. Gradually, however, the strangling process would become more oppressive and the day would arrive when our imperious necessity to find employment for our enormously increasing population would drive us to desperation."

It is argued by the Unionists that the new German navy is prepared for the purpose of attacking England in case that country should attempt to exclude German goods. German exports to Great Britain now amount to \$250,000,000 a year.

The Death of King Leopold of Belgium

Early on Friday morning, Leopold II, King of the Belgians, died at "The Palms" pavilion near Brussels. Three days before an operation for an obstruction of the intestines was performed, but in spite of his magnificent constitution he was not able to rally. His mind was clear to the last and he insisted on looking over his business papers before and after the operation. His daughter, Princess Clementine, whom he had driven from the palace, was not allowed to enter the room while he was alive. There were with him at the moment of his death, two nuns who were acting as nurses, and his mistress, the Baroness Vaughn. Since he received extreme unction from a priest in her presence, it is believed that a morganatic marriage had been performed some time before. This, however, has no legal bearing, except perhaps in the matter of property, and the late king will be succeeded by Prince Albert, son of the late king's brother, Philippe, Count of Flanders. His will divides three million dollars, inherited from his father, between his daughters, Princess Louise, Princess Stephanie and Princess Clementine. There will probably be numerous lawsuits brought by them to recover a share of their father's immense fortune. A large part of his estate goes to Belgium on his death, and he has settled at one time or another a great deal of money

upon the Baroness Vaughn, by whom he has two children, Lucien, Duke of Tervkeren, now aged five years, who was born at Villefranche, and Philippe, Count of Ravenstein, who was born at Balincourt three years ago. Baroness Vaughn was a daughter of the janitor of the French Legation at Budapest, and began her career as a barmaid. The amours of Leopold have been the scandal of Europe for the greater part of his life. In this

LEOPOLD II, KING OF THE BELGIANS
Born April 9, 1835. Died December 17, 1909.

respect he followed the example of the sovereigns of a former century; in other respects, however, he was the most modern of monarchs, a financier of remarkable ability, accumulating money not merely for himself but for the advantage of his kingdom. By shrewd diplomacy and intrigue he secured possession of 90,000 square miles in the heart of Africa, inhabited by fifteen or twenty million Bantus.

The New King of the Belgians

Leopold's only son, Leopold Ferdinand, who was born in 1860,

died nine years later, and according to the Salic law, his daughters cannot accede to the throne. The Cabinet will act as a regency during the interregnum, and on December 23 Prince Albert will take the oath of office. He was married on October 2, 1900, to Princess Elizabeth of Bavaria, and has three children, Prince Leopold, age eight; Prince Charles, age six, and Princess Maria-José, age three. The young King has aroused very favorable expectations. He is energetic and popular and is of an active temperament, both mentally and physically. He is a good horseman, fond of motoring, and has made a flight in a dirigible. He is interested in engineering as well as political economy. He has traveled extensively, spending a large part of the year 1899 in America, where he went about the West in company with James J. Hill. He visited South Africa, and in spite of the disapproval of King Leopold made his way to the Kongo Free State and came back enthusiastic over projects for the development of the country by means of railroads and the improvement of the condition of the natives. His accession is timely, for the Kongo Reform Association of England has recently declared its disappointment that the Belgian Government for sixteen months has had control of the Kongo State and has not made any perceptible improvements in the conditions prevailing in Africa. Freedom of trade has not been established, forced labor in the collection of rubber, copal, etc., is still required, and the native army has been increased instead of diminished. The atrocities of the Kongo are familiar to our readers, for THE INDEPENDENT was one of the first to publish the evidence of the practical enslavement of the natives and the cruel punishment imposed upon them, such as flogging and cutting off of hands. (See "The Misgovernment of the Kongo Free State," by the Rev. W. M. Morrison, July 9, 1903.) As long as King Leopold alone was responsible English criticism received the sympathy and support of a considerable number of Belgians, who were glad to have another weapon to use against the

King, but since annexation has taken place the opposition, even including such leading Socialists as M. Vandervelde, are disposed to resent foreign interference.

Foreign Notes The Cretan question is definitely settled for the present by the refusal of the four protecting Powers to reopen negotiations on the subject, as requested by Turkey. They hold that conditions have not changed since the evacuations by the international troops, and that if infractions of the peace occur, they can be suppress by joint action.—The filibusters in the Austrian Reichsrath gained their point by forcing the Government to adjourn after a continuous session of eighty-six hours. The Czech deputies kept the floor by a succession of speeches, one of them talking for thirteen hours. Many of the deputies slept on the floor of the house wrapped in rugs. In order to prevent such obstructive tactics in the future a bill was passed modifying the rules of procedure, and authorizing the president of the chamber to suspend from one to three sittings any deputy insulting him or disobeying the rules. The deputy thus suspended may, however, appeal from the president's decision to the house. The new rules will remain in force for a year.—In reply to the protests of China and the United States against the assumption by Russia of administrative control in Manchuria, the Russian Government has expressed its willingness to waive its rights over the municipalities of Harbin and other railroad cities in Manchuria if a satisfactory substitute can be found. Some form of municipal administration which could collect taxes for public works and schools was held to be necessary and the railroad must be allowed to police its own buildings and premises. Finance Minister Kokovsoff goes so far as to say that Russia was ready to consider a serious proposition for the sale of the Manchurian Railroad, either to China, financed by an international syndicate, or to such a syndicate direct, altho Russia would prefer to wait for the completion of the Amur Railway.

The only offer yet received, however, was visionary, involving a proposition that payment should be made in the stock of the new company. He could not state the approximate terms on which the railroad would be disposed of, but he said that the fact that Russia had invested \$175,000,000 in Manchurian railroads must be considered. Minister Kokovsoff declared that Russia would not withdraw the railway guards from Manchuria. It is understood, however,

PRINCE ALBERT.

Heir to the Belgian Throne. Born May 28, 1875.

that he personally is in favor of this, because it would effect a saving of \$5,000,000 annually, but the Ministers of War and Foreign Affairs opposed him, and it is suspected that the recent alarmist articles appearing in Russian newspapers threatening another attack from Japan are due to the opposition to the Kokovsoff policy of retrenchment and withdrawal.

My Sad, Sweet Christmas

BY CARMEN SYLVA*

QUEEN OF RUMANIA.

[Some years ago we published a series of poems by Carmen Sylva, Queen of Rumania. These were gathered in a volume, "A Rumanian Vendetta," and other of her writings have followed. With one exception, she is the only occupant of a European throne who is known as an author.—EDITOR.]

SO often, when people have wished me "a merry Christmas," have I felt a lump rise in my throat, and their well-meant efforts to make the day a bright and happy one have so often brought tears to my eyes, I feel inclined to try at last to tell what the anniversary of the festival really means to me, by describing some of the Christmas Eves that have been most important to my life.

For not from one day to another could a child of Western Europe be transformed into an Oriental princess—the memories of one's childhood and the traditions of one's birthplace are too strong within one for that. And thus it is that, notwithstanding our deep affection for our new home, and in spite of the warm sympathies that bind us to the people of Latin race over whom we have been called by Fate to rule, we two—the daughter of the Rhineland and son of the Suabian Alp—can never quite divest ourselves of the feelings and associations among which we grew up, and which, far from being effaced by subsequent experiences, seem but to have gained in intensity by the circumstances surrounding us in later years. Among these associations are some of such special sadness and regret belonging to the present season that the return of Christmas is like the reopening of an old wound whose pain will never quite cease.

Gloomy enough, indeed, must that first lonely Christmas have been which the newly elected young prince spent in the land of his adoption, where he still felt himself to be a stranger. With thoughtful consideration for the homesickness which he had vainly hoped to have hidden from all, the gentlemen in attendance on him had set up in his room, draped and garlanded with flowers and surrounded by lights, the portrait of his mother, just arrived from Sigmaringen, to give him the illusion of

taking part in the usual happy family gathering, which in every German household is so important a feature of the festival.

But when on entering the room he suddenly saw the sweet face gazing at him with wistful tenderness, and noted the traces of sorrow which recent events had left on the beloved features—then his pent-up feelings almost overcame him, and he had to turn aside to conceal the emotion he could not altogether repress. For he remembered how deeply the mother's heart had been wrung within the past year, not merely by the parting with him, the son she had seen with such misgivings set forth into the dim, dark Unknown, but also by the loss of the other no less dearly loved son, who, still a boy in years, had already met a soldier's fate, dying in her arms, within three days after the battle, of wounds received on the hard fought field of Königgrätz.

His thoughts went back, too, to the fair young sister, whom he recalled setting out a few years before, full of high hope, enthusiasm and courage, for the foreign land whose monarch was waiting to welcome her as his bride. He remembered the circumstances of her early death in Portugal, among her new people, to whom she had endeared herself by her sweetness of character, that she was as deeply and generally mourned in Lisbon as in Düsseldorf, by those among whom her youth had been passed; while by her husband she had been so adored that he found it impossible to survive her, and very shortly followed her to the tomb, exclaiming with his last breath: "Thank God! I shall soon be with my Stephanie again!"

All this passed swiftly thru the gazer's mind, for it all seemed written on the gentle countenance that looked forth from the canvas, with that same expression of sweet serenity and resignation

*Copyright in United States of America.

that was on the delicately chiseled features to the very last, in extreme old age.

That was the first Christmas spent in Rumania by its new ruler. Three years later he was no longer alone; we kept it together, we two, for the first time, and under the tiny little Christmas tree, which to his amusement I had lighted up and carried into his study for him to admire, I had placed, with a beating heart, one small object—a wee little

Next year our Christmas rejoicings were much disturbed by a ministerial crisis, which took up all the King's time and thoughts, so that the candles on the tree were well nigh burnt out ere he could rejoin us; the baby, too—the gladly welcomed baby—was still too small to understand or pay much attention to what was going on. Still, there was much to be thankful for; was not the war—the cruel war between France and Germany—at an end, and were we

CARMEN SYLVA,
Queen of Rumania

cradle, the tiniest that could possibly be found—I say with a beating heart, because I was all the time in fear and trembling lest I should be mistaken, and my hopes be premature, after all.

not blessed with a child? And altho it was only a girl, we could hardly complain of that, since there was every prospect that many more would follow, and surely among them would be the wished-

for son; indeed, the doctor had almost smiled at my assurance that I could not have too many to please me, either girls or boys!

The third Christmas in our married life was again upset by political events, to such an extent, indeed, that for a moment it seemed as if we might be forced to abandon the work we had taken in hand and wander out into the world again. No one had time to think of the tree, again the lights had quite burnt down before we could assemble, and to add to the discomfiture of that dreadful evening, my poor little one-year-old girl was almost sent into a fit by fright at the bleating of a little toy animal, whose machinery somebody had imprudently set in motion dangerously near her. It was a terrible disappointment, and the harder to bear because I had been looking forward to this Christmas with such delight. My child was already so interesting—she showed intelligence far beyond her age, and was quite a companion of us both; our chief consolation, indeed, in the time of trial we were passing thru.

Then came a bright, happy Christmas—that of 1873, just after my return from my first visit to my girlhood's home, where I had the pride and happiness of showing my darling little girl to all my old friends, and of witnessing their admiration for her. The little fairy, as all called her, won all hearts by her pretty ways and pretty sayings. She was highly interested in all she saw—there were so many things and people I had told her of, and at first she kept asking every one, "Is that really mamma's Rhine?" Ah! I cannot bear to tell much about her yet! Only thirty years have gone by; it is still too soon to speak of her! In the introduction of "Rhapsodist of the Dimbovitza" I have tried to note down some of the sweet words that were always streaming from her dear little lips like poetry, making me feel, as I have often said, that my child was the one true poem of my life!

Yes, this, the Christmas Eve I speak of, was one of the good old kind, with numberless guests, a whole bevy of laughing young girls, and countless smaller children, too—for there were all the little orphan girls and foundlings from our great asylum, with whom my

darling often played games; and thru the midst of the happy throng danced the graceful little figure, more fairylike than ever that night, for it really seemed as if wings had sprouted from her shoulders and as if her feet no longer touched the ground. Among her presents was a little toy carriage, in which she took her seat while the other children dragged her in triumph and with peals of laughter thru the rooms. That was a lovely evening indeed, and will always shine out in my memory as the one bright spot amid surrounding gloom. For soon after that everything grew dark—quite dark!

It was very hard to bear, tho, that first desolate Christmas, and since then they have always in reality been the same to me. We were silent, even toward one another. I left the King at work in his study, went back to my own lonely room, and, sitting down at my writing table, wrote off four or five poems—each a cry of pain from my aching heart—one after the other.

For a long time all the years were alike after that. All the joy had gone out of our lives; how could we pretend to be happy or take pleasure in such seasons any more. She was gone, and she sent no other to fill her place.

Perhaps it was in order that no other might fill it, that she might be sure of never being forgotten. But oh! there was no fear of that! I had a dozen children come after her, not one could ever have taken her place in our hearts, nothing could ever again fill that aching void her absence leaves! To have had one child, and to lose her so soon! There is no grief like this. It did, indeed, undermine my health, the perpetual longing for her—the more so because I could not bear to speak of it to any one; and if for years I had to be carried from room to room, unable to walk a step, I know that it was not so much from any physical weakness as it was the weight of sorrow that in real truth took my bodily strength away.

So much has already been spoken and written about our public lives, but about the true—the inner—life nothing has ever been told. And who, indeed, could have told it? Who is there who can guess what is passing inside another soul? And even toward one another we

were silent, we two, because neither of us dared to speak of what was uppermost in our thoughts. The blow had fallen, and we could never recover from it, but we had to put on smiles to face the world, and to manage somehow to struggle cheerfully thru our appointed task in life.

After that last Christmas tree, my darling's last one here on earth, I did not see another for many, many years, until the winter I spent as an invalid in my mother's house on the Rhine, when to please her I had myself wheeled in my chair up to the organ to take my place there and lead the singing for her as in old times. The flood of memories that rushed over me as I struck the first chords it would be impossible to describe. Enough that here once more, as on so many occasions, the thought for others' happiness enabled me to force a smile to my lips and to go thru the hard ordeal.

On my return to Bucharest, as soon as I was strong enough, three years later, it was our turn to be invited to a Christmas family party, for during my absence the heir to the throne had brought home his beautiful young wife, and their hearth was already blessed by the presence of two children. For the first moment, when I saw the two fair little heads beneath the tree, I felt as if the knife that is always in my heart was being turned and twisted in the wound, and an agonized prayer went up from my soul to God that I might have strength given me to bear the pain.

It has passed now, the anguish which the sight of other children brings to the bereaved mother's heart, and, like every other trial which we bear in silence for the sake of others, has been rich in subsequent blessing. Only a few weeks more, and I shall once again be ready to take my place under the tree, among the little throng, whose childish voices, as they welcome me with boisterous affection, gladden my heart, and to whom I would always fain appear in the light of a fairy godmother laden with gifts, and skillful in inventing some new surprise

some marvelous amusement never heard of before, to make each Christmas more delightful than the last. But even they can hardly guess, as they rush to meet me with outstretched arms, the whole depth of long-repressed maternal tenderness in the bosom to which they are folded, the cravings of the lonely mother's heart as their sweet lips press her cheek!

Last Christmas I was paying a visit to the convent in Bucharest, where so many poor children are cared for and tended with unselfish devotion, and one poor little sufferer attracted my special attention. The good nuns told me how the story of my invalid brother's life, and of the patience and heroism with which he bore his sufferings, had comforted this little creature on her bed of pain. For this reason she so much wished to see me, and to reward me for having written the book she loved she brought me her greatest treasure, a picture of St. Elizabeth. I held her a long time on my knee, and she leaned her poor little head against my bosom, with the big, melancholy eyes staring wistfully into my face. Afterward I heard how this poor little creature, more than an orphan, since she had never known either father or mother, had said to the nuns when I went away: "What a pity that the Queen is not my mother! She would have been such a good mother to me!" I sent her a little Christmas tree, all for herself, and am looking forward to hearing of her pleasure in the pretty things I hung on it for her.

In this manner, then, has Carmen Sylva's Christmas often been spent—more often in mourning than in gladness, even in the days of childhood. For mine was not the thoughtless, careless youth which so many can look back to, and which most parents wish they could ensure to their children.

So I wait and watch for the true Christmas that no sorrow can mar, no cloud can dim. The Christmas down here on earth is only the image of it, but it can be so dear and sweet to most of us that we know by that how perfect the great, eternal Christmas will one day be!

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root, a member of the staff of THE INDEPENDENT, has for years devoted much attention to the general course of financial and industrial affairs. All the details of the record of American financial and commercial activity during the current year cannot, of course, be set forth within the limits of this brief article, nor can there be any elaborate analysis. His aim has been merely to touch upon the leading points in the record, and to direct attention to a part of the statistical evidence which deserves to be considered.—EDITOR.]

PROGRESS toward complete recovery from panic depression was made slowly but surely in 1908.

Crops were large, and rates for loans on call at the exchange centers were very low thruout the year. Following the election of Judge Taft, in November, trade and speculation were temporarily stimulated by the release of delayed or contingent orders. Comparative dulness followed, but records at the close showed a very notable advance in production, mercantile trade and the prices of securities. In 1909, what may be called a normal measure of prosperity has been restored. This is shown by the condition of leading industries, of general trade, and of the stock market. Crops have been even larger (cotton excepted) than those of 1908, in iron production the record has been broken, railway earnings have been rising steadily, dividends have been increased, and considerable additions have been made to the prices of leading securities. In the following table, relating to representative railway, industrial and other stocks, are shown the large losses in 1907, the gains in 1908, and the net changes (gains, with few exceptions) this year, up to the end of last week:

	Net change in 1907.	Net change in 1908.	Closing Dec. 31, 1908.	Closing Dec. 18, 1909.	Net change to Dec. 18, 1909.

In the first quarter of the year there was little to disturb markets until the middle of February. Trade was dull in January. The Steel Corporation's report for the last quarter of 1908 had been disappointing. Some securities were affected unfavorably by the Supreme Court's decision upholding the reduction of the price of gas in New York to 80 cents. On the other hand, certain capitalists and speculators rejoiced over the same court's denial of the Government's petition for a review of the decision against the Standard Oil fine of \$29,240,000. On February 19 Chairman Gary, of the Steel Corporation's board, gave notice that the great company had decided to make prices that would preserve its share of such business as was offered. It appears that the independent companies had been making low rates. This notice foreshadowed general cutting of prices in the steel trade, and prices were reduced about 15 per cent. The stock market, which had been dull, at once became

very active, with a sharp decline. Depression was promoted by news of an adverse report in the Senate Judiciary Committee concerning President Roosevelt's approval of the absorption of the Tennessee Coal and Iron Company by the Steel Corporation at the time of the panic. For some time thereafter there were lower prices in the steel trade. A majority of the independent companies ordered a 10 per cent. reduction of wages for April 1. The condition of business was not highly favorable in March. In that month Judge Taft became President and the work of revising the tariff was begun.

There was marked improvement in April. Trouble at the anthracite coal mines was avoided by a renewal, for three years, of the agreement with the miners. Coal road shares advanced. In a broadening stock market Union Pacific and Steel Corporation common took a leading position, which they held throughout the year. Altho the Steel Corporation's earnings for the March quarter were less by \$3,000,000 than those of the quarter immediately preceding, this showing had no bad effect, because a much worse one (on account of the war of prices) had been expected. Building for April showed an increase of 45 per cent. For the first four months of the year the advance in this field of industry had been 73 per cent. Steel prices were rising again. A few weeks later the old wages were restored by several of the independent companies. The steel war was over. In May the coal roads had the benefit of a Supreme Court decision (concerning the commodities clause of the Railroad Rate law) which permitted them to retain control of their mines. Corporation interests regarded with satisfaction the speech of the new Attorney General, Mr. Wickersham, in which he spoke of the Sherman act and the prosecution of Trusts. A few weeks later the Government's suit (under the Sherman act) against the New York, New Haven & Hartford Railroad Company was dropped. Thruout the month the prevailing influences tended to increase the price of securities. On the 28th, Steel common, at 64½, made a new record.

In the middle of June the upward

movement in stocks was checked, following Mr. Taft's message (on the 16th) recommending a tax on the net earnings of all corporations and the submission of a Constitutional amendment which would permit the levying of an income tax. These propositions, together with the Federal supervision that (the President said) would accompany the net earnings tax, were disliked by certain corporate interests. Stocks declined. The previous advance, however, had invited a reaction. There was much evidence of activity in general trade. Building in May had shown an increase of 78 per cent. From 80 to 90 per cent. of the capacity of the steel industry was employed in production.

Crop reports had been very encouraging, and their influence was clearly seen. There was promise of 3,000,000,000 bushels of corn, of 1,000,000,000 bushels of oats, and of a wheat yield but little below the highest yet recorded. Corn suffered a little on account of excessive heat, but on the whole the promise of the early reports was fulfilled. Below are the final official estimates of the year's crops, as announced in December, hay being measured by tons, tobacco by pounds, cotton by bales, and the other products by bushels:

	CROPS.	
	1900	1918
Corn	2,772,376,000	2,668,651,000
Wheat	737,182,000	664,662,000
Oats	1,007,353,000	807,156,000
Barley	170,284,000	160,756,000
Rye	32,239,000	31,851,000
Buckwheat	17,438,000	15,874,000
Flaxseed	25,850,000	25,815,000
Rice	24,308,000	24,308,000
Potatoes	376,537,000	278,085,000
Hay	64,938,000	70,798,000
Tobacco	949,347,000	668,120,000
Cotton	10,088,000	12,920,000

The farm value of these, cotton excepted (\$3,971,426,000), exceeded by \$274,000,000 the value of last year's crops. There has been only one larger crop of corn, or of wheat, and for oats and tobacco a new high record is established. The cotton shortage has made very high prices for that staple, and has led to a curtailment of production in the cotton factories both here and abroad.

Owing to the assurance of a bountiful harvest, the settlement of the tariff ques-

tion, the adjournment of Congress, a remarkable growth of business in the steel industry, rising steel prices, and other indications of general improvement, there was a notable burst of speculation on the Stock Exchange in August. The tariff bill became a law in the first week of that month. There was a prevailing belief that it would not disturb business. Earnings of the Steel Corporation for the June quarter had been better by more than \$6,000,000, and the dividend on the Corporation's common shares had been increased to 3 per cent. Railroad companies, encouraged by crop reports, had been placing large orders for equipment. The shares of the car and locomotive companies were rising. In July Union Pacific passed the 200 point. Mr. Har- riman was in Europe. In his absence speculation in what were called the Har- riman stocks was promoted by reports that the stock assets of the Union Pacific were to be segregated under the control of a new corporation, that the dividend was to be increased, etc. On August 18, Union Pacific rose to 219. Mr. Harri- man arrived in New York on the 24th. He gave no support to the current rumors about a segregation of assets and higher dividends. There were reports that he was mortally ill. Following his arrival the market sharply declined. In those days nearly one-third of the trans- actions were in Union Pacific and Steel common shares. He asserted on the 30th that he was not seriously ill, and there was recovery in the market. On Septem- ber 5 he suffered a relapse. Stocks fell again. On September 9 he died. His death was followed by no considerable movement in stocks, as it was understood that the railway companies in which he had been a dominant force were lodged in strong hands. At the end of the month the record of the leading stocks showed a net gain. There had been wide fluctuations, and more than 24,500,000 shares had been sold. Steel, with a divi- dend of only 3 per cent., had risen to 90.

In September the output of the pig iron furnaces, 2,385,306 tons, was great- er than in any preceding month. Up to that time the record had been held by October, 1907, the month in which the panic began. At the beginning of 1908 the monthly output was about 1,000,000

tons, and at the end of that year it had risen to only 1,740,000. In the latter half of the present year, however, activity at the furnaces has been greater than ever before. September's output was exceeded in both of the two following months, and in December the production of iron was at the rate of more than 31,000,000 tons a year; which exceeds by 5,000,000 tons the output of either 1906 or 1907. The growth of production in 1909 is shown below:

PIG IRON, TONS.	
1904	10,497,033
1905	22,002,186
1906	25,897,101
1907	25,781,391
1908	15,936,018
1909—	
January	1,797,500
February	1,797,340
March	1,832,104
April	1,738,877
May	1,883,330
June	1,129,884
July	2,101,579
August	2,246,480
September	2,385,306
October	2,597,541
November	2,547,508

Eleven months 22,767,599

The condition of the iron and steel industry is closely watched for the rea- son that, as a rule, there is no better measure of the general condition of business. Because in this country one company controls about 60 per cent. of the industry and publishes full reports frequently, it is to be expected that there will be much speculation in its securities. This year, as has been said, the shares leading the market and fur- nishing a great part of the current busi- ness on the Stock Exchange have been those of the Steel Corporation and the Union Pacific Railroad Company. The Corporation's report for its September quarter showed a large increase of net earnings. Quarterly earnings for three years are shown below:

	STEEL CORP.—QUARTERLY EARNINGS		
	1907	1908	1909
First ..	\$10,112,407	\$18,000,015	\$19,000,000
Second ..	45,503,705	20,265,756	29,340,491
Third ...	43,804,285	27,106,274	38,246,907
Fourth ..	11,331,005	20,000,000	
	\$100,841,402	\$85,372,045	

On the date of the September quar- ter's report, the dividend on the com- mon shares was raised to 4 per cent. A

new record was made for the stock on October 4, when there were sales at 94 $\frac{7}{8}$. The September report was noteworthy, not only on account of the increase of earnings, but also because in that quarter the company for the first time since the panic made an appropriation for additional construction, taking \$10,000,000 from the earnings for that purpose. In December, a conference of forty labor leaders, headed by Samuel Gompers, proclaimed a labor war against the great company because of its stand for the open shop, notably in its tin plate mills.

In October a sharp advance of the Bank of England's rate of discount affected our securities market to some extent. Adding 1 per cent. on each of three successive Thursdays, the Bank raised its rate to 5 per cent. There were reports that this action was taken to restrain American speculators who had been borrowing heavily in London to support their operations in New York. The Bank's purpose, of course, was to protect its gold reserve, but incidentally the effect was to cause some liquidation here. During this month and afterward, the rate for loans on call at New York, which had averaged in the neighborhood of 2 per cent. from the beginning of the year, advanced a little, rising occasionally to 6 per cent., but averaging about 4 per cent. This tended to restrain speculation, but purchases for the rise had been stimulated by increases of dividends. These were made by the Atchison, Chesapeake & Ohio, Jersey Central, Louisville & Nashville, Reading, Atlantic Coast Line, Norfolk & Western, and two or three other companies, and must be regarded as important evidence of the general recovery. With them may be considered the increases made by trust companies and banks. In November the stock market was unfavorably affected by the decision against the Standard Oil Company under the Sherman act, partly because it was said that the court's opinion had prevented the consummation of a project

for a Copper Trust. Copper shares declined. The strike of the switchmen on railroads in the Northwest, with the preparation for a demand for a general increase of wages on the Eastern roads, had a depressing effect in December for a time, but securities generally were supported by the strength of general conditions. Throughout the year the transactions in bonds have been large, considerably exceeding those of 1908, although bond sales in that year doubled those of 1907. Below are the figures for eleven months:

STOCK EXCHANGE TRANSACTIONS.

	Shares, Number.	Bonds, Par Value.
1905	291,244,176	\$1,224,418,770
1906	284,298,000	1,074,334,850
1907	196,448,824	526,170,450
1908	197,206,346	1,082,161,120
1909—		
January	17,275,500	\$137,762,000
February	12,337,100	111,434,000
March	13,650,595	84,381,000
April	10,055,608	118,748,200
May	16,495,230	117,477,500
June	20,322,230	115,701,000
July	12,800,903	94,539,500
August	24,637,783	114,322,000
September	19,981,975	91,882,200
October	21,700,514	90,371,500
November	18,709,179	88,195,500

Eleven months..197,072,179 \$1,204,866,000

Immigration, checked by the panic, is now proceeding at nearly the normal rate. There were more departures than arrivals in 1908. For ten months of 1909 the net gain in immigrants was 713,586, against a net loss of 73,000 in 1908, and a net gain of 935,030 in 1907. The increase of railroad gross earnings for nine months was 11 $\frac{1}{2}$ per cent. with a gain of 20 $\frac{1}{2}$ per cent. in net. This shows why it has been possible to increase dividends. Exports for eleven months have been nearly the same as in 1908, but imports have been much larger, exceeding those of last year by \$332,000,000. The gain has been in raw and crude materials for manufacture as well as in luxuries. November's imports, \$140,302,000, were the largest ever reported in a month.

NEW YORK, December 31, 1909.

The Working Girls' Strike

BY WILLIAM MAILLY

FROM a lockout of two hundred people to a strike of 30,000 is a great leap to make in one night, even in this day of industrial strife, but that is actually what has just occurred in New York. And as a result of this transformation the metropolis is now witnessing a conflict between employer and employee not only unique in its inception and unprecedented in its development, but also the largest strike of women ever known in the United States. Never before have so many working women quit work at one time in one place, and with such spontaneity and unanimity. The occurrence is not alone remarkable in itself—it is still more remarkable for what it signifies, as an illustration of the growing unrest that is permeating the ranks of working women everywhere.

For the present strike of shirtwaist makers is essentially a woman's strike. Of the 30,000 that left the shops and factories on Tuesday, November 23, at least eight-tenths were women. And what is more notable still, the vast majority were merely girls—nineteen years would be a conservative estimate of the average age of all of them.

This strike which takes on almost the character of a revolt, came practically without intimation, preparation or organization, but it had its beginnings long before when successive efforts to organize a shirtwaist makers' union in various shops and factories proved a failure. The union was growing, but growing slowly, in spite of the reverses which it continually met with. It was out of one of these reverses that the present situation emerged to surprise the union leaders as much as it startled the employers. And it is certain that the conflict would not have assumed the magnitude it has if the police and the police courts had not accelerated its development by their harsh and unwarranted treatment of a group of girls who were locked out by a waist company in September last.

These girls had tried to form a union in the shop, but when the company

learned of the effort it laid them off on the ground that the fashion in shirtwaist sleeves had changed and it would be impossible to employ the girls any longer. The girls believed this but later discovered that the company was advertising for other people to take their places, and they realized that they had been locked out. Failing to adjust matters with the company, Local Union No. 25 took charge and the usual method of picketing the factory was adopted.

Right there is where the trouble which has assumed such great proportions really began. Notwithstanding that picketing, that is, the stationing of union members in front of or near the factory for the purpose of persuading others not to go to work but to join the strike and the union, has long been declared legal by the courts of New York State, the police of the district took a different position. From the beginning the union pickets were harassed, ill-treated and interfered with by the police, who showed militant sympathy with the employers. Then pickets began to be arrested, and these arrests became so numerous and the courts dealt so harshly and summarily with the pickets that the press of the city was compelled to give attention to the strike, which would have probably otherwise passed off unnoticed.

This in turn drew the direct attention of the Women's Trade Union League of New York, a branch of a national organization, to the strike, and the officials decided to assist the striking girls by testing the conduct of the police. Miss Mary Dreier, the League's president, Misses Elizabeth Dutcher, Rose Schneiderman, Helen Marot, Leonora O'Reilly, Margaret Johnson, Elsie Cole and other League members went into the strike district and acted as pickets for the union.

Miss Johnson was the first to be arrested and fined, and her case has been appealed to the General Sessions. Miss Dreier was next arrested. While walking with one of the strikers she spoke to a girl coming from work. The girl re-

plied by striking Miss Dreier and then called upon a nearby policeman to arrest her. Ignorant of who Miss Dreier was and of her social standing, the policeman did arrest her and take her to the station house. There she was charged with assault.

There was consternation when the sergeant learned that the prisoner was not a working girl, a striker, but a cultured and wealthy woman who had for years devoted herself to the organization of working women. The sergeant ordered Miss Dreier's release and apologized, while the discomfited policeman who made the arrest declared to her: "Why didn't you tell me who you were. I wouldn't have touched you then?"

This incident, revealing as it did the discrimination exercised by the police as between poor and rich women, served to arouse the Women's Trade Union League to renewed action and an aggressive campaign against the police methods was begun.

It was none too soon, for complaints of assaults upon strikers by men employed by the company and unlawful arrests by the police were piling up daily. The Woman's Trade Union League assisted the union in compiling a list of these complaints and filed it with Police Commissioner Baker, but two conferences with him brought no results.

It was decided then to make public protest both against the company and the police. Mass meetings were arranged for November 22 in Cooper Union and other large halls, with President Samuel Gompers, of the American Federation of

Labor, and other prominent labor officials as speakers.

The halls were packed with excited waist makers. The feeling that something unusual was about to happen was in the air. It was a girl, fifteen years of age, who brought things to a climax and caused the pent-up emotion of weeks to break loose. President Gompers had already spoken in Cooper Union and declared that the waist makers should not

act too hastily but "If you can't get the manufacturers to give you what you want then strike. And when you strike, let the manufacturers know that you are on strike."

It was while one of the speakers that followed Mr. Gompers was speaking that this girl, Clara Lemlich by name, interrupted and said she wanted to speak. She was recognized as one who had been badly beaten up in the strike, and the meeting gave her the platform with a roar. All she said was: "I have listened to all the speakers. I have no more patience for talk, as I am one of those who feel and suffer from the things described. I move that we go on a general strike."

That settled it. The motion was seconded and carried almost be-

fore the chairman had time to put it. Then after a demonstration of several minutes a committee was appointed to notify the other meetings the same night. These endorsed the motion without hesitation.

Next morning at 9 o'clock the strike began. With a unanimity that threw the employers into complete confusion the shirtwaist makers left the shops in Manhattan, Brownsville and the Bronx and

RULES FOR PICKETS

Don't walk in groups of more than two or three.

Don't stand in front of the shop; Walk up and down the block.

Don't stop the person you wish to talk to; Walk alongside of him.

Don't get excited and shout when you are talking.

Don't put your hand on the person you are speaking to. Don't touch his sleeve or button. This may be construed as a "technical assault."

Don't call any one "scab" or use abusive language of any kind.

Plead, persuade, appeal, but do not threaten.

If a policeman arrest you and you are sure that you have committed no offence, take down his number and give it to your union officers.

CIRCULAR ISSUED BY THE STRIKERS

marched to the union headquarters at Clinton Hall, 151 Clinton street. Before night 30,000 were estimated to be on strike.

The union officials were as little prepared for this development as the "bosses," as the employers are called. The strikers choked Clinton Hall from floor to floor and overflowed into the side streets, stopping traffic and arousing the whole thickly populated East Side. All the strikers wanted to pay dues to join the union at one and the same time. It was several days before some semblance of order was secured. Halls thruout the East Side were engaged and in these workers from the different shops established themselves and held shop meetings.

When the strike commenced Ladies' Waist Makers Local Union 25 had a

and from there speakers were assigned to address shop meetings, pickets sent out and new members for the union taken in. Mrs. Bertha Poole Weyl, another League member, has had her own desk in the office of the union and acted as assistant to Secretary-Treasurer Solomon Shindler from the first day.

What do the strikers want? Narrowed down, the main issue is recognition of the union. On that hinge all the other questions at issue, for the union officials declare no other questions can be settled unless that one is settled. The employers' association as emphatically declares against the union and for the "open shop."

Conditions in the shirtwaist making trade are bad. The wages generally are low, the hours worked per day are many, the shops, especially the smaller ones,

MILITANT STRIKE PICKETS

thousand members. This has grown to over twenty thousand members and the number is increasing daily.

The Women's Trade Union League, headed by Misses Dreier, Marot, Schneiderman, Pike and O'Reilly, established an Information Bureau in Clinton Hall,

poorly ventilated, dark and unsanitary. It is difficult to strike an average of the wages, which in many instances run as low as \$4 a week, irrespective of hours worked. In some cases as much as \$12 and \$14 a week is received. These are highly skilled workers. The inside con-

tracting system enables the employer to "let out" a certain amount of work with a number of machines to one man or woman, who in turn engages girls to operate the machines and pays them low wages. Thru this means the manufacturer gets more product for less cost and encourages the sweating system.

In the busy season work is rushed night and day and frequently on Sundays. Then comes the long period of semi-idleness when the workers have to wait until the busy season begins again and many of them are out of work altogether.

The agreement presented by the union to the employers demands, in brief: All union employees; a price list drawn up in conference between the union and the employer; payment direct to each employee weekly; equal division of work among all employees in dull periods, no discrimination against union members; no sub-letting of work to contractors employing non-union help; a fifty-two hours week, with one hour for lunch (a half-hour for lunch has generally prevailed heretofore); limitation of overtime work to two hours and not later than 8 p. m. Each side to the agreement is liable to \$300 as "liquidated damage" for violation of the agreement.

What has been gained? In the first place, the strike came at the highest point of the busy season. It caught the manufacturers totally unprepared, with large orders on their hands, every available machine going and every available employee at work. It could not have come at a more opportune time for the workers. As a result, from the first hour there was a rush of employers to union headquarters to sign the union agreement. To date 236 shops have signed up, involving nearly 17,000 people. This means not only the establishment of the union in these shops but also a radical increase in wages in many of them. Ninety-six shops, at this writing, are still to settle. In the meanwhile, the non-union employers are running short on filling orders, the busy season is at its height, and the union employers are getting further into the market.

To meet this situation the non-union employers are sending work to other cities. A sympathetic strike has occurred in a Newark shop on account of

this. In Philadelphia the union shirt-waist makers have decided to have a general strike if necessary to win the strike in New York. The same action is pending in Hartford and other cities. The United Hebrew Trades, representing the bulk of garment workers in Greater New York, has declared its support of the strike. In several instances workers in shops not directly affiliated with the waist makers "came down" in sympathy but were requested to return to work by the waist makers officials.

To sum up, three things are notable about this strike: In every shop there are always a few girls in the lead. Some of these have been agitating for a long time, some are new and are having their first experience as leaders. But these leaders are invariably the best paid, the ones who get the most wages, in each shop. They are the ones who have less reason to complain. They have carried their sisters along with them by very force of their own determination and the spirit of resistance to the general conditions prevailing. One has but to associate with these fine, high-strung, intelligent and courageous girls to appreciate their moral caliber and their capacity for self-sacrifice and devotion.

Secondly, while the majority of the shirtwaist makers are Jews, and the union business is usually conducted in Jewish, yet they have succeeded in getting 3,000 Italians to strike with them. It has been difficult to reach the Italians heretofore and get them into the union. Now the start has been made and a separate Italian headquarters established, with special Italian literature and Italian speakers; it is believed the workers of this nationality are permanently enlisted in the union cause.

Lastly, the comparatively minor role played by men, both in numbers and in direction, is something new in the history of labor strikes in this country. The principal union officials are men, it is true, but the strike has been inspired by women; it is mainly women who have done the picketing, been arrested, fined, run the risk of assault, received ill-treatment from police and police courts alike, and shown themselves eager to sacrifice without stint to bring about better conditions in the shops and factories.

Such a spectacle, covering such a wide

area, involving so many interests, social and personal, moral and material, embracing so much of moment to the community, is without parallel. Coming at a time when the movement of women for greater political and economic recognition is commanding the attention of the

civilized world, this remarkable strike of girls in New York is symbolic of how deeply-rooted among women that movement has become and the vast sweep and influence it is destined hereafter to assume in the industrial and political life of this nation.

New York City

Winter Night

BY JOHN GREENLEAF WHITTIER

[This poem was written in the winter of 1829-30, and was printed in the *Haverhill Gazette*. I find it in a scrap-book kept by Mr. Whittier's sister. It was never in any collection of the poet's works.—S. T. PICKARD.]

SILENT and full of stars, the awful Heaven
Is looking down on slumber. There is not
The breathing of a solitary breeze
Upon the cheek of winter. It is still
As when the shapeless attributes of Earth
Slept in the night of Chaos, and the win
Of a most heavy darkness hung upon
The unformed solitude. The trees stand up
Without the show of motion; and the stars
And the uprising of the holy moon
Make visible the silvering of frost
Among their naked boughs. Even the tall grass
Around their trunks is flashing, like the spears
Of fairy multitudes; the snowy tops
Of all the hills are quivering with gems—
The jewelry of winter.

I have gazed
Upon the things around me, until all
The grossness of reality is gone,
And I can feed my fancy with the thought
Of a most glorious vision. I can cast
The veil of Earth aside, and send my gaze
Into the land of fairy; and look thru
Groves of unearthly beauty. I can see
The golden pillars and the fretted roof
Of wizard palaces; the grottoes where
The elfin spirits of the unseen world,—
The winged and mysterious messengers
From the far land of spirits,—shake their plumes
And white wings in the moonlight. I can tread
The jeweled pathway, where a magic wand
Hath changed the unseemly pebble to a gem—
The gray sand into gold.

There cannot be
A vision lovelier in the flowery time
Of the revealing spring, nor in the sun
And glory of the summer. It is as
The blissful Paradise of Yemen's sons—
The flowery gardens of enchanted Gul.

The Canadian System of Branch Banks

BY H. M. P. ECKARDT

IN the last two years the Canadian banking institutions have been growing rapidly in power and importance. The creditable manner in which they weathered the 1907 panic drew much attention to them from the outside world, and of course strengthened their prestige at home. Since the end of February, 1908, their total resources have grown from \$901,504,560 to \$1,133,986,560. When the Knickerbocker Trust Company closed its doors in October, 1907, there were in Canada thirty-three chartered banks sharing among them practically the whole of the banking business of the Dominion. These institutions then had about seventeen hundred branches. About half of the branch offices were in the Province of

Ontario; the rest were scattered from the Atlantic to the Pacific.

At the present time the number of going banks has fallen to twenty-nine; but the number of branches has risen to two thousand one hundred and forty-five. Early in 1908 the Sovereign Bank of Canada, an institution with seventy-five branches, was put into liquidation owing to the effect of losses sustained two or three years before. Thirteen of the larger banks assumed the Sovereign's liabilities, and took over its discounting business. So, altho it had at one time \$29,000,000 of assets, it passed out of the banking world without at all disturbing its creditors. Then, later in the same year, two small French-Canadian local banks failed, and at the beginning of

1909 the Western Bank of Canada was absorbed by the Standard Bank of Canada. Thus it is seen that the number of banks tends to diminish, while the strength, or rather size, of each unit tends to increase. As the Canadian system has sometimes been referred to in the current discussion of monetary problems, as one possessing features which might work well in the United States, American readers will perhaps be interested in an account of the essential differences between Canadian banking and banking in the United States.

In framing banking laws legislators in the Republic and legislators in the Dominion have followed different ideas. With the theory that it is best for the country, and that the popular will requires it, Congress has set at a low figure the minimum of capital that a national bank must have. Twenty-five thousand dollars capital suffices to start a new national bank. The various States also have power to charter new banking institutions. Many of them have set the minimum of paid-up capital so low as \$10,000, some as low as \$5,000. Under the federal laws branches are not allowed. In some few States they are permitted, but not encouraged. In most of the States the laws are either actively or passively hostile to the establishment of branches. As a result of this policy there were on April 28, 1909, 22,491 banks, each with a separate organization and full list of directors and officers.

The Dominion Parliament has proceeded with the view that the interests of the country were best served by strong banks that possessed the full confidence of all classes of the people. It has therefore fixed the minimum of capital for a new bank at \$500,000. And before the bank can begin business it must have \$250,000 capital actually paid in, and it must deposit that amount in cash with the Receiver-General of Canada. The Receiver-General returns the money without delay, accompanied by a certificate of permission to begin business, provided the incorporators have complied with the other provisions of the Bank Act.

There is a possibility that in the ensuing revision of the Bank Act the minimum of capital will be raised to \$1,000,-

000, and the cash deposit increased to \$500,000. If this change is made it will be with the object of discouraging the organization of small banks. It should be noted that the provincial governments have no power to charter banks. Control of banking legislation lies entirely with the Dominion Parliament.

But, tho the legislators do not favor the indiscriminate organization of new banks, they like to see the existing banks pursuing an active policy of branch extension. That attitude suits the banks admirably. In the past few years they have pushed their offices into hundreds of small places in the East and in the West. These offices are run at small expense. A new branch may start with a manager and one clerk, and, as the business grows, the staff will be increased. At these country branches of the larger banks there is no attempt whatever made to keep the loans or the deposits within certain limits, or in any kind of relation with each other. The bank is there, and is to do all the business it can do, no matter whether loans exceed deposits or not. A savings department is started and deposits received from one dollar upwards. Interest at three per cent. per annum is allowed, being credited semi-annually. The poorest people may have savings accounts if they want them, and they may carry balances not exceeding one or two dollars. Wage-earners, town housewives, farmers, their wives and children, make up the bulk of the names in the savings bank lists. No restrictions are placed upon withdrawals; they are paid on demand up to any amount. The pass-books, however, contain a clause under which the bank reserves the right to exact ten or, at the most, fifteen days' notice of withdrawal. The notice has never been exacted in recent years, not even during the course of the American panic of 1893, nor in that of 1907. The people everywhere have implicit confidence in the stability of the banks and nearly everybody uses them. When a chartered bank opens a branch in a little village which has had previously no banking facilities, except the government's postal bank, it invariably happens that the post-office depositors gravitate to the chartered bank, this notwithstanding that the rate of interest paid is three

per cent. at both depositories. The reason the chartered bank is preferred is because money can be deposited in and withdrawn from it with less trouble and delay, and in most cases the depositors consider that their funds are practically as safe with the bank as with the government.

The Canadian branch discounts all the good paper which its locality can furnish without any regard to the amount of deposits held there. But the United States

institutions for the credits they work on. Not one of these institutions will feel itself under any obligation to support the borrower should a crisis occur such as happened in 1893 and in 1907. In Canada every large borrower will have in his home town the branch of some great bank, which carries his whole account from year end to year end. Each year he submits the details of his position to the bank and gets his credit. The bank supports him thru all kinds of weather

VIEW OF ST JAMES STREET

The building with the columns is the Bank of Montreal and the post office is beyond.

local bank must regulate the amount of its loans by the amount of its deposits. When it has loaned out its funds it must decline to take more paper, even when the would-be borrowers are sound and worthy of credit. Therefore it quite commonly happens that in manufacturing towns the large borrowers are obliged to apply to note brokers or to large banks in New York or Boston for the accommodation they need. Also it is the case that many large borrowers are beholden to as many as twenty or thirty banking

so long as he is sound and worthy. During a panic he is under no anxiety at all. Probably he will not even have his discount rate raised.

So it happens, owing to the fact that all the branches are permitted to do all the good business that is offered to them, that the list of branches of a great Canadian bank will present some startling inequalities of loans and deposits. Here will be one located in a large Eastern city. It will show deposits, \$2,000,000; loans, \$2,500,000. Another, in a smaller

BRANCH OF THE BANK OF MONTREAL AT REGINA,
SASKATCHEWAN.

The bank occupies the ground floor; overhead are the staff quarters.

manufacturing town in the East may have loans, \$900,000; deposits, \$600,000. There will be some few quiet and rich residential towns the business of the branch in which may be like this: deposits, \$600,000; loans, \$80,000. And there will be plenty of villages in which the branches will show deposits, \$150,000; loans, \$70,000. Speaking generally, it is the case that in the East, in the farming districts and in the small places, the deposits have a tendency to exceed loans. But wherever there are important manufacturing industries located the loans are likely to exceed the deposits by a considerable sum. In Western Canada the shoe is on the other foot. There the great majority of branches show loans in excess of deposits. It is so because the farmers are heavy borrowers, and as the country is new, deposits are scarce. It is not at all uncommon to find out there country branches with \$200,000 of loans and about \$40,000 of deposits.

It should be borne in mind that the rapid development of Western Canada in the last few years has been one of the chief causes of the rapid extension of branch banks in the East as well as in the West. The banks which own the most branches and do the bulk of the business in Western Canada are Eastern banks; that is to say they have their head offices in Montreal or Toronto, and their stock is owned in small lots by thousands of investors living in Ontario, Quebec, and the Maritime Provinces.

There are about fourteen or fifteen of these banks, the managers of which have their eyes on Western Canada more or less all the time. When a new town or village springs into existence, thru the building of a new railway line or the settlement of a colony of farmers or miners, there ensues a race among some of these banks to establish branches. If the place is very small the first one to open may be allowed to have the field to itself; but if the population is five hundred or more, and good prospects of growth exist,

then two or three banks may tumble into it and fight each other hotly for the available business.

There have been so many new towns placed upon the map in Western Canada lately that the number of branches established there has grown quite rapidly. In less than three years the Western branches have increased from 432 to 654. I have already explained that new branches in the West usually have a considerable excess of loans over deposits. It can be understood then how when a bank had established, say twenty or thirty new branches in the West, that it would find them absorbing quite a large amount of its funds. It would perhaps solve the problem thru opening a series of branches in quiet places in the East, where there were no manufacturing industries and where the demand for loans would not be great. In this way it would be accumulating fresh deposits in the East which would furnish the funds required by the new branches in the West.

This is usually one of the points made against the branch bank system by critics in the United States. They say the branches drain away the capital of one locality for use in another and in that way work an injury to many places. But it is quite easy to see that both kinds of localities in the Dominion benefit thru the establishment of the branches. The Western locality benefits thru being supplied with ample funds for carrying on

its business, and the Eastern locality gets banking facilities which it values highly. So long as the local branch stands ready to discount all good paper that is offered, and all the small branches of the great banks stand ready to do that, no injury is done to the locality thru sending the surplus away.

The manager of a branch bank in a Canadian town nearly always takes an active part in the schemes that are set on foot for encouraging the development of the place. He will most likely be an active member of the local board of trade. In quite a large number of towns the manager of one of the local branch banks holds the chairmanship or presidency of the board of trade. To all intents and purposes the local manager is a citizen of the town and is as much interested in its growth as any of the others.

From the head office of a large Canadian bank one may get a most interesting and absorbing view. Every day statements and reports from the branches come piling in, showing the gains and losses of deposits, the increases and decreases of loans, at many different points, not only in Canada, but in the United States, in Newfoundland, Mexico, the Bermudas, Cuba and Jamaica—for the Canadian bank branches and agencies extend into all those countries. It is a case of watching a steady rise of deposits and banking power. At the end of October, 1909, for example, the Bank of Montreal had assets of \$220,807,746; the Canadian Bank of Commerce, \$142,759,517; the Merchants' Bank of Canada, \$63,409,841; the Royal Bank of Canada, \$61,241,055. Three other banks had resources over \$50,000,000, three others over \$40,000,000, four others over \$30,000,000. All of these fourteen banks are steadily extending their branch systems, and with the growth and development of the country all of them are likely to increase rapidly in power, importance and usefulness.

It is most interesting to

watch the manner in which the branches are planted. Every one of the progressive banks is open to consider the establishment of a branch at any place that is suggested. Suggestions come from two sources. First, the managers of the existing branches suggest places where, in their opinion, the bank might with advantage plant branches. If the general manager is impressed with the arguments they put forward he issues the necessary instructions and appoints the officers and clerks required for manning the new establishments. Secondly, suggestions come from villages and hamlets not having banks. The business men of one of these places will ask a big bank to open a branch in their village. They will present figures showing how much business is done by them; the number of bushels of wheat or oats shipped out; the quantity of cheese marketed; the freight receipts of the local railway station; the population of the place. Finally, they will perhaps hand in an undertaking by themselves to keep their accounts at the branch (if opened) and help it with their influence.

The banking executives do not ask much in the way of profits from these small branches. A couple of hundred dollars a year clear gain would perhaps be considered satisfactory enough. Plenty of the branches are run at a loss for several years in the hope that they

BRANCH OF THE BANK OF MONTREAL AT CALGARY,
ALBERTA

will develop sufficiently to bring the balance of profit and loss on the right side.

Sometimes the business men of a village or town which already has a bank will ask another institution to go in and compete. If they promise a certain amount of support they will have little difficulty in getting the competition they desire.

At crop-moving time, when a large amount of extra currency is needed in the wheat districts, the banks make with ease large advances to the flour-milling and grain-buying interests, because those borrowers take the proceeds of their loans in the banks' own notes, and circulate them among the country people. Thus in September and October, 1909, there was an expansion of \$18,000,000 in the banknote circulation caused by the movement to market of the bumper wheat crop of Western Canada. These notes were paid out as proceeds of loans. If the banks had no circulating rights, or if their rights were as valueless as those of the national banks of the United States, many hundreds of would-be borrowers would have to go without accommodation at this season, and those who did get loans would have to pay a higher price for them.

Another essential difference is that in panics or stormy weather the banking offices cohere or stand together. There could not be a rush of the country bankers in Canada for the cash held in the reserve centers, for the very good reason that the country bankers have no power to demand it. The executive of each bank directs the disposal of its cash resources. So each aggregation of branches is under the control of a calm and experienced mind. Some sixteen or eighteen gentlemen in Montreal and Toronto can get together in a crisis and in a few hours arrange a policy which will be followed absolutely by practically all the banking offices in the Dominion.

Another difference is seen in the composition of the staffs of officers and men. In Canada all the men, from junior to general manager, are professional bankers. Practically all the men at the top rose thru the different grades, in most cases beginning as juniors at \$200 a year. While in the States there are a great many banks which are managed and

ruled by men who made money in some other kind of business and who with it bought or took up bank stock to give them control of a bank. The personal element is oftener seen in connection with the control and operation of an American bank. It is quite common to hear an American bank president, or vice president, in any part of the country, speak of "my bank." Indeed, it is well known that in the cases of a great many institutions there is one man in control by virtue of a dominating stock ownership. That is not seen in Canada at all. There it is always the impersonal thing—the bank—that claims and receives the loyal services of all ranks, from the general manager down. There is not a president or a general manager of any large Canadian bank who would think of speaking of the institution he served as "my bank." A glance at the stock lists explains at once why this is so. Every large Canadian bank is owned by a large number of small proprietors. The names are published once a year in a government blue book. There is page after page in which holdings of from one share to twenty take up the bulk of the space. The directors, even when taken altogether, do not own more than one-sixth or one-tenth of the outstanding stock. So it comes to pass that the officers regard the bank as being comprised of the head office and branches, and as being owned by thousands of investors scattered in every part of Canada and in Great Britain and the United States as well.

Finally it may be said that the United States bank clerk, in the country towns and cities, lives at home. He is a local youth, and when he is taken on the staff of the bank in his home town he stays there. In Canada it is not so. Probably four-fifths or five-sixths of the employees are living away from home. A youth may be taken on the staff of the branch in his home town as a junior, but the chances are that he will not remain there more than two or three years. An opportunity for promoting him to a higher position in another branch occurs, and he gets his transfer orders. In nearly every case he obeys them willingly and readily, because the move is a step upward. Thus it comes about that at all

Canadian bank branches the men are young fellows away from home. The managements of the different banks are anxious, in their own interests, to keep their men from drinking, gambling, and other evils. They do a great deal to ensure comfortable living quarters and to ensure that the clerks shall not be unduly exposed to temptation. In furtherance of this object and also with the object of increasing the loyalty and good will felt by the men to the bank, the great banks have latterly followed a policy of erect-

ing at numerous country points branch buildings equal to the best in town, quite often having the upper portions devoted to home-like quarters for the unmarried members of the staff. Buildings of the type in the illustrations of the Bank of Montreal's branches are quite common in all parts of the country. Of course in the larger cities and towns the branch bank premises are of an imposing character, and they usually constitute the chief object of pride of the locality.

SARANAC LAKE, N. Y.

Bob-for-Short's Christmas

BY LOUISE DUNHAM GOLDSBERRY

NOW, Our Baby had never encountered a locked door. The love-some pit-pat of his busy feet was herald at whose coming every door in the house swung open and over thresholds he went into assured welcomes.

But we were planning a tree. And the library door was locked.

He paused in his ascent of the stairs to button in a button that would not stay buttoned. It required much time and he sat down on the step and with all his ten fat, wee fingers labored. Then, "Das a doodie boy," he objurgated himself as he resumed his climb of the stairs, the button buttoned; "Das a *daryin'* yittle gentleman!"

He shook the knob. Waited, jiggling on the toes of him and discoursing to Nicodemus.

The door remained closed.

Two fat palms smote it wrathfully.

"Open," he commanded; "*pease* open dis door."

Nobody answered.

"P-o-o-r yittle boy," he wheedled at keyhole; "zere ain't *nobody* loves 'im."

Nicodemus yapped and made feints at desertion when a dog barked outside. Fawned back, and licked the fingers where bread and honey aroma lingered. Sat up and waved an affable paw at him.

He sat down on the floor and gathered his yellow dog into his pinafore and hugged.

"*Cept* Nitodemus an' myssef," he said.

Great-grand came up the hall.

"Is you *been* a bad boy, Dreat-dran?" he said. "Is you *all* shutted out?"

Great-grand sighed.

"Seems like this horse just will run away," in doleful tone, "and I've got a bone in my foot and I can't run after him."

In a wink he was after the rampant steed. Captured and mounted, rode it lordily hither and yon, and when at last he came back from the breathless miles we had slipped down the back way, and at stairfoot waited.

Slowly, with dignity, he dismounted, put his steed in stall, came back to stair-head, and, legs astride and head thrown back, surveyed us from the heights of remembered injury. Beside him, perky, tongue lolling out, Nicodemus squatted.

Long legs gathered to his chin, Great-grand ranged himself on the top step and twinkled.

"Yes, sirs," quoth Great-grand; "'shutted' us *all* out!"

Our Baby nodded confirmation and Nicodemus yawned in our faces.

"Me'n mys Nitodemus *an'* mys Dreat-dran," he said. "*An* mys Dreat-dran is dot a bone in his foot *an'* I *needed* to kiss ~~his~~ *him*."

"Bless his precious heart," said Grandmother. "Come and let Grandmother kiss him."

But he shook his curls at her and looked sad.

"It's snowing," said I to the world at large, "and I don't know where to find a boy to sweep off the doorsill."

"*Dood dracious!*" said he. "Me'n mys Dreat-dran *needs* a penny drefful bad. We'll tum sweep dat snow off your door-sill!"

He helped Great-grand uncoil his long legs.

Helped pull him to his feet.

"I *fink*," said he; "I *fink* if I'm slidded down dis banister, maybe I tould forget to fink 'bout dat door."

So Great-grand slidded him down and Nicodemus chased them in joyous haste and we had our tea in chastened mood, forgiven.

But for three long days the library door remained locked.

And regularly, after each morning's breakfast, he mounted the stairs and tried the knob and cogitated to Nicodemus, and poked broom straws under the door.

Christmas Eve we sat about a great open fire. Great-grand loved to dig and delve in the red-charred logs and imprison the swarms of rosy bees. Fascinated, I would watch the swirling upfled sparks, wondering what phantasms of youth he saw all-beautiful in them, what faces went past in that rosy mirage that his own should wear so tender an answering look into eyes he alone was seeing. Sometimes Our Baby would come to stand between his knees, head leaned against his shoulder, and from within the encircling arms watch. Sometimes he would straddle one old knee and snug his head under the down-leaning old chin, gold hair and white hair commingled, and hand over the old hand, help the poker that prodded and piled the embers. And the wide eyes seemed to be seeing with the old man's visioning, so united he would sit.

Christmas Eve we sat about the great open fireplace. Great-grand sorted and

piled his red-charred logs. Grandmother was watching, lost in idleness. Grandfather had gone down cellar for apples and in my lap my Baby was telling me secrets. We listened beyond the singings of the flames; beyond the delicate soft singings and the sighing and the laughers of them, the wind in the chimney. From the end of the new back-log the saps distilled, all the summer's rains and dews and green growings in their *whicker-whicker*. We had hated to shut out the skies, so divinely near they closed in upon earth, with their starry strands garlanding the rim of hills. Our Baby had seen his first meteor—a feathered trail of etherial fire and a soundless splendor as the meteor burst and biggened into a globe of elysian azure, and went out. And the black violet skies seemed yet deeper black with that blue glory memoried against them, and the stars pallid and cold. And my Baby wondered his fair little thoughts aloud to me. He wondered if there might not be another Christmas Baby, in that blue glory. He wondered whether, if we'd go out, we might not find a few boys and girls and babies that got left over, when God forgot who had asked to have some left at their houses. He *wished* he'd been there, that night at the Oxen's Inn, to see the Little Child. So's he could have brought it home to his own self's house. He *wanted* a baby *so* bad. And even his sweets-freighted babble picked up that blue sky-mystery and wondered about it. And his eyes were wide and fathomlessly sweet in the fire-light, and his hand clung all the while to my face and *deared* it, and wove heavenly weave into my life in every least little touches of it to my lips, my cheeks, and in the comings home of it to slip into my bosom and there nest.

Then, we told him that it was going to be the Christmas Baby's birthday, tomorrow, and because we so love God's Little Son we give, year after year, all life long, gifts to Him and to each other on that day. And the library door, tomorrow, would be unlocked, and a surprise, inside, for us each and all.

"*Dracious!*" was his sole comment; and slowly the happy eyes slipped from us behind their curtain-fringes, the little warm body lay heavy in my arms.

Slowly, Great-grand unbuilt the house of red embers, and coming over took the little sleeper into his arms; rocked and crooned and hugged and God-blessed him. And with Grandmother's kisses on the wee feet that never were still save in slumber, and Grandfather's proud look into the unwitting face following after, I bore him away to his crib; so loved, so loved!

"Is Trismus *tum?*"

I wakened with the words breaking the crystal of my dreams and kissing themselves against my lips and a fat white body embracing my head.

"Yes, sir," I managed to say thru the strangling arms of him. "Happy Christmas, Bob-for-Short!"

"Happy Christmas, Bob-for-Short!" echoed from the doorway; and "Happy Christmas, Bob-for-Short!" floated in from beyond the east and west shoulders of Great-grand.

He shouted. He danced. Never before had he so been met by all the family at crib-side. He jigged all over the bed, trickling blarneyments and laughter at the three gray heads that waggled in unconscious tune to the prancings of him.

Then, all his yellow body a-pant with haste, Nicodemus hustled his fat self up the stairs into the fun he was missing, and in his wake, Katy from her kitchen.

"The impidence of 'im," said she; "just scootin' under me feet an' thryin' to throw me!"

And with a "Happy Christmus to yez, Misther Bob-fer-Short," she set a gray kitten on the floor.

We were all very still, as he slipped from the bed and approached the kitten. He had never owned a kitten. He eyed it in raptured silence. "*Meou,*" said the kitten.

Into his cheeks the red crimsoned. "Oh!" he gasped; "wad you *tail*, titty; *pease* wad you *tail*!" And she wagged her tail and arched her back against his feet and cajoled him, and as he gathered

her into his nightgown and the white fat bare legs ran with their treasure, she broke into loud silken purrings. And Nicodemus sulked and fell into a helpless yellow bunch of protest, when the gray kitten was held to his nose for a kiss.

And we all dawdled until Katy's bell rang third summons to breakfast.

He went up the stairs alone. Then Nicodemus. Then Great-grand. Then I. And then the rest of his adorers.

He stopped at the door.

"Open the door, sir," said Grandfather.

"Tum on, Muvver," he said, reaching hand into my hand.

So we stepped over the threshold together.

The room was darked. The firelight dulled behind a screen. In the center of the room a low, fair-branched young cedar tree gleamed like a great jewel.

My hand forgotten, he circled the tree.

'Round and 'round. And we after.

"Das a mos' bu-ti-ful drum," we caught the murmur as he inventoried. "Das a yittle 'tend horse." He paused to jog it and in ecstasy watch its tail go up and down. "Das a yittle toad-frod in dat bid marble. How you *s'pose* it dot in?" He tarried to investigate, and set it rolling for the kitten to chase. Nicodemus thought it was meant for him, and when he collided with the kitten, cowed and scared and muttering, he fled to a distance and yapped at ball and kitten.

And the inventory went on: "Das a dold waths, yike mys Dreat-dran *is* dot." He tarried to hunt a pocket, and deposit his watch therein. But first he held it to ear. And the murmur resumed: "Dat waths is def *an'* dum, too. Das a piture but an' *das* a piture but an' *das* a piture but. . . . Dracious!"

And Christmas was on for Bob-for-Short.

WASHINGTON, D. C.

The Sending of the Magi

BY BLISS CARMAN

In a far Eastern country
It happened long of yore,
That three kings sat together,
And a spearman kept the door,
Where the lone and level sunrise
Flushes the desert floor.

Gaspar, whose wealth was counted
By city and caravan;
With Melchior, the seer,
Who read the starry plan;
And Balthasar, the blameless,
Who loved his fellow man.

There while they talked, a sudden
Strange, rushing sound arose,
And as, with startled faces,
They thought upon their foes,
Three figures stood before them
In imperial repose.

One in flame-gold, and one in blue,
And one in scarlet clear,
With the almighty portent
Of sunrise they drew near.
And the kings made obeisance
With hand on breast, in fear.

"Arise," they said, "we bring you
Good tidings of great peace!
Today a power is wakened
Whose working must increase,
Till fear and greed and malice
And violence shall cease!"

The messengers were Michael,
By whom all things are wrought
To shape and hue; and Gabriel,
Who is the lord of thought;
And Rafael, without whose love
All toil must come to nought.

Then Rafael said to Balthasar:
"In a country west from here
A man is born in lowliness,
In love without a peer.
Take grievances and gifts to him,
And prove his kingship clear.

"By this sign ye shall know him—
Within his mother's arm,
Among the sweet-breathed cattle
He slumbers without harm,
While wicked hearts are troubled
And tyrants take alarm!"

And Gabriel said to Melchior:
"My comrade, I will send
A star to go before you,
That ye may comprehend
Where leads your mystic learning
In a humaner trend."

And Michael said to Gaspar:
"Thou royal builder, go,
With tribute of thy power.
Tho time shall overthrow
Thy kingdom, no undoing
His gentle might shall know."

And while the kings' hearts greatened,
And all the chamber shone,
As when the hills at sundown
Take a new glory on,
And the air thrills with purple,
Their visitors were gone.

Then straightway up rose Gaspar,
Melchior and Balthasar,
And passed out thru the murmur
Of palace and bazar,
To make without misgiving
The journey of the star.

BOSTON, MASS.

A Plea for the Small Investor

BY JOHN MOODY

[Mr. Moody is editor of *Moody's Manual* and is a distinguished authority on financial matters.—EDITOR.]

IT has been conservatively estimated that the corporate capital in the hands of investors in this country aggregates something like twenty-five billions of dollars. This is nearly one-fourth of the estimated wealth of the nation, as based on the most recently published figures of the United States Census Bureau. At least half of this amount is represented by railroad stocks and bonds. In fact, the railroad capitalization of the country exceeds at the present time sixteen billions of dollars, but approximately three and one-half billions of this amount is held by the different railroads themselves in one form or another, so that twelve and one-half billions is probably a fairly accurate estimate of the amount of securities at present outstanding in the hands of investors large and small. In the other fields of corporate enterprise, the public utilities of the country easily represent a capitalized value of from four to five billions, while the great mass of industrial undertakings, covering such industries as steel and iron, cotton and woolen manufactures, electrical instruments, railroad rolling stock, and other equipment, cement and all other building materials, dry-goods, and hundreds of other articles of almost universal demand, go far to make up the balance of the total corporate capital of twenty-five billions.

The outstanding bonds and stocks embraced in this enormous aggregate are not held by a small group of individuals or capitalists, so-called, as is often assumed, but they are the property of several millions of men and women in this and other lands, whose holdings average under \$1,000 each. And as the investment field grows from year to year, and the circle of the investor class widens, this average amount tends to become steadily smaller. A decade ago the average was probably well above \$1,000; a decade hence it may be nearer \$600 than \$1,000.

A little reflection will reveal the significance of this wide distribution of corporate capital. It means that a vast number of people of moderate means, and not

a few multi-millionaires, actually own the great railroads and public utility enterprises and "industrial trusts." It means that something like a billion and a quarter of dollars annually distributed in interest and dividends by these great corporate enterprises goes into the pockets of two and a half million people, in amounts averaging about \$50 per annum for each person. While a limited few receive far larger amounts than this, and are owners of stocks and bonds running up to the hundreds of thousands and the millions, a vast multitude are limited in amount to a nominal sum like this, and a great many to even a much smaller return.

The moment we realize what a wide distribution of invested capital exists in this country, we are brought face to face with what seems to be an anomalous situation with respect to the policy followed by our corporate managers and financiers in the issuing of stocks and bonds. A most vital factor in the safe investment of money, for both large and small investors, is the proper and careful distribution of the funds. The trustee of an estate of \$200,000 will, if he is wise, distribute his investments over a very wide field, giving proper and careful consideration not only to the types of bonds or stocks which he selects for investment, but also taking due care that widely different industries are selected, located in different territories, and being responsive to different influences. With a capital of the above amount, he would possibly select at least twenty-five different issues, dividing the sum logically between such types of industry as railroads, public utilities and industrials, and perhaps also putting a portion of the money into good municipal and government bonds. And he can usually do this with ease and safety. The facilities nowadays for securing the issues of far distant or diversified industries, and even of those industries located in foreign countries, are, thru the high development of method and organization among investment bankers and dealers in good securities, so complete that no large investor need seek far

for good advice or go without ways and means for securing a broad and safe distribution for his investment capital.

But as the facts show, it is not the large investor who is the back-bone of the corporate undertakings of this country today. The great aggregate of small investors, with their holding averaging below \$1,000 each, are the bone and sinew, and the ones who really represent the absorbing power in the buying of securities. They, too, being people of moderate means, in the great majority of cases, are the ones who should give most attention to the matter of proper distribution of their capital. It is really just as vital, from the standpoint of the poor man, that his investments of one or two thousand dollars should be safely and wisely distributed in different lines of enterprise, as it is that the capitalist of a million dollars should have his much larger sum so distributed. And yet, as the situation stands today, it is practically impossible for the poor man to follow such a policy. In ninety-nine per cent. of the cases, the steam railroads and other large corporations make \$1,000 the minimum in the denomination of their bond issues; and while the man with ten thousand dollars has no difficulty in distributing his capital among ten different issues, or ten different enterprises, for that matter (and all the while have every cent safely secured by mortgage), the man with only one thousand dollars must either take one bond, thereby putting his few eggs all in one basket, or he must hazard the dangers involved in the selection of stocks, or other less secure investments. Further, the man of larger capital can with safety assure himself of a larger yield on his money with comparatively less risk of loss. He can put a third or a half of his capital into high-grade bonds, yielding a low rate of interest; a portion of the balance can be employed in selecting less seasoned issues of assured futures, and yielding a much larger return on the money, and a portion can be invested in good stocks with increasing dividend possibilities. But not so the poor man. If he wants a higher return than the seasoned bond offers, he must put all his eggs in one basket again, but this time in the speculative basket. There is no way in which he can, with

bonds for one-third or one-half his capital, and have the remainder for investment in good stock issues, or anything else.

It would seem that our large railroad and other corporations ought to awaken to this anomalous condition. The absorption power of the American investment public is enormous, and is growing steadily, year by year. A decade hence it may be nearly double what it is today. Certainly it would seem that instead of putting obstacles in the way of the small investor, who stands ready with his money, and is only too eager to come forward and contribute his share toward the necessary capital needed for rapidly growing industrial investment, the corporate managers should bend every effort to make his path easy and his position safe. If, instead of apparently catering alone to the individual who has a large amount, and who is in a position to select from the good things as they come along, in blocks of from \$5,000 to \$50,000 each, the great railroad which desires to float a loan of \$100,000,000, would issue bonds in denominations of \$100 and upwards, an investment market could be created in this country in the course of five or ten years which would astonish the corporation managers themselves.

There are two important reasons why stocks and bonds are looked at askance by a large mass of the poorer American public today. The first is that because of the policy of issuing good securities in the larger denominations only, the average investment banker and bond-seller has not been able to cater to the masses in any way whatever, and the result is that this enormous class has been left almost exclusively to the tender mercies of the mining stock peddler and the "bunco-man." The country is continually saturated with offerings of fraudulent securities in small amounts, and as a consequence an immense number of men and women have lost their hard-earned savings in these so-called "investments." This fact has prejudiced them against anything of the nature of a stock or bond as they do not differentiate between a worthless security, bought on the strength of a roseate prospectus or the persuasive eloquence of a traveling stock peddler, and a really good stock or bond

of an established and absolutely sound enterprise.

The other reason why many people of small means look on investment securities with disfavor, is because they have suffered loss at one time or another as a result of having all their eggs in one basket. Their chance of loss is increased enormously by the necessity of concentrating their entire capital in one railroad or one corporation and when adversity strikes that particular corporation they stand in danger of losing their all; whereas he who has a large enough capital to distribute his holdings in ten different enterprises stands but slight chance of serious loss. Probably if one would make inquiries in his neighborhood of twenty families of moderate means, he would likely find that a very respectable proportion of them had either gone thru just such an experience as this, or some one in their family or of their acquaintance had. And when a small investor loses his all in this way, and is left with practically nothing, it is not likely that he is going to look with favor for some time on railroad or other stocks and bonds. If he once more saves money he probably keeps it close beside him in a bank or puts it out on realty mortgages.

There is a gratifying sign in the policy now being adopted by a few of our larger industrial and other corporations—that this anomalous condition between the real absorbing power of American capital and

the financial methods of the great enterprises of the day is beginning to be recognized. A number of these companies are now putting out issues in smaller denominations, and in other ways making it easier for the small investor to properly distribute his capital. If this policy is only persisted in long enough to make it an object, financially, for the good investment houses to cultivate the small investment field, a vast amount of good will be done. The difficulty, as matters stand today, is that there are not enough good issues of small denominations available to really give the poor man a chance of selection, and, therefore, no investment banker is in a position to really build up a sound and substantial business in this special field. But just as soon as the possibilities of selection widen properly, the business of serving the modest investor will surely become an important feature of every progressive investment house. Such an outcome will be of distinct benefit to all concerned—to the corporations seeking capital, for a new field will be opened to them; to the bond-dealer seeking clients, for here will grow up the richest investment field in the entire country; and to the small investor, seeking a safe lodgment for his money **and a fair return, for here he will have demonstrated to his satisfaction that it is possible for him to place his funds on the same basis of security and yield that the larger investor enjoys.**

NEW YORK CITY.

The Wonder of the Story

BY CHARLES IRVIN JUNKIN

O THE wonder of the story
Of the night so long ago,
In the glimmer of the starlight
And the whiteness of the snow,
When the little Prince of Judah
In His beauty came to birth,
While the angels sang his glory
And His sweetness filled the earth!

O the wonder of the story,
Of the tender joy supreme!
O the mystery of loving
And the sweetness of the dream!
For the little head was pillowed
On a Mother's loving breast,
And the Father's little children
They shall find the perfect rest!

DEVON, PA.

O the wonder of the story,
Of the gladness none can tell,
When the Shepherds saw the rising
Of the Star of Israel,
And a light from out the manger,
Reaching far and waxing strong
Till it touched the darkened shadows
And the world was wrapt in song!

The Revision of Our Banking System

BY HON. ROBERT W. BONYNGE

MEMBER OF THE MONETARY COMMISSION.

THE discussion of the banking and currency problems confronting the United States has of late been greatly stimulated by the reports which are almost daily reaching the public of the exhaustive character of the investigations of these problems, which have been and are being conducted by the National Monetary Commission. It would seem timely, therefore, to give some account of the conditions which led to the appointment of the commission, the duties which have been entrusted to it, the manner in which it is proceeding in the discharge of those duties, and the aims and objects sought to be accomplished by its creation.

From the very beginning of our national existence financial and banking questions have been, in one form or another, before our people for solution. We have gradually been evolving out of our own experiences and needs distinctive banking and currency systems which, tho not scientifically perfect in all their provisions, have, with a few notable exceptions, particularly in abnormal times, served our purposes remarkably well. Under them we have become the wealthiest of the nations, our stock of gold exceeds that of any single nation and constitutes about one-fifth of the entire monetary gold stock of the world, and our banking power is equivalent to nearly 40 per cent. of the world's banking power. A banking system which has contributed to these results cannot be wholly bad. The unparalleled material development we have enjoyed must nevertheless primarily be attributed to our great, diversified and undeveloped natural resources. There are financial students who contend that had we possessed during our entire national existence a thoroly scientific banking system our material progress would have been even more stupendous than it has been, and by this time, it is urged by them, the world's financial metropolis would have been located in this country instead of in England. However that may be,

and it must always continue to be a matter of conjecture, the fact remains that our path of progress has been marked by violent periodical disturbances and financial crises, temporarily wrecking our industrial enterprises, creating widespread disaster and injury, and causing at times a general suspension of our banking and credit system. The enormity and intensity of such crises is only fully comprehended when we bear in mind that all modern industry and commerce are based on bank credit and would be utterly impossible without the aid of the credits created and made available by the banks.

It is undoubtedly true that no banking system has ever been devised, and probably never can be, which will be a panacea for all financial disturbances. A general overexpansion of credit or overproduction of commodities resulting from prolonged periods of great industrial activity are inevitably followed by financial disturbances, often reaching the stage of panics and usually followed by periods of contraction and depression. It is under just such conditions that banks granting credits are called upon to discharge their highest and most important public functions. While industrial crises cannot be wholly prevented, they can be and are in every other great commercial nation, by the aid of modern banking methods, controlled, sometimes even prevented, and in all cases, their intensity alleviated. A general banking panic which involves all the banks of a country, good, bad and indifferent, can be and is elsewhere avoided.

It was the general knowledge of these facts and the belief that our banking system was seriously defective in some respects which led to the appointment of the National Monetary Commission immediately following the disastrous panic of 1907, when at the very high tide of our unexampled period of prosperity our whole banking system was for practical purposes temporarily suspended.

We had not been altogether without

warning that a banking crisis might at some time overtake us. There had been considerable discussion at various times of the defects in our banking system which rendered it incapable of preventing or meeting panic conditions. We had also been accustomed to perennial dis-

from time to time for a revision of our monetary system until, in 1907, it was brought face to face with the temporary collapse of our banking system and its destructive consequences. When the force of the panic had spent itself and calm was once more restored, it was

HON. ROBERT W. BONYNGE
Member of the Monetary Commission

turbances, more or less acute, incident to the moving of our enormous crops, which likewise were attributed by students of our financial problems to defects in our existing banking system.

The country had been too prosperous to give serious heed to proposals made

realized that financial conditions were much the same the world over in 1907, and yet no other country, not even our neighbors, Canada or Mexico, had a banking catastrophe similar to that we experienced. It was found that in the banking systems of all the other great

commercial nations methods were provided by which the banks could legally cope with panic conditions and thereby prevent widespread disaster.

When Congress convened in the fall of 1907, a great variety of proposals, in the form of bills introduced, were offered for a general revision of our banking and currency laws. There was, however, no concentration of opinion, either in or out of Congress, in favor of any particular proposal; but, on the contrary, financial experts and bankers apparently of equal authority criticised and denounced each other's proposals. The public was highly agitated and in no frame of mind calmly and deliberately to proceed to a final solution of the difficult problems presented. After a considerable legislative struggle, a measure was formulated and enacted, known as the Aldrich-Vreeland law. It was not intended to be a permanent addition to our banking laws, but was expressly stated by its terms to be a temporary measure and was designed to prevent a possible recurrence of a similar calamity as the panic of 1907 until the whole subject of our monetary system and its needs could be thoroly and scientifically investigated. To secure that object the Aldrich-Vreeland law provided for the appointment of a commission, known as the National Monetary Commission, originally consisting of nine Senators and nine Representatives, to which commission the task of conducting the investigation and making recommendations for a revision of our monetary system was committed. The commission, in the language of the act, was entrusted with the duty of inquiring into and reporting "to Congress at the earliest date practicable what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency." Ample and complete power and authority to make the investigation exhaustive were conferred upon the commission. It was empowered to conduct its examinations in this and other countries in order that the United States might avail itself of the experience of the world in formulating a scientific monetary system.

The law creating the commission went into effect on Mar. 30, 1908. The com-

mission was within a few days thereafter duly organized and proceeded to the discharge of its duties. At the very outset it was resolved to make its investigation as complete as was the power conferred upon it, and it was determined to postpone reaching definite conclusions upon the questions submitted until the investigation had been fully completed and every available source of information was at the disposal of the commission. It was realized that no more favorable opportunity had ever been afforded for a comprehensive and exhaustive study of our entire monetary system. The commission entered at once upon a series of far-reaching and independent investigations in order that the banking problems confronting the United States today might be studied in the light of the world's experience. It accordingly had prepared by leading authorities in America and Europe a score or more of volumes dealing with the recent developments of the banking systems of the civilized nations. These volumes are to be published under the auspices of the commission, and it has recently issued a statement outlining the scope of the publications which clearly shows the character of the investigations which it has conducted. The publications will furnish comprehensive and late information concerning the practical workings of the banking systems of England, France, Germany, Switzerland, Sweden, Belgium, Russia, Austria-Hungary, Holland, Japan, Canada and Mexico. They will, in fact, constitute a financial library of inestimable value to all students of banking problems. Representatives of the commission also held interviews with the managers of most of the large banks of the principal commercial nations. One of the volumes to be published later will contain these interviews, and it is believed that it will prove especially interesting and instructive. Our own experiences, which are of the greatest value to us, have by no means been overlooked. The commission has had prepared a group of volumes dealing with every phase of our varied monetary experience. Analytical and detailed reports as to the banking conditions throughout every part of the country have been compiled, and every phase and feature of our different forms of banks at different

periods in our history, as well as at the present time, have been carefully studied and scrutinized.

Our distinctive conditions and experiences will be given full weight and consideration in formulating any amendments or modifications that may be proposed to our existing system. Imperfect as it may be in certain respects, it is the result of years of growth, and the business of the country has become more or less adapted to it. Enormous amounts of capital have been invested in our banks and existing conditions must be properly recognized. The habits and customs of our people, which have become well established, will necessarily have to be reckoned with in seeking remedies for the defects of our present system.

The diverse character of our existing banks naturally adds to the difficulties of the problem. We have today doing business in the United States approximately 25,000 banks and trust companies, and of this number about 7,000 are organized under the National Bank Law, 18,000 under the varying laws of forty-six States of the Union, of which about 1,000 are trust companies. The total deposits in all our banks now aggregate the enormous sum of about \$14,000,000,000.

Notwithstanding the complexity of our banking and currency systems, they undoubtedly have certain advantages that should be retained in any new system that may be devised. Our currency is absolutely good, and the full faith and credit of the nation has been pledged to maintain this condition. It is not only good, but it is uniform from one end of the country to the other. Our independent banks, dealing directly with their patrons and officered and managed by men who are personally interested in the locality where the banks are located, have materially aided in the development of the different sections of the country.

On the other hand, certain defects in our present system are generally conceded, among which may be briefly mentioned the total lack of elasticity, which includes the power of contraction as well as of expansion in our bank-note issues; the scattering of the reserves among the many thousand different banks, our method of building reserves upon re-

serves, and the failure to furnish any legal method whereby the banks of the country can co-operate for the maintenance of the general banking credit and the specie reserves of the nation.

The difficulty is not to be found in pointing out the defects of the present system, but in devising methods to remedy them. Obviously the problem is so intricate that if a permanent reform is to be proposed it must be after painstaking and thoro investigation.

Without question the nations of the world can learn something of advantage to them from our financial experiences and development, and we, too, with benefit to ourselves, can gather much of value that will aid us in the solution of our problems from the longer and more varied banking experiences of the older nations. The conditions in our country are in many important respects entirely distinct from those existing in foreign countries, and it does not necessarily follow that a system that has worked well in compact and thickly inhabited countries whose resources have been quite thoroly developed would in its entirety be a success in a country of such vast extent with sparsely inhabited sections and with the variety of resources of our own.

There are, however, fundamental principles of banking that apply everywhere and under all conditions. These principles, with such modifications as our peculiar conditions may require, should lie at the foundation of any banking system that may be devised.

In the past quarter of a century great progress has been made in the study of monetary questions and banking methods have been modified to meet modern industrial development. The United States are now in a position to take advantage of all recent developments in monetary science and banking methods.

The purpose of this article has simply been to outline the character and scope of the work of the National Monetary Commission. No effort has been made to advocate any particular solution of the problems presented, or even to discuss them, but rather to indicate what those problems are and the manner in which the commission is proceeding to solve them. The commission has purposely refrained from attempting to formulate its

recommendations until its investigation has been entirely completed and the results thereof thoroly analyzed.

This nation of enterprising and resourceful people surely will not long remain satisfied with a banking system that is so constructed that it works well in ordinary times and collapses in times of stress. We certainly have as conservative, wise and able bankers as any other country, and with their assistance and that of all thoughtful and patriotic citi-

zens who have given study to monetary problems, it is sincerely hoped that the commission will be able to frame a measure that will command the support of the people of the country and will give to the United States a perfectly safe, practicable and workable banking system for all kinds of financial weather, and which will fully meet not only the needs of the present but of our ever-expanding and growing commercial importance as a nation.

WASHINGTON, D. C.

Justice in the West African Jungle

BY GEORGE WASHINGTON ELLIS

[Mr. Ellis is Secretary of the American Legation in Liberia and has been engaged in work among the natives for over seven years. For his researches he has been recently made a Fellow of the Royal Geographical Society of London.]

WITH all the hostility of its environments, Africa is one of the most fascinating of the continents. To the indifferent traveler or transient visitor the Black Belt may be repulsive; but if one can live and linger there, when once the veil of its mystery is lifted, the observer finds himself unconsciously surrendering captive to a charm from whose spell entirely he can hardly hope to ever secure release. Enshrouded in mystery for centuries, most of this grand division remained to the world unknown and unexplored, and only in recent times, under the influence of such a charm, did the nations eagerly divide it up, and careful thinkers enter upon that study of the African in his own home which in time must lead to his presentation to the world as he really is. For so long the ablest and wisest of the learned were content to dismiss Africa as little other than a vast "jungle." It was the intellectual fashion of the nations to consider the religion of so large a number of the human race as nothing but "superstition." Until late in the nineteenth century, respecting Africa and its peoples, for the most part the judgment of mankind was made up from the dramatic of science, founded upon the superficial data of travelers

whose half truths, too largely, had been learned on passing steamers. And while in many quarters the human mind still suffers from the misinformation thus received, and the ill-founded conclusions imposed upon it in the name of science, a very encouraging reformation has been set in progress.

The African Black Belt, marked by numerous systems of lakes and water-courses, includes a broad stretch of territory south of the Sahara, and extends across the continent from the Senegal to the Red Sea. In history it has been known by varied names, but is now usually referred to as the Sudan or Negroland. It is inhabited by millions of negroes and negroid peoples, from whom were secured the African exiles, residing now in almost every quarter of the globe. From resident students and many competent and truthful travelers, we now know that the grossly exaggerated negro-type, erroneously displayed and represented for so many years in anthropological literature, is flatly contradicted by the great majority of every known tribe on the African continent. Science is just beginning to understand something of the causal relation subsisting between the physical features of the African, upon which so

much stress is laid, and the hostile and deteriorating surroundings to which for centuries he has been subjected. Under the regnant influences of a climate which has defied the residence of all other races, the negro has developed beneficial characteristics, physical and otherwise, which have enabled him not only to persist with much evidence of progress in Africa, but to multiply and advance on all the continents. Surrounded by the untamed and ferocious tenants of the forest, for protection and the general welfare the people have been forced to group themselves together thruout Africa in native towns and half-towns, connected by narrow winding paths, leading apparently thru vast and interminable jungles. The more we study the inhabitants of this wooded labyrinth of extravagant Nature the more numerous and admirable become the traits and elements in the life and character of the African.

Under the adverse circumstances of the most tropical of all the tropics, African legal institutions have been evolved. They are adapted to the government and welfare of man as he is situated in no other section of our world.

A fair appreciation of their efficacy and worth implies a knowledge of much connected with the general life and conditions of African tribes. The origin of native laws is lost in the maze of ancient customs and traditions, which are preserved to each tribe and generation by

the surviving old men. And altho the great body of aboriginal law has been thus handed down, the tribal kings, with their chiefs and elders, may make such other laws as are suggested or required by new and unexperienced conditions, which very often attend the wars and

migration of tribes. In scope these laws form the basis of all those economic, social and religious institutions which in Africa conserve the interest of subject and king in the right of life, the protection of wives and children, the possession of slaves, the practice of religion, the cultivation of land, and in the enjoyment, ownership and use of property, in war and in peace. Among aboriginal peoples in some respects the influence of the law is remarkable, due largely in such cases to the deep religious and spiritual nature of the African and the extraordinary sway exercised over him by his belief in the efficacy and power of fetich medicine.

Altho in general there is a striking similarity in the institutions characterizing the African Black Belt, there are many local and tribal differentiations, interesting alike to the scholar and the layman. When the laws are to be enacted, the para-

mount chief or king calls a convocation of all the sub-chiefs, the old and influential men of the tribe, at a specified time and place, and after careful deliberation and discussion such laws are made as meet the favor of the majority of those assembled. The para-

TYPICAL WEST AFRICAN NATIVE GIRL.

A WEST AFRICAN COURT OF JUSTICE IN SESSION.

mount chief appoints some one, usually his nephew, to inform the people of the laws agreed upon, the enforcement of which is subsequently enjoined upon the sub-chiefs. Without entering too much into detail, in all the large towns of the tribes in this section of West Africa, and modified to some extent in smaller towns and half-towns, there are courts, judges, officers and lawyers, and all the legal machinery for the redress of grievances and the detection and punishment of crime, with the right to appeal to the paramount chief. The judges have no fixed tenure of office, and their judicial functions cease with the termination of the case assigned to them for trial. The number of cases tried by any one judge depends largely upon the reputation which he can make for rendering justice. Except in small and half-towns, when the chief acts as magistrate, the judge, assisted by the elders in any given case, is usually appointed by the chief of a large town upon and with the advice

and consent of the litigants, and he is said to be a person whose integrity commands the confidence of the public. The local chief designates his nephew or other relatives to serve as police officers, who summon witnesses and parties *ad litem*, and, when necessary, arrest in criminal cases, execute the judgments of the courts, and may call to their assistance the members of the tribe. Aside from lawyers open to the retention of private persons, there are in every town one or more lawyers associated with the chief as legal advisers, with duties similar to those of our city attorneys. In public matters they guard the interest of the town and represent it in all cases of appeal. In the chief town, where the king resides, these legal advisers possess the dignity of tribal rank, and in addition to advising the king in local and tribal affairs, they represent the whole tribe in intertribal matters of state.

All actionable difficulties and misfortunes in general the African describes as "palavers." Every native town has a "palaver kitchen." Under a native shed provided with seats for the elders, usually it is in the center of the town, and very often it is but the open space beneath a large and spreading tree, where, too, are held the native plays and dances. The African seems to have a fondness for litigation. In ordinary civil and criminal cases the procedure is practically the same.

A native suit is commenced when a plaintiff appears in person before the chief of the town, and, after presenting some cloth, rice, powder or palm oil, called "cold water," varying in amount with the importance of the case, complains by stating the facts of his side of the cause. The chief always keeps a symbol of his authority, as a cane or whip; sometimes it is but a little hand-brush neatly made from fiber or the tail of some animal, very useful in keeping

off mosquitoes and other biting insects. All the subjects know the signal of their chief's authority, and when seen they recognize the right of the bearer to command. The chief places this symbol in the hands of his officer and summons the defendant to appear before him. Very rarely will a person dare to refuse to obey. And by this means alone the king brings to his presence his subjects from the utmost parts of his realm. Upon the appearance of the defendant the chief states the complaint of the

ranged. In the form of slaves, chattels and other African property, each party to the suit is required to give bond as an evidence of good faith and to guarantee the truth of his view of the case. For the support of the court and the officers each day during the progress of the trial the parties must provide rice, palm oil, chickens and other provisions. At the beginning of the trial, to assist in the proper hearing of the case, it is the practice for each side, according to importance of issues involved, to present

AN ISLAND VILLAGE IN DARKEST AFRICA.

plaintiff; if its truth is acknowledged, further proceedings in the case are stopped, either by payment or by giving bond for payment within a certain time. Should the defendant deny the complaint, the issues are joined and the witnesses summoned to appear on a day set for trial.

The native trial is expensive. The great majority of them consist of petty cases of only a day or two in duration. But cases of magnitude sometimes last for weeks. No trial begins, however, until all the preliminaries have been ar-

so much gin, as they say "to open the ear of the court." Aside from the lawyers, it is customary among some of the tribes for each litigant to have one man as a backer in large cases to state his facts, in order that the words of neither party might provoke the other to personal violence. When all the prerequisites have been arranged, the medicine man, who is a native doctor, who prepares for fees the various African fetiches, and who usually has charge of the ju ju house containing all the town ju jus, administers to the parties and the witnesses

the native oath. After the oath the plaintiff presents his facts, which are followed by those constituting the defense. The lawyers then make their pleas; and all who have attended many native palavers attest to the ability and natural eloquence of many of the African lawyers, often disclosing the gifts of the born orator. After the pleas the court repairs with the witnesses "down the path," where both the parties and the public are excluded. But before the court departs the litigants are supposed "to put the court in the path" by presentations of gin, cloth, rice and other articles, in accord with the amount at stake. These presentations, called "dashes," are made by both parties, to avoid the imputation of influencing the court.

In secret before the court "down the path" the witnesses testify to what they know of the case, and the trial is all over but the judgment. After the deposition of witnesses under advisement the issues of the suit are committed to the final determination of the court. During the period of deliberation the members of the court are not open to outside communication. When the case has been determined a native drum informs the people of the reassembling of the court in the "palaver kitchen" to announce the judgment. Here the court is again "dashed" with cloth, gin, or rice, etc., so that the "palaver may be talked easy." In all civil cases and in ordinary criminal cases in advance the amount of the judgment, something like a wager, is agreed upon by the parties; so that the court only has to decide which one of the said parties must pay the judgment. In most cases the "dashes" to the court may be what the parties feel the suit will warrant, and at one time seldom exceeds three or four shillings in value. In addition to the judgment the losing side pays the cost. Besides the return of his bond the victor receives from the vanquished a gown, according to the native custom of "putting in the path."

The binding force of the West African oath is much greater than that which obtains among Western nations. In addition to telling the truth it requires the death of its violator if the violation is discovered. Among the same and dif-

ferent tribes there exist many forms of oaths, but they are substantially the same in general binding force. Chiefly they naturally divide themselves into two great divisions: those associated with the military and civil activities of tribes. In administering the oath to the individual that form is chosen which is recognized in the practice of the tribe to which the individual belongs. As a rule the Bassa and De peoples complete their oaths by drinking their medicine with water. In civil matters the Krus swear by native medicine and a razor. Vai and Gola tribes swear by koffu, the details of which are very interesting. While in the Kossa country swearing by medicine and a rock is employed in the courts. Aside from the fact that military oaths—among them may be mentioned the oaths on the war-knife and the spear—have intertribal significance and adherence, they sometimes ingratiate themselves in the civil life and practice of tribes. An instance of this is found among the Golas, whose principal judicial oath in olden times was by koffu. But at present, both in civil and military affairs, they generally swear by the spear. Employed in both civil and military matters, it might be well to give this form of oath.

Persons who are to take the oath, to prepare them for the taking, are given on the day before strong purgative medicine. On the day of the swearing a spear is stuck into the ground with the point upward, on which is to be placed a piece of cassada. Within the hearing of all a gun is fired, signifying that the next shot heard by the perjurer is to sound his doom and death. The gun is washed out and into the water thereof are mixt salt, powder and ashes, all common in the service and life of Africans. If an oath is violated it is believed that these articles, somehow, will effect the death of the violator. Near the spear in the ground a small hole is dug in which, serving as a bowl, a large eddo leaf is placed. Into this eddo bowl is poured this native compound. The chiefs have some one to administer the oaths in local and tribal matters. And when the interested parties have paid the necessary fees the swearing begins. A person comes forward and without touching

the spear takes from its point with the mouth a piece of cassada. While eating this small piece of cassada, the party at whose instance the person has been called to swear, states to him the elements of the oath to be taken. This person repeats them and concludes, that if he does not tell the truth the medicine must kill him. And it is a matter of common knowledge that if one is known to break his oath he is secretly poisoned. The person swearing brings the ceremony to a close by drinking some of the native medicine from the eddo bowl. Very often after the administration of the oath each person is given a quantity of gin.

Among Western people what are regarded as misdemeanors and some of the ordinary felonies, in West Africa have very much the status of civil cases. In cases of criminal assault with deadly weapons, adultery, all forms of larceny, some cases of rape, and a number of lesser crimes, when the offender is known, the complaining witness proceeds exactly as in a civil action, with this difference, that in case of conviction the person of the defendant is seized and held either until the judgment is paid or until a satisfactory bond is given, securing its payment within a stipulated time.

With most of the tribes in capital crimes the person of the defendant is seized at once and placed in sticks, the native jail. Here he is held until the case is finally settled. In cases of murder and tribal treason, when conviction is secured, it is customary before the public to decapitate the defendant with the native war-knife. The feat is performed with great art, often done at a single stroke. Among the Vais, if the defendant is a person of high birth, he is weighted with rocks and drowned, lest the blood of a freeman might be shed upon the ground. As a rule in capital cases the prisoner is tried as soon as possible, and in some instances when taken "down the path" he never returns. Instead of being tried at once or as soon as possible among the Kpwehis, the prisoner is often held more than a year, in order that many people from afar might attend the trial and understand all the legal steps and proceedings of the case.

For violating by force the virginity of a "gree-gree" girl death is inflicted by poison. Often a member of the family is deputed to execute the deed. It may be a mother, a sister, a wife, or child, no matter, they dare not refuse, for to refuse to them is death. In some of the tribes for violating the virginity of young women with consent, it is the native law to denude the parties, carry them to an open space in the town, and in the public gaze of all subject them to the most excruciating pains and punishments. Sometimes they are tied, peppered and infested with ants and biting vermin. For divulging the secrets of what are commonly called the "gree-gree and devil bushes," in some cases the malefactors are poisoned, and in others, by devices prepared for the purpose, they are delimbed.

We have been considering the criminal practice when the charge, at least, was supported by a *prima facie* case of guilt, but where the accusation is based entirely on suspicion the procedure is altogether different. In the hands of the medicine man the oath seeks to prevent perjury and to punish perjurers; but the ordeal is an African institution, suggested, if not dictated, by abnormal tropical conditions, for the detection and punishment of criminals. Under all the circumstances its saving grace is that in its presence few but the innocent are able to stand. In the variety of their form, like oaths, some are peculiar to tribes and others are intertribal. The selection of the ordeal may originate with either the accused or accuser. Of the many ordeals obtaining among the numerous tribes in this section of West Africa, the present purpose only necessitates the recalling of a few: the palm oil, hot iron, bowl and mortar, stone, paper and sassawood tests. In petty larceny cases and other small offenses and in cases in which children or youths are parties, the milder of the tests are usually employed, as the bowl and mortar and the paper tests. But in cases of grand larceny, wife infidelity, and the high crimes, resort is generally made to the more objectionable tests, like the hot iron, boiling palm oil and the sassawood ordeals.

In the hot iron test the iron is made

very hot and after washing the mouth of the accused with native medicine prepared by the doctor the iron is inserted therein, and if it does not burn the accused is declared innocent. In the palm oil ordeal the oil is supposed to be boiling hot in a large brass kettle, and after washing the hand in medicine the accused is required to take certain rings from the bottom of the kettle and put them in his mouth. If he escapes being burnt he is considered innocent. It can be readily seen that there is some reason in the motive which influences the great majority of the guilty to confess their crime rather than to stand the ordeal of these trying tests. In the case of sassawood, tea is made from the bark of a sassawood tree, which is held to be rank poison. Persons taking this test must drink about a quart of this sassawood tea; and as they walk about the town they are either encouraged or depressed by the cheers and exclamations of their friends or the taunts and derisions of their enemies. If this tea is thrown up the accused is pronounced innocent; if retained, guilt is established. Among the Krus the sassawood is the favorite ordeal when the fidelity of the wife falls under the suspicion of the husband. On account of the seafaring disposition of this people among them this is a common charge. With the Grebos and tribes generally it is invoked in accusations of witchcraft; and upon such a charge that the defendant is guilty the Vais require the accuser to wage his life

against the life of the accused. To discover witches at one time it was the custom of this latter tribe to hold post mortem examinations upon the bodies of all the dead. Hated and stigmatized the body of a condemned witch is excluded from the native cemetery, and is even denied temporarily a resting place in the town. The odium and disgrace is said to extend to every member of the witch's family. For punishment, according to offense, as a rule, all persons condemned by ordeals are turned over to the chief.

In Africa the law is supreme. And altho there are frequent gifts made to the court, to contaminate and corrupt justice, there is no secret fixing of the jury and no raising of technicalities. None seem so strong as to be above the law, and none so weak but that they feel the solace of its protecting care. The African has a keen sense of justice and a high regard for law. Save from the wild denizens of the forest, the unescorted maiden, unmolested, may walk for miles thru the wild and tangled wood. The native fetich medicine, bound in a common rag and hung upon a neighboring shrub or bush, is quite sufficient in the jungle to police and guard from theft the products of the native farm. In the marts of towns and hamlets the trader may pursue his trade and traffic in peace and security, and transport his wares from town to town and from tribe to tribe. In efficacy and administration African law is as admirable as it is impressive.

ALASKA, LITHUA

The Child

BY CLINTON SCOLLARD

The birds sing and the waters sing—
(O the child in the manger!)
With a marveling, with a rapturing,
"Hail to the little stranger!"

The suns sing and the stars sing—
(O the child in the manger!)
With a gladdening, with a glorying,
"Hail to the little stranger!"

And Mary, her heart and her soul sing—
(O the child in the manger!)
With a tender, yearning mothering
"Hail to the little stranger!"

CLINTON, N. Y.

School Teaching in Panama

BY MAY L. BAKER

“WHAT kind of children do you teach down there?” is inevitably the first question which greets me when vacation brings me back from the Canal Zone, where I have been teaching. The impression seems to hold that our schools there are filled with negroes and mixed breeds and that we live among heathen

The school system includes schools for the negroes, and tho these have a larger enrollment than do the white schools, and tho they are under the same superintendent, yet they are taught by colored teachers, and conditions make them almost as distinct as if they were under a separate system. Of the 722 white children in the schools last year, some 550

THE SCHOOL AT CRISTOBAL, SHOWING THE CAREFUL SCREENING AROUND THE PORCH

in a heathen land. But this is not the case. We have civilization in all its forms, from well-paved streets and sewing machines, to afternoon receptions and bridge parties. The thousands of American families who have been drawn to the Isthmus thru the construction of the canal live much as they do at home, and our school children come from this substantial middle class of whom our nation boasts.

were born in the States and the others came from the various countries of Europe and South America, and entered the schools only after the payment of a tuition fee, unless their fathers were working for the United States Government in one capacity or another.

The school conditions in the Zone are unique and I doubt whether like difficulties, together with equal opportunities, are offered to a teacher in any other

place on the globe. To understand the conditions which exist one must realize that the Isthmus is only 48 miles across, yet within that distance there are eigh-

notices, sent to the teachers thru the mails.

With so good an organization as exists, teaching would seem smooth sailing.

A GROUP OF SCHOOL CHILDREN IN PANAMA.

teen towns where stop regularly the six trains that cross each day from ocean to ocean. In any town where there are enough children to warrant building a school one has been opened, and children living in towns where there are no schools are given free transportation to the most convenient school town.

The schoolhouses themselves are mosquito proof, tho I could count on the fingers of one hand all the mosquitoes I have seen outside the jungle. Yet such are the health precautions taken by the sanitary department to prevent the spread of malaria and other diseases that all buildings erected by the Government are completely enclosed by netting. The schools are well equipped and a plan for joining them closely to the general office has been made effective, thru daily

but there appears a peculiar difficulty arising from the heterogeneous make-up of the school. Scarcely any two children come to us from the same school. They represent thirty-six different States, two Territories and the District of Columbia, besides some dozen or so foreign countries. We all know that education in the United States is in a more or less experimental stage at the present time, with each State and, in fact, each city working out a system of its own. In some localities the cry is, "Back to the rudiments. Drill the children in the three Rs." Others are saying, "Behold this age of usefulness. Let us give them manual training," and still others would have them working on languages during their most receptive years, and studying arithmetic and the other reasoning

branches after their minds have developed the reasoning power. So, working along different theories, the New York system is unlike Ohio's, and Maryland's is different from Massachusetts', just as it is from California's. The children we have are from all of these schools and they and their parents are loyal to the system with which they are the most familiar, being at the same time more or

drawing and singing." And the mother replies that she must put up with it for a time, which, thank goodness, will not be for long, as the father will not care to work down here much longer. And so the criticism accumulates. Some oppose the schools, some tolerate them, but none have interest enough to champion them, for no family expects to remain on the Isthmus long enough to make it worth

A GROUP OF NEGRO CHILDREN IN A CANAL ZONE SCHOOL

less antagonistic to the Zone system, to which they unwillingly conform.

"If Johnny passed the fourth grade at home," his fond parents will reason, "he ought not to be put back into the fourth grade down here, even if he has not had as much in fractions and decimals as these schools teach in that grade." Little Mary, who used to stand at the head of her class in sewing and cooking, goes home from our schools to tell her mother that the work here is "awfully stupid, with nothing but book studies and a little

while to care how they are run. A good school system needs the support of a community spirit, but such a spirit can never exist in the Zone.

The climate is hot—not excessively so, yet hot enough to melt away much of the will power and energy which we bring with us from the States. With the heat comes a restlessness on the part of the children and an unnatural aversion to hard work which in many homes is fostered by parents, who humor the children with the idea that their teacher

ought not to expect them to study so hard or be so quiet as at home.

What I have mentioned thus far have been difficulties which we encounter, but these are entirely overshadowed by the joy of meeting a class of unusually wide-awake children. They all know the taste of manufactured ice, and the wireless telegraph they see every day. Many a boy can tell you the meaning of the signals used at sea and can recognize the ships from France and the ships from Germany, England or Spain long before they have docked because he knows the flags they carry, and could even tell you from the color of the smokestack to what line they belong. The boy from the Mississippi is comparing the flying fish, turtles and porpoises he sees in the two oceans with the creatures of the fresh water river he knows so well. The strangeness of the bamboo, palm and banana trees attracts the New England lad who comes from the pine belt.

Some of the children have been in a shipwreck, and most of them have seen storms which would be memorable in the life of an old sailor. Close to their homes runs the Panama Railroad, and they are watching the Government experimenting with the new oil-burning engines. It may sound forced to say they are watching these things, but it is not so, for the fathers of many are running engines on this road and are discussing in their homes the comparative expense of shipping coal down from the States or buying oil which is delivered on the spot. The mothers, too, who hang their washing on the line, are remarking about the cleanliness of the new engines.

On the streets our pupils meet men from all parts of the world. The East Indian wearing his bright yellow or blue turban drives a dirt cart for the railroad or serves in the office of watchman. Every other store is a Chinese shop filled

THE OLD SPANISH BUILDINGS AT PORTO BELLO.
Which were in use nearly three centuries and a half ago.

with the ivories, carved woods, and silks from the Orient, and incidentally with the liquors of the Isthmus. Assyrian peddlers and Hindoo merchants in their queer costumes go from house to house selling their wares. And on every hand the child meets Spaniards, Frenchmen and Italians. There visit at his home men who have lived in the Philippines and Hawaii, in China and South Africa. What wonder, then, that he has a more lively interest in geography than he could have developed had he always remained in his conventional little home town.

History is another subject tangible to the Zone child, for the weekly holidays are occasions for picnics to the old Spanish forts of San Lorenzo, Porto Bello and Old Panama, which were captured more than three centuries ago by that story-book hero, Sir Henry Morgan. The tales of the bold piratical raids of the early buccaneers fire his imagination and whet his appetite for history as no stories unassociated with these ruined towers could possibly do. He has seen the first island that Columbus discovered, and, like Balboa, he has looked from the hill out upon the broad expanse of the Pacific, and if he is a real boy he, too, has waded out into that ocean.

It was these conditions that led my fifth grade Billy to carry a small geographical dictionary in his pocket on all occasions, whether he was playing ball or licking another fellow, and which kept me busy to keep up with the minute knowledge of places which he acquired from that wonderful book.

The snobbishness of grown-ups in this Isthmian society has trickled down into the schoolroom to a certain extent. Forgetting our democratic ideals, we Americans have come to a country having its own civilization and institutions, and have set ourselves up as the aristocracy, who, by reason of our birth, have a cause to scoff at all other peoples and ideals we find here. Then, too, the negro characteristics are stamped on so many men who would pose as Spaniards, as French or Chinese, that the Americans are skep-

tical and grant to none the benefit of the doubt. All dark-skinned persons are looked at askance, and I have noticed a certain aloofness on the part of some of my school children toward the swarthy Greek and Polish pupils in the class.

But the caste spirit does not stop with race distinctions. It goes much further. The Americans are split up into cliques in a truly novel way. To be of an old family would scarcely avail the Bostonian down here in this far away land, and the mention of "my uncle, Judge Linn," serves him not in the least as a key to the inner circle of society, for what do his California or Florida neighbors know of the judge. Neither will his family's wealth help the Texan as an introduction, for no one knows him or his family and it is always very tempting to adopt rich parents. Still, there are cliques and they come about somewhat after this fashion. The Government furnishes the houses for all its employees, and you can tell by a glance at the type of the house what income a man is receiving, and consequently how he is rated by the Government which employs him. If he is assigned to a four-family house he is receiving from \$125-\$200, and if he lives in a house that is for two families we know that he must be getting more than \$200, while if he is one of the few who has a house to himself he is assuredly a high official.

This obvious difference of income between one family and another is carried out in the consequent social distinctions, and in turn makes itself felt at times in the schoolroom, where a girl is barred from certain companionship, not because she does not dress in taste or because her grammar is faulty, but rather because her father is a \$1000 man. So it is that our Canal Zone schools, existing in a state of society that would be difficult to duplicate anywhere, are meeting each day problems peculiar to themselves, and at the same time, in their work of educating the child, are aided by outside forces which would be difficult to overestimate.

RAY C. G. MERRILL

Literature

Holland of Today

THE Netherlands continue to be the happy hunting ground of the artists. When to the sensitiveness of the man of taste we have that sympathy of the thoughtful observer which is the key to interpretation, we are sure to get a good book of description. This we have,* rather than the philosophy of the subject. Mr. Edwards is a fine draughtsman with a keen appreciation of color, but he has taken the trouble also to learn something of the Dutchman's language and history. Hence the fair proportions of his work. Instead of finding merely love of quaintness or unbridled admiration, we discover insight, critical values and an appreciation of whatever is good, whether tiny or colossal. He is not familiar with the last deliverances of such critical historians as Fruin, Blok, Brugmans or Groot, and for the reader who clings to the old traditions this is well, for criticism spoils a great many popular stories and is apt to chill fluency. So, taking slight trouble to inquire what the researchers have to say, Mr. Edwards disturbs no verdant moss or bright lichens that grow on the gray stones of tradition. All the more he has a keen eye for the scene of today, and tells a good story of travel and pleasing experiences, illustrating his text most handsomely by means of his facile pen and well furnished palette. He goes into out of the way places, as well as on beaten tracks. We have pictured for us the oyster girl of Goes and also the pink-cheeked maids of Marken. As our local interpreter once told us he finds many places "full of antics" (antiques). From Urk on the Zuyder Zee rises an incarnation of wool and wood and sturdy muscle, and out of Leeuwarden rises the rosy-cheeked boy and girl at the tiller. His pen deals with the characteristics of country and people, with art, ancient and modern, with bulbs and cheeses, and

with things of the spirit, which make the real Dutchman. Occasionally a misprint, like Erotius, for Grotius, and a slip of the nib, like van Ruyter for De Ruyter, adds to such a misapprehension as understanding Holland to mean the Hollow land, instead of Holt land or woodland. The name Holland is as old as the ninth century, when forests abounded; whereas dams, dykes and drainage operations, which make the land one of many hollows, did not begin until the twelfth century. Nor is his spellings of the same name absolutely uniform. But these are mere specks or motes on a fair surface. The book is distinctly alive, wholesome, attractive and readable.

Special chapters treat of Utrecht, Alkmaar, The Hague, and other places that have many petals on the composite flower of Holland's history. We are happy to note that he gives a whole chapter to Friesland, which, we can say, after seven visits, is almost a country by itself, which Americans to their great loss do not usually visit. Here Friesland is worthily treated, with brightness and charm. Added to the narrative is the element of personal adventures that were far more interesting than dangerous. Any one who, after reading Edwards, goes to the Netherlands and does not visit Hindeloopen, Bolsward and Dokkum is, we fear, a person defective in proper appreciation of what is worth seeing. Mr. Edwards warns the tyros in travel that they need not expect to find every person in Amsterdam wearing a costume, or to discover dykes as high as dunes, or to see as much of the expected bizarre, or of the amphibious element at which many writers have waxed witty. Rather is he in earnest to induce each reader to discover the Netherlands for himself. In this his point is well taken and he will assuredly be successful. Unless we mistake, the Netherlands is "the biggest little country" on earth.

The book is sumptuously printed, bound, and bears in golden colors the stamp of the national arms, with the

*Holland of Today. By George William Edwards. New York: Moffatt, Yard & Co., 1906. \$6.

motto, "I will maintain," of William of Orange-Nassau, who, by the way, was probably not called "Silent" during his

superb. In these the artist-author not only shows truth, harmony and balance, but he has made the faces real and genu-

A STREET IN LEYDEN.
From Edward's "Holland of Today." (Moffat, Yard.)

lifetime. Even more valuable than the text are the original drawings by the author, all of which are bold and clear, while his full page colored plates are

ine, giving first class portraits and not mere types. Very properly in reproducing old Dutch silver, to the extent of eleven full page pictures, we have the

photographic black and white. The book is bound to win a large welcome at Christmas time, which, by the way, is not, in Holland, the day of Santa Claus, which comes on December 6, and with this saint the author seems to be well acquainted.

De Morgan's New Novel

IN this new novel,* the fourth produced since his sixty-fifth birthday, William De Morgan is at his very best, and how much better his best is than the work of any novelist of the past thirty years only the patient reader will know. There are stumbling blocks here and there for any who push thru a book on an auto. There are corners to be turned where "skidding" is hopelessly sure with the reader who is unwilling to slow up. It is quite worth while in this latest work of De Morgan to go slow and look about. Evidently, whether putting pen to MS. pages or not, the author has been *thinking* novels all his life—observing, noting peculiarities, tracing the likenesses which go to make types, marking closely the particulars that give spicy individuality. If he had not made excursions into the "undiscovered country" he had only to polish the links of the writer's art and start forth, sure of the working of the chain. At sixty-five he had lived long enough to draw conclusions as to heredity and environment as factors in man's life. Spanning two generations he could watch them both, and comment and compare. His training had kept him quite alive to the newest of the new—far more alive, indeed, to the meaning of both old and new than those who, wholly unacquainted with the one, only half-understood the other. He has not yet forgotten some of the good things of the old which were not wholly laughable—attachment, for instance, as distinguished from "detachment." With a "perceptive" mind, such as he describes one of his characters as possessing, he was an analytic observer, quite as keen to catch the humors of life as was George Eliot, but an observer who has his own way of putting down his "finds," and a smile withal not possessed by that lady, who

could seldom stand aside from this sad world long enough to enjoy the fun of it. A poet, in his eye for the beauties of nature, and in the phrase by which he expresses that beauty, he is yet a novelist not lost in his symbolism, like Meredith. His reading has clearly been wide and abundant—probably promiscuous—certainly nothing of a humorous quality has escaped him. Dramatic in the highest degree, without being too ready to mount the pulpit by the front steps, or to land his reader in the morgue, or to call a halt while he is himself organizing a "movement." He is not a Dickens, with a teary handkerchief at the eyes of a Dick Swiveller, nor a Thackeray, with a staying finger on your vest button for a lengthened morality. He is not dramatic, with a placard; nor pathetic, with a drawl; nor "persuasive," with a plate. Rather is he of the dramatic school of the skilled physician of the body and soul, two essences or substances closely knit in a union that might be sweet, but is too often sad.

As for style, he has invented one by which he can merge himself at any moment in his characters and by a word disengage himself from them—where the actor, no longer himself on the stage, is constructively present and felt by the audience. The acting holds over across the interlude, and the music goes on. This, while sometimes mystifying enough, is a most engaging characteristic. It enables him to modernize for the novel the best element in the old Greek chorus.

Our readers can puzzle themselves over the plot, and swear that it is double and that the two lines of it are not sufficiently related. In that matter they must fight it out with Mr. De Morgan. They will find the wrestling tough; but they will never hesitate about the irresistible humor of the book, the new kind of pathos, the artistic bits of description, where a single word does the whole business. Thus: "How in Heaven's name could a thing one knew as a girl, *unlengthened*, become an immoral, unprincipled woman, like in books and newspaper paragraphs? Absurd!" Of two lovers at table: "Challis was conscious that each of these young people would be the other's *menu* for the ban-

**The New Novel*, by William De Morgan. New York: Henry Holt & Co., 1901.

quet." Some of the bits of description are in the old vein, but quite as good as the best. Take this touch of pathos: Blind Jim, with the wooden leg and the "scrutches," is in an agony of mind to make himself sure that his dying child is by some possibility mending—now, now, if not before—"always feeling, feeling gently, about the little feet and hands that came out of the blanket. He could see with his finger-tips." Again, the little sick girl is describing a stout lady who "medgers eighteen inches round." "That's no great shakes!" says blind, wooden-legged Jim. "That's no great shakes for round an old lady's waist!" "I didn't sye wyste—round her arms, with string above the elber. She hin't got a wyste. She's all one piece! Yass!" Dickensy, undoubtedly; but then, if two men work in the same muck heap, there will be the same odors, and the same possibility of a rich gardening. The flowers will be of the same varieties. No man can claim a royalty in the smells, be they sweet or be they glad-some. Again, take this hint at a type. Could it be done better? "You *do* see, don't you, that Dr. Pordage *was* right? For this good lady could *glisser* and always *appuyait*, until her accuracy had been entered on the minutes."

✱
Stradella. By F. Marion Crawford. New York: The Macmillan Company. \$1.50.

In Mr. Crawford we have lost an inimitable artist of Italian scenery and Italian life. Whatever may have been his shortcomings as a novelist, he never failed to give us a sun-warmed romance of that sun country which flows with spiced wines and honey. In his last book he achieved something more individual in the annals of romance than his delineation of Roman scenery. That is to say, a faithful wife, Ortensia, was a Venetian girl, who had fled from her elderly guardian who purposed to marry her, and eloped with her music master, Stradella. The guardian puts two famous cutthroats on their path, and the story henceforth is taken up with the schemes of these villains and the narrow escapes of Ortensia from persistent lovers. Mr. Crawford's animate characterizations do not equal his inanimate. His gardens breathe more vitally than the lovers in

them. The people of his books speak a primer language, while his scenery speaks the language of poetry. The romance itself is tedious and loiters in every wayside tavern along the road of its adventure. It is as if a woman with a face for a tintype had had herself painted in the soft draperies and colors belonging to the canvases of the old Venetian artists.

✱
Readings in American Government and Politics. By Dr. Charles A. Beard. New York: The Macmillan Co. \$1.00.

Professor Beard has brought together, primarily for the use of students, an illuminating collection of illustrative materials on American government and politics, a collection as interesting and informing to the publicist and politician as to the collegian, a suitable companion volume to the standard works on American institutions. The range covered is as wide in time as a Texan cow-range in space. It stretches from the Governor's commission issued by George III for New Hampshire down to the latest decision of the Federal Supreme Court upon social legislation. The book is as full of meat as a dictionary or an encyclopedia. To read straight thru it would be to gorge on pemmican. To take it a meal at a time will strengthen the political understanding. The thoughtful student of American affairs, whether freshman, voter, legislator or executive, when he is puzzled by some problem of government, will be apt to find in this volume some aids to a solution. If he be stirred by an insurgent attack upon Speaker Cannon he will find here documents concerning the Speaker's powers, their origin and extent and the reasons advanced for maintaining or curtailing them. If municipal matters attract his attention he can read the best utterances upon the form of municipal organization, the relation of city to State and the functions of a city administration. If he be tough-minded and make taxation his favorite study he will find here extracts and references which will send him to the pastures where that stony and sandy subject has been made to yield blades of green, nutritious grass. If the five-to-four decisions of Supreme Courts perplex him and he wonders whether, after

all, ultimate wisdom be clad in black gown and perched upon judicial benches, he can learn how the courts were able to set themselves above legislatures, what struggles have been waged against their assumptions of power, why they won and what limitations they set, at present, to their own pretensions. The book, in fact, is a grab-bag, with all prizes and no blanks.

The Conquest of the Air. By Alphonse Berget. New York: G. P. Putnam's Sons. \$3.50.

This is a timely and useful book, written with French clarity and illustrated with thirty-two full-page half-tones from photographs. Still more novel and useful than the pictorial illustrations are the eighty-two diagrams in the text, showing the construction of dirigible balloons and aeroplanes of all kinds and the principles on which they work. The theory and mechanism of all the rival aeroplanes of which we hear so much in the newspapers are carefully explained and illustrated. M. Berget is naturally proud of the leading part which France has taken in the development of aviation, but he is somewhat unjust in his references to the Wright brothers. The relative merits of the various models is, of course, yet undetermined, but in view of the monoplane accidents in France and the recent flight around the Eiffel Tower, made by a Wright machine, he is not warranted in holding that the Wright biplane is inferior in stability and safety to the French monoplanes. His objection that the pupils of the Wright brothers require months to learn to fly, while those practising on a monoplane learn in four or five lessons, could not now be maintained in consideration of the success that Wilbur Wright is having in teaching the army men at College Park. The translation of this book is one of the most absurd that we have ever seen

issued by a reputable publisher. It resembles the local guides to foreign cities which tourists are fond of quoting. The anonymous translator uses quotation marks promiscuously and disregards English idiom in a way that is often amusing and sometimes misleading. The following are fair samples of his English:

"The fundamental points in the construction of hélicoptères was therefore recognized to be the simultaneous use of two screws, one screwing on the right, the other screwing on the left, and turning in opposite directions around vertical axes." "So long as the Brothers Wright refuse to make avail of this launching 'rail,' they will hold an inferior position." "In turning their apparatus assumes itself to the most convenient inclination." "Thus we shall have 'hat bands' for 'aeroplane messengers,' who will go straight from city to city every hour, or even more often."

The Golden Season. By Myra Kelly. New York: Doubleday, Page & Co. \$1.20.

The author of "Little Citizens" has a story to tell of a college in New York, which we would identify as Teachers' College, at Columbia University, except for her insistence upon its "gray walls."

Now, as everybody knows, the walls of Teachers' College are a dull red, and not gray at all. The life inside the walls is anything but gray, if we are to accept Myra Kelly's presentment of it: but full of prankish and freakish spirits. The escapades of Elizabeth Alvord are not always in the best of taste, but they are girlish and gay, and the chapter wherein she plays the part of "Mrs. Dowling" at one of the kindergarten séances, in which the serious maiden aunts bent their minds to the consideration of "Mother-Play-Study-Problems," is a piece of pure humor that

MYRA KELLY
Author of "The Golden Season"
(Doubleday, Page.)

is not easily matched. The heroine of *The Golden Season* is a rich girl, beautiful and attractive, but the soberer sisters of her college are not forgotten, nor their pathetic,

heroic struggles to attain the coveted diploma on the slenderest of means. *The Golden Season* is a contribution to the somewhat meager list of co-educational romances, and it is an amusing novel for an idle hour. An hour that is filled with laughter is not ill spent.

Commercialism and Journalism. By Hamilton Holt. Boston: Houghton, Mifflin Company. \$1.

This little volume contains one of the addresses delivered at the University of California in the Weinstock series devoted to the discussion of the "various phases of the moral law in its bearing on business life in the new economic order." It differs decidedly from the general run of academic lectures in its lively style and in its frank exposure of existing abuses. Mr. Holt draws freely upon his own experience as Managing Editor of *THE INDEPENDENT* and of his knowledge of the methods and policies of other offices for specific illustrations of the more or less insidious attempts that are constantly being made to draw the editor from the narrow path of rectitude and impartiality. He is not afraid of giving names and he backs up every statement with an abundance of actual instances. To those persons who put implicit faith in everything they see in print, if such still exist, and to those who having found periodical press false in one thing have come to think it false in all, this book will serve as a wholesome corrective, for Mr. Holt, in spite of what he says of the pernicious influence of commercialism on journalism, gives full credit to the periodicals of the day for their leadership in moral and social reforms as well as for their efficiency and interest.

The Shadow Between His Shoulder Blades. By Joel Chandler Harris. Boston: Small, Maynard & Co. \$1.

This is a story of the Civil War, with the scenes laid along the route of General Forrest's raids in Tennessee. It is told by "Uncle Billy Sanders," which was as much a favorite character with the author as Uncle Remus, and was the one which most nearly resembled some aspects of his own personality. Joel Chandler Harris had a gracious way of insinuating himself into the past. And when in it his kindly genius interpreted

events there in a way that did not provoke bitterness or kindle the dying embers of strife. Thus his contribution to literature on the race problem was Uncle Remus. He was a man whose mind was founded upon courage and the wisdom of peace. And no better example of his peculiar intelligence and tolerant humor can be found than this little volume. It is a slight story, based upon a few slight incidents and redeemed by the method of the telling, as some homely face is immortalized by the brush of an artist.

A Guide to the Country Home. By Edward Kneeland Parkinson. Illustrated. New York: The Outing Publishing Company. \$1.

A practical treatise, intended for those who have capacity, energy and pluck—and some money to spend, judiciously, on farm-building. The book is one of wide and wise suggestions, which cover a large variety of marketable farm products, ranging from bee-made honey to ample and well-filled milk bags. Few cultivators would be able to carry out the system of farming which the author's larger plan contemplates, but any farmer of intelligence would find much practical value in the details as minutely given in Mr. Parkinson's book, for specific scientific treatment, for instance, of the horse, cow, swine, fowls; for the curing of the various meat products; for the care and keep, cost and profit, of the orchard, kitchen and market gardens, etc. The parts devoted to architecture—and the architect nowadays seems a necessary adjunct even to the building of a pig-pen—give the latest modern theories as to the construction of healthy homes for all these animals. There are to be improved beehives, pig-pens, cow-stables, grape-houses, etc. It would be advisable—and the author in his own way suggests as much—to begin with a little preferred stock of all kinds—good Guernseys, for instance, and Holsteins, and the like, and not to omit a little preferred bank stock, and, perhaps, a few shares of the same first-class securities as the suburban cultivator finds useful. With the bread, so to say, thus spread upon the waters, and buttered, let him put hard work into the furrows and hope into the market basket, and trust to time for the returns.

Literary Notes

....The weakest department of American newspapers and magazines is apt to be their treatment of foreign affairs, both editorially and as news. For that reason we wish to call attention to the unusually full and intelligent discussion of foreign news in the Catholic weekly *America*.

....A revised and enlarged edition of Mr. Lorin F. Deland's *Imagination in Business* furnishes the opportunity to draw attention to an uncommonly readable little book. Here are tales of business imagination that outdo the wildest inventions of the story tellers, and they are all true. We are all "ultimate consumers," and it is interesting to know how we are led sometimes to buy—in a quite legitimate way, receiving full value for our money. Mr. Deland lays down general rules in the telling of his concrete instances. (Harper's. 50 cents net.)

....The fiftieth anniversary of Darwinism has brought many a volume, mostly solid and serious, but here is one that strives to strike a note of romance, a decorated and annotated edition of the late Landon Smith's *Evolution* (Luce & Co., Boston). These curious verses first appeared in their entirety as a "filler" among the "want ads" of a New York daily, but they found lodgment in scrapbooks and memories, and many readers will recognize the first stanza:

"When you were a tadpole and I was a fish
In the Paleozoic time,
And side by side on the ebbing tide
We sprawled thru the ooze and slime,
Or skittered with many a caudal flip
Thru the depths of the Cambrian fen,
My heart was rife with the joy of life
For I loved you even then."

....That omniverous reader, Mr. E. V. Lucas, reads to great purpose, and is generous with his store of acquired wealth. He gives of it freely to those whose tastes resemble his, gladly pointing them to storerooms of whose very existence he might otherwise remain unaware. Nor does this delightful companion insist upon forcing his own appreciation and delight upon us in introductions or comment; he simply places before us his gathered treasures, and, having said *circumspice*, stands aside. It is thus with his latest volume of choice bits from many sources, *Some Friends of Mine; A Rally of Men*. Here are "Chance Acquaintances" described by Pope, Hazlitt, Lowell, and Hilaire Belloc; "Country Gentlemen" limned by Alfred Cochrane, James Paterson, and John Brown; "Good Servants" praised by Baring-Gould and Robert Louis Stevenson; "Adventures" drawn for us by Borrow, Major Tru-
mann, Joaquin Miller, and C. G. Leland; "Painters" appreciated by Vasari, Hazlitt, and others; "Bookworms" lovingly remembered by Washington Irving and Charles Lamb; and clergymen, men of law and medicine, patriots, talkers, poets, and many others, their memory kept green for us by eloquent pens. (Macmillan, \$1.25 net.)

Pebbles

MINISTER.—And the child's name, madam?
Mother (firmly).—Name him Nansen Shackleton Cook Peary Smith. I'm not going to take any chances.—*New York Sun*.

FIRST GIRL (looking at the statue of the Venus de Milo).—What terribly thick waists girls must have had in those days!

Second Girl.—Yes, but perhaps the gentlemen's arms were longer.—*Human Life*.

LIVES of great men all remind us
We may do great stunts as well,
And, departing, leave behind us
Anecdotes we didn't tell.

—*Washington Post*

"If you refuse me," said the young man, "I shall blow out my brains."

"I'd hate to have you do that," replied the girl, thoughtfully, "and yet it would be a good joke on pa. He says you haven't any, you know."—*Philadelphia Public Ledger*.

"IN choosing his men," said the Sabbath-school superintendent, "Gideon did not select those who laid aside their arms and threw themselves down to drink; he took those who watched with one eye and drank with the other."—*The Herald and Presbyter*.

A WELL-KNOWN sculptor tells the following story:

"Whenever I see a toothpick I think of a dinner that was given in Rome in honor of two Turkish noblemen.

"I sat beside the younger of the noblemen. He glittered with gold embroidery and great diamonds, but nevertheless I pitied him sincerely, for he was strange to our table manners, and some of his errors were both ludicrous and painful.

"Toward the dinner's end a servant extended to the young man a plate of tooth-picks. He waved the plate away, saying in a low and bitter voice:

"No, thank you, I have already eaten two of the accursed things, and I want no more."

The ship upon clearing the harbor ran into a half-pitching, half-rolling sea, that became particularly noticeable about the time the twenty-five passengers at the captain's table sat down to dinner.

"I hope that all twenty-five of you will have a pleasant trip," the captain told them as the soup appeared, "and that this little assemblage of twenty-four will reach port much benefited by the voyage. I look upon these twenty-two smiling faces much as a father does upon his family, for I am responsible for the safety of this group of seventeen. I hope that all thirteen of you will join me later in drinking to a merry trip. I believe that we seven fellow passengers are most congenial and I applaud the judgment which chose from the passenger list these three persons for my table. You and I, my dear sir, are—Here, steward! Bring on the fish and clear away these dishes"—*Every-body's Magazine*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Good Will

WHETHER the song of the angels was Peace and good will, or Peace to men of good will, we are not concerned to discuss. Whichever it is, and was, is a matter of no concern, for they are both one. It was Peace and good will just the same, and to the same people, for there is no peace to them not of good will; and to those of good will there is ever peace.

What a benediction of peace the advent brought to the world! Then it began, a slender rill of peace, like the smile on the Maid-Mother's face as she bent over the Child; but that rill was to become a river and then an ocean of peace to flood the whole earth, even as the Mother's smile was to spread a ringing firmament of joy over every family of man to whom the Christmas message was to come. Those angels that filled the shepherds' ears and hearts with solemn rapture were to sound a wider cadence heard the world around, calling Truth and Justice to descend and dwell with men till Heaven's high palace hall shall open wide her gates as in high festival of peace and praise.

And yet the world is still seeking

peace with the sword. But it is much that peace is the purpose, tho sought with smoking enginery of war. The nations protest that they hate war, that they, each of them, are resolved not to provoke war, but that it is only their suspicion and fear of other nations that makes them assume in time of peace the waste and extravagance of war. By and by—before many years now—they will learn each that the other can be trusted not to provoke the greatest curse the world knows. Then Russia shall fill her steppes with a teeming yeomanry who shall be allowed to till the fruitful soil, and will not flee to happier lands to escape the hated military service. Then Germany shall not madly increase her naval armaments to match those of Britain, and Britain shall not strain to double hers that she may surpass those of her dreaded rival. Then this our land shall no more be content to be the refuge of the peoples, but shall restore her regiments and her marines to peaceful industry, and be the example of confident peace to all the republics of the world. Then shall we have the world's federation of nations, and the Prince of Peace ruler of them all. It comes. We can even now see its dawning. Let the swift years fly more swift that shall bring the full day!

Give us peace, good Lord, not in our time only, but in all times for all the generations of universal good will!

Church Federation

Do our readers know that the biggest thing in the religious movement of this country is that represented by the Federal Council of the Churches of Christ in America? Do they know that it is now well organized and is preparing to extend its beneficent work? Do they know that it embraces nearly all the Protestant Churches of the land, banded together to express and practise the unity and also the service of their common faith?

What the Federal Council of Churches can accomplish is not yet fully made plain, for it has but just begun its work. A year ago it held, in Philadelphia, its first meeting after its organization in New York. It has an executive commit-

tee representing the various denominations, which meets once a year, and has just held its first public session in Louisville, Ky. It was an enthusiastic and useful meeting, and the reports showed that the Federation has already begun to do service. It has auxiliary local federations in the various States, whose business it is to harmonize or prevent rival differences. In Vermont, for example, there were reported sixty-four cases of interdenominational action in the interests of unity. In all the States the plan is to substitute for the old way of denominations working independently of each other the new way of co-operative activity and mutual helpfulness. The denominational home missionary societies, which have been too much rivals with each other, are under this new influence becoming allies, and conferring about their mission fields. This requires large statesmanship in place of sanctified selfishness and denominational greed. Chicago and Denver will be the headquarters for executive activities which will give leadership and inspiration in the interior and the West.

Another special field of service for the Federation will be found in directing the relations of the Churches to the moral and social condition of the people. This matter was brought before the body by a special committee of which Dr. North is chairman, and by a deputation from the American Federation of Labor. At its great meeting in Toronto the Federation of Labor had asked the Churches to set apart the Sunday in September before Labor Day as a Labor Sunday, when special attention shall be directed to the questions which concern workers, and when workmen shall be especially asked to attend. This request was presented to the Federation of the Churches, and in response the request was commended to the Churches for their hearty compliance, to be observed with sermons and other appropriate observances. Thus the two Federations, of labor and prayer, are brought closer together. The best man in the country will be sought to lead that work.

This is but the beginning. The Federation of Churches means two things: First. unity in place of severance; and,

secondly, service for the social needs of the world in place of aloofness or indifference. We ask for local interdenominational federation everywhere "that they may be one."

Selma Lagerlöf and the Symbolists

THE reaction from realism is a striking characteristic of the literature of almost all languages at the present time, less, perhaps, in the United States than elsewhere, because we do not take literature seriously and the pendulum had not gone so far in the previous swing. The realists, or veritists, or naturalists, as they sometimes preferred to call themselves, professed to give the plain truth about life, which meant generally that they turned the coat inside out to expose its seamy side. This aspect of it has more interest for a tailor but not necessarily for the public. The realistic novelists scornfully disclaimed any intention of pointing a moral in their books, just as the realistic artists indignantly repudiated any intention of telling a story in their paintings. But these writers could write and these painters could paint with unprecedented skill, and thru the concentration of their efforts on technique taught the world a lesson which it has not forgotten in the reaction against them.

The new idealism is, therefore, sharper-sighted and farther-sighted than the old. Its optimism, when it is optimistic, is attained, not by ignoring, but by mastering the unpleasant facts of life. It keeps the method of realism, but adapts it to its own purposes. Accordingly we have stories and plays composed of the prosaic scenes and commonplace conversation of actual life, but illumined from within by an esoteric significance. We have modern examples of the fable, the parable, the allegory and the apolog, as well as more novel forms not easy to classify under the old names. In short, it is a revival of symbolism. The symbolists teach, not by injunction as in sermons, not by examples as in novels, but by the more subtle method of suggestion. Most of the tales of humanized animals now so popular among young and old have as clear an ethical purpose as the

fables of Æsop. Kipling uses the jungle folk to teach individualism. Maeterlinck uses the bees to teach socialism, notwithstanding that Lord Avebury, better known as Sir John Lubbock, the foremost British authority on bees and ants, is the head of an anti-socialist society. Kipling, beginning with a pure realism of an unusually vivid sort, has gradually developed the mystical tendency. Maeterlinck, on the contrary, was a mystic, from the beginning, a leader of the Young Belgian symbolists, and his latest play, "The Blue Bird," differs from "The Intruder" chiefly in being sane and wholesome instead of morbid and decadent.

From Denmark come Carl Ewald's tales, quiet and deep as a mountain pool; Russia gives us Merejkowski's historical trilogy of Julian, Leonardo and Peter, containing a mystical theology hidden in its strange confusion of picturesque details. In Germany Pastor Frenssen's "Jörn Uhl" and "Holyland," tedious and uninteresting as they appear to us, are heralded as a new gospel, or, rather, as the retelling of the old in a form acceptable to the present generation. It is natural that the great master of the parable should appear in person in the works of recent symbolists. Olive Schreiner, whose "Dreams" are the best of modern allegories, introduced the figure of Jesus in her "Trooper Peter Halket." When Kennedy's play, "The Servant in the House," was put on the stage in this country, the leading character, Manson, was made up to represent the traditional pictures of Christ, but in England the censor would not allow this. In Jerome's "Passing of the Third Floor Back," the person who converts and regenerates his fellow-boarders was an angel in the story, but the incarnation of "The Better Self" in the play. There have been many messianic novels appearing this year, but none of great importance.

Among French writers of the day Anatole France is most conspicuous as a symbolist, but not of the idealistic sort. His recent allegorical history of France, "The Island of Penguina," is as brutal in its satire as "Gulliver's Travels." In England there is Chesterton, who, in "The Man Who Was Thursday" and his new novel, "The Ball and the

Cross," has not hesitated to express the deepest Christian doctrines in the most grotesque and startling imagery. H. G. Wells, before he went off on his present tack, made effective use of symbolism. His "Food of the Gods," for example, is an allegory of the rise of socialism or something of the kind. In this country James Lane Allen has always employed a delicate, symbolic suggestion, and of late this tendency has become more pronounced. Frank Norris, if he had lived, might have become one of the world's great symbolists, for he began where Zola left off.

Seeing how wide is the movement taking this form it is fitting that the Nobel Prize for literature of an idealistic tendency should go this year to Selma Lagerlöf. She represents the reaction in Sweden against the coarse realism of Strindberg. Whether she is telling a story of the birds and animals, or recasting an ancient saga, or dealing with modern Sicily, she aims always to teach and inspire, and the reader who gets only the superficial meaning of it misses its better part. She has, too, the faults of the mystics, a lack of constructive power, a confusion of imagery. Her long stories are chains of episodes, in which the connection and relevancy are sometimes hard to find.

In "The Miracles of Antichrist" she is kind enough to give the key to the interpretation, calling upon the Pope, as Browning does in "The King and the Book," to deliver judgment in the end. Antichrist is modern atheistic socialism and in general the materialistic reform movement which in this age performs many of the mighty works of primitive Christianity, but without being inspired by its spirit. Antichrist brings plenty upon earth, but makes people forget heaven. He preaches the love of man, but the hatred of God. He heals the sick and inspires martyrs, and rich men come from far to lay offerings at his feet. The allegory is based on the Sicilian legend:

"When Antichrist comes, he shall seem as Christ. There shall be great want and Antichrist shall go from land to land and give bread to the poor. And he shall find many followers."

According to the story, a counterfeit has been made of the wonder-working

bambino of the Church of Aracœli on the Capitol at Rome, and the two images have become confounded. No one can tell whether the true Christ-child is in Rome or Sicily. So they put it to the same test of genuineness as the three rings of Nathan the Wise. The village of Diamante, which holds the rival image, prospers exceedingly, more than Rome in fact. There come to it hospitals, factories and schools, and, as the final and crowning blessing, a railroad up Mount Ætna, bringing crowds of tourists. But a priest of the village watching the people comes to the conclusion that they have become idolaters instead of Christians. They prayed for lottery tickets and good years and daily bread and health and money and they got them, but none came to the church to pray for the forgiveness of his sins or for the peace of his soul. So he takes the image of Antichrist down from the altar and attempts to burn it in the marketplace. This, however, he is prevented from doing, and the Pope, who is evidently not Pius X, rebukes him for it, telling him that he should rather have brought the two images together, which, to come down to bald language, means that thru Christian socialism the problem is to be solved.

Volunteer Censorship

THE official censorship of indecent and vulgar plays in Great Britain lately aroused some opposition, but it carried sound judgment and prevailed. At present there is again discussion over the volunteer censorship of novels, such as one lately written by H. G. Wells, which received severe criticism lately in *THE INDEPENDENT*. In the *London Spectator* it was denounced as "poisonous," fit to be burnt, and the common judgment, outside of club life, approves. To be sure Mr. Wells has written to *The Spectator* in defense of his novel, which is itself a defense of free love, only to call forth stronger denunciation.

Now the British circulating libraries have taken up the evil. They buy popular books, an edition at once, and distribute them to their multitude of branch libraries. There are half a dozen of these companies, and they have suffered no little criticism because they have inadver-

tently purchased and distributed offensive novels. At times they have felt obliged to withdraw them after purchase with considerable loss. They have therefore agreed to form a sort of moral trust, not a financial one, called the Circulating Libraries Association, composed of six companies, like Mudie's, and have agreed that they will circulate no books which they have not had a chance to examine a week at least before issue; that "they will not circulate or sell any book considered 'objectionable' by any three members of the association"; and "that they will do their best to make the circulation of any book considered 'doubtful' by any three members of the association as small as possible." That is, they will not buy or circulate the "objectionable" books at all, and will restrict as far as possible the circulation of those that are of "doubtful" character. They ask the help of the publishers, and the Publishers' Association, thru its council, cordially supports the movement, and calls for a further conference of the two associations with the Authors' Society.

Of course, some object, particularly some authors. Mr. Wells cannot be expected to agree; and Mr. Edmund Gosse has written his protest to *The Times*. He calls it "a serious danger to literary liberty," "a censorship of the press." He says:

"If the proposal of the Circulating Libraries Association is tamely accepted by the publishers, there must be an end to all liberty of publication. I will take leave to shelter myself behind the noble fervor of Milton, who, resisting what answered to the Circulating Library Association of his time—namely, the commissioners assembled in star chamber for the prevention of scandalous publications—replied: 'Suppose we could expel sin by this means; look, how much we thus expel sin, so much we expel of virtue.'"

We would remind Mr. Gosse that a refusal to buy does not at all correspond with the law of Milton's day forbidding to print.

But Mr. Gosse here misrepresents Milton. He does not tell his readers that in that great writer's famous speech in favor of unlicensed printing he particularly excepts some books. He says:

"That which is impious or evil absolutely either against faith or manners no law can possibly permit that intends not to unlaw itself."

By "manners" he means *mores*, mor-

als, precisely what the Circulating Library Association means when it excludes books of a plainly corrupting tendency.

What such books are may be illustrated by that book by Mr. Wells which *The Spectator* characterized as "poisonous." In his reply to *The Spectator* Mr. Wells thus defines its meaning:

"My book was written . . . in full sympathy with the natural, but perhaps anarchistic and anti-social idea that it is intolerable for a woman to have sexual relations with a man with whom she is not in love, and natural and desirable and admirable for her to want them, and still more so to want children by a man of her own selection."

This is the announcement of the doctrine of the book which *The Spectator* declares to be a glorification of incontinence and adultery, and which we called a "pithecanthropoid romance" of "passion reduced to a scientific formula." It is no service to the human race to have the brute in us made regnant in society.

We add one word in reply to Mr. Wells's attack on American conditions. He says to *The Spectator*:

"Your ideals have had the fullest play in the United States of America among the once prolific population of Puritan and Dutch descent. There, if anywhere, the Christian ideal of marriage and woman's purity, as you conceive it, has prevailed exclusively. So late as 1906 the Gorki incident in New York called attention to the continuing vigor of these conceptions. And yet that colonial strain has dwindled to a mere fraction of the population of the States, and still dwindles."

That is utterly false. It has not dwindled; it has multiplied many fold. It has spread from New England to the Pacific Ocean and has filled a score of States with a teeming population which far outnumbers the millions that have come in later from other lands, *teste* the prevalence of English names almost everywhere in the country. Take the nearly five hundred members of the two Houses of Congress and there are scant sixty-five names that are not distinctly English or Scotch. That does not look like race suicide. It is true that in New England the old native population is proportionally reduced, but simply because for two centuries the vigorous young people have moved West to fill the new States. Mr. Wells is in error if he imagines that in telling the story how a girl bolts with a married man he is solving the decline of the birth rate.

Now to return to the censorship question. The Circulating Library Association is guilty of no censorship; it is simply a limited boycott. They forbid no writer to write, no publisher to print, no reader to buy. They simply agree that they will not buy what they regard as immorality just short of obscenity. In this they are perfectly justified, just as they would not buy books and distribute books classed as "Facetiae" or "Curious." It is time that such an agreement were made. If that is Puritanism or bigotry we would be Puritans and bigots.

Western Farm Mortgages

THE frequent assertion that the Western farmer is paying off his mortgage indebtedness because of his abundant prosperity, is not borne out by some statistics gathered by the Labor Bureau of Nebraska. That commonwealth has certainly had its share of the advancement in wealth and in the prosperity of the farming sections of the West. It had its hard times in the early nineties and recovered from them in full measure. It is a typical prairie State in many ways and its experience is probably not much different from that of its neighbors. Yet the report just published shows that in 1907 16,658 mortgages on farms were filed, their total amount being \$36,432,000, while those released were 17,990, for \$26,357,000. In 1908 the number filed was 16,108, for \$34,408,000, and the number released, 16,004, for \$30,701,000. Here was a net gain in mortgage indebtedness in that State for the two years of \$13,782,000 a condition not to be anticipated from the reports that have come regarding the abounding wealth of the Western farmer. On the face of it this has the appearance of a retrogression in actual net possessions and argues either a failure of the farmer to save his money or a speculative tendency that indicates perpetual indebtedness. Considering the political capital made of those same mortgages back in the nineties, we had expected a different showing.

Yet there are extenuating circumstances that modify the situation. The value of the farms on which these mortgages rest is today four to six times that of ten years ago. The loans are conse-

quently much less in proportion to the worth of the property than when in the early nineties the loan and the value of the security were more nearly equal. The farmer has a larger equity and he gets his money at a rate not more than two-thirds the old figure. Mortgages are written at 6 per cent. as far West as the Sixth Principal Meridian, and investors find the security sound. Several large life insurance companies that make a specialty of real estate mortgages declare the Middle West wheat belt their best territory. The statements of two such companies show these amounts loaned on farms in that section: Nebraska, \$9,400,000; Kansas, \$10,193,000; Oklahoma, \$2,136,000; South Dakota, \$5,534,000; North Dakota, \$6,017,000; Iowa, \$19,771,000; Missouri, \$22,561,000. The fact that their loans are constantly increasing in this territory is another evidence of the capital-seeking tendency of the Western agriculturist.

Then there is the added modification of modern reasons for borrowing. The early settler pledged his farm in order to secure money on which to exist. He spent the proceeds of the loan for food and clothing. He promised any interest the investor might charge if he only could obtain the funds. In many instances it was with him a means of selling his land, and thousands of Eastern purchasers of Western farm loans found themselves in possession of gaudily decorated documents that were practically worthless and the losses on this class of investments were for years a reproach to anything that savored of realty loans west of the Mississippi. The modern farmer borrows for a different purpose. He is either buying more land or is making improvements on that which he already possesses. He has learned how to use money in ways that will return to him a larger income than the interest account, and thus becomes a business man in a broader sense. With land constantly increasing in value, as it has been doing for a decade, his real estate investments are giving him ample return and he is satisfied, perhaps increasing his loan in order to go deeper into the new wealth-making procedure. This, no doubt, accounts for much of the increase noted in the statistics of Nebraska.

Within bounds there is good business judgment in such borrowings. The danger is that it will continue until the climax of values is passed and settlement must come. Prices of Western farms cannot continue to rise forever. Indeed, many shrewd observers believe that already the figures are higher than conditions warrant—that is, they are beyond the limit at which a fair interest on the investment can be returned from the production. When this point is reached it means that prices are fixed either by sentiment or by speculation. The former is not characteristic of the West; too many changes in population take place to indicate the old homestead affection felt for Eastern farms that have been in the possession of a family for generations. The Westerner is restless; he is always willing to move on to more promising prospects.

The Western farmer has branched out in recent years into many activities. He has invested in bank stocks and has been a liberal buyer of lands in the unsettled portions of the Southwest, where is a promising outlook for rapid rise in land values. Perhaps he has delayed reducing his home debts in order to take these chances and has counted on the future to make the account good. Then, too, he has become a local investor and divides with outside capitalists the offerings of desirable loans. This, of course, means that the total wealth of his community is greater than when practically every mortgage was held in the East and all interest payments went out, instead of remaining at home. So on the whole the farming communities are making financial progress and comparatively are in the best condition in their history, even if there are yet many millions borrowed on the farm.

But the Westerner should remember that there may come again hot winds and light yields, and he ought in these days of thrift and gain to make preparation for such future. This he cannot do by increasing his debts, even tho the security increases in value. Values may not be maintained and creditors may become insistent. To this extent the increasing volume of mortgages is a danger—tho for the present it may indicate intelligent business methods.

King Leopold It is extremely difficult, probably not desirable, in mentioning the death of King Leopold of Belgium, to follow the old rule "Nothing but good of the dead." He may have been a sagacious ruler of Belgium, and he may have been a shrewd business man, but the foreign world knows him only as the old roué, the man who lived in illicit relations in a palace with his mistress, called his morganatic wife; who quarreled with his children, and who managed to seize personal possession of an enormous area of Africa, and who governed it with terrible cruelty for his own personal wealth. He goes down to history as one of the world's chief monsters, one whose acts have disgraced Belgium while they have devastated the Kongo. At last Belgium took possession of the Kongo Free State, and we may hope that a better era is at hand. He died in the bosom of the Church, having received extreme unction, the priest who administered it declaring that he had met the conditions, that is, that he had, under a religious ceremony, tho not a legal civil ceremony, married the baroness who was the mother of two of his children. We can offer no criticism of the priest, for if a man makes confession and claims to repent of his sins, the priest has no right to refuse the offices of his Church, no matter how questionable the genuineness of the repentance may be. Even in a case of sudden death the old rhyme expresses hope:

"Between the saddle and the ground
He mercy sought and mercy found."

It is agreeable to be assured that there is no truth in the report that the Pope had sanctioned his "morganatic marriage."

The Abolition of Football It must be confessed that college authorities have not gained the respect of the public by their attitude on the football question. They have permitted and encouraged the development of a game which is not only brutal and dangerous but antagonistic to the spirit of true sport and the promotion of physical culture. Yet they stick to it and defend it as the German universities do the practice of dueling. But in dueling fatalities are

very rare and slashes on the face are not nearly so injurious as the torn ligaments and broken bones common in football. Every year in response to public protests the "friends of football" have promised to reform the game. Every year they have broken the promise. The game has grown worse right along and everybody now realizes that the leading coaches have no intention of making any important changes. Last fall was the most fatal of all. The death roll is 8 college students, 20 high school students and 2 athletic club men, total 30. The injured number 216, among which are 19 cases of concussion of the brain, 19 fractured ribs, 15 broken legs, 9 broken arms, 12 cracked shoulder-blades, 25 internal injuries, etc. The defenders of football are fond of saying that yachting, skating, horseback riding and swimming have even more victims. But there is this difference. In football the injuries are inflicted by the opposing players, often with malice prepense, and are inevitable accompaniments of the game. In the other sports they are truly accidents. If people went in swimming for the sole purpose of holding each other under water, and if in every group of 22 bathers some one had to be resuscitated by artificial respiration every few minutes, then we should undoubtedly have laws against swimming. One of the reasons why university authorities generally refuse to take action against football is the belief that athletic prowess increases the prestige of the institution and draws students. But it is questionable whether the young men who are attracted to a university by this lure are a benefit to the institution. It is also questionable whether there is any gain even in numbers. Five years ago both President Eliot of Harvard and President Butler of Columbia expressed themselves as opposed to football, but there was this difference in the result. Columbia abolished football and Harvard did not. Since then Columbia has passed Harvard in attendance and now stands at the head of American universities. In 1903 Harvard had 6,013 students and Columbia 4,557. In 1909 Columbia had 6,132 students and Harvard 5,558. Yale, whose superiority in football is unquestioned, is decreasing in numbers, particularly in the college which is most occu-

pied with athletics. About the same time President Jordan of Leland Stanford and President Wheeler of the University of California agreed that football had become unendurable, so the two institutions substituted Rugby, which is a rough game still, but not so likely to cause serious injuries. Of course, the minor colleges and the high schools of California had to follow suit. The whole State now plays Rugby and the public finds it a more interesting and less distressing game to watch. If the university authorities want to abolish football they can. If they do not want to they are likely to be compelled to by force of public opinion or of legislation.

The Children of Immigrants Everybody knows that while one can usually tell an immigrant Irishman, Italian, or other foreigner from a native-born citizen, it is almost impossible to distinguish their children born in this country from other children. Whether the reason is that they talk "American" as well as the rest of us, or wear American clothes, has not been clear, but the fact of a complete assimilation was evident, and has been, to thoughtful people, a sufficient proof that we make too much of racial peculiarities. Now the Immigration Commission has been studying this problem, and they find, to their surprise, that in the cases of Sicilians and European Hebrews, and probably of other races, a remarkable change in physical type takes place in the first generation after reaching this country. It develops in the earliest childhood and even affects the shape of the head, hitherto regarded as one of the most permanent of hereditary characteristics. It is shown that the American-born children of the long-headed Sicilians and those of the round-headed East European Hebrews have very nearly the same intermediate head form. The children of the long-headed Sicilians are more round-headed, the children of the round-headed Hebrews are more long-headed, than their parents. Similar changes are traced in the development of the faces of these types. Of course, better physical conditions will also affect the stature, but in the case of

Sicilians it does not yet appear that the improvement is more than slight. This new investigation may seriously disturb the conclusions of those who have made so much of dolichocephalic and brachycephalic craniology, and the study of the origin of races.

A Cruel Law Here is a curious story of what has lately occurred. Edward W. Von Buelow lived in New Orleans, and was cousin of the late German Premier. He was a brilliant and successful business man. He was in love with a beautiful girl and sought her hand in marriage. She told him that it was not generally known that she had a trace, but not a tinge, of African blood, and that the miscegenation law would forbid their marriage, and that it would be made disagreeable to him if the fact became public. He said he did not fear, that no one would ever suspect it, and that he loved her for herself. They were married, and two flaxen-haired children were born to them. He was successful in business, but a group of cotton speculators led him into a business trap in which he lost his house and fortune. They had somehow learned that his wife, who was the daughter of a judge bearing an old and honored name, and who had loved and educated her, had a mother not a pure Caucasian, and Von Buelow was arrested and then disappeared. Officers who went to his house to serve a warrant upon his wife found him missing. "You'll never see him again," she told them; "neither will I. Your laws have killed him." A few days later his body was found floating in the Mississippi. It is a pitiful story of a shameful law. If any one was to be arrested, why not that judge? But his offense was too common.

What the Farmers Want The Farmers' National Congress, which held its annual session at Raleigh, N. C., in November, places in its platform a resolution demanding a parcels post system, and another demanding a postal savings bank. It is strongly opposed to a ship subsidy, and it demands the conservation of our national

resources. It is somewhat more original in calling for an appointment of a Government commission to survey four national roads from the Atlantic to the Pacific, these to be joined by longitudinal roads. It calls for the drainage of our swamp lands by the Government, and national appropriations for farm demonstration work among the negroes. It would like to see foreign immigration sharply restricted, and it is opposed to great standing armies. It calls for a reorganization of our school system in the interest of industrial pursuits, and it wants an equal chance for country boys and girls at school with city children. Most of these points are not novel, perhaps not every one is wise, but they are a simple presentation of public sentiment on our farms. Instead of asking for protection, by a tariff or a subsidy, the farmer calls for a chance to develop natural resources. He wants hindrances removed. What the congress says for the negro is worth heeding:

"Whereas, the majority of the lands of the Southern States is cultivated by negroes, resolved that we urge additional appropriation, to conduct special farm management demonstration work among negro farmers."

The Restoration of Mesopotamia

One of the most important of all the results of the constitutional reform of Turkey is likely to be the recovery of Mesopotamia and Babylonia from the condition of a desert to civilization and dense population. Just one thing is necessary, and that is a sound government which will protect investment and labor instead of oppressing and destroying them. It is extraordinary that the region where once reigned the two mightiest nations of the ancient world, with a dense population and a most fertile soil, should now be inhabited by small straggling villages of miserable Arabs, the lowest of the nations. But there will be a speedy and marvelous change. Under the engineer who has executed the irrigation system of Egypt a similar plan has been devised for Mesopotamia, and the expense is very small. Millions of money will pour into the country for investment and great fortunes will be made. A territory much larger than that of Egypt will be fitted

for agriculture, supplied by a network of larger and smaller canals, and along the banks of these canals roads and railways will be created, at very small expense, and the traffic and commerce of the country will be diverted from India and carried by railway to the Mediterranean coast. Our children will again see great cities and centers of culture to succeed ancient Babylon and the later Seleucia, and the still later Bagdad of the Arabian Nights. We thought it would be necessary that the Turk should go, but it may be that the Turk can be reformed.

"John Brown's Body" is marching now in England. The Budget Protest League have put to it the following words to use as a campaign song against the Government:

If they put a tax on talking it would make a useful law,

They could raise about a million out of Mr. Bernard Shaw,

And p'raps we might get a little less of Jaw and Superjaw

As we go marching along!

There's a tax upon your whisky, so you have to take it weak,

There's a tax upon your beer as big as—Winston Churchill's cheek!

There's a tax upon your temper when Lloyd-George begins to speak,

As we go marching along!

(Chorus)

Oh! we're a happy, happy nation,

Thanks to modern legislation!

Give three cheers for emigration

And Heaven bless Lloyd-George!

Some years ago Cardinal Richard removed an assistant priest. Thinking himself wronged, he sued the Cardinal, claiming 100,000 francs damages. Recently the case was before the court, with Mgr. Amette, Archbishop of Paris and legal heir of the dead Cardinal, as defendant. The main charge against the removed priest was that he had a sour temper. His life was correct and his doctrine sound, but he was a hard man to get along with. In winding up his defense, the priest's lawyer quoted this saying of Cardinal Richard: "And to fancy, my God, that after we have borne with them on earth, we may find them in heaven!" The advocate provoked a discreet smile among the clergy present in

adding: "My client peevish? And such a thing never yet kept a curé from becoming a bishop; a bishop cardinal, or a cardinal Pope. Some of them even are beatified."

We too regret that we and the world had no knowledge of the fact now published by his brother that William Watson had seventeen years ago suffered from mental aberration after a period of unusual stress and elation, and that it took the form of unreasonable suspicion and bitter attack on those who were his friends. His brother now tells the sad story in defense of the poet, whose late outbreak he equally attributes to insanity. How could we know it, how could the world know that it was not the real William Watson, but the disordered mind which had uttered those otherwise unpardonable words? We said, "We could not believe that any sane man—but are poets sane?—could have been guilty of such a personal offense." Now we withdraw whatever we said against the irresponsible poet, who has our inexpressible pity.

As to close communion, we ought not to have conveyed the impression that it is passing away among the Baptists of the South, if we may trust the statement of the Rev. E. T. Mobberly, of Booneville, Miss. He writes us:

We are a unit in our well-known position on the communion question. . . . I am firmly convinced that you would be unable to get a half dozen pastors among all Southern Baptists who would have consented to take part in the ordination in question.

He refers to the case in Atlanta when ordination was refused to a man who did not believe in close communion. In the North close communion is no longer insisted on, and we wonder if open communists are really so few in the South.

President Shanklin, of Wesleyan University, said at his inauguration the other day:

"We openly announce that Wesleyan does not desire at any time above five hundred undergraduates. She will be content with small but picked classes. We believe that then we shall continue to attract to the faculty scholars of the first rank who are sick and tired of adapting their instruction to the requirements of incompetents and of resisting appeals from

the Athletic Committee to give their 'star' one more chance."

Very good, but we have yet to see a college president who regretted additional numbers—and tuition fees.

Here is a curious case in verbal history. In Kobe, Japan, a boy at school pronounced the word *melancholy*, with the wrong sound of *ch*. The boys took it up, shortened and changed the word further, and as *chori* used it as a slang term for the blues. It spread further, and in a girls' school a pupil in an exercise used it innocently, supposing it to be good Chinese until her teacher, who had not yet heard it, asked what she meant by it. What a puzzle an etymologist of fifty years hence would have had to find its derivation.

The Royal Commission appointed to investigate needed British legislation as to divorce has on it, very properly, two women. It particularly will consider the inequality which makes it possible for the rich, but not the poor, to obtain divorces. Every year more than 7,000 separations are granted, at little expense, but they are not divorces, and these separated parties can not remarry, and their condition is a menace to good morals, it is thought. It is hardly fair to grant divorce to those who can afford it, and refuse it to others.

While the deaths by football were numerous and bad enough, yet more deaths were caused by another sort of game during the season. In Maine fourteen persons were killed while hunting, and twenty others in New England, New Brunswick and Nova Scotia. Besides these five others are not expected to recover and two have lost their sight. And yet nobody seems to object to the sport, except as some criticise Mr. Roosevelt's expedition in Africa.

Brigadier-General C. R. Edwards, Chief of the Bureau of Insular Affairs, once more recommends that Congress take positive action speedily conferring citizenship on the people of Porto Rico. We have often urged this duty, and are glad to see it once more advised by high authority.

Abridging a Beneficence

UNLESS the State of New York is prepared to take the position that life insurance is one of the necessary evils rather than a beneficent instrumentality in ameliorating human misery, it will find difficulty in defending some of the absurd restrictions circumscribing the operations of life companies, and particularly that law which limits the aggregate amount of business a company may annually transact.

A consideration of this subject renders it impossible to forget that distilleries, wholesale dealers in whisky and the hundreds of thousands of saloons which, like cancerous sores, infect the body politic, are not so rigidly inspected, and that the law is absolutely mute in respect of the extent of their traffic. The traders in "creature comfort" may, if they can, dispense millions of gallons of body-and-soul-destroying fluid among the people, but life insurance companies have set up for them limits which they dare not exceed without incurring the penalties assessed against the commission of misdemeanors.

Is it seriously contended by legislative omniscience that the multiplication of life insurance is productive of more injury to the public interests than the sale of an article which, thruout all recorded time, has indisputably wrought more ruin among men than any other one thing that ever affected their estates? If this claim is not made, and if it is sincerely believed by the sage givers of laws that life insurance should be "cabined, cribb'd, confined," then upon what principle do they silently consent to the un-dammed flood of liquor which annually deluges the land?

Are we to be forced to the conclusion that life insurance is not only an evil, but that it is one of greater proportions and similar effects than the traffic in intoxicating liquors?

Such a conclusion would naturally blossom out of the intellectual soil of a Bowery politician, and others of his kind, but not elsewhere.

Life insurance management, in common with all other activities, including those of law-making and governing, has not been guiltless of indiscretion, extravagance and dishonesty in the past; nor, unless human nature undergoes a marvelous transformation, will it be exempt from these weaknesses in the future. In an endeavor to curb those made manifest by the inquiry of four years ago, some very useful and a few injurious laws were enacted. Among those of a beneficial character was the one governing expenses, and included with those which may be classed as indifferent or bad was the one limiting the amount of insurance permitted to be written annually. The necessity for stern measures against extravagance is apparent, but where are we to find an adequate reason in support of an interdiction against the extension of a blessing? If twice or thrice the amount permitted by the law were written—granted strictly in conformity with the regulations governing expense and in accordance with the usages of economy—what injury could result either to the general public, the older policyholders or those newly insured? Positively none. On the contrary, the benefits, individual and public, are enlarged by that much.

Sociologically, the man who argues that there can be too much properly granted and maintained life insurance extant in a nation is a student of superficial proportions, habituated to dealing exclusively with externals, and totally insensible of the essence of things.

What is life insurance?

Consider this question thoughtfully. Is it not the distribution of misfortune? Is it not the multitude contributing pennies to the few who become, thru death, the inheritors of poverty?

Death will not cease. Poverty has not yet been destroyed. Why should not the results of these two scourges be distributed among the greatest number possible, and not restricted to the smallest number?

Then why limit the amount of life insurance which, under proper conditions, may be written?

Instructive Bond Tables

COMPLETE and trustworthy tables relating to all the bonds reported on the regular daily lists of the New York Stock Exchange are published in the pages immediately following. They have been prepared for us by Francis Emory Fitch, the well-known compiler and publisher of standard quotation statements and other Stock Exchange records. In them are shown the title of each bond, its rate of interest, the year of its maturity, the dates of interest payments, income (or annual return, irrespective of maturity), yield (or approximate annual return, if the bond be held until maturity), the highest and lowest prices, with dates, since January 1, 1907; prices at latest sales, with dates; and last week's bids and offers. The quoted prices include interest to date of sale, exceptions to this rule being plainly marked. There are also distinguishing marks for bonds in which the savings banks of the State of New York are permitted by law to invest. This information, our readers will observe, is given not only with respect to all the railroad bonds, but also concerning Government securities and the issues of gas, electric light, street railway, coal, iron, industrial, telegraph and telephone companies.

The purchase of bonds has been a very prominent feature of the transactions on the Stock Exchange during the last two years. Sales of bonds (par value) in 1907 amounted to only \$526,170,450. But in 1908 they rose to \$1,082,161,120, altho the number of shares of stock sold was almost the same in the two years. Following the panic, investors became cautious and sought safe securities that could easily be marketed. This movement in favor of bonds has been even more noticeable in 1909, for in eleven months the bond sales, \$1,204,866,000, have largely exceeded those of 1908. Our tables, when examined, will show many trustworthy issues which yield quite satisfactory re-

turns. The average investor who finds in them certain issues which are commended by their income figures, and which, altho not prominent in the market, may be of fine quality, should procure the advice of bankers who are thoroly informed as to the history, condition and prospects of such securities.

Telephone Companies Bought

It was announced on the 15th at Toledo that two prominent independent telephone companies had been bought by J. P. Morgan & Co., of this city, for their own account. Following the recent acquisition of control of the Western Union Telegraph Company by the American Telephone and Telegraph Company (the Bell interests), this purchase is especially interesting, in view of the fact that after the change in the Western Union, Mr. H. P. Davison, a member of the firm of J. P. Morgan & Co., was elected a member of that company's board of directors. One of the companies which were bought last week is the Cuyahoga Telephone Company. It does business in Cleveland and has an authorized capital of \$2,000,000 in common stock and \$1,500,000 in preferred, with \$3,500,000 in bonds. The other is the United States Long Distance Company (capital, \$4,000,000 common stock, \$1,500,000 preferred, with \$2,500,000 in bonds), which owns exchanges in several cities of Ohio and has long distance connections with Buffalo, Pittsburgh, Indianapolis and Detroit. Five other companies, which appear to be controlled by James S. Brailey, Jr., who sold the two already mentioned, will also be acquired, it is predicted in Toledo, by J. P. Morgan & Co.

It does not follow that the companies thus acquired will be turned over to and absorbed by the Bell corporation. The statement is made that "they will be continued as separate plants in competition with the Bell, but upon conservative lines, without disastrous price-cutting."

In all probability, however, the interests of the people would be better served by a complete merger with the Bell properties. This movement of the Morgan house is probably for the public good, but a complete union of the competing companies is to be desired. In any city, as a general rule, one telephone company is better than two. But the one must give good service at reasonable rates, and the prospect now is that it will have to accept official supervision.

....Since it was chartered, sixty-three years ago, the Pennsylvania Railroad Company has paid \$329,773,437 in dividends.

....The wages of telegraph operators on the Atchison road have been increased. These employees were not organized and had not asked for additional pay.

....The Brooklyn Rapid Transit Company, which has 13,000 men in its service, announced last week the adoption of a pension system for the benefit of its veteran employees.

....Relief fund payments on the Pennsylvania road have amounted to \$27,150,635 since the first of the two relief departments was organized, in 1886. The work of the second was begun in 1889.

....More than 90 per cent. of the mills in Manchester, England, that spin American cotton have for some time past been running 40 instead of 45½ hours a week, and they intend to continue this curtailment until March 1.

....The New York gas companies have paid to consumers, on 1,335,575 vouchers, rebates amounting to \$10,351,027. When the price of gas was reduced by statute this money was collected and held subject to the final decision of the courts.

....Reports from Chicago say that provision prices are higher than they have been for many years. Lard has not been so high since the seventies. Prime steers were recently sold in the open market there at the highest price on record.

....Forty applications to organize new national banks were made in November, and twenty-nine were approved

by the Comptroller of the Currency. In the same month, twenty-three banks, with a total capital of \$1,375,000, were authorized to begin business.

....An extra dividend of 8 per cent. has been declared by the directors of the First National Bank. This makes in all a dividend of 16 per cent. for the stockholders, and a total of 40 per cent. for the year. The bank is capitalized at \$10,000,000, and this year's dividends amount therefore to \$4,000,000.

....According to an official report recently issued at Manitoba, the railway companies have spent this year in construction work in Western Canada \$28,000,000, and \$20,000,000 for supplies and materials. Next year's estimates of the three leading companies provide for an expenditure of \$75,000,000.

....In the last 120 years, exports of manufactures from the United States have amounted to a little more than \$12,000,000,000, half of which is assigned to the last eleven years. Recent growth is shown by the following figures for the last five decades: \$479,357,780; \$1,078,638,471; \$1,500,552,772; \$2,411,408,106; \$5,855,613,378.

....Henry Evans, president of the Continental Fire Insurance Company, and at present chairman of the board of directors of the Phenix Fire Insurance Company, has issued a statement in which he presents the belief that the Phenix has a capital intact of \$1,500,000 and a net surplus of \$500,000. The work of housecleaning and rehabilitating the company is progressing rapidly and satisfactorily.

....Reports compiled for the use of the Monetary Commission show that the total resources of the country's 22,491 national, State and private banks (savings banks, loan companies and trust companies included) amount to \$21,095,054,420. Other totals are as follows: Capital stock, \$1,800,000,000, in round numbers; surplus, \$1,326,000,000; undivided profits, \$508,000,000; undivided deposits subject to check, \$6,056,000,000; savings banks deposits, \$4,026,000,000; holdings of United States bonds, \$702,000,000; of State, county and municipal bonds, \$1,091,000,000; of railroad bonds, \$1,560,000,000; of other bonds, \$846,000,000; of stocks, \$280,000,000.

These Bonds are reported on the New York Stock Exchange List.

Under INCOME will be found the annual return of the investment, irrespective of maturity.

Under YIELD is given the approximate annual return if held till maturity

• Legal for investment for Savings Banks New York State. * In Bid and Offered column means amounts less than \$70,000.

VOL. LXVII NEW YORK, THURSDAY, DECEMBER 30, 1909 No. 3187

Survey of the World

Zelaya Sails Away in Safety

Ex-President Zelaya sailed away from Nicaragua on the 25th, having sought asylum on the Mexican gunboat "General Guerrero." Dr. José Madriz, a judge of the Central American Court of Justice, had been made President, and on the 20th and 21st the Government's army at Rama had been completely routed by the revolutionists. Dr. Madriz, to whom Congress had offered the Presidency, came up from Costa Rica on the 19th. During his journey he is reported to have said that the Mexican Government desired that he should be Zelaya's successor. On the 20th, Congress elected him President by unanimous vote. He sent to Estrada an envoy, whom the revolutionist leader declined to receive. Estrada's attitude toward Madriz had been defined in the following message to Secretary Knox:

"No change in the person of Zelaya's chief executive selected by him or by the Congress he controls will be accepted by the majority of the Nicaraguan people allied to our cause in the struggle for justice. Peace in this country can only be assured by the complete exclusion of Zelaya and his followers. We will continue fighting until this is secured. In the name of liberty, and with justice on our side, we ask you to recognize my Government."

Estrada began to attack the Zelayan army near Rama on the 20th, but the sharpest fighting took place on the following day. It was a real battle, for our Consul at Bluefields reports that 900 were killed. The revolutionists had machine guns, which were used under the command of Captain Fowler, formerly an officer in the United States army. He is an officer of the Texas National Guard and a member of the Texas Governor's staff. There were also American sharpshooters commanded by Colonel Conrad, of Louisiana.

At the end scarcely anything was left of the Zelayan army, for Estrada took 1,900 prisoners, including the commanders, General Gonzalez and General Castrillo (Vasquez, the chief, being absent on sick leave), 1,500 rifles and 1,000,000 rounds of ammunition. The prisoners were marched to Bluefields. They were ragged and half starved, having had very little food in ten days. Many were mere boys. Our Consul asked by cable that food be sent from Colon, and a shipload was soon on the way. The wounded were carried to Bluefields, where they filled hospitals improvised by the fourteen surgeons who landed from the United States warships. At last accounts, Estrada was preparing to go to Managua by way of Greytown, expecting that the Zelayan garrison there would surrender.—Madriz was inaugurated in Managua on the 21st, Zelaya urging the people to support him. Zelaya issued a manifesto, saying he had resigned to prevent the humiliation of his country by the United States, whose enmity he had excited by opposing attempts to make the Central American countries mere dependencies. The execution of Groce and Cannon, he added, had been used as a pretext for interference, as the destruction of the "Maine" had been used in the case of Cuba. On the 23d, accompanied by an armed guard, he started for Corinto. There, on the following day, he was taken on board the Mexican gunboat, which at once sailed northward. There was a salute of thirteen guns from the shore when he went aboard, but no notice of his departure was taken by the United States warships. The Washington Government had been informed by Mexico that his request for asylum had been granted. It is asserted that Mexico has been in alliance with Nicaragua

against Guatemala by secret treaty. Zelaya's destination was not made known. It is said that he will go to Brussels, and that a part of his wealth is invested there. —Zelaya left the treasury empty, and on the 25th President Madriz publicly announced that the country was on the verge of bankruptcy. By his order Joaquin Passos, Zelaya's son-in-law, and Ernesto Martinez, Zelaya's Minister of Finance, were arrested. Both are charged with misappropriation of public funds, the circulation of unsigned paper currency, and similar offenses. Passos represented Zelaya in the operation of monopolies for their joint profit. Zelaya's Chief of Telegraphs, Santos Ramirez, was also arrested, and several prominent Nicaraguans banished by Zelaya some years ago, were recalled. Francisco Baca, who has been made Minister-General, in place of Julian Irias, is preparing a decree establishing a commission to revoke the franchises under which have been operated a score of monopolies given by Zelaya to men with whom he was secretly in partnership and who turned over to him the greater part of the profits.

Trust and Customs Fraud Cases

It was said last week that the Government's prosecutors in the sugar fraud cases at New York had given up all hope of getting from the five men recently convicted confessions affecting their employers in the Sugar Trust. Additional indictments have been procured from the grand jury. One of the men thus accused is Thomas Doyle, assistant dock superintendent for Arbuckle Brothers, the refiners who recently paid the Government \$695,000 on account of frauds in weighing sugar. Another is James F. Halligan. It now appears that he was indicted jointly with Ernest W. Gerbracht, whose indictment was mentioned last week. Gerbracht had been general superintendent of the Sugar Trust's largest refinery, at a salary of \$20,000, and he was indicted a few days after his acceptance of an offer of \$80,000 from the Arbuckles. —Thomas B. Harned, of Philadelphia, a lawyer who was counsel for Adolph Sigmund when the Sugar Trust obtained control of the latter's refinery, and who was indicted some months ago, with

directors of the Trust, for violation of the Sherman Act, has sued a New York magazine for libel, asking damages in \$75,000 on account of a published criticism of his action. When indicted, Harned pleaded the statute of limitations, and his demurrer to the indictment was sustained. The same magazine published a letter relating to these indictments, sent by Attorney-General Wick-ersham in June last to District Attorney Wise, who filed it with his personal correspondence. It appears to have been stolen, and the Attorney-General desires to prosecute the thief. The letter said that Senator Root had sent to Mr. Wick-ersham the petition or brief of Harned's counsel in support of the contention that the statute of limitations had run in favor of him and the other defendants. It continued as follows:

"If the only overt acts done to carry out the objects of the conspiracy were those referred to in the brief, I should think they were insufficient to save the bar of the statute. A strong effort will be made tomorrow to persuade the President to interfere in some way to prevent the indictments, but aside from that, no indictments should be returned against any one if there is no reasonable ground to believe they can be sustained—if, for instance, the offenses charged are clearly barred by the statute."

Mr. Wise was asked to advise the Department of Justice of the charges upon which he relied, and to do this before procuring the indictments. Some time later the indictments were returned, but the statute of limitations was successfully pleaded by two of the defendants, Harned and Kissel. From this decision the Department of Justice has appealed. —Thomas L. Hisgen, of Springfield, Mass., president of the company which is the most aggressive competitor of the Standard Oil Company in the North-eastern States, says that if the recent decision of the Circuit Court against the latter company is sustained by the Supreme Court, there will surely be not less than five hundred suits against the Standard for damages, involving claims of \$250,000,000. These suits will be brought under that section of the Sherman Act which provides for the recovery of three times the actual damages. —In New York, last week, indictments were returned against twenty-seven persons (dressmakers, milliners, importers and persons employed on the

steamship piers) for smuggling costly gowns, laces, etc., in trunks from Paris and elsewhere. Several of the defendants are in business in Boston or Chicago. It is said that this smuggling, carried on by methods devised by a man formerly employed in the customs service, has cost the Government \$1,000,000 a year for the last five years.

Canada's Navy The Canadian Government has purchased from the British Government the cruiser "Rainbow," 3,400 tons, which was built at a cost of \$920,000. This cruiser, the nucleus of Canada's navy, is to be used as a training ship for recruits, and will probably be stationed in Pacific waters. Negotiations are in progress for another and a larger cruiser to be used in the same way in Atlantic waters. When Parliament reassembles, on January 12, the question of the new navy will be taken up, in connection with a Government bill providing for the cruisers and torpedo boats which are to be constructed. It is predicted that they will be built in Canada, as the Government is considering offers from two prominent British firms of shipbuilders for the establishment of the needed shipyards and dry docks. A recent caucus of the dominant party showed that the Laurier Government's naval policy will have ample support in Parliament.—The proposition that Canada should be represented directly at Washington by an attaché, subordinate to the British Ambassador, was recently discussed in Parliament. It was opposed by Premier Laurier, who said such representation was not needed at present, as Canadian affairs were receiving more attention at the Embassy than ever before. It would be difficult to define the status of such an attaché, and it was wise to let well enough alone. Canada's relations with the United States, he remarked, were very cordial.—In the eight months ending with November, 71,988 settlers went into the Canadian Northwest from this country, this number showing an increase of 68 per cent. over 1908. It is estimated that each of these settlers had, on an average, \$1,000 in cash and property. The prediction is made that for the full year ending with

March next the number of American citizens thus crossing the boundary to settle on homesteads in Canada will be 100,000, representing an immediate addition of \$100,000,000 to Canada's wealth.—The Manitoba Government has decided to support during the approaching session of the Legislature a policy of Government ownership of grain elevators, and will proceed in co-operation with the Grain Growers' Grain Company, which has 10,000 farmer stockholders and handles a large part of the wheat crop.

The Islands The announcement was made in Porto Rico, last week, that after twelve years of political hostility, the leaders of the Republican and the Unionist parties, Dr. J. C. Barbosa and Luis Rivera, had agreed to bury their differences and work together for the improvement of civic conditions, an elective Senate and the largest measure of self government. The Unionist is the dominant party. The Republicans have supported in the main the policy of the Washington Government.—The extraordinary Christmas drawing of the Cuban national lottery was a failure. Only 18,000 of the 30,000 tickets were sold. This probably means a loss for the government, which expected a profit of \$900,000. The capital prize was won by a club of eighteen bricklayers.—No effort will be made by our Government to collect from Cuba the debt of \$6,569,511, representing the cost of intervention, until the island's treasury is in better condition.—Attorney-General Wickersham has decided that the Philippine Government has a right to sell in tracts of any size the lands acquired from the friars, although the organic act limits the sale to individuals or corporations of unapportioned lands obtained by the treaty with Spain. He holds that the friars' lands are not covered by that act. The question arose in connection with the recent sale of 55,000 acres of the San José estate, on the island of Mindoro, to persons said to represent the Sugar Trust.—According to statements made by persons who arrived in Porto Rico, last week, from Santo Domingo, the Government forces in Santo Domingo have recently been defeated in several battles

by the revolutionists, whose leaders are Ex-President Jimenez and Ex-President Morales.

Dr. Cook Discredited

The committee of the University of Copenhagen appointed to examine the evidence presented by Dr. Frederick A. Cook that he had reached the North Pole reported unanimously that the documents contain no proof of his claim. No original notebooks were submitted and no information of any value as to the instruments used or methods of making observations. Dr. Cook does not appear even to have been aware of the necessity of allowing for variations of the compass or of correcting his chronometer. Very few astronomical observations were given and these were not expressed in such a way as to indicate that he had the ability to make the necessary observations for determining his latitude and longitude. The series of observations which Captain Loose stated that he fabricated at the request of Dr. Cook do not appear to have been incorporated by him, at least not to any considerable extent. Dr. Cook's evidence consists of two documents, a typewritten report of his secretary, Walter Lonsdale, of 61 pages, and a typewritten copy made by Mr. Lonsdale from Dr. Cook's notebooks, 16 pages, describing the expedition from March 18 to June 13, 1908. This is substantially the same narrative as was published in the New York *Herald* and abstracted in THE INDEPENDENT of September 9. Knud Rasmussen, who had supported the claims of Cook on the evidence of the Eskimos, was called in by the committee to examine that portion of the narrative relating to the sledge journey, and found that as inadequate and incredible as the scientific data. The authorities of the university feel keenly the humiliation of having been the first to give recognition to Dr. Cook and to bestow upon him a gold medal and an honorary degree. It is probable that the degree will be canceled. The Danes, who gave him the most enthusiastic of receptions and have regarded all criticism as the malicious attacks of his enemies, are indignant at the gross imposition which has been practised upon them. They are inclined to blame Min-

ister Egan for his patronage of the explorer and President Taft for his telegram of congratulation. The decision of the Copenhagen committee is almost universally accepted as final. Rear-Admiral Schley is one of the few who still retains faith in Cook and suggests that it would be only fair for Dr. Peary to also submit his proofs to the University of Copenhagen. Dr. Cook's whereabouts is not publicly known. He sailed for Europe after his papers were dispatched for Copenhagen, assuming a false name and shaving off his mustache. A letter from him to Mr. Lonsdale, dated Marseilles, requests that the final verdict be withheld until he procures his original records and instruments from Etah. Mrs. Cook is also somewhere in Europe.

The week preceding the holidays was filled with electioneering speeches by all the parties in the field. The debate is lively, but would be more enlightening if it were kept closer to the issue on which the appeal is made to the country, that is, the finance bill or budget. The opponents do not often cross swords. The Liberals, assuming that the country is still stanchly free trade, devote themselves chiefly to attacks on the Lords. The Unionists, assuming that the English still love their House of Peers, are arguing for protective duties, or, as it is called in England, tariff reform. A few quotations from recent addresses will give the most vivid idea of the tone and character of the controversy. We keep the interjections of the audience as reported in the *Times* because these are more prominent than ever before. Some speeches are scarcely more than rapid fire debates with the audience, in which the speaker is not infrequently worsted and driven from the platform. We begin with the heavy artillery of Lord Curzon, former Viceroy of India:

"I believe that if a Unionist Government were returned to power in January next it would be possible for them without any difficulty to combine a budget and to construct a tariff which would in the first place begin by setting a limited duty on foreign manufactures (loud cheers), accompanied by a preference for colonial and Indian produce (cheers), which should leave scope for negotiations with foreign countries in order to make arrangements by which their markets should be open to our trade in return for the benefit of ours.

and which would not involve any substantial or heavy cost in collection. ('Hear, hear.') If we were able to do anything of that sort let me summarize to you what I conceive would be the result. In the first place we should succeed in raising the revenue, or, at all events, a very large part of the revenue that is required. ('Hear, hear.') Secondly, I believe that we should not increase the cost of living to the working men. ('Hear, hear,' and cheers.) Thirdly, we should tend by these proposals to keep capital at home ('hear, hear'), to stimulate home productions, to give the Englishman a preference in his own market (cheers), and to provide employment for those who are at the present moment so largely and so unhappily unemployed. Fourthly, I think it would enable us to bring pressure to bear upon foreigners in order to compel them to reduce the artificial obstacles which they impose on our trade. (Cheers.) Fifthly, in so far as a tax on imported manufactures in one country is paid by the producer of those articles in another—and I think it can be clearly established that it is largely so paid—in that proportion and to that extent should we receive a contribution from the foreigner to our expenditure in this country. (Cheers.) And, sixthly, we should meet half way the offers, the spontaneous and genuine offers, from brethren across the seas (cheers), offers which have been repeatedly made at Colonial Conferences, at congresses of chambers of commerce, and so on, but hitherto unhappily not responded to ('Shame')—offers which have actually taken material form in the attitude of Canada and some other of our colonies, and which only await a favorable reception here in order to expand into a much larger and more beneficial scheme. (Cheers.) Yes, I think we should succeed, at the same time that we helped ourselves, in cementing the unity of the empire and materially increasing the force of our material and economic position in the world at large. ('Hear, hear.')

—Mr. Churchill said that ten days ago, when he began his campaign in Lancashire, he challenged any Conservative speaker to come down and say why the House of Lords, composed as it was, should have the right to rule over them, and why the children of that House of Lords should have the right to rule over their children. (Cheers.) His challenge had been taken up with great courage by Lord Curzon. The House of Lords could have found no more able and no more arrogant defender. Lord Curzon treated a great public meeting to what he could only call a prize essay on the Middle Ages. (Laughter.) It was a beautiful speech, which he read with the most intense pleasure and also with a sense of satisfaction, because he would like Lord Curzon to make that speech in every town and city thruout the country. Lord

Curzon began in defense of the hereditary legislator—a plucky thing to do. He said, Look at the monarchy—but the Sovereign was not an hereditary legislator. (Laughter.) The Sovereign reigned, but did not govern. In this country the King acted on the advice of his Ministers, and it was a wise thing that the supreme office should be out of the reach of party warfare.—Lord Cromer cites his experience in Egypt to prove that it is possible by means of loans from a land bank to increase the number of small proprietors. In this way the number of persons in Egypt who own and cultivate 50 acres or less was increased by 400,000 within ten years. Lord Cromer also made a feeble defense of the House of Lords in much the same language as Lord Curzon:

"Now I turn to some of the weak points of the House of Lords. In the first place, it is far too numerous a body. There are over six hundred peers, of whom a considerable number very rarely attend. The number might, with great advantage, be cut down to, say four hundred. But now I come to another point where the shoe really pinches. Gentlemen, it is very easy to go too far in condemning the hereditary principle. There is something in heredity. (A voice, 'What?' and cheers.) There is one illustrious individual who, I will undertake to say, does as much good work in the interests of his country as any living man, from prince to peasant, who rules by the hereditary principle. I mean his Majesty the King. (Cheers.) If we were turned into a republic tomorrow—which is not very likely—and if the people of this country were asked who they would like to be President of the new republic, I will undertake to say that all, save an infinitesimal minority of the community, would reply with one voice, 'King Edward VII.' (Cheers.) Nevertheless, I think it is now generally admitted that the hereditary principle is pushed too far in the present composition of the House of Lords. But, after all, the composition of the House of Lords is not the main point. The main point is that however a second chamber is composed, it ought to be a thoroly effective body, not in order to oppose the will of the people, but in order that on occasions of supreme importance, such as the present issue, it may give the people of the country an opportunity of deciding what they themselves think best in their own interests. (Cheers.) Remember some twenty years ago the House of Lords saved the country from Home Rule. They now wish to save the country both from Home Rule and from Socialism."

—Lord Milner uses the same arguments for a tariff which have long done service in this country and cites Germany and the United States as examples of the blessings of protection:

"The Radical idea is that you can only provide for a social reform, for the good of those who are less well to do, by plundering those who are better to do. We believe that you can do it in only one way, that is by increasing the total amount of your national output, from which the wages of workers, the profits of capitalists, and the revenue of the State are all alike derived. (Cheers.) Let us look to our production, first of all here at home, next in all the countries over which the British flag flies. Let us free ourselves from the insane delusion that a nation grows richer by buying outside its own borders what it is perfectly able to produce within them. Foreign trade is a blessing, where with the excess of our own production we buy things which we need and cannot ourselves produce. It is not a blessing where, in the blind worship of immediate and often only temporary cheapness, we allow our own basic industries to be undermined. That may lead to an increase of imports for a time. It may even lead to an increase of exports, tho that is no advantage, but the reverse if it only means that we are exporting to pay the foreigner goods which otherwise would have remained here to pay our own fellow-countrymen. There is no profitable increase of foreign trade except that which results from a positive increase of the total national production, from our buying more because we have more to sell. (Cheers.) These lessons stare us in the face today from every corner of the world, from across the North Sea and from across the Atlantic. It is the countries whose first thought has been the promotion of their own industries which are challenging, and will soon do more than challenge, our old supremacy in foreign trade.

—The Duke of Devonshire says that after all it was the barons of England who obtained the Magna Charta to protect the people of the country against an oppressive sovereign, and now it was the barons of England who were asking the people to say whether they should be governed by practically an autocracy in the House of Commons. — Mr. Lloyd-George, in his usual lively style, deals blows with both hands, hitting the big navy and the tariff arguments at the same time. He asked, Who clamored for additional Dreadnoughts? He said he remembered a great meeting in the city presided over by Lord Rothschild (hisses), who demanded that eight Dreadnoughts should be instantly laid down. The Government ordered four and Lord Rothschild would not pay. (Laughter.) There was a very cruel king in the past who ordered Lord Rothschild's ancestors to make bricks without straw. (Loud laughter.) That

was a much easier job than making Dreadnoughts without money. The Government had to get money for pensions which their opponents did their very best to upset. Now they said that they did not object to paying for the pensions, but that in order to obtain the money the Government ought not to put a tax on the land, and they asked, Why not tax food? (Cries of "Shame!") Tax the food of the workingman's children in order to spare the acres for the landlord's child, so that the workman's spare store to feed his child should be diminished in order that the estate should be preserved for the landlord's heir!

Baron Sidney Sonnino
Italian Politics has succeeded in forming a Cabinet composed of representatives of various groups from the Center of the Chamber. He refused to comply with the wishes of the radicals and adopt an anti-Clerical policy, altho he has put in the position of Minister of Public Instruction Signor Daneo, who is a Freemason and an advocate of lay schools. As Minister of Foreign Affairs he has chosen Count Guicciardini, a lineal descendant of the historian of Florence, well adapted by experience and travel to assume the duties of the position. It is expected that he, like his predecessor, Signor Tittoni, will support the Triple Alliance, but at the same time will appreciate the value of the close friendly relations which have within the last seven years have been established with England and France. When Count Guicciardini was Minister of Agriculture in the Rudini Cabinet of 1896-98, he secured the passage of two important laws for the insurance of workingmen for their protection against accidents. The new Cabinet contains three of the same members as that of ex-Premier Giolitti, and, as it is understood that they have not broken with Signor Giolitti, the new Ministry will hold position thru his sufferance. Premier Sonnino, in outlining his policy to the Chamber of Deputies, stated that he would create two new ministries, one of labor and one of railroads. Additional public schools would be

opened and the national steamship service would be recognized so that Italian lines should secure the transportation of emigrants. Baron Sonnino has abolished the censorship of the press, which has hitherto been applied in a very arbitrary and unreasonable manner to prevent foreign correspondents from telegraphing any news regarded as injurious to the interests of Italy. Following the Messina earthquake this censorship was especially embarrassing and annoying.

Foreign Notes Prince Albert took the oath of office as King of the Belgians at a joint session of both houses of the Belgian parliament, on December 23. On their entrance into the capital from the palace at Laeken, Queen Elizabeth and the two princes in the royal coach, and King Albert on horseback in the uniform of a general, were received with continuous cheering, in which the counter demonstrations of the socialists were quite lost. In his first speech from the throne, the new King paid tribute to King Leopold's efforts for the enrichment of the nation and the extension of its power, and referred to the Kongo in the following words:

"In the Kongo the nation wishes a policy of humanity and progress enforced. The mission of colonization cannot be other than a mission of high civilization. Belgium always has kept her promises, and when she engages to apply in the Kongo a policy worthy of her, none has a right to doubt her word."

The late King Leopold was buried with great pomp on the preceding day, notwithstanding his expressed desire that the funeral ceremonies should be of the simplest character. Immense crowds of people visited the cathedral during the time when the body was in state. The Baroness Vaughan, themorganatic wife of the late king, left Belgium for Paris. Her photograph is being sold in both Brussels and Paris as "Queen Caroline," but it is not yet known whether she will put forth any political claims in behalf of her two sons.—Yi Wan Yon, Premier of Korea, was assassinated by a young Korean on December 22. The assassin stabbed him in front of the Catholic Cathedral in Seoul and then killed the jinriksha men in attend-

ance on the Premier. Yi Wan Yon was Minister of Education in the Korean Cabinet in 1907, when the King was forcibly persuaded to abdicate, and he was then, thru the favor of Marquis Ito, made the head of the new Government. The assassin is said to be a young Korean who had lived in the United States for some time and professed Christianity. He is probably a member of the same secret society which instigated the assassination of Marquis Ito and which aims to prevent the amalgamation of Korea by Japan thru a system of terrorism.—Colonel Karpoff, chief of the Russian Secret Police, was assassinated at St. Petersburg on the same day by the explosion of a bomb. He had been enticed to a flat in the Viborg district when the explosion occurred, completely wrecking the place and mutilating the body so that it was at first unrecognized.—The so-called Servian conspiracy, which has for some months caused great excitement in Austria, proves to have been a fake. Documents alleged to have been purloined from the Servian state archives were produced in Vienna and given some credence by the Government and the Emperor. Upon this evidence Heinrich Friedjung, the Austrian historian, published an article in the *Neue Freie Presse*, declaring that King Peter had been conspiring with the Serbo-Croatian coalition for the purpose of preventing the annexation of Bosnia and Herzegovina, and of making these provinces, as well as Croatia, part of the Servian empire under King Peter. Since this article was of an official character, forty-nine members of the Diet brought a libel suit against Dr. Friedjung and proved in court that the two documents on which he relied were forgeries. Dr. Friedjung admitted that he had been deceived, so the plaintiffs withdrew the suit and the costs were divided.—The Law Lords in England have decided that it is not permissible to use the funds of the trades unions for political purposes or the payment of salaries of members of Parliament. This will interfere seriously with the Labor party, because members of Parliament receive no salaries from the Government, and it will be difficult to raise the money to pay them outside of the union funds.

A TYPICAL COUNTRY SCHOOL IN HAWAII

Educational Problems in Hawaii

BY ARTHUR FLOYD GRIFFITHS

PRESIDENT OF OAHU COLLEGE.

HAWAII of today has three great educational problems, or, rather a problem of a threefold nature. It has to train up its white children in Anglo-Saxon traditions and educate them in all that is best in Anglo-Saxon knowledge and manners and customs alongside of several inferior races. The white boy and girl must be reared without a lowering of standards, and no obstacles shall be placed in the path of his fellow student of the Hawaiian or Chinese or Japanese race who is traveling in the same way toward the same goal. More thought and money are being spent upon the education of Hawaiian boys and girls than upon any other section of the population. The race has had long centuries of training in observation and in a knowledge of nature, but only eighty-five years of education as we understand it. They had lived the care-free, open-handed life of the native whose wants nature supplied. The lessons of industry, foresight and

the necessity of meeting obligations—to say nothing of English, arithmetic and other confusing branches—were difficult, and are not yet learned. The results of this work, if measured by Anglo-Saxon standards with the cumulative force of hundreds of years of education, leave much to be desired; if measured by a standard of less than one hundred years from barbarism they show a great accomplishment.

A great and a growing problem, different from all the rest, is the peoples of many nationalities who have immigrated to the islands and whose children are now in the schools. Chief among these are the Chinese and Japanese. To educate these Oriental children in English branches is by itself a task; to educate them alongside of the whites and the Hawaiians makes one more complication. It is not so much that one race hinders another, as that each demands somewhat different treatment. The Oriental student is rarely lacking in am-

bition and willingness to learn, but he has hundreds—yea thousands—of years of traditions and tendencies to undo. The molds of his thought have to be recast. The marvel is how soon they effect the transformation, how quickly they fall into the American ways by more than a superficial imitation. In the Porto Ricans, Portuguese and other nationalities there are variations to the difficulties that the school teacher has to meet, but, thru school instruction and thru contact with and encouragement from Americans, these diverse peoples are being woven into the warp and woof of the fabric soon to form the cloth of Hawaiian citizenship.

There are two powerful agencies at work for the solution of these problems. One is the public school system and the other is the private schools. The public schools are under the Department of Public Instruction, which consists of six commissioners and the Superintendent of Public Instruction. The latter is the active head of the department, but by the law the commissioners have equal responsibility with him. All are appointed by the Governor, by and with the consent of the Senate. All the public schools of the Territory are under their control and all the private schools come indirectly under their supervision. This board has under its charge the care of school property, the organization of the course of study, the employment of the teachers and everything that pertains to the welfare of the schools under the laws of the Territory. The schools are entirely a Territorial affair. Altho county government has been recently established, the schools were retained as a Territorial charge. The Territory collects a \$2 school tax from every male inhabitant twenty-one years of age, which is paid into the general treasury. The money spent upon schools is then appropriated by act of Legislature. School matters in the local districts are administered by school agents, appointed by the department, who are responsible men, often the managers on the plantations. Normal inspectors give that direct supervision over all the schools in the Territory so essential to the successful conduct of a large system.

The latest statistics show that there

are more than a dozen different nationalities in the public schools, distributed as follows: Hawaiian, 4,045; part-Hawaiian, 2,382; American, 457; British, 142; German, 144; Portuguese, 3,239; Scandinavian, 63; Japanese, 3,578; Chinese, 1,489; Porto Rican, 338; other foreigners (including Gallicians, Koreans, Filipinos, French, South Sea Islanders, Poles and Spaniards), 242; total, 16,119. A casual study of these figures would lead a person to believe that the 806 whites whose parent stock comes from America, England, Germany or Scandinavia are submerged, and that, in every

A. F. GRIFFITHS

school, the white individuality stands about in the relation of 1 to 15 to the lowering influence of other races. As

a matter of fact, however, the white children, for the reason that their parents live in the towns and centers of plantations, are concentrated, in large part, in a few schools. No less than one-half of those in the public schools are in one school alone, the Honolulu Central Grammar and High School. There is also a goodly representation in the Hilo and Wailuku High Schools. Of all the white children on the islands, including those in both public and private schools, more than 50 per cent. are in the two Honolulu schools—the Oahu College and the High School. A statement of the registration in the large Honolulu grammar schools goes far to show how complete this separation of the races is. Kaiulani School, with a total attendance of 614, has 1 German and 1 Scandinavian; Kaahumanu School, with 621, has 97 pure whites drawn from a nearby residential district; Royal School, with 930, has only 2 Anglo-Saxons. This proportion is not the same in the country schools, but even on the plantations there are many small private schools that care for the white children.

This separation has come about not thru laws and rules, but largely thru convenience from residential reasons and thru scholastic requirements, especially in English. Each pupil has sought that which he needed and for which he was prepared. Any student of any nationality can enter any school. Ambition, coupled with adequate intellectual and moral stamina, will open the door of any school in the Territory.

The enrollment by grades shows that of the 16,119 children in the public schools, 14,423 are in the first four grades. There are only ten public schools in the Islands, which do the work of the eight grades, and in only one of these does a teacher devote her entire time to eighth grade work. Of this same 16,119 public school students, only 597 are above fifteen years of age. Many of these are students of deficient attainments who are in the lower grades.

From the earliest days when Richard Armstrong, who came to be called "the disciple of Horace Mann," translated text books and established courses in industrial training, the essential needs of the Hawaiians have been the foundation

on which the school superstructure has been reared. It has been the aim to bring the schools into close and vital relation with the home life of the people, and to give in them a real preparation for an industrious, worthy life. The Kamehameha Schools, which are the leading Hawaiian schools, show by statistics that 81 per cent. are engaged in productive industries, and that 27 per cent. are in agricultural or mechanical work. It is hoped that, with the training that they are now receiving, the Hawaiians, in a generation or two, will give constant illustrations of the wisdom of an education which is planned "to create a taste for practical life and work and to increase the efficiency of workers, and thus promote the character, security and prosperity of communities."

At the present time there are three great needs: Money with which to build schoolhouses and supply teaching apparatus in overcrowded districts where there are inadequate accommodations and in districts where are practically no buildings; an appropriation sufficient to pay fair salaries, so that good teachers may be secured and kept; and a supply of teachers who have studied the needs of the schools, who have had training to meet them, and who are in sympathetic touch with the people of the Territory. This means a locally trained teacher who is willing to go into the country districts and work for a reasonable compensation for the upbuilding of an ideal.

The course of study and the whole plan of work of the Honolulu Central and High schools, and of the Hilo and Wailuku High schools to a somewhat less degree, are on the lines of the best Eastern schools of similar grade, modified slightly to meet local needs. The Honolulu High School sends well-prepared students to Eastern colleges, has a well equipped commercial department, employs trained teachers from the best normal schools and colleges, and does work that would merit favorable comment anywhere in the United States.

Lahainaluna is another public school worthy of comment. It was founded thru private enterprise in 1831 to train Hawaiians for the ministry and to instruct them in agriculture and in practical self-support. The first newspaper

in the Pacific was printed at this school. As there were no manual training schools in America in 1830, as Oberlin began her experiments in industrial education in 1834, and as the first technical school in America was founded at Worcester in 1866, it is seen that this school is a pioneer in industrial education, not only in the Islands, but also in the United States. In 1849 it passed under the control of the Government and became, as it now is, a Government boarding school for boys, where agriculture and the trades are taught. Modern school buildings and dormitories were built by the Government in 1903.

TABLE SHOWING NUMBERS OF STUDENTS OF FIVE MAIN NATIONALITIES ATTENDING SCHOOL IN TERRITORY OF HAWAII DURING TEN YEARS.

	1896	1898	1900	1902	1904	1906
Hawaiian	5480	5406	4977	5076	4983	4845
Pt. Hawaiian...	2443	2468	2631	2934	3267	3422
Japanese	397	737	1352	2341	3313	4297
Chinese	931	1170	1280	1499	1875	2602
Whites*	1050	1191	1364	1458	1452	1546

* Americans and Europeans, not including Portuguese.

This table shows that there has been a steady growth in the schools in the num-

efficient citizenship. The purely scholastic question is a serious one, for these sons of Nippon, together with other foreigners and the natives, make a total of the school children of not less than 85 per cent. who come from homes in which English is not spoken, or in which pidgin English, which is worse, is the every day language, but the essential need is Americanization. In addition to the Hawaiians, many of the 6,000 children of foreign parents, largely Japanese and Chinese, will, in the course of time, be voters in the Territory. The schools are laying the foundations of citizenship. A quality and a quantity of education must be provided that will raise up an English-speaking, American-thinking population.

There are two classes of private schools in the Islands. The one is the school primarily for the white children, which has found its origin in the desire to have a school where the children of white parents could be taught in full accordance with Anglo-Saxon traditions

KAMEHAMEHA SCHOOL

bers of Anglo-Saxons, of Chinese and of part-Hawaiians, who are in general the children whose mother is Hawaiian and whose father is of some other nationality, mostly white or Chinese. The points which are of most significance from a sociological or educational standpoint are the gradual decline in the pure Hawaiians and the rapid increase in the numbers of Japanese. Whether or not the future will see a time when the education of the Japanese will be a burden upon the people, the future demands that these foreign children be trained for

free from other influences and associations. The other is the school planned for the various other races in the Islands. These schools are the natural expression of the thinking Christian conscience, which has seen that there were two great needs in the uplifting of the inferior races, the Hawaiians especially—the one was an education in character and morality, the other an education in industry and foresight, which among the men will emphasize the need of providing for the home and family, and which among the women will enable them to

OAHU COLLEGE BUILDINGS

do their share in the home building and housekeeping. Many of these schools, like Kamehameha, take only children who have Hawaiian blood, but most of them receive students of any nationality. A few like Mills Institute accept only Oriental pupils. Some of these private schools have an endowment, notably Kamehameha and Oahu College, but the most of them are either mission schools supported by contributions and by a small income from tuitions or are schools conducted by a nationality, like the Japanese or Chinese, for the purpose of instructing the children in the language, literature and traditions of the nation.

Pre-eminent among the various white schools stands Oahu College. It was founded in 1831 as a school for the children of the missionaries. It has grown steadily in strength and influence. A large gift of land from the Rev. Hiram Bingham, which has proved an ideal site for a school, laid the foundation of a magnificent estate. It now has property and buildings valued at \$400,000, buildings in process of erection to cost \$150,000, and an endowment of \$550,000. It was chartered as a college in 1852. From the 3,300 students who have been in attendance at the school have come the leaders in State and Church and business in Hawaii. At the present time it does work equivalent to the freshman year in college, and sends annually a number of young men and young women to Eastern colleges. It has no restrictions in admission in either race or religion, but keeps the personnel of the student body high by rigid intellectual and moral standards.

The Kamehameha Schools were founded by Princess Pauahi, later Mrs. Charles R. Bishop, the last of the royal

line of Kamehameha, for children of Hawaiian blood. The instruction follows manual training ideals, with a broad academic foundation. The course is the broadest, the equipment the best of any industrial school in the Islands. The aim is to give scientific and practical education in farming and the trades. The graduates go out from the schools trained in industry and in the knowledge of self-support. A large percentage enter remunerative occupations, and, by example, assist in the great work of putting the Hawaiians upon a higher industrial level.

The Hilo Boarding School, which has had a long and influential existence, has a large claim to distinction from the fact that upon it Gen. Samuel C. Armstrong, who was born in the Islands, and was prepared for Williams College at Oahu College, modeled Hampton Institute. From its foundation in 1836 to 1850 the school was under the control of a board of trustees and supported by a small endowment, tuitions and subscriptions. The course includes farming, manual and industrial training of a kind adapted to the needs of the students, and academic branches.

The Roman Catholics were among the earliest to establish schools. From the time of their coming in 1839 to the present day the attendance upon the schools of their sect has steadily grown. To-day, out of 5,239 students in private schools, 2,131, or almost one-half, are in their schools. St. Louis College and the Academy of the Sacred Heart in Honolulu together have more than a thousand children.

The question is frequently asked whether there has been intellectual and physical degeneration in tropical Hawaii.

The answer from the schools is emphatically, "No." For fifty years students from Hawaii have been going to Eastern colleges, where they have been in vigorous competition with the States' best young people. The high places that they have taken in the classroom and on the field has proved beyond the shadow of a doubt that there has been no deterioration. The names of those who have achieved distinction first in school and later in life are legion. In Hawaii they are the leaders in law, in practical politics, in medicine and in every walk in life. Today the young people are going in a steady stream to higher schools of learning. At the present time, in Oahu College alone, there are forty students in the upper classes who are planning to go to different institutions, beginning geographically with California and Stanford, and continuing to Wellesley, Yale and Harvard. In the last three or four years four former students of this school have been captains of university teams

respectively at Yale, Harvard, Cornell and Pennsylvania. This record has even been surpassed in scholarship, for in elections to Phi Beta Kappa, in class rank and in other scholastic honors, students from Hawaii have won many distinctions.

It may be said with confidence that, judged by what has been put into the schools by public and private money, by gross gift or per capita tax, by public interest and pedagogic thought; or by what has come out of the schools, by the making of citizens from the new or the old races, by the educating of leaders who have made and maintained conditions under which the community has improved and prospered, and by the establishment within these schools themselves of healthy conditions for growth and progress, the schools of Hawaii have gone a long way toward the solution of such varied and complex problems as are found in hardly any other State or Territory in the Union.

HONGKONG, HAWAIIAN ISLANDS

HAWAIIAN KOA TREES.

Privilege

BY FLORENCE EARLE COATES

BLEST is the right to share
The grief of hearts forlorn;
With other men to bear
What must by men be borne;
For right bestows dawn's orient rose
And glories of the morn.

And as its shadow-wing
Lends to the sunlight worth,
So out of suffering
Arise the joys of earth,
The good and ill, united still,
And offspring of one birth.

Great is the gift of life
To him who lives indeed;
A partner in the strife,
The toil, the pain, that speed—
Lie hidden rills veined thru the hills—
Life's ocean deeps to feed!

What Is the Matter with Farming?

BY WALDON ALLAN CURTIS

THE question used to be asked in an academic, if not always a sentimental way. Rural depopulation excited a gentle melancholy and there was a genuine concern for the hard lot of the farmer. That it was a hard lot was the natural inference from the fact that so many were abandoning farming. But the question now has a direct and practical bearing. The price of food has gone up greatly in the past few years. This is largely because the old ratio of producer to consumer has not been maintained, tho the constant introduction of new insect and plant pests and plant diseases, not to speak of soil depletion, has greatly increased the cost of production. The farmer's bill for insecticides is now a large one. Altho the total rural population has not decreased, it has remained stationary and succeeded in doing this only because the desertion of the farms in the old States has been offset by the settling of new areas in the West. The fear exists that the farm depopulation in the older States will soon more than balance the increase in the new areas. Even if the present number of farmers can be maintained, with the rapid growth of the urban population, it will be impossible to supply the nation with food at the present prices.

The classic explanation of contemporary rural desertion in the East could just as well apply to an earlier day when Eastern farms were all occupied. And if they cover the ground, the West, too, ought to exhibit deserted farms. For farm life in the East was isolated and monotonous sixty years ago, without social and educational advantages, and all this is true of contemporary Western farm life. Indeed, rural free delivery

and telephones have removed much of the isolation and the instruction of agricultural colleges and agricultural institutes has diversified the monotony, making agriculture more interesting. If the classic reasons sufficed, Illinois would exhibit as many deserted farms as New York. There are, of course, all sorts of causes of the contemporary desertion of farms in the old States, but the principal cause is that farming is badly underpaid, that in no other line of endeavor do the same physical strength, mental ability and capital command so little. Desertion has been faster in the East, for the countless factories give the farmer an opportunity to change his employment that is lacking in the West.

Certain things which once counter-vailed the drawbacks of farm life are now no longer operative in some States. These drawbacks are a constant quantity, to be mitigated, but impossible to remove. The thing to do is to restore the old offsets and provide new ones to take the place of those that cannot be restored. Farm life has to be more or less isolated. The farmer cannot have advantages that a town or city gives. Then give him things to compensate. Which will after all simmer down to giving him a greater pecuniary reward. This is not a very satisfactory suggestion to the general public, already groaning under the burden of high prices for food. But the farmer is going to have it. Either the ratio of number of farmers to number of consumers will continue to adjust itself until prices get higher, simply thru decreased production, or the middleman will have to surrender some of his toll, not so exorbitant as is popularly charged.

It has always been hard to get people

to till the soil. Slave labor long seemed the only solution. In several countries where no other form of labor ever was enslaved, agricultural labor was. Even today tropical agricultural labor is carried on by slaves under various disguises, peons, contract laborers, indentured servants. Thru lack of initiative inherited from centuries of stagnant mental life, the peasantry of European countries submit to disabilities that do not bear upon the artisan, endure the social disesteem that clings to the calling that was the occupation of the last slaves, and tho in name and in law free, live in at least a social villeinage. In history, guilds of artisans have bearded kings, but never the peasants. America was the first country after China which did not attach a social stigma to farming. But some shade of social depreciation is now beginning to be attached to it with us and in the East, where this is most noticeable, farming is most decadent.

The first settlers in this country had to farm. It was about all there was to do and food must be had. For a long time, even until quite recently, the farmer was something of a manufacturer. The Old World had never seen anything like the diversified industry that was carried on by the American farmer, who was weaver, tanner, shoemaker, lumberman, carpenter, and smith, as well as farmer. The diversity of occupation made farm life attractive. Something of the ancient stigma attaching to agriculture was lifted by the fact of the farmer becoming an artisan. The farmer being almost entirely sufficient unto himself, there grew up that traditional independence, self-reliance, and self-respect that is associated with "American farmer," the very antithesis of the connotation of the word peasant.

In some sections of the country, the farmer is still as independent as ever in a social way and economically dependent hardly upon individuals at all, and to the extent that he is dependent upon individuals it is in a way almost as impersonal as if they were weather, seasons, soil. The grain and stock farmer, the dairy farmer does not dispose of his produce locally. He ships it and instead of asking favors of the local tradesmen, gives. His produce is disposed of in

lumps to dealers he may never see, a few large transactions each year. In the older States, because of the character and quantities of the farmer's produce, the village store-keeper is almost the only customer of the farmer. The dependent position is irritating and humiliating. Perhaps I am mistaken in thinking the store-keeper likes to make the farmer cringe, but his economic theories make him think it advisable to hold the farmer in as dependent a position as possible. The man who preferred the farm to the factory in spite of better returns from the latter, because he could be his own boss, comes to perceive that the factory worker is more independent than he. The factory man is under a boss, but he has a union backing him, or a sense of reliance upon his mates and of counting for something, that keeps up his self-respect. He exposed himself to disappointment and rebuff when he sought a job, but once he got it, that was over. The farmer has to face the galling patronizing of the store-keeper every time he sells anything—unless he sells at back doors of private houses—has the worry of feeling that the store-keeper's indifference to dealing with him is a pretense intended to defraud him of a just price. He realizes that he isn't independent and that he works harder and for less pay than the factory man. So he becomes a factory employee himself.

While there are no abandoned farms in the West, the farming population there is not reproducing itself as it once did. I mean this in a double sense. Families are smaller and the children do not follow their fathers' occupation. In some of Wisconsin's counties, counties inhabited by Norse and German stock, the death rate in the last decade has now and then balanced the birth rate. In Wisconsin, the movement of citizens toward the farm, mainly of farmers to new farms, farms of Wisconsin itself and many other States, has for a number of years been greater than that of any other State. It is the great emigrating State. Yet one, at least, of its agricultural counties, the first one that had any extensive Anglo-Saxon population, Iowa County, had lost two thousand at the last State census. Until quite recently, the sons of Western farmers became farmers, usual

ly passing from older Western States to newer, or newer parts of their own State, tho smaller farms and intensive culture are now the rule in some counties. The classic reasons could be adduced to account for this abandonment of their fathers' vocation by the farmers' sons, were it not that these reasons ought to have been just as operative ten and twenty years ago, a point I have already covered.

The Western farmer, like the Eastern, begins to see he is underpaid for his work, and more than that, he sees that with the present price of Western farm lands, the interest on his investment is glaringly inadequate. For after all, in buying a farm, you only buy a job, and if you can get a job without buying it and put your money in a bank, how much better you are off. Realization of this fact is a great tho not recognized factor in the depression of Eastern farm values. Realization of this fact will send down the high prices of Western lands before those lands have been depleted. The farmer sells his labor in the form of cabbages, potatoes, eggs, wheat. He makes a small per cent. on the cost of his farm, machinery, and work animals. Very likely, he barely keeps even on the last two items and has them merely that he may sell his labor. In Wisconsin, a farmer makes his wages and three per cent. on his investment—a low rate for that section. If you are a Wisconsin farmer possessed of an average-sized Wisconsin farm, two hundred acres worth the average Wisconsin price of one hundred dollars an acre, would it not profit you to sell the farm, invest your money at four per cent. anyway, and probably five, and sell your labor in some occupation in a town? Or why should a man in Massachusetts with \$5,000 spend it in buying a job by buying a farm, when he could buy a house in town for \$2,500, put \$2,500 in the savings bank and sell his labor for money to a mill owner instead of to a storekeeper for barter? Farming is, save for the exceptional instances, a matter of selling labor. Even suppose you sell the trees that grow on your place. A few years ago in Wisconsin they delivered fine red oak at railway stations for \$2.50 a cord. At this rate, a farmer got \$2.50

a day for himself and horses—an altogether inadequate wage—and gave the wood. We did better in New Hampshire the past winter. After deducting the standard wages of men and horses, the farmer who sold wood was better off than that, for he did make standard wages of four dollars a day for a man and two horses and he did get something for his wood—thirty cents a cord, that ironic sum, thirty cents. How far does thirty cents go toward paying the taxes and interest on a piece of land during the forty or fifty years a cord of wood is growing? Somehow in New England the great profits from forestry that the newspaper paragraphists talk about are not visible to us, not in upper New England, anyway. It is true that in Ohio and Indiana the woodlands are now remunerative. Two years ago around Crawfordsville, Indiana, were woodlands that could not be bought for a thousand dollars an acre. Yet down in the limestone part of the State, five years ago and years before that, farmers would drive two mules over muddy winter roads—frightful roads they are in the hill counties in winter, tho in general Indiana does have splendid roads—hauling a log whose preparation and teaming took an entire day and for which they received at the mill, forty cents. "Nothin' else to do in winter, and had to come to town anyway. Might as well snatch a log along."

The census of 1900 gives the national average of the wages of white farm laborers working a ten-hour day without board, as eighty-seven cents. This was all the farm employee could earn, all the farm employer could afford to pay. Any sort of discussion of the remunerativeness of farming in the last decade is almost needless in view of these figures. Montana paid the highest wages, \$1.72, the Carolinas the lowest, fifty-three cents. Wages in the South were low, but Michigan paid only ninety-eight cents, Wisconsin ninety-nine, Indiana eighty-one, Illinois ninety-one. To be sure, the farmer gets his living off his place, but the farm laborer working at an average of eighty-seven cents has nothing included with that. Perhaps you will ask about the stories of farm profits to be read in agricultural maga-

zines and about the constant statement of farmers' prosperity in the editorial columns of a myriad daily papers. The stories of personal experience in the agricultural press are psychologically much the same as patent medicine testimonials. The poor fellows like to see themselves in print. The pleasure of having an atrocious woodcut in a medicine almanac induces many humble persons who long for notoriety, to write testimonials of cures that were never made. A farmer who one year in a discouraging life made three hundred dollars from a few pigs, tells about it. One profitable apple year makes the basis of a wondrous tale to which the paper refers editorially when it tells for the thousandth time how much better off the farmer is than any one else. The agricultural paper gives and the farmers themselves get the impression that the exception is the rule and keep on living in their fool's paradise. That is a diminishing number, diminishing relatively, at least, have done so, but cajolery has lost much of its power. The barren mind of the editorial writer of the secular press, by the limitations of his mentality and still more by the limitation imposed by the counting room, confined to a narrow range, has two favorite themes of disquisition—the superhuman qualities of ex-President Roosevelt and the remarkable profits made from agriculture. Mr. Patten, of Chicago, it is true, has made some remarkable profits, but he held no plough handle and wore no overalls.

The farmer bumps along because he works more hours than the town laborer and because his whole family work. The mill-hand goes to work when the morning whistle blows. He has no preliminary labor of preparation. His pay begins when his work begins. Before the farmer can begin his ten-hour day of actual productive work, he has to spend from one to three hours with his animals, tools, vehicles, in order that he may use them in the work, and at night he works one or two hours after the mill-hand is thru for the day. The farmer manages because the labor not only of himself, but of his children and wife, is given to reach the wage return of a single worker in an industrial employment. If the children of the mechanic work, they

get paid for it. They do not have to throw in their labor with that of their father that he may receive a day's wages. People laugh because rich men playing farmer spend more than their crops return. Even the farmers, who should know better, laugh. Selling below cost of production, is the whole history of agriculture. Unpaid slaves, underpaid peasants and farmers. When the decline in the size of families is advanced as one explanation of the unsatisfactory state of agriculture, the nail is hit on the head. The Eastern farmer of today simply cannot throw in enough gratis labor with his own to make a living.

There are, of course, exceptional farmers who make money, men who raise special things for special markets, and men who by the ability to handle labor, make money from directing the work of others, manufacture wheat and corn. But every cobbler is not a shoe manufacturer, and few farmers are more than agricultural laborers after all. Be not deceived by big barns full of horses, big sheds full of machinery. Look into the house. There may be twelve horses in the barn. The house is more poorly furnished than that of a factory hand. The family has fewer clothes than the family of the factory hand. The farmer—in the West—spends considerable sums in the village, buys harnesses, wagons, mowers, reapers, poisons. He seems to others and even to himself a man of means, spending these large amounts. But for all his large expenditures, his returns are only those of a moderately well-paid factory hand. He has to have all those horses and that rolling stock as a prerequisite for earning his day's wages.

Despite the increased price of provisions in the past few years, I doubt if the farmer has begun to feel the advance. Cost of production has increased. Think of the single item of the cost of fighting quack grass, which has spread thru thousands of square miles that knew it not a generation ago. Farming is twenty per cent. slower where this pest exists. We have dozens of insects preying upon both plants and animals which our grandfather never saw, and this means poisons and washes and machines to apply them, to say nothing of the time

spent in applying them. Soil depletion means more fertilizer and the price of fertilizer does not merely increase. It jumps.

Railroad presidents talk glibly of natural fertilizers, plowing under clover, Canada peas and other soiling crops. But the land thus treated is for one season bearing no saleable crop and the cost of seed and fitting it as great as if it were. Moreover, the fermentation of the mass of green vegetation turned under makes the land so sour for a year that potatoes are about the only crop that can follow.

The price of provisions will continue to rise. Farmers are not going to stay on the farm unless they can make as much as other men. When they can, the pleasure of being their own boss will counterbalance isolation and monotony. Prices of food will go up enough to keep the farmer on the farm and even drive some of the town laborers to the farm.

This will happen before there has been much farm desertion in the West and it will repopulate some of the abandoned Eastern farms. For tho many of the abandoned New England farms ought never to have been occupied in the first place, much of New England is as productive as the best parts of the West. Even in New Hampshire, nadir of our agriculture, you can get crops of corn that would make farmers in Illinois, proud zenith of our agriculture, cry out with astonishment, and Michigan, great potato State, cannot equal in quality or approach in quantity per acre the potatoes produced in New England. The farmer is going to stay on the farm and new men will join him there. The public will have to pay to bring this about, but the public must eat. Our standard of living will go down, already has, but the effect this might have upon the farmer will be counteracted by the increase in the number of consumers.

A Study of Yeast

BY PROFESSOR EDUARD BUCHNER

[The author of this article is the distinguished chemist of Berlin University, who received last year at Stockholm the Nobel Prize for chemistry, which consisted of \$38,000, a diploma and a gold medal. Subsequently, Professor Buchner lectured before the Swedish Academy of Sciences on the discovery which had won him the prize, and this lecture is resumed below for our readers by the distinguished German scientist.—EDITOR.]

IF you leave exposed to the action of the air fruit juice or any sugar solution, after a few days these liquids will show signs of what one calls fermentation. You will notice bubbles of gas rising to the surface, the clear solution becomes turbid and a deposit is formed, which deposit is called yeast. This phenomenon has been known since the very earliest times, but it is only since the end of the eighteenth century that Lavoisier discovered that in this reaction sugar is transformed into carbon dioxide and alcohol; and a little later, Gay-Lussac pointed out that the sum of the weights of these two new bodies was equal to the weight of the sugar from which they were formed.

The rôle of the yeast in this reaction was for a long time unknown, and it was

only in the thirties of the last century that three searchers, Cagnard Latour, of Paris; Theodore Schwann, of Berlin, and Frederick Kützing, of Nordhausen, announced that yeast was formed by the living cells of a plant. Yeast products, therefore, are the result of the living actions of micro-organisms.

But this announcement of vital forces acting in a fermentation was accepted in very different ways by different scientists. Thus, Berzelius, Liebig and Wohler were very critical and declared that this new idea appeared to them to be little else than a poetical scientific fiction. The two last even went so far as to say in a presumptuous and satirical tone that, thanks to a wonderful microscope, they had been able to see the yeast-cells swallow the sugar of the solutions, which

was immediately digested in their stomachs and excreted in the form of alcohol and carbon dioxid!

An effort was also made to explain the facts by means of pure chemistry. Berzelius held that the cells only acted as a catalyzing substance, that is, that it was a case of contact-action, while Liebig believed that the yeast occasioned fermentations thru a continuous transformation brought about by the presence of air and its contact with water. The problem was finally solved by the exhaustive and methodical series of experiments carried on over a period of more than ten years by Louis Pasteur, who convinced the scientific world that no fermentation could take place in nature without the presence of organisms, that is, living cells. He proved that fermentation as a physiological act could not be separated from the vital acts of living cells or yeast.

Science now turned its attention to the understanding of the physiological part of this yeast action and tried to discover its cause. Schwann had already surmised that the sugar fermentation and the nutrition of yeast were one and the same thing. Traube's theory was still simpler. He showed that the micro-organisms contained a certain chemical which brought about this fermentation. This idea was widely examined. But the labors of these men and of the great Pasteur were fruitless; they could not solve the problem. The latter said:

"In answer to the question as to what is the process of the decomposition of the sugar and what are its causes, I must admit that I am completely in the dark. Can we say that the cells, feeding on the sugar, transform it in their excrements into alcohol and carbon dioxid? Or are we to admit that the yeast develops in its growth a body in the nature of peptose, which reacts on the sugar but disappears as soon as it is formed? For we never find a trace of such a substance in a fermenting liquid. This is all I can say about this hypothesis."

Nägeli advanced another theory. He stated that the yeast cells had a catalyzing action by which they decomposed the sugar without the intervention of any vital act. These various theories stimulated further investigations and the grand question then became to decide whether the inside of the yeast cells has any special action on fermentation.

Yeast cells may be likened to little balls filled with a semi-liquid substance, protoplasm, surrounded by a membrane supplied with numerous pores, which permit the absorption and the excretion of substances. In order to study this protoplasm, it is necessary to remove this membrane and the adjacent plasma, which differs from the central protoplasm. All chemical solvents and the use of high temperatures must also be avoided, while the result must be obtained in the shortest possible time so that no outside reactions may interfere with the experiment. It was under these conditions that I made a great number of experiments with my brother, the bacteriologist, Hans Buchner, of Munich, who died at an early age.

In 1878 Nägeli and Löw pointed out that:

"the difficulty of analyzing yeast, if you would learn its combinations and not its elements, lies in the fact that, on account of the smallness of the cells, it is impossible to tear or burst them open and then separate the membrane from its contents."

But the way out of this difficulty was first shown in 1872 by Marie von Manasséin, in the Vienna Botanical Institute. He mixed fine sand with the cells before grinding them. By this means Mayer, Fernbach and Anthor had dissociated micro-organisms before I began my experiments.

If to a given weight of yeast cells you add an equal weight of quartz and one-fifth of this weight of kieselguhr (diatomaceous earth) and then grind this mixture, which, at first, is dust-like, in a large mortar, using a long-handled, heavy spatula, you will have in a few minutes a dark gray colored plastic substance which shows that a liquid has escaped from the cells. If this thick paste is then tied up in a strong cloth and put under the hydraulic press, a liquid will gush forth under a pressure rising gradually from zero to ninety kilograms per square centimeter, and in a few hours you will have obtained 500 cubic centimeters of liquid from 1,000 grams of yeast; that is to say, you have extracted far more than half of the contents of the cells.

This yeast liquid is a brownish yellow in color and has an agreeable odor of yeast. It is transparently clear in direct

light and opalescent in incident light. If heated, flakes like coagulated albumin are formed, and if the heat is increased, these flakes increase in size until, at a certain moment, the flask can be turned bottom up with scarcely any of the liquid escaping. In this way, for the first time, the presence of coagulable matter in the inside of micro-organisms has been demonstrated.

If to this freshly prepared yeast liquid is added a solution of sugar, an important formation of gas soon begins. If a concentrated sugar syrup is added to yeast liquid, numerous carbon dioxid bubbles soon begin to appear on the surface and a thick froth shows that a fermentation has set in. If this experiment is made with liquid heated to blood temperature, the fermentation begins in a quarter of an hour instead of at the end of two hours. Careful research has shown that parallel with the formation of this carbon dioxid, alcohol also appears in the liquid, and exactly in the same proportion as when the experiment is made with living yeast cells.

The first question now was to determine whether the yeast cells which might still exist in the yeast liquid were not the cause of the fermentation of the sugar solution. I feel sure that this question can be answered in the negative. Their number is far too small, and you can filter the liquid thru kieselguhr without completely annihilating its action.

It may also be said that the action of this yeast liquid is traceable perhaps to the presence of living plasma particles. This can be checked, however, by the use of antiseptics, for it is known that toluol stops the action on sugar of living cells, but does not in any way hinder the action of yeast liquid; and the bare plasma particles, unprotected by their membrane, would surely be more easily attacked by the antiseptic than the protected yeast cells. You can then thoroly dry this yeast liquid by evaporating it at a low temperature in a vacuum. The yellowish substance, looking like dry albumin, thus obtained is nearly entirely soluble in water and still possesses its action on sugar solutions.

These experiments and many similar ones show, therefore, that the action of yeast can be completely separated from

the living yeast cells, and that this action does not depend upon the existence of living plasma particles in the yeast liquid. In fact, it must now be admitted that the active agent in this yeast liquid is a chemical body, an enzym, which I have named zymase, and with which experiments can be made just as with any other of the enzymes.

Now let us glance for a moment at some of the other peculiarities of this yeast liquid. In the first place, it loses very quickly, when kept at an ordinary temperature, its special action on sugar solutions. Again, it can be shown that the fermenting action of the yeast liquid is lost still more rapidly in the presence of other enzymes, such as pancreatin or trypsin. The fermenting property of yeast is, therefore, disturbed by the presence of a digesting enzym in this yeast liquid. In this same way, the coagulable albuminoids of high molecular weight in this yeast liquid also disappear in time, so that old yeast liquid can no longer produce fermentation and is not coagulated when heated to the boiling point.

Many experiments have led us to believe that lactic acid itself is to be considered as an intermediate product of the fermentation of sugar. In the first phase, the sugar is transformed into lactic acid, which, in the second phase, is decomposed into alcohol and carbon dioxid.

In order to prove the correctness of this hypothesis of the intermediate production of lactic acid, we have recently tried to transform this acid by means of living yeasts. It would appear that we have obtained, in some cases, positive results, for we have found that in a solution containing only sugar and no nutritive substances, the lactic acid which is added is made to disappear. But we must now find out whether alcohol and carbon dioxid have been formed, for in this way alone can it be proved that lactic acid is an intermediate step between sugar and the two derivatives, alcohol and carbon dioxid.

When this goal is attained, it will then have to be admitted that in an alcoholic fermentation two enzymes are necessary instead of only one. The first of these will be found to be the yeast zymase,

which transforms sugar into lactic acid; the second will be the lactacidase, which divides the acid into alcohol and carbon dioxid. The action, as just described, of the yeast liquid can then be explained by saying that the liquid extracted contains, according to the physiological state of the primitive yeast, both these ferments in different proportions. When a relative scarcity of lactacidase exists we will find an accumulation of lactic acid. In the fermentation products of living yeast we do not find any acetic acid, as Pasteur has shown. It is probable that these living cells produce an excess of both ferments.

If in the future we must consider two ferments, the recent experiments of Harden and Young will render these studies still more complicated, for they have shown that one can increase considerably the fermentation power of a yeast liquid by adding to the original liquid a cooked yeast liquid, which has, consequently, lost its fermentive power. These experiments, made in London, were repeated by me in my laboratory with liquid extracted from beer yeast.

These English experiments have also shown that, by filtering the yeast liquid thru a Martin gelatin filter, the liquid can be separated into two parts, which if employed separately have no action on sugar, but which, united, will react on the sugar. This, therefore, means the presence of a dialytic body resisting heat, which is necessary for the life of the zymase. This so-called koenzym is partly precipitated, so say the discoverers, by the addition of phosphates.

In closing, I may say a word of the highly interesting experiments which I have made very recently in collaboration with Dr. Klatte. In numerous instances we found that a yeast liquid, which had acted for four days on a sugar solution and had thereby lost its fermentive power, got all its power, and in some cases twice its original fermentive power, back again thru the addition of cooked

liquid, that is, koenzym. These experiments open up a new vista in the highly complicated study of the nature of zymase.

From all that has just been said, it will be seen that, at the present moment, it is impossible to give a clear and precise description of the fermentation of enzymes; on the contrary, each new discovery only increases the complications. Yet we must not be discouraged, for it is evident that progress has been made when we compare what we know today on this subject with what was known a hundred years ago. The problems which occupied the attention of Berzelius, Liebig and Pasteur have been solved. Neither the physiologist nor the chemist can claim to be the victor; and yet there are no vanquished. Both branches of science have presented their different points of view. This has been useful and has aided in the progress which has been made. Today we see clearly the difference between enzymes and micro-organisms. The latter produce the former, which we must consider to be complex but non-living chemical substances. What seemed to be inseparable from the living action of living bodies has now been found to be caused by the simple action of a chemical compound contained in a living cell.

The course to be followed outside of the cell for the study of this compound, this active body, is exceedingly simple and reminds one of the famous Columbus egg. It is quite evident that if you wish to study the inside of a cask, you must first begin by opening it. And the method employed to get at the secret of these yeast cells will surely be useful in the future for the clearing up of similar difficulties elsewhere. So let us never be satisfied with an "Ignorabimus," but, on the contrary, let us ever feel that the day will surely come when the problems of life, which still appear to us as riddles, will abandon for us nature searchers their unfriendly and unneighborly attitude.

BERLIN, GERMANY

Wisconsin vs. Japan in Baseball

BY D. J. FLANAGAN

[The trip of the University of Wisconsin baseball team to Japan was an event of more than athletic importance. The following account is written by a member of the Wisconsin team, who was one of the fortunate players to be taken on the extended trip.—EDITOR.]

THE University of Wisconsin baseball team made the longest trip that has ever been made by college athletes when they journeyed seven thousand miles to Japan this autumn to play Keio and Waseda universities, of Tokyo, a series of ball games. The Wisconsin party consisted of fourteen 'varsity players, Dr. Charles McCarthy, faculty representative, and Genkwan

Shibata. The latter was a graduate of the School of Commerce and acted as manager of the team.

Much interest was manifested in this international baseball series between leading universities of the United States and of Japan, not only from an athletic standpoint, but also from a diplomatic view as well. The students and faculty gave the team a rousing send-off. Baron

WISCONSIN AND KEIO BASEBALL TEAMS BEFORE THE FIRST GAME.

JAPANESE BANQUET GIVEN TO THE VISITING WISCONSIN TEAM.

H. Takahira, the Imperial Japanese Ambassador at Washington, wrote President Van Hise that he was pleased that the series had been arranged; that it would bring a better mutual understanding between the institutions concerned, and that it would prove an inspiration to manly sport among the people of the two friendly nations. President Van Hise expressed his interest in the series in a letter to the Hon. Thomas J. O'Brien, American Ambassador to Japan, in which he said, "I shall greatly appreciate any courtesies or considerations within your power which you may be able to extend to the team while in Japan which may add to the usefulness and pleasures of their visit there." The interest shown in the United States was mild as compared with that of the Japanese. As soon as the Wisconsin faculty sanctioned the trip the Keio boys were hurried off to a cool, quiet place in Northern Japan to spend the summer in practice. Each day they spent six hours in practice, and when it came time for the first game they were in the best of physical condition. The little brown fellows were prepared for this contest as they are for everything they enter. When two days out of port from Yokohama we received a wireless message from the *Hochi*, Tokyo's leading daily, bearing greetings and asking for news.

After this the messages came fast from Keio, from our Japanese alumni and from newspapers. When we steamed into Yeddo Bay we were met by a yacht load of news reporters, and they were about the most persistent news hunters that we met with. They were very anxious for an account of our trip. This we could not give them, as we did not speak Japanese and their knowledge of English was so meager that it was of little use to them. Still they insisted on talking to us, with the hope that we might suspect what they were saying. The situation had become very amusing to us when the reporters discovered Mr. Shibata, who gave them the desired information. Pictures of the team, of Dr. McCarthy, President Van Hise and of the university were printed throughout the empire in daily papers, magazines and on post cards. Every mite of information and every little occurrence that had any connection with our party went into print. Our very actions, individually and collectively, were noted and went to the press, not with a critical intent, but as a basis on which to compare the American and Japanese college men.

A deputation of six hundred Keio students met us at the pier. They greeted us with the Wisconsin yell, which sounded very odd as given by them in their broken English. We replied with

a 'varsity "locomotive," which seemed to be appreciated very much by them. Queer, strange students these were. They were eager to get close to us and learn what we were like. The most of them had never seen an American student before, and we appeared just as extraordinary to them as they did to us.

from those of ours. Their economics, literature and religion were alien to us; we did not understand or comprehend their Eastern culture. Even their physical actions were unfamiliar. They did things just opposite to the Western way. When they walk they shuffle along rather than step; they turn to the left

KEIO PLAYER SLIDING FOR THIRD BASE

The majority of our men were six footers, and our little brown opponents marveled at our size. Some of the less timid stepped to our sides and compared their height with ours. It was seldom that one stood higher than our shoulders, and this great contrast in stature never failed to cause laughter. The free, easy manners of the Wisconsin men gained the warm friendship of the Japanese students at once. It gave them great pleasure when we grasped them by the hand and gave it a good, vigorous shake. Handshaking is a thing unknown to the Eastern student when he meets a friend. He makes a low bow instead.

On further acquaintance with our hosts our interest was in no way diminished. They were of a people that had a civilization older than the West; a civilization that has reached a high state of perfection along totally different lines

instead of to the right. The floor serves them as chair, table and bed; doors are made to slide, not to swing on hinges; the carpenter pulls his plane and saw toward him instead of pushing them from him, as is our custom. The author starts his book at the point which corresponds to the end in ours, and instead of writing across the page he begins at the upper right hand corner and writes down. These and many other strange things came to our notice. To be invited by these funny little fellows to journey seven thousand miles to their strange land and play at our own favorite game was indeed a novelty. Would they carry their peculiarities onto the diamond, or did they play the game as it was played in America? This remained to be learned in the first game.

Three days after our arrival in Tokyo our first game was played. It was sched-

uled for 2 p. m. About twenty minutes before the hour we proceeded to the field in 'rickshaws. The ball park was surrounded by neatly trimmed hedges of cedars which shut off all view from the outside. As we approached the entrance, which was decorated by a huge evergreen arch, hung with American and Japanese flags, we were surprised at not seeing many people entering the grounds. We had been told that they expected a very large attendance, but what we saw did not seem to confirm this report. All was quiet and there did not seem to be many people on the ground. But as we stepped thru the gate we were amazed. Sitting there before us, grave and silent as a multitude in a church, was a crowd of twenty-five thousand Japanese "fans."

situation; we were bewildered. How different this was from the wildly cheering American crowds, where a deafening noise is considered a part of the game. And what made things more unfamiliar was the oddness of the Japanese bleachers. With the exception of a few near the catcher's box, they resembled the side of a roof or a tilted floor, with the incline toward the diamond. On these flat arrangements the expressionless spectators sat with their feet drawn back under them. A queer thrill impossible to describe came over our boys—a feeling of the totally unfamiliar. To play before these thousands of strangely dressed, barefooted brown men, who neither smiled nor scowled, was our task. We had come all the way from America

CAPTAIN KNIGHT AT BAT IN THE FIRST GAME WITH WASEDA.

The crowd extended around the entire field. This was a most curious sight. The onlookers consisted entirely of men, most of whom were dressed in their native costumes, which consisted of a pair of gaiters on the feet and a loose kimono about the body, leaving their bare brown legs exposed. As we came in the crowd applauded us with their hands only, after which all was quiet. We did not know what to make of the

to test our skill with the sons of these men, and they wanted to see us fight it out, as is their spirit.

The game was on when the Japanese umpire called "Play!" in his broken English, and from the very beginning our opponents' playing ability surpassed all expectations. Their infield worked like a machine, but one error being made during the entire game. Their throwing was perfect and on the bases

they were very active and fast. They surprised us by their knowledge of baseball, knowing all the little tricks of the game, even to the squeeze play and the delayed throw. Their pitchers were about on a par with the average American college pitcher. On the whole, the Keio boys outplayed us in base running and fielding, but we were easily their superiors in batting. With this advantage we were a match for them. The little brown fellows were determined to show that they were our equals and we were equally anxious not to be beaten at our own game. It took nineteen innings to decide the battle, which Keio won by a score of 2 to 1. This was the longest game ever played in the land of Nippon. After the game the spectators filed out of the park in silence but with a satisfied expression. That the teams were evenly matched is shown by the results of the series of eight games, in which each team won four.

In one thing the spectators did not understand us, which was our talking on the field. When on the field it had always been our custom to carry on a "line of talk"; every player does it in America. This talk was new to the bare-footed men on the flat bleachers; they did not comprehend the spirit of it and so hissed us. They hissed us because it was a custom of theirs to carry on all contests in silence and we had broken it. We kept on with our talk, however, and before the series was over they paid no attention to it, and even sanctioned it on the part of their own boys, who picked it up very readily.

Our boys soon became popular with the Keio students. We went with them to their homes, where we would sit on the floor and talk. It was difficult to carry on conversation, however, as their knowledge of English, with a few exceptions, was very limited. When we walked about the streets, crowds of col-

lege and middle school students would collect about us. Those that could speak English took pride in displaying their knowledge. The students would then take us to places of interest about Tokyo. In the evenings the Keio boys came to our hotel and sang their native songs. In turn we went to the university and sang "America," "Wisconsin Toast" and others. These songs were appreciated by the students, as they had already learned the music. One of their favorite college songs is set to the music of "Marching Thru Georgia." Many of our boys conducted classes in English in the university. Dr. McCarthy delivered a series of lectures on law-making in America at Keio. He also lectured to the members of the Transportation Department, of which Baron Goto is the head.

When the time for our departure drew near we were reluctant to go. Our stay of a month in the land of the Mikado had been one of the most pleasant of our lives. There was a certain fascination about these people that appealed to us; we wanted to stay and study and learn them better. They asked us to remain another month, but this we could not do, as we had to return to our school work. We had remained long enough, however, to see that the people were deeply interested in baseball, especially in an international series. This interest is so keen that they have planned to have an American college team come there each autumn. As we boarded the boat for departure, each member of the team was presented with a huge floral wreath from the Keio boys, a token of friendship and respect. And as we steamed down the bay the strains of "America" came to us over the water from where it was sung by a thousand Japanese students who stood on the pier.

MARTIN. WIS

Amending the Constitution

BY JAMES ALBERT WOODBURN

PROFESSOR OF AMERICAN HISTORY IN YALE UNIVERSITY

IT is now determined that the States will be called upon to vote upon another amendment to the Constitution of the United States. A resolution proposing an amendment has passed both houses of Congress, the Senate by a unanimous vote, the House by the preponderant majority of 317 to 14. If, now, it be ratified by three-fourths of the State legislatures it will become a part of the Constitution and will be known as the 16th Amendment.

This amendment is submitted at the suggestion and by the consent of President Taft, tho Executive consent is not necessary for the submission of an amendment to the States. Congress submitted the 13th Amendment to President Lincoln, who readily approved it, while, at the same time, he disclaimed any right to be consulted in the matter and recognized that his sanction was not necessary in the amending process. Subsequent amendments, the 14th and 15th, were sent to the States without reference to Executive approval, the Secretary of State, in transmitting the amendments, acting in a purely ministerial capacity. It is now the understanding of our law that the process of amending the Constitution set forth in that instrument does not take the President into consideration; it being presumed that the sovereign, constitution-making body is not to be controlled by the President, or that the two-thirds majority required in the first instance would be asserted to overcome his veto if he were permitted to interpose it.

The Constitution might be amended by another process—by a national convention, which Congress would be bound to call upon the request of two-thirds of the State legislatures. Such a convention would be unlimited in its power to *propose* amendments, but all of its proposed changes, before becoming parts of the Constitution, would have to be ratified by three-fourths of the States, either by spe-

cial conventions or by their legislatures—a process of amendment which has never been resorted to. If the first method of amendment be followed, Congress determines what process of ratification shall be used in the States, whether by legislature or by convention, and all the States must follow the process Congress decides upon.

The new amendment is for the purpose of authorizing a graduated income tax. It is to be passed upon by the legislatures of the States, not by State conventions of the people elected for that purpose and upon that issue. It would probably stand a far better chance of adoption in such popular conventions, as the astute managers of the United States Senate, who arranged for its submission, very well understood. But it is fair to say that ratification by State conventions would be much more expensive and inconvenient, and it is a process that has never been used since the Constitution itself was first ratified.

The Constitution says that representatives and direct taxes shall be apportioned among the several States according to population. The Supreme Court has held, on a case coming up under the Income Tax Act of 1894, that an income tax is a direct tax, and that if Congress imposes such a tax it must be apportioned among the States in proportion to their population. The new amendment will enable Congress to impose an income tax that will operate within the States without regard to population. The proposed new tax, it is intended, will provide for such exemptions on small incomes and such graduated rates on large ones that it will bring little revenue from the poorer sections of the country, and large revenues from the excessive incomes that prevail in the richer mercantile centers of our population. A few individuals and corporations in the Eastern States would pay, not in proportion to the population of their sections, but in proportion to their incomes; that is to say, in propor-

tion to their ability to pay. The amendment will therefore be opposed, not by the masses of the people in these States, who would on a referendum most likely vote for such a tax, but by the few rich individual and corporate interests, who will seek to control the action of their States and prevent ratification.

There seems to be only a remote probability of the final adoption of the amendment. The ratification of thirty-five States will be required. The legislatures of twelve States can, therefore, defeat it. More accurately, half these legislatures can do so. Its ratification must be a legislative act, and it is essential to such an act that both houses of the legislature, acting separately, shall approve the measure. Some of the small Eastern States have small upper houses. Twenty State Senators can defeat the amendment in Rhode Island, eighteen can do so in Connecticut; while in New Hampshire only thirteen votes will be needed for its defeat in the State Senate. In other States half of the Senators are "hold-overs," who sit for the next three years, and they were not elected with reference to this issue, and they are entirely free to act on their own discretion, in entire disregard of the opinions and desires of their constituencies. So undemocratic is our Constitution, especially in the process of amendment that more than three-fourths majority of the people might favor the change and still be unable to bring it about.

Even if vast wealth interested in escaping national taxation, with the party and political machinery in hand, which it knows so well by experience how to direct and control, even if these moneyed interests were not to assert themselves to defeat the amendment, its adoption would still be very doubtful. There will be indifference and lack of knowledge among the people, and it will be next to impossible to overcome the political inertia and arouse an aggressive and vigilant sentiment that will demand action by so many State legislatures. These legislatures are elected on a multitude of issues. More than thirty of them are to elect United States Senators within the next two years. Will party managers have any concern for this amendment as against the interests and claims of the

senatorial candidates and their political machines? Instead, it is altogether likely that the personnel and purposes of the party candidates for the legislature will be largely, if not entirely, determined by the interests of the senatorial aspirants.

Nor is it likely that the people, in electing their legislatures, will disregard their inclinations and desires for other interests in order to promote this amendment. It may not be desirable that they should do so. There will be, in the various States, railroad legislation to attend to, legislation for the regulation of insurance, for the control of public utilities, for the government of cities and towns, for improved methods in taxation, for better schools and better divorce laws, and for many other local and special interests. The people are interested in all these things, and these will, to a very large extent, govern the voters in their election of legislators. At best, the income tax can only be an incidental influence. The struggle of the anti-saloon forces against the liquor traffic will be sufficient of itself in many States to cause thousands of voters utterly to disregard the issue of the income tax. In fact, as we look at the actual forces in practical control of our legislation and politics, the people may be said to have but small chance indeed to express themselves upon this amendment. The opponents of the income tax seek to create the impression that a constitutional amendment is necessary to its enactment. This gives them a feeling of comfortable security, since waiting for an amendment is usually a safe means of securing indefinite postponement.

Experience, also, points to the failure of the amendment. Only twice in the history of the country has the Constitution been amended in the way that the written Constitution prescribes. Out of nearly two thousand proposals for amendment within a little over a century, *only two* have become accomplished facts by the regular order. The first ten amendments may be considered as a part of the original instrument. They went into operation in the first years of the new government, and it was the understanding in the State conventions that ratified the Constitution that they would be added. They were proposed almost

as a condition to ratification, in order to secure a "bill of rights" for the citizen and to define the reserved rights and powers of the States. The last three amendments, known as the "war amendments," came into the Constitution in a time of revolution and upheaval, while eleven States were out of their normal relations to the Union and as a condition of their restoration. In ordinary times of peace these amendments, of course, could not have been adopted. Of the two that have been added regularly, the eleventh was adopted by general consent during the first decade of the Constitution, to protect the dignity and sovereignty of the States by preventing their being haled into court; while the 12th Amendment, as the election of 1800 demonstrated, became inevitable after the rise and operation of party government, in order to prevent the election of the President in every contest from being thrown into the House of Representatives. Yet, obviously necessary as the 12th Amendment was, if the majority under party government were to be allowed to administer the government, it was resisted as unconstitutional, was kept pending for seven years and was finally successful in 1804, by a bare margin of votes, and that, too, at a time when there were only fifteen States in the Union. Every State added since has made the amending process the harder.

So it may fairly be said that the Constitution has not been regularly amended for more than a hundred years, and, while political prophecies are usually futile, it is at least reasonable to conclude that it is not very likely ever to be so amended again. The amending process laid down by the framers of the Constitution has fallen into "innocuous desuetude." It is all but obsolete, and if the pending amendment fails, it will have become entirely so. The recognition of this fact by the country will be some slight gain from the proposal and campaign for the new amendment, as then the people will feel freer to accommodate their Constitution in other ways to their changing and expanding needs.

Fortunately, other ways exist for changing the Constitution. Apart from the formal fifteen amendments, it has been greatly changed since its adoption,

so vastly changed, that if its framers could arise from their graves and see it today in practical operation they would not at all recognize it.

It has changed by usage, and is constantly so changing. It is now unconstitutional for a presidential elector to exercise his discretion in electing a President; he must vote for the candidate of his party that he is elected to vote for, a law that is as binding and effective as any written document or statute can make it. Yet this is altogether contrary to both the intention and the terms of the Constitution as originally made and provided.

It is now constitutional for a President to veto a bill which he deems inexpedient and unwise. It was not so under Washington. The early Presidents never presumed to veto an Act of Congress, except to defend the prerogative of the Executive from legislative aggression or the Constitution from violation. It was not deemed to be the President's function to pass upon the policy of a bill. Jackson changed the principle and enlarged the scope of the veto, and tho he appealed to the letter of the Constitution for his justification, it was the precedent that he set and the usage that has followed from his example that have made of the President's veto the formidable constitutional power that it is today.

It was unconstitutional for the President to interfere in legislation, apart from his negative and his formal message of recommendation. He was not to be allowed to control the action of Congress. There was nothing on which there was a keener jealousy among the makers of the Constitution than that. They wished to keep the departments separate and distinct and to safeguard the legislative from interference by the executive, and they went to their graves supposing they had done so. But the idea of preventing the President from controlling legislation is long since exploded and an obsolete idea, as recent history has so clearly illustrated. Mr. Cleveland forced the repeal of the silver purchase clause in 1893 by executive patronage and pressure; Mr. Roosevelt wielded the "big stick," and, appealing by the special message to public sentiment to back his demands, he secured the legislation that he desired; and

Mr. Taft has just forced a capitulation from the congressional chieftains by virtually dictating a course of action to the Conference Committee of the two houses. If it is not already an accomplished constitutional fact, it is rapidly becoming so, that the President is the controlling factor in promoting legislation. All these executive methods are entirely unknown to the written Constitution, but if they are prompted, or accepted, by public opinion they come to have the weight of precedent, and subsequent usage makes of them regular and lawful constitutional procedure.

We have thus been able, fortunately, to establish in large measure an unwritten constitution in America, a constitution that is based on usage, precedent, practice, and public opinion. I have cited but a few instances among the many that might be adduced. The people decide, from time to time, what the Constitution is by what they insist upon, and by the means found necessary for them to secure their ends.

The Constitution has changed in another way—by *construction*. Perhaps the changes wrought by this process have been even greater than those brought about by usage. The changes and the enlargement of governmental powers by construction set in under Washington, when the Constitution was first launched for its trial trip. They have always met opposition and resistance, but despite conservatism and objection the changes have gone on steadily and constantly. Madison, the "father of the Constitution," who had hoped and worked for larger national powers than he believed the completed Constitution permitted, objected to Hamilton's doctrine of "implied powers"; he believed that Hamilton was seeking to "administration" the new government into something more than its framers intended. But Madison lived long enough to consent, of necessity, to a broader construction than he at first thought was permissible; and Marshall, the great interpreter of the Constitution, by the application of his principles of construction and by his use of Hamilton's doctrine of implied powers, did more to make the Constitution what it now is than any man who sat in the convention of 1787. Illustrations of these changes by

interpretation and construction readily occur.

The exercise of powers now used for the regulation of interstate commerce could not have been dreamed of under the Constitution as it was a hundred years ago. Marshall asserted these powers by construction to the amazement and dismay of the strict construction school of States rights republicanism. The power of Congress to issue legal tender notes is now constitutional (by the reversal of the court's opinion), but it was clearly not so intended by the makers of the Constitution.

A graduated income tax, such as is now desired, was constitutional until 1895. Then the Supreme Court, by the reversal of a former opinion, and by a simple act of interpretation, changed the Constitution and the precedent of a hundred years upon that point, a change that was wrought merely by the process of one of the justices changing his mind.

The very power of the Supreme Court itself to declare an Act of Congress or of a State legislature unconstitutional, and therefore null and void, came by construction; no such veto power was directly conferred upon the court by the written instrument, and it was resisted as startling and dangerous when it was first asserted. Who should be the ultimate judge as to the powers left with the States and those conferred upon Congress was one of the most important of our early political and constitutional disputes. The forces of construction and usage have settled it, as they may again unsettle it.

Thus the Constitution is changing from year to year without the formal process of amendment. Nothing has been more clearly illustrated by the history of the Constitution (and it ought to be a commonly recognized lesson in civil government) that if it had not been thus able to grow as an unwritten constitution grows; if it had been rigid and inflexible, dependent for its changes only on the process of amendment laid down, it would have proved entirely unworkable and would soon have suffered the fate of the Old Articles of Confederation. That is, it would have been sent to the political junk-heap long ago, as perhaps a single decade would have been sufficient

to bring about its abandonment as a complete failure. For a workable and growing Constitution the people will have to rely in the future as in the past upon the influence of usage and construction—the two forces in our constitutional development that have more than all others made our Constitution what it is today. The more they rely on these forces and the less they permit themselves to be bound by the hampering restrictions of a rigid written Constitution, the more they will make for political betterment and progress. The people have been able to preserve the Constitution, and capable statesmen have been able to administer it, chiefly because they have never been willing to be bound by it as by a political strait-jacket. It should be looked upon more and more as a body of principles and less and less as a bill of particulars. What it needs is not more written parts—too much of it has already got written—but a more liberal construction by statesmen and less of technical interference by lawyers.

It has been said by a prominent advocate of the income tax, a "progressive Republican," that if the pending amendment is defeated the millions of wealth now escaping taxation for the support of the National Government will continue to escape for all time. Perhaps that was intended by an advocate of the tax as a tocsin of alarm, in the hope of arousing the people to compel the adoption of the amendment. Certainly from the standpoint of progressive republicanism, such a position is untenable. The movement for an income tax presents a political issue, and Supreme Court decisions do not settle political issues. They did not under Jefferson, nor under Jackson, nor under Lincoln. All these great Presidential leaders disregarded opinions of the court that bore on political issues and went right on with their political programs. Is there any one today who will contend that Lincoln and the Republican party, upon coming into power in 1861, should have felt bound by the opinion of the Supreme Court to the effect that

Congress had no power to keep slavery out of the Territories? That opinion was discarded and denounced by Lincoln and by those who were loyal to the great popular cause of that day. It was their intention in their political policy to reverse the decision or to disregard it, an intention that now receives very common approval and applause. Lincoln had convictions about keeping slavery out of the Territories and he showed that he was not to be swerved from his purpose by either judicial opinion or compromising Senatorial pressure. When men came to power who really favored the restriction of slavery a way would have been found, with or without war, and the notorious opinion of the court would soon have become obsolete. The people would not have waited for the impossible process of securing an amendment to the Constitution.

It is so with the income tax. If the people favor it and wish to enact it, let them nominate and elect a President who really believes in it, and a few more United States Senators of that kind, and a way will be found. A year ago President Taft thought an amendment to be unnecessary. If an act cannot be drafted that judicial nullification will permit to stand, or if the court cannot change its opinion as it has frequently done in the past, there is a way to change the court. Now, as in the days of Lincoln, "government of the people, for the people and by the people" is far more important and precious than respect for a court's opinion. The people will respect court-made law only when it does not interfere to prevent their determining what the public policy of the country shall be. It is idle to expect the people to be governed by mere verbalism, or ponderous legalism, or a lifeless constitutionalism based on a written parchment made by men who have been dead for a hundred years. There is no reason why the people should surrender their intention with respect to an income tax merely because they cannot change their Constitution by an obsolete process of amendment.

Senator Frye of Maine

BY D. S. ALEXANDER

[Mr. Alexander has been an intimate friend of Senator Frye's for many years. He is a graduate of Bowdoin, and a member of Congress—1874.]

SENATOR FRYE has completed forty years in Congress, twelve in the House and twenty-eight in the Senate. Since the death of Senator Allison he has ranked second in length of service in the Senate, Mr. Hale having preceded him by eleven days; but in continuous service he is without a peer in Congress. When he came to Washington in 1869 Speaker Cannon had not yet arrived, and Henry H. Bingham, now the "father of the House," did not appear until eight years later.

His service in Congress had been preceded by three terms in the Maine Legislature, two years as attorney-general of the State, and two years as mayor of Lewiston. This experience, coupled with superior intelligence, prepared him for rapid advancement in the House. Indeed, in twelve years he achieved such prominence that his transfer to the Senate prevented his becoming Speaker in the Forty-seventh Congress. It was a big price to pay for a senatorship, for the speakership would have presented an opportunity to add luster to that great office. Although but one Speaker has become President, more Speakers than Presidents have ranked high for constructive statesmanship, which, in the last analysis, is the chief end of public service, and the only achievement in civil life that brings imperishable fame.

Senator Hoar, in his "Autobiography," speaks of the Maine Senator as "gentle, charitable and kindly," characteristics readily acknowledged by his colleagues. As president *pro tem.* of the Senate, a position which he has held many years longer than any predecessor, he betrays as little show of force as if he were presiding over a company of guests at his own table. Yet the order and dignity of the body have always been preserved. After the funeral of Senator Hanna, held in the Senate Chamber, President Roosevelt remarked that his admirable bearing and choice words, "modulated with a voice full of tears," saved the service by

giving it a profoundly tender and solemn character.

Respect for tradition and custom marks his conduct. He is a regular attendant at church. He likewise conforms to the temperance sentiment of Maine, turning down his glass at public as well as private dinners. But he imbibes freely of Poland water. He keeps it on ice in the committee room, is laden with it on fishing excursions, and thoughtfully provides it at Bowdoin alumni banquets. He is without the slightest taint of bigotry, however. In fact, as a legislator, he has kept on the skirmish line of progress. The Bureau of American Republics is his child. He also introduced the bill establishing a Department of Commerce and Labor. The annexation of Hawaii deeply interested him. On one occasion, after a prolonged debate in which Senator Morgan had delivered a speech covering several days, the latter said to the Maine Senator:

"Now, Frye, why can't you be patriotic, give up your fishing in Maine, and go to Hawaii with me, and come back and make one of your enlightening and convincing speeches on the subject?"

Senator Frye replied:

"Senator Morgan, why can't you be patriotic, go to Hawaii, make an exhaustive and intelligent study of the subject as you always do, and come back and make a three hours' speech to which everybody will listen instead of a three days' discourse to which nobody will listen?"

Perhaps the most helpful of his recent (1895) measures involved the principle of "continuing contracts" for important river and harbor improvements, resulting in great economy of time and cost. He sympathized with President Roosevelt's efforts respecting the control of interstate commerce corporations, and actively supports improvement of inland waterways. For a man almost within sight of his eightieth year he may be called Gladstonian in the view he takes of things.

His long public career conceals no political disappointments. Perhaps Presi-

dent Hayes's reluctance to grant Mr. Blaine's request to make him a Cabinet officer jarred at the moment. Blaine desired to compose some incipient jealousies in Maine, and the President's refusal threw him into sympathy with Roscoe Conkling's historic attack upon the Hayes administration, temporarily creating the impression that their feud was buried. But Frye nursed no resentments. Indeed, it proved a most fortunate decision, since a place in the Cabinet would, in all likelihood, have deprived the country of his useful and brilliant service in the Senate. It is an old saying that Maine retains its Congressmen, and had Frye stepped out another would have been in line.

He was born with the gift of winning men's esteem and love. A group of able and aspiring youths of kindred tastes and high aims clustered about him in Maine Hall at Bowdoin, where he graduated in 1850, at the age of nineteen. Among his classmates were Oliver Otis Howard, the distinguished general; John Smith Sewall, the sweetest and gentlest of men, now dean of Bangor Theological Seminary, and Charles Carroll Everett, known at least to all Harvard graduates of the third quarter of the last century as an accomplished writer of rare literary culture. In classes above and below him, Egbert C. Smyth, the great "apostate" of Andover; Melville W. Fuller, Chief Justice of the United States Supreme Court, and Joshua L. Chamberlain, the hero of Little Round Top at Gettysburg, stimulated the warm, frank fellowship of the

little coterie. For many years these alumni, except Everett, acted as trustees of the college, and five are still serving in that capacity. As a student the Senator delighted in angling for the spotted beauties as much as in after life, and on one occasion the sport led to his rustication. Before the time expired he prankishly entered the town and called upon President Woods. For a moment the head of the college blended bewilderment with

resentment, but Frye's gentle demeanor soon won him such a pleasant evening that, upon his departure, the kind-hearted president expressed the hope that he would avoid meeting any member of the faculty, otherwise his banishment might be prolonged.

An evening of leisure with the Senator is rich in reminiscences, for his life nearly spans Maine's statehood, affording him a personal acquaintance with all its public men. The interest in his comments, as he speaks of the more distinguished, centers in the ease with which he classifies them. He thinks William R.

Copyright, 1908, by C. V. R. & W. Co.
SENATOR FRYE.

King, a brother of Rufus, the eminent New York Senator, the ablest as he was the first Governor of the State. His concern for the public schools, said the Senator, led him to make the then long, tedious journey to Monticello to confer with Jefferson, of whom he was very fond, resulting in Jefferson's writing the article on the public school system, now a part of Maine's Constitution. The first free school-house in the country, he added, was built in Maine, while it was yet a province of Massachusetts. Israel

Washburne, a brother of Elihu, he places in King's class as a Governor. "Some years ago," he said, "I delivered an address at the dedication of a substantial library building, the gift of the Washburne brothers to Livermore, their native town. In one of the rooms was deposited a little, old-fashioned, unpainted, wooden cradle in which one mother rocked two United States Senators, three Representatives in Congress, three Governors of States, two ministers plenipotentiary, one major general in the United States Army, and one captain in the navy." The writer thought he almost matched this story by citing the widowed mother in New York State (Mrs. Andrews) who raised three boys, one of whom became Chief Judge of the Court of Appeals, another, bishop of the Methodist Episcopal Church, and the third, a leading member of the New York City Bar.

In Congress Senator Frye's intimates seem to have been chosen because of likeness and unlikeness. Justin S. Morrill, of Vermont, "one of the wisest and kindest Senators," says Senator Hoar, naturally appealed to the gentle side of Mr. Frye's nature. For the same reason William A. Wheeler became one of his coterie in the House. In 1873 these friends visited Louisiana to inquire into the legality of the Kellogg State government. The story combined the dreadful with the painful, deeply affecting them both, but in their quiet room, away from the turbulent and factional discussion, they declared only for what appealed to their highest sense of right. Tho without authority to enforce their decision, it proved satisfactory to both sides and became as effective as a tribunal of arbitration. It is not surprising, perhaps, that at the Cincinnati convention in 1876, after the defeat of Mr. Blaine, the Senator urged with great earnestness the nomination of Mr. Wheeler for Vice-President.

Perhaps service on committees promotes the most cordial relations between Congressmen. Affinity and nativity do much, but in the committee room a man reveals himself. It is there legislation is worked out, and possessors of strong minds and pleasing personalities readily associate. This accounts for Mr. Frye's admiration of Benjamin F. Butler, with

whom he served on the Judiciary Committee. Butler was its chairman and "a great executive." Samuel J. Randall, of the Ways and Means, similarly impressed him. When Randall became Speaker he asked Frye to arrange the minority committee assignments, a courtesy seldom granted to a minority leader. Perhaps the one who completely captivated him was Alexander H. Stephens. "He was the soul of honor, and a most wonderfully interesting talker, especially about the War. While we smoked he entertained us with stories, history and an endless flow of reminiscences. In him every disagreeable characteristic was absent. He had the simplicity of a child and the intellectual grasp of a giant."

It is doubtful if a public man ever gave more generously of his time than did Senator Frye in the earlier years of his career. His clear, incisive, forceful speech classed him among the few really popular political speakers. He was not eloquent. That is to say, he never wrote his speeches, molding sentences into rhythmical periods and enveloping arguments "in rhetorical jam," as Lord Rosebery puts it. Nor did he cultivate the brilliant audacity, unembarrassed by scruple, which characterized some of the orators of his time. But he possessed the priceless gift of concentration blended with an almost unrivaled skill in presenting apt illustrations. Blaine pronounced him the most convincing platform orator and successful vote-maker in the country. He tendered his services without conditions, often inviting appointments at places inaccessible by railroad. In 1876 he spoke in all the small Indiana towns along the Ohio River. A few years later Senator Scott induced him to traverse the interior counties of West Virginia, promising excellent roads, short drives, good hotels and acres of people. He found the audiences as promised, but nothing else. Yet he faithfully kept every appointment. One town was so difficult of access that the Democrats, to discourage the crowd, offered large bets on his non-appearance. The incredulous Republicans, to hold the people who had come many miles on horseback, courageously accepted the wagers, and cleared enough to finance the entire campaign. In another place he found, at last, a comfortable room in

an insane asylum. This was the limit, and he wired Scott: "You are the monumental liar of the age, and I am in a madhouse, where I ought to be for believing you."

The Senator very properly takes pride in his service upon the Spanish Treaty Commission, after our late war with Spain. At first he declined President McKinley's appointment. Then came a telegram inviting him to Washington. At the White House he met other gentlemen of the commission, to whom the President read his letter of instructions. Among other things he favored taking a part of the Island of Luzon for a naval station. "That is one reason," said the Senator, "why I do not accept your appointment, for I will never consent to take a part of one island in that great archipelago, leaving the others to fall into the hands of France or Germany or some other world power." "What do you want?" asked the President. "To take everything in sight," replied Frye. "That is why I want you to go on this commission, that both sides may be represented," quickly answered McKinley.

"The most difficult problem we had to meet," continued the Senator, "was Cuba's status. Spain insisted that we annex it, because any sovereignty taking the island would be responsible for the Cuban bonds, secured by the customs receipts. And we would have annexed

it except for the instructions of Congress, and by this time it would have been a blooming garden." The writer suggested that Jay violated the instructions of Congress in making the treaty with England in 1783. "I know it, and I am sorry we didn't."

In reply to the question whether the Spaniards resented any suggestion made by the Americans, he said, with a laugh: "Only once. It is a matter of history," he went on, "that American missionaries landed on the Caroline Islands about the time they reached Honolulu, and civilization advanced as rapidly. Subsequently a contest of sovereignty was decided in favor of Spain, which immediately sent out priests and troops. Then followed the destruction of churches and schoolhouses, and the expulsion of our missionaries, for which Spain afterward paid us damages. Remembering this history, I offered an amendment to the treaty providing for religious freedom in those islands. Thereupon the president of the Spanish Commission, gesticulating with his hands and shoulders and face, exprest great amazement that 'the very distinguished Senator from the United States' should make such a proposition, when Spain for centuries, as is well known to the whole world, has always been in favor of the utmost tolerance in all matters pertaining to religion."

WASHINGTON, D. C.

The Evening Prayer

BY MARIE CONWAY OEMLER

In the twilight of my days,
In the evening of the years,
Life unto my saddened gaze
Seems a vision veiled in tears.
All the knowledge fades away
That I vainly thought to keep:
As a little child I pray:
Now I lay me down to sleep.

I have wandered far from Thee
Since that childish prayer I said,
And the lips that taught it me
Have been gathered to the dead:
Yet her face I seem to see
When the evening shadows creep.
And again, as at her knee,
Pray Thee, Lord, my soul to keep!

Softly fades the lingering light:
Lo! the last beam leaves the skies;
And I watch, amid the night,
For the evening star to rise
Far beyond the bounds of space
I may drift ere day shall break:
Let me see my mother's face
If I die before I wake!

Darker grows the gathering gloom,
While my soul its vigils keeps
With the memories that loom
Up from Life's unsounded deeps.
When upon a sunless strand
I shall hear the surges break
Ere I near the Nameless Land
Pray Thee, Lord, my soul to take!

SAVANNAH, GA.

Literature

Many Inventions

SIX tales of adventure in our own day, five detective stories, and a historical novel—here is a vast territory opened up to imagination's anticipatory roaming. The adventure is confined to this earth, it is true, but all the three elements are the scene of its happenings: the land and the mountains upon it; the sea and the depths below it; and the air above them, the latest of man's conquests of Nature. The coast of Africa, the glaciers of Switzerland, an island in the Pacific, the Sargasso Sea in the Atlantic, and still another imaginary principality in the Balkans are the stage-settings, more by token; the air is that of the United States—we shall, no doubt, ere long have a three-mile limit there, as we already have it on the water. Of the detective stories three are American, two English; and the historical novel is of Cromwell's day, with its dénouement laid on the soil of the Old Dominion.

Of these twelve novels two deserve hearty commendation as far above the average—*The Veil*¹ and *Where Snow is Sovereign*,² one of the detective stories—*Into the Night*³—has qualities that make it well worth reading; the others vary in merit, from respectability to, in one case, deserved inclusion in the annual "rubbish-fall" category of reading matter. Two of them—Mr. Brady's adventure story and Mr. Scott's tale of crime—have a moral; indeed, they read as if they had been written for its sake. Thus does didacticism stalk us unsuspected in even the hours of our idlest relaxation.

Mrs. Ethel Stefana Stevens's romance of Tunis, *The Veil*,¹ challenges comparison with Mr. Hichens's "Garden of Allah" by its merit only. It lacks the brooding silence, the vast mystery of the desert of his pages: its interest is with

the men who are the children of this land, not with the land itself, but it is this human mystery, where East and West stand face to face, hopeful and watchful, plotting and alert, both awake, behind the veil and before it, that gives the story its unflagging interest. A young Sicilian comes to Tunis to take charge of his uncle's shipping business; that uncle, a *mafioso* in the town's large colony of Sicilians, is strangely connected with native plottings, while the nephew, all unknown to himself, is drawn within the complicated, dangerous web by the elusive charm of a dancing woman, veiled ever, whose face he never sees until the end. It is this woman who is the great achievement of the book: she allures the reader, intrigues him, tempts him from page to page, and—crowning merit—does not disappoint him in the climax.

Novelty is the keynote of *Where Snow Is Sovereign*.² A tragedy of the emotions is played among the high peaks of Switzerland: a woman finds there, too late, the man who is her true mate, and renounces him for the sake of a duty laid upon her by life before they met. That is all there is of plot, but it is enough; dangers shared, and the zest of them, the impressive grandeur of the lonely high places suffice to reveal them to each other as years in drawing-rooms could not do; suffice, also, to reveal to her the man to whom she is bound by law, in all his amiable conventionality and lack of strength. The *milieu* is well chosen, and admirably employed for its purpose, but it counts for far more than as a means to an end in the story. Its author is a mountain climber, a true lover of the Alps, their beauties in fair weather and foul, he has heard their eternal challenge to adventurous, masterful men, he has answered it, and conquered. It is its descriptions of mountain climbing, so vivid, so real, so unmistakably true, that give the story its distinction, its novelty.

Mr. Crittenden Marriott has chosen an almost new setting in fiction for his story,

¹The Veil, by Ethel Stefana Stevens. New York: F. A. Stokes Co., 1906. 342 pp.

²Where Snow Is Sovereign, by Frederick Scott. Illustrated by Mr. Arthur H. May. F. A. Stokes Co., New York. Dime Novel & Co., 1906. 320 pp.

*The Isle of Dead Ships*³—almost new, but not quite, for some fifteen years ago Mr. Thomas A. Janvier's imagination wandered thither in a capital tale of adventure, "In the Sargasso Sea." Mr. Marriott, no doubt, knew nothing of its existence when he wrote his book; he makes good use of his own discovery of the region of floating weeds, whither the Gulf Stream has been carrying thru the centuries the derelicts of the sea, but he is interested in them merely in so far as they may serve the adventurous story of his characters, who find, therefore, treasure and a submarine, but not a Phœnician galley. Those who know and remember Mr. Janvier's book will prefer it for its felicitous use of just this possible historical interest of the Sargasso Sea as a boneyard of the hulks of the ages, a treasure-house, also, and a museum.

Another island—imaginary, too, but far more real. Mr. Cyrus Townsend Brady's busy inventiveness shipwrecks an ultra-modern young woman on *The Island of Regeneration*,⁴ in the Pacific. Its only inhabitant is a young savage, tall, lithe, strong, handsome, white like herself, without speech. The only clue to his identity is a Bible. Now, this young woman, in her pride, had scorned the laws of man, and defied them; she had said in her heart, "There is no God." The young savage she tames, then begins to civilize him; and she begins to read the Bible with eyes that are gradually opening to the things she had denied. The situation is slightly dangerous, but the woman, being an American, remains the master. Love does not shoot his arrow till the proper, the eminently proper, moment. This story of adventure with a moral—for the sake of a moral—is an ingenious invention: no doubt it will please many readers.

Of Mr. Rupert S. Holland's *The Man in the Tower*⁵ it will suffice to say that its scene lies one station further on the Ruritania-Graustark line, in the Balkans, that it is carefully planned after the

familiar pattern, that the author has done as well with his material as can be expected at this late day, and that the book will please those whose liking for this kind of story remains undiminished. There is adventure and danger and intrigue enough to satisfy the most exacting. For one thing the author deserves thanks: he has made the now obligatory American not the hero of the plot, but that hero's intimate friend and resourceful fellow-adventurer.

*Virginia of the Air Lanes*⁶ is one of the aeronautic romances which will ere long swoop down upon us in their multitudes. It is not a very good sample of a promising genre, and its humor is truly saddening.

Now for three murders, a kidnapping case, and a warning that "findings are keepings" only at one's moral and material peril. *Into the Night*,⁷ by Frances Nimmo Greene, is a detective story that is decidedly worth while. Its scene is laid in the third American city that offers the most promising field for a book of this kind—New Orleans—the other two being New York and San Francisco, of course; the author recognizes the possibilities of that scene, with which she is evidently familiar; and the plot has the merit of fitting into it very closely. It is not a "great" detective story, but it rises well above the average in construction and treatment.

Miss Carolyn Wells, an experienced hand in many literary fields, makes the real *Clue*⁸ as small as it can well be, then negligently puts around others, apparently much more important, to throw the reader and the local authorities and amateur sleuths off the track. Three women and one man are suspected of the killing of Miss Van Norman on the evening before her wedding, but the clues lead nowhere except deep into their private affairs, tender and otherwise. It is disquieting to reflect on how many things we do thoughtlessly that may suddenly confront us, in criminal complications, with damnatory significance. Then the

ing *Observer*, across their corner table in the Aërated Bread Shop branch in Norfolk street. These ingenious theories are never acted upon; the crimes remain unsolved mysteries, so far as the authorities are concerned, but the reader is certainly convinced. An entertaining book.

A London burglar, having made a "haul" of jewelry worth thousands of pounds at a great lady's country-house, stops on his way home to burgle the scant silverware of an Eastham suburbanite—a most unprofessional proceeding, one would think. Disturbed in this second venture of the night, he departs hastily, forgetting to take along the jewelry, which, again, has an unprofessional look. However, he does these things in order that Mr. C. A. Dawson Scott may point a moral in *Treasure Trove*.¹¹ The suburbanite, a widow in humble circumstances, finds the stolen jewels, and, instead of returning them to their owner, converts them into money, thus insuring, as she thinks, the future of her two children. But, of course, no blessing can rest on ill-gotten gains. An improving tale, dedicated (appropriately, one suspects) to the author's "aunts, great-aunts, aunts-in-law, and step-aunts."

Mr. Wilson Vance, who is the father of his son, who is author of "The Brass Bowl" and other best-sellers with alliterative titles, proves himself a painstaking, laborious and conscientious worker in *Big John Baldwin*,¹² which purports to be the diary of an Englishman who went to London in the days of Charles I, served in Cromwell's armies, and finally settled in Virginia. The archaic style, carried thru with grim determination from first page to last, becomes rather discouraging after a while. This is not a novel so much as a narrative, following far too closely the pattern of the journals of that day that have come down to us. Incident is piled upon incident, with abundance of familiarity with the life, conditions, happenings, thought, convictions, and speech of the period, but one loses sight of the forest for the many trees that are in it.

When Doctors Disagree

Two new books upon equal suffrage,* appearing simultaneously, show a marked difference in spirit. Dr. Buckley's is polemical, agitated, even hysterical at times in its portrayal of the potential terrors of woman suffrage. Dr. Sumner's treatise is a careful and scholarly presentment of the facts as to the actual working of woman's suffrage in Colorado, where it has been in operation for fifteen years. It is to be regretted that Dr. Sumner did not include in her researches some statistics of the adjoining State of Wyoming, where women have voted for forty years, and the situation is no longer novel, but has settled down into a normal activity. We would note, here, an error of Dr. Buckley's in repeating the statement that equal suffrage in Wyoming was

"treated as a joke by the first session of the legislature, . . . that it was carried amidst laughter by both houses."

On the contrary, several members of that first legislature, now men of the highest standing, assert that they were never more serious in their lives than when they voted for the measure. A careful perusal of the records of the Constitutional Convention of 1889 bears out their statement; Judge Brown, Governor Hoyt and others denying the story of the "joke" and declaring their conviction of the complete success of the experiment, "if it could any longer be called so."

"Mr. Hoyt: For twenty years the women of this Territory have taken part with the men of the Territory in its government, and have exercised this right of suffrage equally with them; of the results of which we are all proud. No man has ever dared to say in the Territory of Wyoming that woman suffrage is a failure. There has been no disturbance of the domestic relations; there has been no diminution of the social order, nor of the dignity that characterizes the exercise of the elective franchise; there has been, on the contrary, an improvement of the social order, better laws, better officials, a higher and better civilization."

"Mr. Brown: It has been said that the proposition to give women the right to vote in Wyoming was originally presented in jest. I think the rumor not well founded. Whether

¹¹TREASURE TROVE. By C. A. Dawson Scott. New York: Duffield & Co. 12mo. \$1.50.

*EQUAL SUFFRAGE. By Helen I. Sumner. New York: Harper & Bros. \$2.

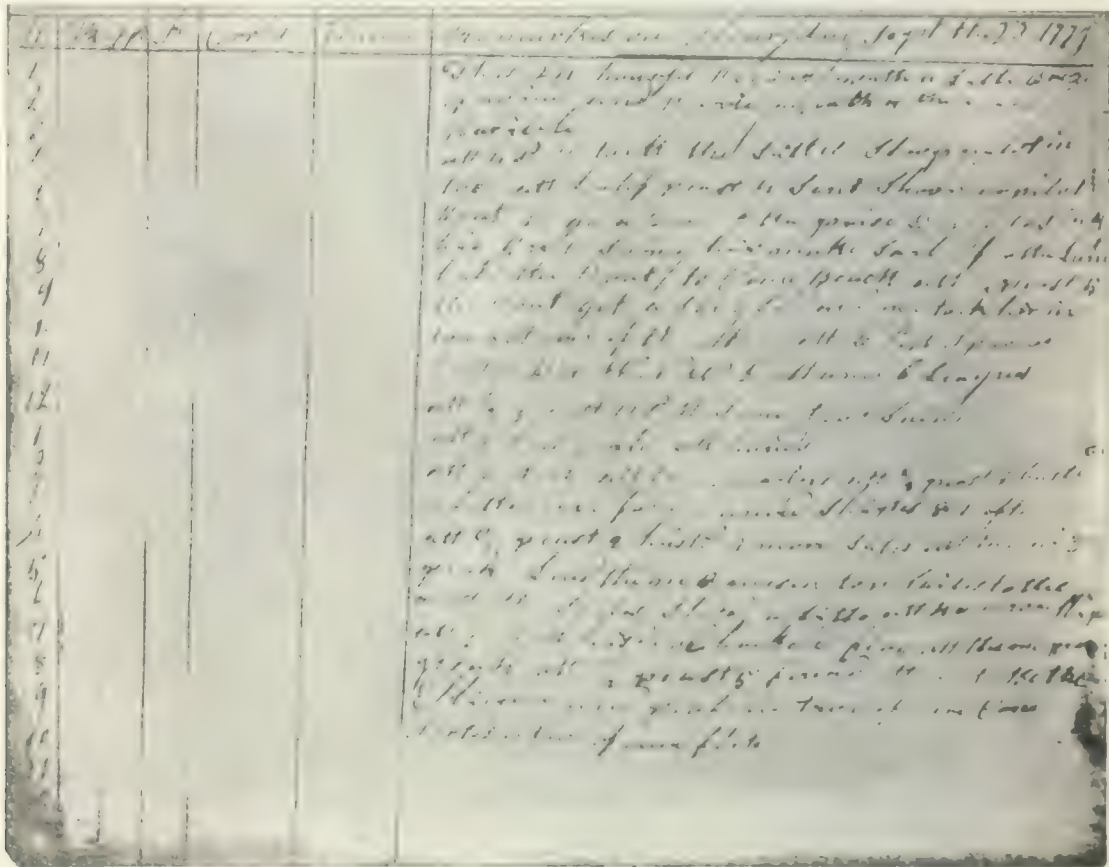

THE WORK AND PLEAS OF WOMAN SUFFRAGE. By James M. Buckley. New York: Fleming H. Revell Company. 75 cents.

there were some members of the legislature who treated it as a jest, I know not, but that the measure was adopted in serious earnest there is no doubt."—*Proceedings of the Wyoming Constitutional Convention.*

The rumor arose from a farcical account of the debate given by the humorist Bill Nye; but it is not proper evidence to quote in a serious discussion such as Dr. Buckley attempts. His thesis is an expansion of Horace Bushnell's dictum uttered forty years ago: "It is a reform against Nature." Dr. Sumner's carefully collected and collated statistics, the result

statistics. Her modesty of opinion is, however, in refreshing contrast to the blatant assurance of other investigators who know no hesitations or reserves. Her conclusions, altho cautious, are favorable to equal suffrage, and the report will interest all who care for impartial investigation. The final summing up of the evidence of 260 pages of statistical research is:

"Equal suffrage has brought, then, practically no loss and some decided gain, the latter mainly evident in the effect of the possession of the ballot upon the women of Colorado. It

A PAGE FROM THE LOG OF THE "BON HOMME RICHARD"
FROM ALEX. J. HENRY'S "HISTORY OF THE UNITED STATES"

of two years of painstaking research do not bear out the contention.

We question the absolute value of the questionnaire system of gathering data used by Dr. Sumner; there is an unconscious selection of subjects before sending out the papers of questions, certain classes are excluded from the field; and where the queries relate to matters of opinion, which may be biased, which may be reversed, and which is notoriously untrustworthy, the results are worth little. Dr. Sumner shows a certain timidity in drawing conclusions from her

has enlarged their interests, quickened their civic consciousness, and developed in many cases ability of a high order which has been of service to the city, the county and the State. Closely allied to this wider outlook and richer opportunity . . . is the development of the spirit of comradeship between the sexes."

One undoubted danger of our civilization, as it becomes sophisticated, is the divorce between the interests of the sexes; whatever draws them closer and makes men and women comrades and friends as well as lovers, is a social good incalculable.

A History of the United States and Its People From Their Earliest Records to the Present Time. By Elroy McKendree Avery. Cleveland: The Burrows Brothers. Vols. V, VI. \$6.25 each.

Since we last called attention to it, Mr. Avery's monumental work has been continued in two more volumes from the Treaty of Paris in 1763 to the completion of the Constitution in 1787. In volumes three and four the author was traversing the neglected eighteenth century where it was difficult to compare his work with any other of similar character, but he has reached charted seas with his latest instalments. In the well known field of the revolution it would be difficult for any writer to present a new story unless he had passed many laborious years in the archives or, like Mr. Sydney George Fisher, had been endowed with that perverse brilliancy that sees every old fact from a new viewpoint so that the traditional tale may sparkle with new interpretations. Mr. Avery was not born such a historian, nor has he been made one by long discipline and training. His narrative in these volumes is clear and accurate, based upon a wide reading in monograph and secondary literature, and fortified by the blue pencils of the various experts that his publishers employ to correct his text. It will injure or mislead no one; libraries and collectors may safely be recommended to buy it; but (and we say it with much regret) we find in it, even yet, no sign of the hand of the great master of facts or the creator of literature. Our regret at the textual shortcomings is the keener since the book promises to become one of the great triumphs of American printing. Its illustrations and maps are better selected and rendered than we have ever seen before. The former, by themselves, give the work a great permanent value as a record of American life and culture. The latter are drawn by geographic experts and reproduced with unusual clearness and beauty. Altho there is some disproportion between this magnificence of execution and the value of the narrative, the latter is by no means to be despised. It is well balanced and Mr. Avery has avoided the temptation to give too much space to military detail. Legends, like that of Betsy Ross, have gen-

erally been avoided. Even the recent critical view that the continental congress did not constitute a new nation has not been overlooked. Mr. Avery is not a whole-souled convert to the new theory but he at least reports it fairly. Mr. Avery has produced the best detailed general narrative, based upon secondary materials, that we have.

Last Poems. By George Meredith. New York: Charles Scribner's Sons. \$1.25.

A small volume, twenty-five poems in all, including fragments, is this last volume of last poems by the English poet-novelist. A sort of wild-haired Browning in verse is he, in search of a sensation; or an Emerson, smothering the little words, careless of rhythm, a poet over whose unmetrical feet one stumbles continually, and to read whose lines aloud one needs a previous training with some good professor of the art of reading verse. But the lines are, indeed, worth stumbling over for the wayward beauty they open upon in every line. There is a world of music, too, of the rough, guttural Wagnerian order, which only yields its metrical values to the inner ear when the full thought is developed and the true accent discovered—such a poem, for instance, as the one which the eye falls upon almost at the start, "The Wild Rose," may be selected as a fair specimen of the German roughness. It is lovely in its suggestiveness; a whole dissertation on the pretty Trilby of the flower world is condensed into the thirty or forty brief lines. Very musical too, if one's sense of measure survives the tumble in the first line:

"High climbs June's wild rose,
Her bush all blooms in a swarm;
And swift from the bud she blows
In a day when the sunset is warm."

The observation on Nature is selective in the highest degree. It is the commonplace the poet is after, the commonplace so perfectly discovered and made forever lovable by Wordsworth in "The Daffodils," and, in a higher degree, made the typical poem of the kind in "To the Daisy." But the commonplace remains commonplace, unless it is married to the choice thought. This is always the desirable match to seek. How prettily the

match is found in the very next ballad poem the eye falls on:

"The years had worn their seasons' belt,
From bud to rosy prime,
Since Nelly by the larch-pole knelt
And helped the hop to climb.

"She seemed to make the sunlight stay
And show her in its pride.
O she was fair as a beech in May
With the sun on the yonder side."

Literary Notes

....The award of the Nobel Prize for the greatest work of idealistic literature to Selma Lagerlöf, the Swedish authoress, has attracted attention to such of her works as have been translated into English. Four of them are published by Little, Brown & Co., Boston, at \$1.50 each, viz., *Invisible Links*, *The Miracles of Antichrist*, *The Story of Gösta Berling*, and *From a Swedish Homestead*. Henry Holt & Co., New York publishes *Christ Legends* (\$1.25), and Doubleday, Page & Co., New York, *The Wonderful Adventures of Nils* (\$1.50).

....The translation of Wagner's dramas into good English verse by Mr. Oliver Huckel advances another step with the appearance, this season, of *The Valkyrie*, added to his rendering of "Rheingold," issued last year. The two remaining dramas of the tetralogy are to follow in due time, completing an undertaking that already includes "Parsifal," "Lohengrin," and "Tannhäuser." Mr. Huckel gives us more than the text of Wagner's librettos, retaining in his translations those parts of the poems which the composer later omitted when writing his music, and paraphrasing the action and dialogue. An introduction is provided, dealing with the sources of the Niebelungen legend and its meaning. These translations, so infinitely superior to the clumsy "English words" of the opera librettos, are artistically and appropriately printed in black-letter, with side-heads in color. (Crowell, \$1.50 net.)

....The editor of the series of booklets devoted to "The World's Best Story Tellers," Mr. Arthur Ransome, deserves thanks for maintaining in the later volumes the high quality that marked its earlier issues. Here is not only good taste and knowledge in the selections, but also discrimination and understanding in the brief introductory essays, that to *Stories by the Essayists* being a noticeably clever piece of work. We have in this volume, not only "Sir Roger de Coverly," but Mr. Bickerstaff himself, Samuel Johnson's "City Wit," four selections from Goldsmith, including, of course, both the "Man in Black" and the "Strolling Player," Lamb's "Mrs. Battle" and "Dream Children," Leigh Hunt's "Old Gentleman" and "Italian Girl," De Quincey's "Memoria Suspensio," and, leading them all, Sir Thomas Overbury and John Earle. The book is a little gem. A second volume is devoted to "Cavaliers and a third to Balzac" (Macmillan, 40 cents net.)

Pebbles

INSTEAD of achieving his life ambition of becoming poet-laureate, Mr. Watson may better fit the rôle of poet-lariat.—*New York Times*.

FOXY FATA.

Old Gent—Have you vanishing ink?

Tradesman—Yes. Going to make sure of no breach of promise suits?

Old Gent—Oh, no; going to give my daughter a check for a thousand pounds as a wedding present.—*Tit-Bits*.

BROWN had returned from a fishing expedition, and, after partaking of a most welcome dinner, was relating some of his fishing experiences, says the *Buffalo Times*.

"Last year," said he, "while fishing for pike, I dropped half a sovereign. I went to the same place this year, and after my line had been cast a few minutes I felt a terrific pull. Eventually I landed a fine pike, which had swallowed the hook, and on cutting it open to release the hook, to my amazement"—

"Ah," said his friends, "you found a half-sovereign."

"Oh, no," replied Brown, "I found nine shillings sixpence in silver and threepence in copper."

"Well, what became of the other threepence?" queried his friends.

"I suppose the pike paid to go thru the lock with it," answered Brown.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periods, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Psychology of the Cook Fake

Now that the evidence prepared by Dr. Cook in support of his claim to the discovery of the North Pole has been declared valueless by the first and only body of scientific men who have had an opportunity of examining it, the question must be regarded as settled. As we have already said all that we could in honor of Commander Peary's achievement, and as we have exhausted our vocabulary of denunciation in delivering a hypothetical anathema of Dr. Cook, we shall now attempt nothing more in the way of eulogy or condemnation, but consider some interesting features of the controversy.

The most curious thing about it is perhaps that the jury of the world empaneled by the press which had been sitting on the case for nearly three months and listening to the arguments of the opposing attorneys, has not yet seen the evidence. The only men who have so far had an opportunity to form an intelligent opinion on the subject are the committees of the National Geographical Society and of the University of Copenhagen. Yet most people accept their

verdict without question, and quite properly, too.

We are careful to say "most people," not all, for there will be a "Cook party" to the end of time, no matter how strong the evidence brought against him in the future, no matter if he made public confession of fraud. Did not the Fox sisters confess to making the spirit knockings with their toes and show how they did it, and do not thousands still have faith in them? Probably there are believers in the Tichborne Claimant yet to be found in England, and followers of El Mahdi in the Sudan, and of the False Dmitri in Russia, and of the Lost Dauphin, alias Eleazar Williams, in France. This sentiment of personal devotion and championship once aroused is one of the most powerful and indestructible of human motives.

There will also always be those who will disbelieve in Peary. We did not fully realize the extent to which the emotions influence the judgment when, at the time of Peary's arrival at Labrador, we wrote that while it was doubtful if Dr. Cook reached the Pole, "no one questions that Commander Peary did." A correspondent at once proved that we were wrong by sending us a clipping from the *Pittsburgh Press* of September 26, 1909, showing that 58,009 Pittsburghers questioned it. The result of this referendum is worth quoting as an illustration of the workings of mob psychology:

"By a vote taken by the *Press* on the Cook-Peary controversy, *Press* readers have awarded, by an overwhelming majority, credit for the discovery of the North Pole to Dr. Frederick A. Cook. An analysis of the vote shows the following:

Cook discovered North Pole in 1908....	73,238
Peary discovered North Pole in 1909.....	2,814
Peary reached North Pole in 1909.....	18,043
Cook did not reach North Pole.....	2,814
Peary did not reach North Pole.....	58,009

It is not surprising that 73,238 persons should have expressed faith in Cook, for his *prima facie* case was a good one. It is natural that more votes should have been cast for Cook than for Peary, because Cook had the happy faculty of making friends and inspiring confidence wherever he went, and, besides, the champions of the "under dog" in any

crowd are always more vociferous. But the curious thing about it is that 58,000 persons should believe that Peary did not reach the Pole merely because he had treated ungraciously a man who was trying to rob him of his glory!

Of course, the *Press* was wrong in thinking that Dr. Cook, being first in the hearts of his countrymen, could "afford to remain indifferent to any decision finally arrived at by scientists." The fundamental validity of the jury system, and of democracy in general, lies in the fact that the people as a whole and in the long run do listen to evidence and do accept the opinions of experts.

Dr. Cook has not been exposed. He has exposed himself. He has gradually forfeited the confidence of the public, beginning with his refusal to show any documents or instruments to the Copenhagen professors who welcomed him, and culminating with his failure to furnish them with any competent observations, not even such a plausible set as could easily have been fabricated. It is interesting to see how futile have been most of the attempts to discredit his claim by criticism of his narrative. The objections brought forward when his announcement was made, that the ice was too smooth, that the speed was too great, that he had no scientific companion with him, etc., were found a few days later to apply also to Peary's narrative. The testimony of the Eskimos as reported was conflicting. The charge that he did not intend on the start to make a dash for the Pole, and was not outfitted for it, was at once disproved by his backers. In the calculation of his penmican his critics used arithmetic as faulty as his own. Most of the discrepancies, slips and self-contradictions detected in his narrative he found it easy to explain away with more or less plausibility. The three witnesses brought against him—Barrill and Loose and Dunkle—had been content to testify for him so long as they were satisfactorily paid. The last and most skillfully arranged plan for his exposure was a most ludicrous failure, for the series of observations manufactured by Captain Loose and brought forward in New York after Dr. Cook's report had been deposited in the safe at Copenhagen

were not included in the evidence submitted to the committee. The lesson of this is that it is almost impossible to prove a negative by circumstantial evidence. The opposing counsel could not produce an alibi for Dr. Cook on April 23, 1908.

The whole affair has more interest for the psychologist than the geographer. It was a matter of simple justice that the credit for the achievement should go to the proper man, but otherwise the question was of no importance. It made no difference to science whether Peary or Cook or anybody else ever visited the Pole. No spot upon the globe has less of scientific interest. A square yard of South American jungle affords more material for investigation than a square mile of polar ice. Lieutenant Shackleton, altho he missed his goal by a few miles, really accomplished as much as Commander Peary. The reason why the public took such an interest in polar expeditions was because it was not a scientific question. It was a sporting event, an international race, a world marathon. The chief advantage of the clearing away of the pretensions of Dr. Cook is that we can now get the real results of the Peary expedition, the description of a large area of unexplored territory, and the records of his observations, not on the sun and stars, which we can see as well from here, but on the land, and water, and weather, and animals, and people.

Nineteen Hundred and Nine

THE INDEPENDENT is instinctively optimistic. It was born to advocate ideas ahead of its age, and it has lived to enjoy the fulfilment of its uttermost hopes. At the close of nineteen hundred and nine it is inclined to indulge in enthusiastic gratulation. The year has been crowded with moral and physical victories in almost all directions. The historian will find the fruition of great faith, and the promise of supreme victories ahead. There have been no great wars, and while universal peace has not been proclaimed, it is evidently nearer to establishment. Europe has apparently been near a vital struggle, but the peace forces hold it in check, and are growing

relatively stronger. International commerce has become an ally of Christianity, and the waning of race hate goes on *pari passu* with religious prejudice. A Jew was in the Cabinet of President Roosevelt, as well as a Catholic, while another Jew is in the British Cabinet, and the successor of Bismarck, in the fourth degree, is Dr. Von Hoffman, also a Jew.

In 1909 Moslem tyranny came to a sudden end, that had existed so long in defiance of civilization, that it seemed immovable; and this was accomplished with scarcely a sign of brute force. A stalwart race, with many elements of novel but sterling characteristics, steps to the front to take pace with the Saxon and Slav and Celt. Russia, from her birth as a nation up to the present year, the head of absolutism thruout the world, has become a representative government, beyond possible relapse. Very reasonable progress has been made in the direction of popular freedom.

Events in Asia have been even more startling, and at the same time more helpful to universal progress. The old Turanian stock that had slept for a thousand years has waked up with strange suddenness in China, reversed its policy of looking backward, and is successfully evolving a forward-looking history. The soul of the Orient, Persia, the cradle of mankind, has also broken with her past, and seems likely to renew her glorious youth. Railroads and telegraph lines are the coming order all over the Continent, and the rulers of Afghanistan and Siam are pronounced leaders of industrial progress.

Still more remarkable has been the work achieved in Africa. A real alliance of races seems to have followed the Boer War, and the determination to make South Africa a Garden of Eden as well as a Golconda has displaced the rivalry of stocks and the fever for power. The Cape to Cairo railroad creeps northward and creeps southward, to meet somewhere south of Abyssinia. Yet the continent of black men bids fair to remain largely in the hands of progressive black peoples. Recent war with Spain has shown the despised Moor to be a fair competitor of the Andalusian.

Yet nothing has occurred in any of

the Old World continents that makes more for civic rightness and human happiness than has been shown in South America. When Chile and Argentina declared peace, instead of declaring war, and placed a statue of Jesus Christ on the Andes, it really meant the inauguration of a new order of events among the republics of the south. No doubt our own Root helped on matters much by his wise campaign, removing old prejudices and misunderstandings, but it is to the development of industrial arts and commerce that we must credit the passing away of the chronic revolution, and the inauguration of co-operative good will among the peoples. This year has seen the Andes pierced by a railroad tunnel connecting the two republics. Competition in the arts of peace becomes rapidly more satisfactory than competition in the art of war. The Republic of Chile, among others, is already a close rival of the United States in all that marks advanced civilization. She has her parcels post and her postal savings banks in advance of ourselves.

In the United States the supreme political and social event has been the determination to conserve our national resources and put an end to an era of waste. The conference of Governors at Washington was an event of vastly more importance than could be measured at the moment. It contributed greatly to bring all the States into an enlightened co-operation. There is less of rivalry between sections, and while State rights seems likely to reaffirm itself, a working nationalism is better understood. The wrecking of political partisanship has gone on steadily, and no party any longer dares to appeal to the people on the score of loyalty. The American has become substantially an independent in State affairs as he already was in church affairs. The polls stand for individual conviction. Never before in the history of our nation has it been so impossible to forecast the result of an election as during the campaigns of 1909. The most skilful organizer, or boss, was unable to give any forecast of the Mayoralty contest in New York.

A larger measure of co-operation is in the air. The failure to secure postal

savings banks and parcels post during the recent session of Congress has put the people into a humor for demanding them. Partisanship cannot long prevent the promised tariff reform, promised by all the political parties, and required by our agricultural and commercial industries alike. Juggling away a whole session of Congress left the people something to do and it will be done. If, however, 1909 opened the way to a rational income tax, and laying the burden of taxation upon wealth instead of upon the necessities of life, we can have no cause for complaint. When an American citizen has acquired a capital of one hundred millions he should have reached the stage of ethics as well as economics that demands of him a higher rate of taxation than is required of his washer-woman.

Our navy, early in the year, returned from hobnobbing around the world, instead of fighting. That would be well, if it did not cost us nearly a million a day for the display—the poor man's taxes fired out of the cannon's mouth. However, we can afford one such exposition, if it has tended to express our good will rather than our hatred to all the nations of the world. The common people everywhere are protesting against the waste of their resources on armies and navies. Every battleship costs from ten to fifteen millions, and goes to waste generally before it has ever seen any other service than costly display and costly dockage. The people themselves are on a peace footing, and so is labor and commerce. We need all our surplus for industrial expansion, for the year has given us relief from the financial depression.

Aviation has become the passion of the world. We have got just far enough with our wings to study the problem. We do not yet know that we can safely travel in the air, or transfer from the earth any large amount of pleasure or of business. But it does not seem any longer quite impossible that the mails will be carried thru the air, and a good deal of commercial exchange go on by aerial transit. If this be possible, then the growth of internationalism will be more rapid, and wars as well as tariffs

impossible. We shall proclaim the open roof as well as the "open door," and while we follow the birds to winter in the semi-tropics, our commercial travel will follow a bee line.

We have touched the North Pole of our earth, and now have positively only one undiscovered point left on the globe. Not much has come of the achievement but a quarrel and a scandal. It may in time give us some helpful data, but not much that we did not already have. As a sign of human pertinacity and masterfulness it is a great event. From Captain Parry to Captain Peary measures about one century, during which man has accumulated power to overcome the iceberg. It will never do for us to give up beaten over any problem.

The suffraget excitement of 1909 is noted for its boisterous audacity. Woman will not remain womanly if deprived of equality. Carrie Nation stands for an amazonian rage that has real danger. If for no other reason it would be best to grant suffrage, not so much for its inherent value as to turn the forces of woman's wits and ambition into lines of more pronounced importance. Vastly more notable is the fact that in 1909, for the first time, a woman has been elected superintendent of the schools of the second largest city in the United States. Mrs. Ella F. Young, of Chicago, stands for a victory comparable with that demanded by Susan B. Anthony.

From a religious standpoint there is a clearer comprehension of what has been going on for the last fifty years. Religion is emphasizing more and more its ethical sides, and so directing and controlling a multitude of social reforms and suppressing a thousand abuses. Even in France the Catholic Church, stricken by a blow, is finding courage for self-support, and there can be no better way to spread liberal views than the attempt to crush Modernism. Altho the backward looker can find some things crumbling under his feet, there is not one crumb of comfort for the pessimist. There is a growing faith in God, and in man as the child of God. Knowledge and love go hand in hand as they never did before. Let the old year go; it has done its work well.

Business and Gold

THE *Annals* of the American Academy of Political and Social Science considers at length the subject of American business conditions, as seen in sixteen different important industries, and as discussed by experts on the causes of the late depression and the recovery therefrom. The writers who take a philosophical view of the general situation agree with the judgment expressed by Senator Crawford, in our issue of November 25, that the essential factor in the increase of prices is not the trusts or railroads or anything other than the great increase in the amount of gold, which is the basis of all our circulation. But if the gold supply is increased it becomes cheaper, that is, it will buy less, and prices in gold will soar.

Mr. John Moody, editor of *Moody's Magazine*, a principal financial journal, says that the value of gold has declined at least 40 per cent. in the last eight or ten years. With this view of the causes of advanced prices agrees Thomas Gibson, the accredited author of "Cycles of Speculation." He quotes from *Dun's*, *Bradstreet's* and other compilers to show that in ten years prices have advanced almost 50 per cent., that is, gold is so much less valuable than it was, because more abundant. The man who has lent money for ten years at 5 per cent. has received his 50 per cent. of interest, but his principal has come back to him with a loss of nearly as much in value. Both writers find here the reason why the course of recovery from the depression of 1907 has been so contrary to all precedent, and they evidently fear for the future. Says Mr. Moody:

"I do not believe we are justified in expecting, unless new signs appear on the horizon, a period of more than two or three years more before we will be in danger of facing a crisis far more serious and far reaching in its effects than that of two years ago."

What can we do about it? The answer is not easy, but it deserves quite as much attention as the proposal for a central bank like those of Great Britain, France and Germany, which Senator Aldrich is calling to our consideration. Mr. Gibson says:

"It is a great mistake to argue that the effects of increasing gold production are too re-

note, or too low, of operation to affect the investor or speculator. The matter should receive the serious attention of every man who is interested in, or contemplating, being interested in, securities or business of any kind."

Overproduction of silver brought on one panic; the overproduction of gold has been so rapid that there is danger that it will cause another. Possibly some means might be found to limit this production. Possibly gold mining should be made a national monopoly, with an agreement between the gold-producing nations as to the amount to be taken from the mines in a year, or, at least, the amount to be put in circulation. We have had our calamitous experience with the reduction in the value of silver. It would be a very serious evil to have our remaining sole standard of value itself continue to lose value. The proposition for a congressional commission to investigate the causes for the advance in the price of commodities has come not any too soon.

The Matter with the Farmer

WE do not disagree with very much that appears in our columns under the head of "What Is the Matter with Farming?" It is a fact that the farmer's hours cover a long day of work, and at times his labor is very severe. During harvesting, if he gets off with less than twelve hours a day he does well. A farmer talking about eight hours a day as a limit to his physical exertions would be an oddity, soon to retire from his profession. It is also true that the drift from the farms into the city was excessive during the dominance of steam power. But this drift was reversed not less than ten years ago, and at present the country is taking very nearly or quite two-thirds of the increase of population. This is true in spite of the fact that only 2 or 3 per cent. of the present immigration gets outside of city congestion. As to the farmer's long days of work, it is a varied employment, and it is his own business. He is not working for other people, and his hired help, as a rule, are not compelled to work beyond ten hours.

As to the isolation and monotony of the country, Mr. Roosevelt's commission reports this is greatly modified, if not entirely abolished, by the widespread

use of telephones and by free mail delivery. We have heard recently of the women of a rural district who sat down at their 'phones to hold a tea party at 4 p. m. No one was compelled to dress up, or to leave her own house. Gossip was freely distributed, and each one nibbled her own cake. In fact, the gasoline-driven automobile is creating an absolutely new era for the country. Its boulevards, in the place of old-fashioned mud roads, are likely to search out every hidden nook of the country. Country taverns are patronized more than city hotels, and there is a beautiful redistribution of patronage, which makes the fashionable resorts groan. This is "back to the country" with a vengeance. In fact, we do not see but what the loneliest place on earth is no longer in the remote hills, but in the city streets, and there also is the monotony and the isolation.

As for deserted farms, Governor Hughes, in one of his speeches, says that if they exist in New York State, he cannot find them, and it is quite true that Connecticut no longer advertises them. The farmer can have advantages that a city gives, and he can have many that the city cannot give. He is finding this out, and now the demand is for postal savings banks and parcel post service. He will have his packages carried as freely as they are carried in the city. In addition to this, he insists on a new sort of education. All the signs of the times indicate that he will have it. Instead of sending his boys to a school that will educate them directly away from the farm, and fill them with unusable facts, he will have schools that will educate them to go back to the farm. Industrialism is grappling with our school system, and the farmer will soon have all that he wants. The agricultural college will reach out, with some sort of ramification, into every township, and the boys and girls will be inspired with a love for nature.

As to a greater pecuniary reward for the farmer, we hardly understand what the writer calls for. With dollar wheat, and with corn bringing more than twice its price of twenty years ago, and yet the crop touching the three billion mark; with all the minor crops, like potatoes

and eggs, pouring wealth into his coffers, what more shall the farmer ask for? His apples, which he used to sell for 50 cents a barrel, are now bringing up to \$5 a barrel, and this grading up of prices runs thru the whole gamut. As for the middleman, that certainly must be attended to. The trouble is that there are so many of them who are utterly unknown to the farmer personally that he is liable to fall into bad hands. Fraud is extremely easy in this method of reaching the market. The remedy lies in some method of co-operative marketing, or in a better supervision of commission merchants. It is quite true that there is a large percentage of the farmer's profits swallowed up by the present system. It is loose at the best.

As to the increase of tenant farming, this is largely the passing out of the old-style farmers, men who will not and cannot adjust themselves to the new state of affairs. The farming of 1850 consisted in an easy-go-easy cultivation, and swapping was the common method of trade. The farmer of that day needed to handle not more than one hundred dollars of cash in a year. This style of agriculture was run over and run down by the steam age, and it left farming stranded in the hands of Hayseed and family. It was deprested, of course. Wheat was fed to hogs and corn was burned for fuel. The railroad brought in new demands, and the farmer must do his work for a distant market. The result was enormous competition, and the crowding out began of the weaker and more ignorant. The agricultural college came in just in time. The farm must be wedded to science, and every agricultural neighborhood must be a clearing house of latest research. Today the farmer must be the best educated man in the land; and that is just what is causing the trouble. The transition is grinding the old-style farmer down and out—rather slowly, but surely. His farm is bought up by his better educated neighbor, who runs it, and half a dozen more, with the best machinery and educated brains. Then we have, besides, a fashion among the richer city people of buying up available farms to establish country homes. There is no harm in this, for they are spending a lot of

money in doing it, and most of them are getting educated to the nonsense of trying to do farm work without doing some of it themselves. European tenantry is in no danger of being established in this country, at present.

We can understand what the writer says about the stigma attached to farming, because we are old enough to remember back of one or two decades; but as for any stigma of a social sort or a business sort attached to land tillage at present, there surely is nothing of the kind. It is true that steam power robbed the farm of its most attractive features and took away most of its industries to factories. These industries are in part going back again; and electricity belongs quite as much to the remote farm as it does to the city or town. The trolley is running its fingers up the valleys and all around between the hills. It is even picking up the farmer's wagons and dragging them to market. In France, and to some extent in this country, electric plants, from water power, are heating and lighting farmhouses and barns, and doing much of the farmer's work. It cannot be long before the smaller streams all over the country will be utilized by the farmer for this sort of work.

It is, of course, possible to find farmers who are complaining. It is possible to find hard spots; but not one whit more than in any other employment. The farmer went thru the recent crisis almost unscathed, and this is more than we can say of any other industry. Where he has had the good sense to send his boys to an agricultural college, they are coming back charged with enthusiasm, to apply scientific methods in the place of slipshod guesswork or inherited wastefulness. If the farmer makes only "3 per cent." on his investments in Wisconsin he is making a sure investment. The article to which we are referring allows, however, for very much of this prosperity, and we can hardly understand its complaints. It agrees that prices of food will adjust themselves to the farmer's needs, and that farm desertion is not likely to be felt in the West at all, while the abandoned farms in the East will be repopulated; indeed, are already being taken up. It allows, farther, that the New

England State, under the influence of scientific culture, are beating the virgin soils of the West. We owe this progressive change to that new sort of tillage taught by our experiment stations and industrial schools. Intensive farming brings more out of a five-acre lot than extensive farming used to bring out of fifty. The youngster who has spent one or two winters at an agricultural school is likely to find this out.

The farmer is certainly justified in demanding from the Government services equal to those rendered to his city neighbors. Rural free mail delivery has taught him his rights. He justly demands a parcels service as liberal as that which exists between himself and foreign countries. Every grange and farmers' club in the United States has passed resolutions calling for local savings banks, connected with the post office. The farmer demands also greater economy in public expenditure, and he insists that our system of taxation shall be so modified as to take the burden off the bread and boots of the laborer and place it upon wealth, whether this is done by a modified tariff or otherwise. The farmer looks with unmitigated condemnation on the building of battleships in the time of peace, but at the same time he heartily endorses every measure proposed to preserve our national resources. No man knows so well as the farmer what the destruction of our forests means and the reckless waste of our water power.

The farmer wants the "open door" of President McKinley kept wide open between us and foreign nations, to take his ever-increasing crops of corn, wheat and cotton. He takes little stock in the bugaboo that we are soon to consume our whole possible harvest. He knows, what others do not know, that our new agricultural training is going to teach us how to more than double the yield of our acres, and that what has already been done in that line is only a beginning. New foods will be created, and the time is not far away when we shall be ashamed and amused to read our records of thirteen bushels to the acre for wheat, or even thirty. On the whole, we believe that the condition of the American farmer is wonderfully satisfactory,

and that the outlook is promising almost beyond the imagination to picture. We are optimistic, but we believe we have the facts and the conditions to warrant our confidence. The industrial world moves so fast that we must not go too far back to gather data.

The Deceased Wife's Sister Case

FOR many years the House of Lords held out against legalizing marriage with a deceased wife's sister, as it now holds out against the Budget. Two years ago it gave way, but the High Church party continued the fight and carried a case up thru the Arches Court and the Divisional Court to the Court of Appeals. All of the courts decided against the ecclesiastical contention, so the law will remain in full force regardless of its contradiction to the Prayer Book. The test case was that of Canon Thompson, who refused to admit to communion two of his parishioners on the ground that they were "open and notorious evil liverers" because their marriage was "incestuous and forbidden by God's law." The Master of the Rolls, in pronouncing judgment, states in very plain language that a curate has no right to say that a couple are living in a state of sin when they are lawfully married and when, if they did not live together, legal action for "restitution of conjugal rights" could compel them to. He calls attention to the condition of anarchy which would result in case the courts supported the ecclesiastical contention that a clergyman has the power to decide what kinds of marriage are right and wrong. For example, a clergyman who believed that a man should not marry his deceased wife's sister might declare the marriage null and void, their children bastards, and marry the woman to another man during her husband's lifetime. The Master of the Rolls says:

"It would require the very clearest language to induce me to interpret any part of an Act of Parliament as conferring any kind of immunity on a clergyman who had thus aided and abetted bigamy or who had thus told a deliberate lie."

An earnest plea was made to the court on behalf of clergymen who had conscientious scruples against solemnizing

such marriages or tacitly approving of them, but this receives a somewhat caustic rebuke from the Master of the Rolls:

"No man has a right to become a clergyman of the Church of England who is not prepared to perform the lawful duties of that office. For instance, one of such duties is the solemnization of marriage of parishioners unless there be lawful cause for refusing. That one of the parties has been divorced and seeks to marry again during the lifetime of the former spouse is unquestionably not such lawful cause in the case of the innocent party because such re-marriage is expressly permitted by the statute, and the clergyman is compellable to solemnize such a marriage of a parishioner if called upon so to do. If, then, a person conscientiously holds that marriages cannot be dissolved, or that if dissolved neither of the parties may marry again in the lifetime of the other (an opinion held by many members of the Church of England), and if the solemnization of such a marriage would do violence to his conscience, he should abstain from entering Holy Orders, for if he do so he certainly comes under the legal obligation to solemnize them. Similarly, if he considers that a man who marries his deceased wife's sister is living in a state of sin and should on that account be refused the Communion he ought to remember that in taking Holy Orders he becomes a minister of a Church which is unquestionably bound by law to treat such marriages as lawful for all purposes if made under the Colonial Marriage (Deceased Wife's Sister) Act of 1906, so that, as admitted by counsel for the appellant, persons so married cannot be refused the Communion. This being so, I cannot say that I feel much sympathy with a delicacy of conscience so eclectic that it is willing to bear the strain of treating persons so married as reputable members of the Church of England in a case where the marriage is between inhabitants of a colony, but finds unbearable the burden of treating them as such when the marriage is between inhabitants of this country, where it is equally in accordance with the law."

Evidently the English courts are determined to uphold the view that marriage is a civil contract and that the state has the right to declare under what conditions it may be made or annulled, and, on the other hand, a strong party in the Established Church is equally determined to uphold the view that marriage is a sacrament and therefore under the control of the Church. This is shown by the instant repudiation of the decision by the Bishop of Birmingham, and by the action of the Representative Church Council in adopting by an overwhelming majority the following resolution:

"That seeing that all marriages within the prohibited degrees of affinity (whether allowed by the law of the land or not) are wrong as being contrary to the moral rule of the Church of England, and the principles implied in Holy

Scripture as interpreted by it, the use of the Prayer Book's service for the solemnization of Holy Matrimony in respect to any such marriages is most strongly to be reprobated."

The only logical outcome of this conflict is the separation of Church and State, and this may not be far off if the Tories are beaten in the present campaign. In the meantime it is amusing to see that marriage with a deceased husband's brother is still illegal and incestuous, and nobody in England seems to perceive the incongruity of it.

The Senate's Minority Leader

Some surprise was caused by the election, a few weeks ago, of Mr. Hernando de Soto Money, of Mississippi, to the office of leader of the Democratic minority in the Senate. He had not exhibited the qualities required for parliamentary or political leadership, and the record showed that his ability to control his temper, whether in or out of the Senate chamber, left something to be desired. Those who could not understand why his associates gave him this promotion have since learned from the dispatches of newspaper correspondents that there seemed to be need of additional places in which members of his family could be employed. As chairman of the Committee on Additional Accommodations for the Library (a committee whose labors are not strenuous and whose meetings are infrequent), he had been able to place on the payroll only his son, as the committee's clerk, and his daughter, as its messenger. But his new and more exalted position placed at his disposal more offices of this kind, with larger salaries attached to them. The Senator not only has taken with him his son, as clerk, at a salary of \$2,200, and his daughter, as assistant clerk, at \$1,800, but he has also made his daughter-in-law messenger, at \$1,440. And on the 20th inst. he introduced a resolution creating the additional position of second messenger for the minority leadership, at a salary of \$1,440. It is reported that this office is intended for his grandson. As there are in a session only two or three meetings of the committee to which the members of the Senator's family are now attached, they will not be overworked. He is certainly a

leader in the march to the paymaster's window, even if his fitness for command of the minority has not been conspicuously displayed.

The President to the Census Men

The President had about a third of the Census Supervisors in Washington just before Christmas and he gave them a heart-to-heart talk, which was meant not only for them, but for Congressmen as well. He had spoken of his instructions against politics in the Census in his letter to Superintendent Durand, and he continued:

"I hope you will all observe it. I know if you pursue it, it will be an easy course for you. If you don't observe it, then I will observe you. I know, of course, there will be pressure.

"Many of you must of you have been recommended by Congressmen, and it may be that some of these Congressmen will come to you and expect, because they did recommend you, that you owe them something in the way of selecting the men as enumerators who will help them in their Congressional election. You have got to use sense and discretion. You have got to select the men that you think will do the work, and if you catch them doing political work I wish you to remove them, just as I will remove you if I catch you doing political work. It is business. . . . You are the gentlemen that I want to make responsible, thru Mr. Durand, for taking this Census, and you are the gentlemen I rely upon, and if I can't rely upon you, then I am going to direct Mr. Durand to let me know about it, and I will see if I cannot help him out with somebody else."

The number of enumerators under the Census of 1910 will be at least 68,000, and many of them will be readers of THE INDEPENDENT. All applications must be filed with the supervisors not later than January 25, and any one of fair common school education can pass the examination. The tests will be made February 5, and will be reasonable. The applicant will fill out a sample schedule of population from a description, in narrative form, of typical families, and, in rural districts, a second schedule of agriculture from information given. Men or women may apply, but they must be citizens, residents of the supervisor's district, from eighteen to seventy years of age, physically capable, trustworthy, and able to write plainly and with reasonable rapidity. Their work will begin April 15.

The First Suffragets We are indebted to Arthur Preuss's lively St. Louis fortnightly review for information as to the ancient suffragets. When Cecrops founded his city there suddenly appeared out of the ground, as St. Augustine tells us, following Varro, an olive tree and a flowing fountain of water. Of course, Cecrops and all the people were astounded, and they applied to the oracle at Delphi for the meaning of the prodigy. The response was, that the olive was sent by Athene (Minerva) and the fountain by Neptune, and the citizens were to decide after which of the two deities their city should be named. The men all voted for Neptune and the women for the peaceful goddess, for then the women could vote. Being more in number the women prevailed, and the city was called Athens. Then Neptune was angry and sent the waves of the sea devastating their land. In order to placate the jealous god—for Athene seems to have lost her usual wits—the women received triple punishment. They were deprived of the right to vote; their children could no more take their mothers' names; and the designation "Athenian" was to be borne only by men, so, as Augustine says, "*De Civitate Dei*," xviii, 9:

"Nec adfuit *suffragatricibus* suis, ut *suffragiorum* deinceps perdita potestate, et alienatis illis a nominibus matrum. Atheniensium saltem vocari liceret, et ius deæ mereri vocabulum, quam viri dei victricem fecerant ferendo *suffragium*."

Now, if *suffragatrix* is not the Latin for *suffraget* we know no Latin.

Civilization in South Carolina Lovers of their country will be pleased to learn from that admirable daily, *The State*, of Columbia, that South Carolina is making hopeful progress toward civilization. A white farmer in Oconee County killed his neighbor and was actually convicted and sent to prison for life. That journal tells us that any one, white or black, rich or poor, who lives in Oconee County, and is careless of human life, had better emigrate to some other county; for there are other counties, it tells us—a number of them—in which this murderer would

have had excellent chances of acquittal and "vindication," yet it assures us:

"There are other counties in which civilization has advanced as far as it has in Oconee—regard for life being one of the first and highest tests of civilization."

We trust we shall not be charged with ill-will toward the South for this word about civilization, and we rejoice that this can truly be said of South Carolina:

"A number of convictions of white men for murder and manslaughter, in counties where they have heretofore seldom been secured, during the last twelve months point to the steady growth of a recognition of the truth that prosperity and happiness can co-exist nowhere with indifference to the value of human life and the crime of taking it."

We wonder how Dr. Cook takes things in his hiding place. Is he laughing sardonically to himself? Is he overwhelmed with remorse? Will he hang himself? Will he flee from humanity and live with jackals or the seals? There is a story that he said that if the Danish decision went against him he would go as a missionary to the Eskimos. More likely Lucifer might send missionaries to Cook to learn new wrinkles for the use of the Father of Lies. Can we hope that he is insane? That is quite too good to be true. He is no poet; he is as sane as ever. He has made his pile and his fame. Herostratus burnt the temple of Ephesus and earned a name for himself, and so has Cook. The two cases show what a commonplace man can do to gain immortal infamy.

What will the next British Parliament, when the Liberals win it, do with the House of Lords? The most conservative of the members of the Liberal Government is Sir Edward Grey, and this is what he says in a late speech:

"If reform of the House of Lords merely means that they are to make themselves into a smaller body—a smaller body of superior persons chosen by themselves—then that is no reform at all. If they mean reform of the House of Lords, I say no reform will in our view be a real reform unless it be that of the abolition of the hereditary principle and the substitution of popular election."

"Abolish the hereditary principle!" That takes our breath away. Are they moving as fast as that? Does it apply to kings?

Insurance Libraries

BY JOHN COTTON DANA

LIBRARIAN OF THE NEWARK PUBLIC LIBRARY

INSURANCE libraries are collections of books, pamphlets and periodicals devoted wholly or in part to insurance and related subjects. They will increase very rapidly in number, size and efficiency in the next few years. They will develop much as have general public and college libraries in the last generation; but more wisely and with greater rapidity. Their promoters will find at hand much good literature on library management; while general libraries, when they entered on their era of development in 1876, found that library management, in the modern meaning of the phrase, had scarcely been thought of, and that few records of study and experiment existed.

In 1876 an American library association was formed; in the same year a library journal was established, and from that year progress in library economy was very rapid. The ideas, methods and devices that originated with or were developed by and thru this library organization revolutionized library administration. Many of these ideas, methods and devices were adopted in the business world, notably the card system in all its many applications.

That insurance libraries will be both large and numerous seems inevitable as soon as one considers these facts: In library history one well-organized and effective public, college or State library has always led to the founding or development of from one to a dozen others hitherto non-existent or inefficient. Special libraries are being established by the score, and insurance men will follow the custom.

Books and circulars are increasing with greater rapidity every day and demand more careful treatment before they surrender what they contain even to the specialist. Insurance and its allied subjects are daily growing in extent, importance and output of literature—literature which can be wisely and efficiently handled only by the application to

it of tried library methods at the hands of an expert.

Out of the experience of public, college, university, State, medical and law libraries in their swift development in recent years one may draw a few general rules which apply to the establishment and management of an insurance library:

(1) Do not delay. The books, journals, pamphlets and reports of this current year are now easily acquired. With each succeeding year they will be more difficult to obtain. Begin at once.

(2) Provide space for more rapid growth than at first seems essential. It is a universal rule that the efficient library soon outgrows the limits of space its founders set.

(3) At the very beginning, investigate insurance library administration as practised in insurance libraries and other libraries of a kindred nature already established. The field is new, experience limited, wise decisions difficult, and the united wisdom of all who are undertaking to manage insurance libraries will not secure for this work at first the maximum of efficiency.

(4) Specialize as soon as possible: that is, devote the efforts of your own library to matters of supreme importance to your own company; and do not duplicate good collections already made if you can have ready access to those collections. Co-operate with other libraries akin to yours, that you may divide labor and share results.

(5) Above all things begin with a skilled librarian. At first, at least, set library skill above skill in insurance or knowledge of the literature of insurance. The purchase, storage, arrangement, classification, cataloging, digesting and making generally useful printed things call for very special skill. This skill has been developed by thirty-odd years of experience in this country, is taught in a dozen schools, and is today of the utmost value in the founding of a library of any kind whatsoever.

Kansas Guaranty Law Invalid

THE new bank guaranty law of Kansas finds no more favor in the courts than the similar statute of Nebraska. Judge Pollock, of the United States District Court, on the 24th inst., decided that the Kansas law is unconstitutional. There were three cases before him. One was the application of a stockholder in a State bank for an injunction. The directors and other stockholders had voted to participate in the guaranty and had paid the deposit. This complainant objected. An injunction was granted, and the court ordered that the deposit be paid back. The second case was one in which several State banks that were unwilling to go in asserted that the law was virtually compulsory. Judge Pollock did not think it was, and their application was dismissed. In the third case all the national banks in the State asserted that in this legislation the State discriminated against them, the Comptroller of the Currency at Washington having decided that national banks could not lawfully participate in any State system for guaranteeing deposits. For them an injunction against the enforcement of the law was granted. The essence of the decision is found in the following extract:

"In the light of authorities it must be held that a legislative enactment that confers on a class special privileges and benefits which by the law and not by conditions are denied to another class in the same business or calling, and which privileges and benefits so conferred on the favored class may be and are employed to impair and destroy the business of those belonging to the excluded class, is inhibited by the provisions in the Fourteenth Amendment to the Constitution. And more especially must this be true, I think, in a case such as this, where the business conducted by the excluded class is not only of the same nature and character as that transacted by the favored class, but is conducted in the same city, town or locality and in competition one class with the other."

It is reported that the Governor of Kansas will call a special session of the Legislature to consider the matter.

....According to the estimate of the Director of the Mint, published last

week, the output of gold in the calendar year 1908 was \$441,932,200, or \$31,379,900 more than in 1907.

....The Chase National Bank has declared an extra dividend of 6 per cent. in addition to its regular semi-annual distribution of 3 per cent. When the capital was increased from \$500,000 to \$1,000,000 an extra dividend of 100 per cent. was declared, and when this capitalization in turn was increased to \$5,000,000 there was another extra dividend of 400 per cent.

....The stockholders of the Mechanics' National Bank voted last week to buy the assets and business of the National Copper Bank. The institution formed by this consolidation will be known as the Mechanics' and Metal National Bank. It will have a capital of \$6,000,000 and surplus of at least that amount. Gates W. McGarrah (now president of the Mechanics' National) will be president, and the first vice-president will be Charles H. Sabin, now president of the National Copper Bank. The Mechanics' National is one of the oldest of the New York banks, having been founded in 1810.

....Dumont Clarke, president of the American Exchange National Bank, died of pneumonia, on the 26th, at his home in Dumont, N. J., a town named after him. Descended from several generations of bank presidents, he had worked his way up from a clerkship in the American Exchange to the presidency, which he had held for fifteen years. As director or trustee he was connected with more than twenty prominent railway, telegraph, industrial, banking and insurance companies. For two terms he was president of the Clearing House Association, and more recently he was chairman of the Chamber of Commerce's finance committee. In the suburban town where he lived, and whose name was changed in his honor, he was much respected and loved, especially by the poor, who were frequently beneficiaries of his generous but unobtrusive charity.
